The White Horse of Berkshire, 778
Primitive Style of Skating, . 787

Then came hot JULY, boiling like to fire,
That all his garments he had cast away;
Upon a lion raging yet with ire
He boldly rode, and made him to obey:
(It was the beast that whilom did foray
The Nemæan forest, till the Amphitrionide
Him slew, and with his hide did him array:)
Behind his back a scythe, and by his side
Under his belt he bore a sickle circling wide.

SPENSER.

(DESCRIPTIVE.)

JULY is now what our old poets loved to call 'sweet summer-time, when the leaves are green and long,' for in such brief word-painting did they picture this pleasant season of the year; and, during this hot month, we sigh while perusing the ancient ballad-lore, and wish we could recall the past, were it only to enjoy a week with Robin Hood and his merry men in the free old forests

'All under the greenwood tree.'

We feel the harness chafe in which we have hitherto so willingly worked, amid the 'fever and the fret' of the busy city, and pine to get away to some place where we can hear the murmur of the sea, or what is nearest the sound—the rustle of the summer leaves. We long to lie down beneath the low-bending, and high overhanging branches beside the stream, that runs dark and bright

through shade and sunshine, and watch the blue dragon-flies sport above the bluer forget-me-nots, that nod their tufted heads to every breeze which ripples the water. There fancy floats away, and where the drooping willow gives a white shiver as the under part of the leaves is turned to the light, and the brook rolls along 'singing a quiet tune,' we conjure up the image of sweet Ophelia, 'her clothes spread wide' upon the glassy stream, and seem again to hear her warbling 'snatches of old tunes' till, mermaid-like, she sinks beneath the 'weeping brook.' Then we hear the bleating of sheep that come down from some hidden bending of the water-course, and journeying along we see an old-world picture, such as the gray patriarchs had often looked on, and which is familiar to us, through the Bible pages, unaltered through thousands of years; for there we find them washing sheep, just as they did when David and Solomon paused to look at the sheep-washers, beside the brooks that flow through the valleys around Jerusalem. The mind wanders away into the twilight of those remote ages, and we wonder who she was whose teeth Solomon in his Song compared to a flock of sheep 'which come up from the washing.' In our wanderings through the nooks and corners of England, we have seen sheep-washing in such pleasant places, that had they been selected purposely to harmonise with this picturesque occupation, it would scarcely have been possible to have added a new beauty to the scene, though trees are always beautiful when reflected in water, especially when they also overhang a ground of green. The wattled hurdles, running in lines beneath the wide-spreading branches, which enclose the white sheep, making gray patches of light under the boughs, and upon the greensward; the sheep-washer standing in the pool, and the idlers in every variety of coloured costume assembled on the banks, and all mirrored in the water, make as pretty a rural picture as the eye can delight to dwell upon, and which seems ever changing its hue under the shifting lights of heaven. Then those brown sinewy labourers clutch at the fleecy sheep as they are driven down the bank—keeping their heads clear of the water, while they roll them to and fro, making incessant circles of ripples, for as one releases a sheep, another seizes upon it, until the immersion is completed, when it swims to the opposite bank, and there stands bleating, while the water drops from its heavy-hanging wool. Now and then you hear a loud laugh from the spectators, for the chubby farmer's-boy, who has to drive the sheep into the water for the men to wash, finds one that is obstinate, at which he pushes with all his might, when the animal gives a sudden spring, and the boy falls headlong into the pool.

About a week or so after the washing, sheep-shearing commences; the reason why 'clipping' is delayed for this length of time is, that the fleece may regain its oily nature, which it can only do through the wool becoming thoroughly dry, when the shears cut through it easily. This also is a busy time, and we have seen half a score sheep-shearers at work at once, the large barn-door having been lifted off its hinges and raised about a foot above the ground, to place the sheep upon, while they were shorn. By night the barn looks like a large wool warehouse, so high rise the piles of rolled up fleeces, and some of our English sheep yield as much as fifteen pounds of wool each. It is amusing to watch the lambs after the dams are clipped, the way they go smelling about them, and the pitiful bleating they make, until the mother answers, when they at once recognise her voice, and all doubt in a moment ceases.

Sheep-shearing feasts, like harvest-homes, are of ancient date; for we read in the Bible of Nabal, who had three thousand sheep in Carmel, holding a sheep-shearing feast in his house 'like the feast of a king,' and the custom still remains amongst many of our English sheep-breeders in the present day. It is pleasant to know that such old-world customs are still kept up; that when the owner has gathered the wool that clothes him, and the corn that feeds him, he should make glad the hearts of those who 'have borne the burden and heat of the day.' While this busy work is going on, the bean-fields are in bloom, and fill the air around with such a perfume as makes the wayfarer feel languid, longing to lie down in the midst of it, and with half-shut eyes dream dreams.

At every passing gust which ripples the fields, the corn now makes a husky whisper, and there are white spots on the long ears, which tell that it is fast ripening, and that bending reapers will soon be busy with their crooked sickles in the harvest-field. We now see amid the grass that is powdered with summer-dust, the most beautiful of all our wayside-flowers, the pretty pimpernel, which, though but little larger than the bloom of the common chickweed, fairly dazzles the eye like a gem with its rich crimson petals. By the very rim of the cart-rut, and close by the dent of the horse's hoof on the brown highway, it blows, a thing of beauty, that has no peer in garden or green-house, whether blood-red, crimson, or scarlet, for nothing but the flashing blaze of the red poppy of the cornfield, can be compared with it a moment for richness of colour. Country-people call this wayside beauty the poor man's weather-glass, and the shepherd's clock; and it never errs in announcing the approach of rain, for long before we can discover any sign of the coming shower, we find its deep-dyed petals folded up in its green cup. As a time-keeper, it may be relied upon, always closing at noon, no matter how fine the day may be, and never opening again before seven on the following morning. Its leaves are also very beautiful, of a fine clean oval shape, and on the underpart spotted. Often near to it, on the sunny-side of the hedge, may now be found the dull golden-coloured agrimony, with its long spiked head up-coned with little flowers, the favourite 'tea' of the poor cottagers, and a thousand times more delicious than some of the rubbish sold as tea in low neighbourhoods, for it makes a most refreshing beverage. Scarcely a leaf can be found on tree, shrub, or plant, to equal in beauty of form that of the agrimony, so deeply and elegantly are the edges cut, and so richly veined, that they carry the eye from the up-piled head of five-petaled golden flowers, which so gracefully overtop the foliage. The fragrance, too, is quite refreshing; only bruise this elegant leaf between the fingers, and it throws out an aroma that can no more be forgotten than the smell of roses. The next favourite as a tea-making herb among our old country-women, is the wood betony, now in bloom, and which forms a winding

terrace of flowers, as the whorls rise step above step, a pile of rose-coloured flowers, beautiful to look upon in the sunshine. Nor does the charm of each little bloom diminish, when examined closely, as it is found to belong to the lipped family of flowers, the most exquisite of all the many orders; and quaint old Culpepper, writing about it at his house in Spitalfields above two centuries ago, says, 'the leaves and flowers, by their sweet spicy taste, are comfortable both in meat and medicine;' he also calls it 'a very precious herb;' and in his curious book, he tells us where he found choice wild-flowers growing in the summer sun about London, in the very places where long miles of streets now spread, and not even a blade of grass can be seen.

Through long leagues of untrodden flowers the golden-belted bees now go with a pleasant murmuring, over sunny openings in the bowery underwood, which shrub and bramble guard, and beneath overhanging branches by the water-courses, where the foot of man cannot tread. Up lanes that lead nowhere, saving to green fields, and over which a wheel seldom passes, saving at hay-time, or during the garnering of harvest, they grow and run. Up the hillsides they climb, over the fences, and into the old woods, where they play at hide-and-seek behind every bank and shaded hollow. Great trees throw their green arms over them, and make a shelter for their beauty under their shadows. From the faces of steep crags, inaccessible to man, they droop and wave in all their beauty; and in their bells the insects find a home, and at the golden entrances they play in the sunshine. They lean over and listen to the singing of the river all day long, and when they are folded, still hear its soothing lullaby go rippling over the reflected stars. The gentle dews alight upon them with silver feet in the moon-light, and hang golden drops about their petals to sparkle in the sun, in hidden nooks which the eye of man never penetrates; for nature leaves no crypt in her great temple undecorated. Place any flower under a microscope, and it becomes a world of wonder: the petals are vast plains, the stamens stately trees, many of them formed of gold; and deep down, on a pavement richer than any that was ever inlaid by the hand of man, move the inhabitants of this beautiful world, winged, and dazzling to look upon—fitting forms to sip nectar, and find a dwelling-place in the fragrant flowers. And what know we of their delights? The marigold may be to them a land of the sun, and its golden petals the beams that ever shine upon them without setting.

What tranquillity reigns around a green secluded village on the Sabbath! There seems a Sunday breath in the very air, so calm and quiet sleeps everything we look upon, compared with the unceasing hum of far-away cities, whose streets are never silent. The very fields are still, and we have often fancied that the flocks and herds take more rest on this old Holy day than at any other time. Not a sound of labour is heard. The creaking wagon, with its shafts turned up, stands under the thatched shed; and the busy wheel of the old water-mill rests, gray, and dry, and motionless, in the summer sun. No far-sounding ring comes from the blacksmith's forge, at the door of which a few peasants linger in their clean smock-frocks, waiting until the village-bells sound from the hoary tower to summon them to church. Even the bells, as they come and go in the shifting breeze, seem like sounding messengers sent out everyway—up the valley, and over the hill—now heard, then lost—as if they left no nook unvisited, but carried their Sabbath tidings everywhere. The childish voices that come floating on the air from the low, white-washed, village Sunday-school, where they are singing some simple hymn, bring before us His image, who said: 'Suffer little children to come unto me,' and who walked out in the fields with His disciples, to enjoy the calm of the holy Sabbath. The very murmur that Nature makes, in the low rustling of the leaves, and the subdued ripple of the stream, seems—because they are audible—to leave the stillness more profound, as her voice would not be heard if the grit of the wain, the tramp of the hoof on the dry rutted road, and the ring of the anvil, broke the repose which rests here—almost noiseless as the dew falling on the fleece of a sleeping lamb—throughout the Sabbath-day. The very gardens appear asleep, the spade is stuck motionless in the ground, hoe and rake are laid aside, and, saving the murmuring of a bee among the flowers, or the twittering of a bird from the orchard-trees, all around lie images of rest—a land of peace from which brown Labour seems to have retired in silence, and left no sound of his whereabout, but sunk in slumber somewhere, folds his sinewy arms.

How tempting those great ripe round-bellied gooseberries look on a hot July day; we wonder there is one left on the bushes, when we see so many children about! The red currants, too, hang down like drops of rich carnelian; while the black currants look like great ebony beads, half-hidden by their fragrant leaves—for all the early garden-fruits are now ripe to perfection. Down the long rows the pretty strawberries peep out, shewing like red-breasted robins at hide-and-seek under the foliage; while overhead the melting cherries hang down, leading even the very birds to commit trespass, for they cannot resist such a tempting banquet. Sweet Summer has now attained her perfect loveliness; the roses on her cheeks will never look more beautiful than they do now, nor will her sky-blue eyes ever beam with sweeter lustre. She has wreathed her sunny hair with the sweetest and fairest of flowers; and when they have faded, there will be no more found to make a frame of blossoms round her matchless countenance until the leaves of Autumn have fallen, white Winter awakened from his cold sleep, and young Spring gone dancing away, holding up her green kirtle as she trips over the daisies. As yet, there is no sign of decay around her, only a few birds are silent, but they have not yet departed; there are myriads of flowers in bloom, and great armies of insects hurrying along every way, as they go sounding through the warm and fragrant air. Few writers had a deeper appreciation of the beauties of nature than honest Izaak Walton; we can almost hear the rain-drops fall while reading that beautiful passage where he describes himself sitting under the hedge of honeysuckles, sheltering from the shower, 'which fell so gently on the teeming earth, and gave yet a sweeter smell to the lovely flowers that adorned those

verdant meadows;' and listening 'to the birds in the adjoining grove that seemed to have a friendly contention with an echo, whose dead voice seemed to live in a hollow tree, near the brow of that primrose-hill.'

What dreams have we dreamed, and what visions have we seen, lying idly with half-shut eyes in some 'greenwood shaw,' sheltering from July's noonday sun, while we seemed to hear 'airy tongues that syllable men's names,' in the husky whispering of the leaves! Golden forms have seemed to spring up in the sun-lighted stems of the trees, whose high heads were buried among the lofty foliage, through which were seen openings to the sky. The deep-dyed pheasant, shooting over the underwood with streaming plumage, became a fair maiden in our eyes; and the skulking fox, noiselessly threading the brake, the grim enchanter from whom she was escaping. The twining ivy, with discoloured leaves, coiled round the stem in the far distance, became the fanged serpent, which we feared would untwine and crush her in its scaly folds. Scouts were sent out after her in the form of bees and butterflies, and seemed not to leave a flowery nook unvisited in which there was room enough for her to hide. Bird called to bird in sweet confusion, from leafy hollows, open glades, and wooded knolls, as if to tell that she had passed this way and that, until their songs became so mingled, we could not tell from which quarter the voices came. Then, as the sun burst out in all its brightness, the grim enchanter seemed to throw a golden net over the whole wood, the meshes of which were formed of the checkered lights that fell through leaf and branch, and, as we closed our eyes, we felt that she could not escape, so lay silent until the shadows around us deepened, and gray twilight stole noiselessly over the scene:

'A pleasing land of drowsyhead it was,
Of dreams that wave before the half-shut eye;
And of gay castles in the clouds that pass,
For ever flushing round a summer sky.'

THOMSON.

What imaginative mind has not enjoyed these summer dreams, these poetical flashes of purple, gold, and azure, that play on the 'inward eye' like colours on a cathedral pavement, streaming through some triple-arched window, richly stained with 'twilight saints, and dim emblazonings!'

Towards the close of July, most of our birds are silent—even the robin and the wren are but rarely heard again till the end of August. Large flocks of young birds may now be seen flying together, and many think that they have been driven away by the old ones, so congregate for company; their assembling has nothing to do with migration, as it is the case with those that never leave us, as well as with others that will soon migrate. It is just possible that they may have become so numerous in the places where they were hatched as to find food scarce, so set out together in flocks, to seek their living where fare is more plentiful. The chiff-chaff is one of the few birds that neither the heat of summer nor the advance of the season can silence, for it sings better in July than in any of the earlier months; leaving off the two shrill monotonous notes, which in sound resemble its name, and giving a peculiar whistle, unlike that of any other bird. One of the earliest singers in the morning is the chaffinch, which may often be heard before three o'clock during the long days of summer. The clean white on his wings gives him a splendid appearance. These birds build their nests with such an eye to the harmony of colour, that they are difficult to distinguish from the branches and leaves amid which they are placed, as they will match the green moss on the bough, and the yellow lichen on the bark, so closely, that only the little bright eyes of the bird betray its whereabout by their glittering. In the midland counties they are called 'pinks,' from their constant repetition of the note conveying that sound. Though most birds display great courage in defending their young, yet hundreds of little nestlings perish during the absence of their parents in search of food. Then their stealthy enemies, who are ever on the watch, pounce upon the little half-naked things, tear them out of their nests, and devour them. It is pitiable to hear the cry of the female on her return, when she finds her nest empty, and parts of the remains of her little ones hanging to the thorns they have been dragged through. We have sometimes fancied those wailing notes convey the feeling of Shakspeare's Macduff, when he exclaimed:

'All my pretty ones. All at one fell swoop!'

(HISTORICAL.)

July was originally the fifth month of the Roman year, and thence denominated *Quintilis*. In the Alban Calendar, it had a complement of thirty-six days. Romulus reduced it to thirty-one, and Numa to thirty days, and it stood thus for many centuries. At length, it was restored to thirty-one days by *Julius Cæsar*, who felt a personal interest in it as his natal month. After the death of this great reformer of the calendar, Mark Antony changed the name to July, in honour of the family-name of Cæsar. 'This month he selected for such honorary distinction, when the sun was generally most potent, the more effectually to denote that Julius was the emperor of the world, and therefore the appropriate leader of one-half of the year.'—*Brady.*

Our Saxon ancestors called July *Hey Monath*, 'because therein they usually mowed and made their hay-harvest; and also *Maed Monath*, from the meads being then in their bloom.'—*Verstegan.*

CHARACTERISTICS OF JULY.

July is allowed all over the northern hemisphere to be the warmest month of the year, notwithstanding that the sun has then commenced his course of recession from the tropic of Cancer. This is owing to the accumulating effect of the heat, while the sun is still so long above the horizon. In a table formed from the careful observations of the Rev. Dr Robert Gordon, at Kinfauns, Perthshire, the mean temperature of the air during the month, in that part of Great Britain, appears to be 61°. The same average has been stated for England; but in London 62° would probably be more correct.

At London, the sun rises on 1st July at 3.46 morning, and sets at 8.14 evening; on the 31st, the respective times are 4.18 morning and 7.42 evening. At Edinburgh, it rises on the 1st at 3.20 and sets at 8.46; on the 31st, the respective times are 4 4, and 8.8. The sun is in Cancer for the

greater part of the month, and enters Leo about the 22d.

The great heat of the month led to a superstition among the Romans: they conceived that this pre-eminent warmth, and the diseases and other calamities flowing from it, were somehow connected with the rising and setting of the star Canicula—the Little Dog—in coincidence with the sun. They accordingly conferred the name of DOG-DAYS upon the period between the 3d of July and the 11th of August. Horace, it will be remembered, makes allusion to this in his address to the Blandusian Fountain—

> 'Te flagrantis atrox hora Caniculæ
> Nescit tangere.'

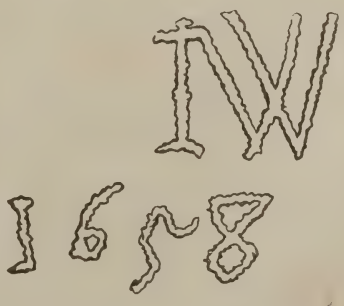
The fact truly being that a spring necessarily preserves a mean heat all the year round—in Britain, about 47°. The utter baselessness of the Roman superstition has been well shewn by the ordinary processes of nature, for Canicula does not now rise in coincidence with the sun till the latter end of August, while, of course, the days between 3d July and 11th August are what they have ever been. Dr Hutton, remarking how the heliacal rising of Canicula is getting later and later every year in all latitudes, says that, on the Roman principle, the star may in time come to be charged with bringing frost and snow. Yet the *Dog-days* continues to be a popular phrase, and probably will long continue so. It is undoubtedly under some lingering regard for the old notion, as much as from a consideration of the effect of extreme heat upon canine flesh and blood, that magistrates of towns so often order dogs to be muzzled about the beginning of July. The verity of the Roman superstition is brought home to us by an antique

ANTIQUE GEM—THE DOG STAR.

garnet gem in the Bessborough Collection, representing the face of a tongue-lolling dog, surrounded by solar rays, as in the accompanying illustration.

First of July.

Saints Julius and Aaron, martyrs, about 303. St Thierri, abbot of Mont-d'Hor, 533. St Calais or Carilephus, abbot of Anille, 542. St Gal the First, bishop of Clermont, about 553. St Cybar, recluse at Angouleme, 581. St Simeon, surnamed Salus, 6th century. St Leonorus or Lunaire, bishop. St Rumold, patron of Mechlin, bishop and martyr, 775. St Theobald or Thibault, confessor, 1066.



Born.—Bishop (Joseph) Hall, 1574, *Bristow Park, Leicestershire;* Louis Joseph, Duc de Vendome, 1654; Jean Baptiste, Comte de Rochambeau, 1725, *Vendome;* Adam Viscount Duncan, admiral, 1731, *Dundee.*

Died.—Edgar, king of England, 975; Admirable Crichton, assassinated at Mantua, 1582; Isaac Casaubon, learned scholar, editor of ancient classics, 1614, *bur. Westminster Abbey;* Frederick, Duke Schomberg, killed at the Battle of the Boyne, 1690; Edward Lluyd, antiquary, 1709, *Oxford;* Henry Fox, Lord Holland, 1774; William Huntingdon, 1813, *Tunbridge Wells;* G. F. von Schubert, German philosophical writer, 1860, *Laufzorn*, near *Munich.*

ISAAC CASAUBON—WALTON'S INITIALS.

Isaac Casaubon was a foreign scholar of the highest eminence, who came to England in 1610, along with Sir Henry Wotton, the English ambassador at Paris, who had lodged in his house at Geneva, and 'there contracted,' as Izaak Walton tells us, 'a most worthy friendship with that man of rare learning and ingenuity.' Casaubon did not survive his arrival in England above four years. He was buried in the south transept of Westminster Abbey, where a marble mural tablet was erected to him by Bishop Morton.

While we have ample record of the friendship—and it was an *angling* friendship—which subsisted between Izaak Walton and Sir Henry Wotton, we have none regarding any between Walton and

Casaubon, beyond the respectful reference to him above quoted, and the presumption arising from Walton having been the friend of Casaubon's friend Wotton. There is, however, some reason in the

traditions of Westminster Abbey for believing that Walton, from affection for Casaubon's memory, scratched his initials upon the mural tablet just adverted to. We do find upon the tablet a rude cutting of initials, with a date, as represented on the preceding page. For the mere probability of this being a veritable work of the hand of one so dear to English literature as good Izaak Walton, we have thought the matter worthy of the present notice.*

HOLY WELLS.

July 1, 1652, the eccentric John Taylor, commonly called the Water Poet, from his having been a waterman on the Thames, paid a visit to St Winifred's Well, at Holywell, in Flintshire. This was a place held in no small veneration even in Taylor's days; but in Catholic times, it filled a great space indeed.

There is something at once so beautiful and so bountiful in a spring of pure water, that no wonder it should become an object of some regard among a simple people. We all feel the force of Horace's abrupt and enthusiastic address, 'O Fons Blandusiæ, splendidior vitro,' and do not wonder that he should resolve upon sacrificing a kid to it. In the middle ages, when a Christian tinge was given to everything, the discovery of a spring in a romantic situation, or remarkable for the brightness, purity, or taste of its water, was forthwith followed by its dedication to some saint; and once placed among the category of holy wells, its waters were endued, by popular faith, with powers more or less miraculous. Shrewd Thomas Powell, writing in 1631, says: 'Let them find out some strange water, some unheard-of spring; it is an easy matter to discolour or alter the taste of it in some measure, it makes no matter how little. Report strange cures that it hath done; beget a superstitious opinion of it. Good-fellowship shall uphold it, and the neighbouring towns shall all swear for it.' So early as 963, the Saxon king Edgar thought it necessary to forbid the 'worshipping of fountains,' and the canons of Anselm (1102) lay it down as a rule, that no one is to attribute reverence or sanctity to a fountain *without the bishop's authority*. Canons, however powerful to foster superstition, were powerless to control it; ignorance invested springs with sanctity without the aid of the church, and every county could boast of its holy well.

Some of these were held specially efficacious for certain diseases. St Tegla's Well was patronised by sufferers from 'the falling sickness;' St John's, Balmanno, Kincardineshire, by mothers whose children were troubled with rickets or sore eyes. The Tobirnimbuadh, or spring of many virtues, in St Kilda's Isle, was pre-eminent in deafness and nervous disorders; while the waters of Trinity Gask Well, Perthshire, enabled every one baptized therein to face the plague without fear. Others, again, possessed peculiar properties. Thus, St Loy's Well, Tottenham, was said to be always full but never overflowing; the waters of St Non's ebbed and flowed with the sea; and those of the Toberi-clerich, St Kilda, although covered twice in the day by the sea, never became brackish.

The most famous holy well in the three kingdoms is undoubtedly that dedicated to St Winifred (Holywell, Flintshire), at whose shrine Giraldus Cambrensis offered his devotions in the twelfth century, when he says she seemed 'still to retain her miraculous powers.' Winifred was a noble British maiden of the seventh century; a certain Prince Cradocus fell in love with her, and finding his rough advances repulsed, cut off the lady's head. Immediately he had done this, the prince was struck dead, and the earth opening, swallowed up his body. Meanwhile, Winifred's head rolled down the hill; where it stopped, a spring gushed forth, the blood from the head colouring the pebbles over which it flowed, and rendering fragrant the moss growing around. St Bueno picked up the head, and skilfully reunited it to the body to which it belonged, after which Winifred lived a life of sanctity for fifteen years, while the spring to which she gave her name became famous in the land for its curative powers.

ST WINIFRED'S WELL, FLINTSHIRE.

The spring rises from a bed of shingle at the foot of a steep hill, the water rushing out with great impetuosity, and flowing into and over the main basin into a smaller one in front. The well is enclosed by a building in the perpendicular Gothic style (dating from the beginning of the reign of Henry VII.), which 'forms a crypt under a small

* The initials and date were first introduced to public notice, by Frank T. Buckland, Esq., 2d Life Guards, in the *Field* newspaper.

chapel contiguous to the parish church, and on a level with it, the entrance to the well being by a descent of about twenty steps from the street. The well itself is a star-shaped basin, ten feet in diameter, canopied by a most graceful stellar vault, and originally enclosed by stone traceried screens filling up the spaces between the supports. Round the basin is an ambulatory similarly vaulted.'* The sculptural ornaments consisted of grotesque animals, and the armorial-bearings of various benefactors of the shrine; among them being Catharine of Aragon, Margaret, mother of Henry VII., and different members of the Stanley family, the founders both of the crypt and the chapel above it. Formerly, the former contained statues of the Virgin Mary and St Winifred. The first was removed in 1635; the fate of Winifred's effigy, to which a Countess of Warwick (1439) bequeathed her russet velvet gown, is unknown. On the stones at the bottom of the well grow the *Bissus iolethus*, and a species of red *Jungermania* moss, known in the vulgar tongue as Winifred's hair and blood. In the seventeenth century, St Winifred could boast thousands of votaries. James II. paid a visit to the shrine in 1688, and received the shift worn by his great-grandmother at her execution, for his pains. Pennant found the roof of the vault hung with the crutches of grateful cripples. He says, 'the resort of pilgrims of late years to these Fontanalia has considerably decreased; the greatest number are from Lancashire. In the summer, still a few are to be seen in the water, in deep devotion up to their chins for hours, sending up their prayers, or performing a number of evolutions round the polygonal well; or threading the arches between and the well a prescribed number of times.' An attempt to revive the public faith in the Flintshire saint was made in 1805, when a pamphlet was published, detailing how one Winefred White, of Wolverhampton, experienced the benefit of the virtue of the spring. The cure is certified by a resident of Holywell, named Elizabeth Jones, in the following terms: 'I hereby declare that, about three months ago, I saw a young woman calling herself Winefred White, walking with great difficulty on a crutch; and that on the following morning, the said Winefred White came to me running, and without any appearance of lameness, having, as she told me, been immediately cured after once bathing in St Winifred's Well.' It was of no avail; a dead belief was not to be brought again to life even by Elizabeth Jones of Holywell.

St Madern's Well, Cornwall, was another popular resort for those who sought to be relieved from aches and pains. Bishop Hall, in his *Mystery of Godliness*, bears testimony to the reality of a cure wrought upon a cripple by its waters. He says he 'took strict and impartial examination' of the evidence, and 'found neither art nor collusion—the cure done, the author an invisible God.' In the seventeenth century, however, the well seems to have lost its reputation. St Madern was always propitiated by offerings of pins or pebbles. This custom prevailed in many other places beside; Mr Haslam assures us, that pins may be collected by the handful near most Cornish wells. At St Kilda, none dared approach with empty hands, or without making some offering to the genius of the place, either in the shape of shells, pins, needles, pebbles, coins, or rags. A well near Newcastle obtained the name of Ragwell, from the quantity of rags left upon the adjacent bushes as thank-offerings. St Tegla, of Denbighshire, required greater sacrifices from her votaries. To obtain her good offices, it was necessary to bathe in the well, walk round it three times, repeating the Lord's Prayer at each circuit, and leave fourpence at the shrine. A cock or hen (according to the patient's sex) was then placed in a basket, and carried round the well, into the churchyard, and round the church. The patient then entered the church, and ensconced him or herself under the communion-table, with a Bible for a pillow, and so remained till daybreak. If the fowl, kept all this while imprisoned, died, the disease was supposed to have been transferred to it, and, as a matter of course, the believer in St Tegla was made whole.

Wells were also used as divining-pools. By taking a shirt or a shift off a sick person, and throwing it into the well of St Oswald (near Newton), the end of the illness could easily be known—if the garment floated, all would be well; if it sank, it was useless to hope. The same result was arrived at by placing a wooden bowl softly on the surface of St Andrew's Well (Isle of Lewis), and watching if it turned from or towards the sun; the latter being the favourable omen. A foreknowledge of the future, too, was to be gained by shaking the ground round St Madern's Spring, and reading fate in the rising bubbles. At St Michael's (Banffshire), an immortal fly was ever at his post as guardian of the well. 'If the sober matron wished to know the issue of her husband's ailment, or the love-sick nymph that of her languishing swain, they visited the well of St Michael. Every movement of the sympathetic fly was regarded with silent awe, and as he appeared cheerful or dejected, the anxious votaries drew their presages.'*

Of St Keyne's Well, Cornwall, Carew in his *Survey* quotes the following descriptive rhymes:

'In name, in shape, in quality,
This well is very quaint;
The name to lot of Keyne befell,
No over-holy saint.
The shape—four trees of divers kind,
Withy, oak, elm, and ash,
Make with their roots an arched roof,
Whose floor the spring doth wash.
The quality—that man and wife,
Whose chance or choice attains,
First of this sacred stream to drink,
Thereby the mastery gains.'

Southey sang of St Keyne—how the traveller drank a double draught when the Cornishman enlightened him respecting the properties of the spring, and how

'You drank of the well I warrant betimes?
He to the Cornishman said;
But the Cornishman smiled as the stranger spake,
And sheepishly shook his head.

'I hastened as soon as the wedding was done,
And left my wife in the porch;
But i' faith she had been wiser than me,
For she took a bottle to church!'

* *Archæological Journal*, iii. 148.

* *Statistical Account of Scotland.*

When Erasmus visited the wells of Walsingham (Norfolk), they were the favourite resort of people afflicted with diseases of the head and stomach. The belief in their medicinal powers afterwards declined, but they were invested with the more wonderful power of bringing about the fulfilment of wishes. Between the two wells lay a stone on which the votary of our Lady of Walsingham knelt with his right knee bare; he then plunged one hand in each well, so that the water reached the wrist, and silently wished his wish, after which he drank as much of the water as he could hold in the hollows of his hands. This done, his wishes would infallibly be fulfilled within the year, provided he never mentioned it to any one or uttered it aloud to himself.

While the Routing Well of Inveresk rumbled before a storm of nature's making, the well of Oundle, Northamptonshire, gave warning of perturbations in the world of politics. Baxter writes (*World of Spirits*, p. 157)—'When I was a schoolmaster at Oundle, about the Scots coming into England, I heard a well in one Dob's yard, drum like any drum beating a march. I heard it at a distance; then I went and put my head into the mouth of the well, and heard it distinctly, and nobody in the well. It lasted several days and nights, so as all the country-people came to hear it. And so it drummed on several changes of tunes. When King Charles II. died, I went to the Oundle carrier at the Ram Inn, Smithfield, who told me the well had drummed, and many people came to hear it.'

Not many years ago, the young folks of Bromfield, Cumberland, and the neighbouring villages, used to meet on a Sunday afternoon in May, at the holywell, near St Cuthbert's Stane, and indulge in various rural sports, during which not one was permitted to drink anything but water from the well. This seems to have been a custom common to the whole county at one time, according to *The June Days Jingle*.—

'The wells of rocky Cumberland
Have each a saint or patron,
Who holds an annual festival,
The joy of maid and matron.

And to this day, as erst they wont,
The youths and maids repair,
To certain wells on certain days,
And hold a revel there.

Of sugar-stick and liquorice,
With water from the spring,
They mix a pleasant beverage,
And May-day carols sing.'

London was not without its holy wells; there was one dedicated to St John, in Shoreditch, which Stow says was spoiled by rubbish and filth laid down to heighten the plots of garden-ground near it. A pump now represents St Clement's Well (Strand), which in Henry II.'s reign was a favourite idling-place of scholars and city youths in the summer evenings when they walked forth to take the air.

THE BATTLE OF THE BOYNE.

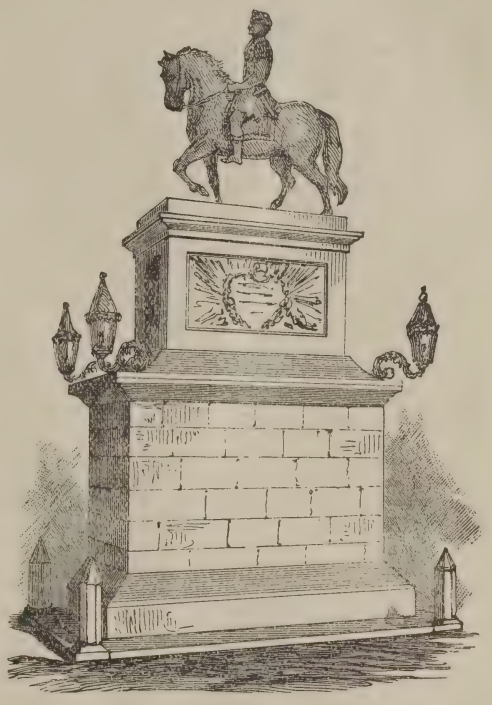
This conflict, by which it might be said the Revolution was completed and confirmed, took place on the 1st of July 1690. The Irish Catholic army, with its French supporters, to the number in all of about 30,000, was posted along with King James on the right bank of the Boyne river, about 25 miles north of Dublin. The army of King William, of rather greater numbers, partly English regiments, partly Protestants of various continental

MEDAL STRUCK TO COMMEMORATE THE BATTLE OF THE BOYNE.

countries, approached the river from the north. Although the river was fordable, it was considered that James's army occupied a favourable position for resistance.

In the course of the day before the battle, the Irish army got an opportunity of firing a cannon at King William, as he was on horseback inspecting their position; and he was slightly wounded in the shoulder. The news that he was slain spread to Paris, Rome, and other strongholds of the Catholic religion, diffusing great joy; but it was quickly followed by intelligence which changed that joy into sorrow.

At an early hour on Tuesday, the 1st of July—a bright and beautiful summer morning—the right wing of the Protestant army made a detour by the bridge of Slane, to fall upon the left of the Irish host, while William conducted his left across the river by a ford, several miles in the other direction. The main body crossed directly, and found some difficulty in doing so, so that if well met by the enemy, they might have easily been defeated. But



the great mass of the Irish foot did not stop to fight; they ran away. For this their want of discipline, aided by lawless habits, is sufficient to account, without supposing that they were deficient in courage. Such panics, as we now know better than ever, are apt to happen with the raw troops of all countries. The Irish horse made a stout resistance; but when King William, having crossed the river, came upon them in flank, they were forced to retire. Thus, in a few hours, a goodly army was completely dissipated. King James pusillanimously fled to Dublin, as soon as he saw that the day was going against him. Nor did he stop till he had reached France, bringing everywhere the news of his own defeat. So it was that King William completed the triumph of the Protestant religion in these islands.

The anniversary of the day has ever since been held in great regard by the Protestants in Ireland. As it gave them relief from the rule of the Catholic majority, the holding of the day in affectionate remembrance was but natural and allowable. Almost down to our time, however, the celebration has been managed with such strong external demonstrations—armed musterings, bannered processions, glaring insignia, and insulting party-cries—as could not but be felt as grievous by the Catholics; and the consequence has been that the fight begun on Boyne Water in 1690, has been in some degree renewed every year since. In private life, to remind a neighbour periodically of some humiliation he once incurred, would be accounted the perfection of bad-manners—how strange that a set of gallant gentlemen, numbering hundreds of thousands, should be unable to see how unpolite it is to keep up this 1st of July celebration, in the midst of a people whose feelings it cannot fail to wound!

MISADVENTURES OF A STATUE.

The services of King William in securing the predominance of the Protestant religion in Ireland, were acknowledged by the erection of an equestrian statue of him in College Green, Dublin. This work of art, composed of iron with a coating of lead, and solemnly inaugurated in 1701, has lived a very controversial life ever since—never, it may be said, out of hot water. Rather oddly, while looked on with intensest hatred by Catholics, even the Protestant lads of the college did not like it—for why, it turned its tail upon the university!

So, ever since that solemn affair in 1701, this unfortunate semblance of the hook-nosed Nassau has been subjected to incessant maltreatment and indignity, all magisterial denunciations notwithstanding. Some of the outrages committed upon it were of a nature rather to be imagined than described. On the 27th of June 1710, it was found to have been feloniously robbed of its regal sword and martial baton. The act was too gross to be overlooked. The corporation offered a reward of a hundred pounds for the discovery of the culprit or culprits; and three students of Trinity College were consequently accused, tried, and condemned to suffer six months' imprisonment, to pay a fine of one hundred pounds each, and to be carried to College Green, and there to stand before the statue, for half an hour, with this inscription on each of their breasts:—'I stand here for defacing the statue of our glorious deliverer, the late King William.' On account of their loss of prospects by expulsion from the college, and loss of health by incarceration in a noisome dungeon, the latter part of the sentence was remitted, and the fine reduced to five shillings. But neither severity nor lenity in the authorities seemed to afford the statue any protection; just four years after the students' affair, the baton was again taken away, and though

EQUESTRIAN STATUE OF WILLIAM III.

another reward of one hundred pounds was offered, the evil-doers were not discovered.

Twice a year, on the anniversaries of the battle of the Boyne, and birthday of King William, the statue was cleaned, white-washed, and decorated with a scarlet cloak, orange sash, and other appurtenances; while a bunch of green ribbons and shamrocks was symbolically placed beneath the horse's uplifted foot. Garlands of orange lilies, and streamers of orange ribbons, bedecked the honoured horse, while drums, trumpets, and volleys of musketry made the welkin ring in honour of the royal hero. Moreover, every person who chanced to pass that way, and did not humbly take off his hat, was knocked down, and then mercilessly kicked for presuming to fall in the presence of so noble a prince. As a natural consequence of these proceedings, during the other 363 days of the year, the then undressed and unprotected statue was so liberally besmeared with filth by the anti-Orange party, as to be a disgrace to a civilised city.

To chronicle all the mishaps of this statue, would require a volume. Many must be passed over; but one that occurred in the eventful year 1798, is worthy of notice. A well-known eccentric character, named Watty Cox, for many years the editor

of *The Irish Magazine*, having been originally a gunsmith, was expert in the use of tools, and being much annoyed by the helpless statue, he tried, one dark night, to file off the monarch's head. But the inner frame of iron *foiled*, as the Dublin wits said, the literary filer's foul attempt.

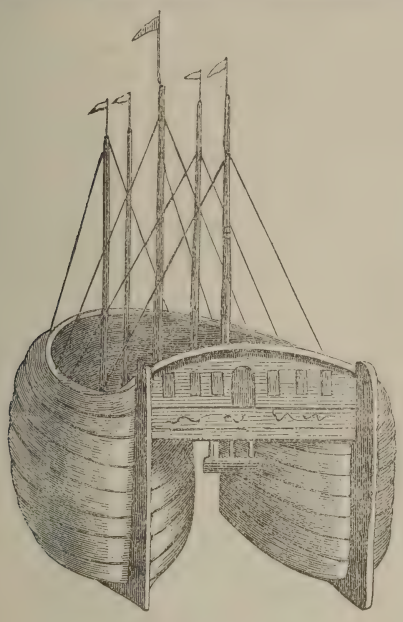
In 1805, the 4th of November falling upon a Sunday, the usual riotous demonstration around the statue was postponed till the following day. On the Saturday night, however, the watchman on College Green was accosted by a man, seemingly a painter, who stated that he had been sent by the city authorities to decorate the statue for the approaching festivities of the Monday; adding that the apprehended violence of the disaffected portion of the populace rendered it advisable to have the work done by night. The unsuspecting watchman assisted the painter in mounting the statue, and the latter plied his brush most industriously for some time. Then descending, he coolly requested the watchman to keep an eye to his painting utensils, while he went to his master's house for some more colours, necessary to complete the work. The night, however, passed away without the return of the painter, and at daybreak, on Sunday morning, the statue was found to be completely covered with an unctuous black pigment, composed of grease and tar, most difficult to remove; while the bucket that had contained the mixture was suspended by a halter fixed round the insulted monarch's neck. This act caused the greatest excitement among the Orange societies; but most fortunately for himself and friends, the adventurous artist was never discovered.

The annual custom of decorating the statue, so provocative of religious and political rancour, and the fertile source of innumerable riots, not unattended with loss of life, was put down by the enlightened judgment of the authorities, combined with the strong arm of the law, in 1822; and the miserable monument suffered less rough usage, until its crowning catastrophe happened in 1836. One midnight, in the April of that year, the statue blew up, with a terrific explosion, smashing and extinguishing the lamps for a considerable distance. The body was blown in one direction, the broken legs and arms in another, and the wretched horse, that had suffered so many previous injuries, was shattered to pieces. An offered reward of £200 failed to discover the perpetrators of this deed.

The statue was repaired and replaced in its old position. Like an old warrior, who had seen long service and suffered many wounds, it gradually acquired a certain degree of respect, even from its enemies. The late Daniel O'Connell, during his year of mayoralty, caused it to be bronzed, thereby greatly improving its appearance: and ever since it has remained an ornament, instead of a disgrace, to the capital of Ireland.

THE CHEVALIER DE LA BARRE.

The case of Thomas Aikenhead, a youth hanged in Scotland in 1695, at the instigation of the clergy, for the imaginary crime of blasphemy, finds an exact parallel in a later age in France. A youth of nineteen, named the Chevalier de la Barre, was decapitated and then burned at Abbeville, on the 1st of July 1765, for mutilating a figure of Christ, which stood on the bridge of that town, this offence being regarded as sacrilege, for which a decree of Louis XIV. had assigned a capital punishment. Even when the local judgment on this unfortunate young man was brought for review before the parliament of Paris, there was a majority of fifteen to ten for confirming the sentence; so strongly did superstition still hold the minds of the upper classes in France. Does it not in some measure explain the spirit under which Voltaire, Diderot, and others were then writing?



It is to be admitted of the first of these writers, amidst all that is to be reprobated in his conduct, that he stood forth as the friend of humanity on several remarkable occasions. His energy in obtaining the vindication of the Calas family will always redound to his praise. He published an account of the case of the Chevalier de la Barre, from which it appears that his persecutors gave him at the last for a confessor and assistant a Dominican monk, the friend of his aunt, an abbess in whose convent he had often supped. When the good man wept, the chevalier consoled him. At their last dinner, the Dominican being unable to eat, the chevalier said to him: 'Pray, take a little nourishment; you have as much need of it as I to bear the spectacle which I am to give.' The scaffold, on which five Parisian executioners were gathered, was mounted by the victim with a calm courage; he did not change colour, and he uttered no complaint, beyond the remark: 'I did not believe they could have taken the life of a young man for so small a matter.'

THE FIRST STEAMER ON THE THAMES.

The London newspapers in 1801 contained the following very simple announcement, in reference to an event which took place on the 1st of July, and which was destined to be the precursor of achievements highly important to the wellbeing of society: 'An experiment took place on the river Thames, for the purpose of working a barge or any other heavy craft against tide by means of a steam-engine on a very simple construction. The moment the engine was set to work, the barge was brought about, answering her helm quickly; and she made way against a strong current, at the rate of two miles and a half an hour.'

The historians of steam-navigation seem to have lost sight of this incident. But in truth it was only a small episode in a series, the more important items of which had already appeared in Scotland. Mr Patrick Miller, banker, Edinburgh, made literally the first experiments in steam-navigation in this hemisphere. [There were some similarly obscure experiments at an earlier date in America.] Mr Miller's own plan at the first was to have a double boat, with a wheel in the centre, to be driven by man's labour. Annexed is a copy of a contemporary drawing of his vessel, which was ninety feet long, and cost £3000. It proved a failure by reason of the insupportable labour required to drive the wheel. His sons' tutor, Mr James Taylor, then suggested the application of the steam-engine as all that was necessary for a triumph over wind and tide, and he was induced, with the practical help of a mechanician named Symington, recommended by Taylor, to get a

smaller vessel so fitted up, which was actually tried with success upon the lake near his mansion of Dalswinton, in Dumfriesshire, in October 1788, the boat going at the rate of five miles an hour.

DOUBLE BOAT.

The little steam-engine used in this interesting vessel is preserved in the Andersonian Museum at Glasgow.

Encouraged by this happy trial and the applause of his friends, Mr Miller bought one of the boats used upon the Forth and Clyde Canal, and employed the Carron Iron Company to make a steam-engine on a plan devised and superintended by Symington. On the 26th of December 1789, the steamer thus prepared, tugged a heavy load on the above-named canal, at the speed of seven miles an hour. For some reason or other, nothing further was done for many years; the boat was dismantled and laid up. From this time we hear no more of Mr Miller; he turned his attention to other pursuits, chiefly of an agricultural nature. Mr Taylor, without his patron, could do nothing. In 1801, Lord Dundas, who was largely interested in the success of the canal, employed Symington to make experiments for working the canal trade by steam-power instead of horse-power. A steamer was built, called the *Charlotte Dundas*—the first ever constructed expressly for steam-navigation, its predecessors having been mere make-shifts. A steam-engine was made suitable for it; and early in 1802, the boat drew a load of no less than seventy tons at a rate of three miles and a quarter per hour, against a strong gale. An unexpected obstacle dashed the hopes of the experimenters; some one asserted that the surf or wave occasioned by the motion of the steamer would damage the banks of the canal; the assertion was believed, and the company declined any further experiments. What took place after another interval of discouragement and inaction will be related in another place.

JULY 2.

The Visitation of the Blessed Virgin. Saints Processus and Martinian, martyrs, 1st century. St Monegondes, recluse at Tours, 570. St Oudoceus, bishop of Llandaff, 6th century. St Otho, bishop of Bamberg, confessor, 1139.

Visitation of the Virgin Mary.

In the Romish church, the visit paid by the Virgin Mary to her cousin Elizabeth (St Luke i. 39, 40) is celebrated by a festival on this day, instituted by Pope Urban VI. in 1383; which festival continues to be set down in the calendar of the reformed Anglican Church.

Born.—Christian II., king of Denmark, 1480; Archbishop Cranmer, 1489, *Aslacton, Notts;* Frederick Theophilus Klopstock, German poet, 1724, *Quedlinburg, Saxony;* Henry, third Marquis of Lansdowne, statesman, 1780.

Died.—Henry I., emperor of Germany (*the Fowler*), 936; Michel Nostradamus (predictions), 1566, *Salon;* Jean Jacques Rousseau, 1778, *Ermenonville;* Dionysius Diderot, philosophical writer, 1784, *Paris;* Dr Hahnemann, originator of homœopathy, 1843, *Paris;* Sir Robert Peel, statesman, 1850, *London;* William Berry (works on heraldry), 1851, *Brixton.*

KLOPSTOCK.

The German poet Klopstock enjoyed a great celebrity in his own day, not less on account of his *Odes*, many of which are excellent, than for that more ambitious sacred poem, called *The Messiah*, upon which the fabric of his fame was first built. This celebrated epic was written in hexameters, a species of verse little employed by his predecessors, but not uncongenial to German rhythm. Klopstock formed himself on Milton and Young, and is styled in his own country the *Milton* of Germany: but he soars rather with the wing of the owl than the wing of the eagle. His ode *To Young*, as the composition of a stranger, will be interesting to English readers, and serves very well as a clue to his genius.

TO YOUNG—1752.

Die, aged prophet: lo, thy crown of palms
Has long been springing, and the tear of joy
Quivers on angel-lids
Astart to welcome thee.
Why linger? Hast thou not already built
Above the clouds thy lasting monument?
Over thy night-thoughts, too,
The pale free-thinkers watch,
And feel there 's prophecy amid the song,
When of the dead-awakening trump it speaks,
Of coming final doom,
And the wise will of heaven.
Die: thou hast taught me that the name of death
Is to the just a glorious sound of joy:
But be my teacher still,
Become my genius there.

The language of this ode approaches to a style which in English is termed *bathos*. As a proof of the wide-spread fame which Klopstock acquired in his own country, we briefly subjoin the account of his funeral, in the words of Mr Taylor's *Historical Survey of German Poetry:* 'Klopstock died in 1803, and was buried with great solemnity on the 22d

of March, eight days after his decease. The cities of Hamburg and Altona concurred to vote him a public mourning; and the residents of Denmark, France, Austria, Prussia, and Russia joined in the funeral-procession. Thirty-six carriages brought the senate and magistracy, all the bells tolling; a military procession contributed to the order and dignity of the scene; vast bands of music, aided by the voices of the theatre, performed appropriate symphonies, or accompanied passages of the poet's works. The coffin having been placed over the grave, the preacher, Meyer, lifted the lid, and deposited in it a copy of *The Messiah;* laurels were then heaped on it; and the death of Martha, from the fourteenth book, was recited with chaunt. The ceremony concluded with the dead mass of Mozart.'

THE PROPHECIES OF NOSTRADAMUS.

Princes, and other great people, besides many learned men, three centuries ago, paid studious attention to a set of mystic prophecies in French quatrains, which had proceeded from a Provençal physician, named Nostradamus, and were believed to foreshadow great historical events. These predictions had been published in a series of little books, containing each a hundred, and they were afterwards collected into one volume. Our copy of Nostradamus is one published in London in 1672, with English translations and notes, by a refugee French physician, named Theophilus de Garencieres, who had himself a somewhat remarkable history. Wood informs us that he died of a broken heart, in consequence of the ill-usage he received from a certain knight. He himself, though a doctor of Oxford, and member of the Royal College of Physicians of London, appears to have been a devout believer in the mystic enunciations which he endeavoured to represent in English. He had, indeed, imbibed this reverence for the prophet in his earliest years, for, strange to say, the brochures containing these predictions were the primers used about 1618 in the schools of France, and through them he had learned to read. The frontispiece of the English translation represents Garencieres as a thin elderly man with a sensitive, nervous-bilious countenance, seated, in a black gown with wig and bands, at a table, with a book and writing materials before him, and also a carafe bottle containing what appears as figures of the sun and crescent moon.

DR GARENCIERES. THE TRANSLATOR OF NOSTRADAMUS.

Michael Nostradamus (the name was a real one) saw the light at St Remy, on the 14th of December 1503, and died, as our prefatory list informs us, on the 2d of July 1566. He studied mathematics, philosophy, and physic, and appears to have gained reputation as a medical man before becoming noted as a mystogogue. He was twice married, and had several children; he latterly was settled at Salon, a town between Marseille and Avignon. It was with the view of improving his medical gifts that he studied astrology, and thus was led to foretell events. His first efforts in this line took the humble form of almanac-making. His almanacs became popular; so much so, that imitations of them appeared, which, being thought his, and containing nothing but folly, brought him discredit, and caused the poet Jodelle to salute him with a satirical couplet:

'*Nostra damus* cum falsa damus, nam fallere nostra est,
Et cum falsa damus, nil nisi *Nostra damus.*'

That is: 'We give our own things when we give false things, for it is our peculiarity to deceive, and when we give false things, we are only giving our own things.' His reputation was confirmed by the publication, in 1555, of some of his prophecies, which attracted so much regard, that Henry II.

sent for him to Paris, and consulted him about his children. One of these, when king under the name of Charles IX., making a progress in Provence in 1564, did not fail to go to Salon to visit the prophet, who was commissioned by his fellow-townsmen to give the young monarch a formal reception. Charles, and his mother, Catharine de' Medici, also sent for him on one occasion to Lyon, where each gave him a considerable present in gold, and the king appointed him his physician. Many of his contemporaries thought him only a doting fool; but that the great bulk of French society was impressed by his effusions, there is no room to doubt.

The quatrains of the Salon mystic, are set forth by himself as arising from judicial astrology, with the aid of a divine inspiration. 'I am,' he said, 'but a mortal man, and the greatest sinner in the world; but, being surprised occasionally by a prophetical humour, and by a long calculation, pleasing myself in my study, I have made books of prophecies, each one containing a hundred astronomical stanzas.' We are to understand that Nostradamus lived much in solitude—spent whole nights in his study, withdrawn into intense meditation—and considered himself as thus attaining to a participation in a supernatural knowledge flowing directly from God. He was probably quite sincere in believing that coming events cast their shadows on his mind.

Nor are we left without instances of his acting much as the seer of the Scottish Highlands in the midst of the ordinary affairs of life. One day, being at the castle of Faim, in Lorraine, attending on the sick mother of its proprietor the Lord of Florinville, he chanced to walk through the yard, where there were two little pigs, one white, the other black. 'The lord inquired in jest, what should come of these two pigs. He answered presently: "We shall eat the black, and the wolf shall eat the white." The Lord Florinville, intending to make him a liar, did secretly command the cook to dress the white for supper. The cook then killed the white, dressed it, and spitted it ready to be roasted, when it should be time. In the meantime, having some business out of the kitchen, a young tame wolf came in and ate up the buttocks of the white pig. The cook coming in, and fearing lest his master should be angry, took the black one, killed, and dressed it, and offered it at supper. The lord, thinking he had got the victory, not knowing what was befallen, said to Nostradamus: "Well, sir, we are now eating the white pig, and the wolf shall not touch it." "I do not believe it," said Nostradamus; "it is the black one that is upon the table." Presently the cook was sent for, who confessed the accident, the relation of which was as pleasing to them as any meat.' *

The prophecies of the Salon seer appear to us, in these modern days, as vague and incoherent rhapsodies, extremely ill adapted for being identified with any actual event. And even when it is possible to say that some particular event seems faintly intimated in one of these quatrains, it is generally accompanied by something else so irrelevant, that we are induced almost irresistibly to trace it to accident. One of the predictions which most conduced to raise his reputation, was the following:

> Le Lion jeune le vieux surmontera,
> En champ bellique par singulier duelle,
> Dans cage d'or l'œil il lui crevera,
> Deux playes une puis mourir mort cruelle.
>
> [The young lion shall overcome the old one,
> In martial field by a single duel,
> In a golden cage he shall put out his eye,
> Two wounds from one; then shall he die a cruel death.]

It was thought that this prophecy, uttered in 1555, was fulfilled when Henry II., in 1559, tilting with a young captain of his guard, at a tournament, received a wound from the splinter of a lance in the right eye, and died of it in great pain, ten days after. But here we must consider these two combatants as properly called lions; we must take the king's gilt helmet for the golden cage; and consider the imposthume which the wound created, as a second wound; all of them concessions somewhat beyond what we can regard as fair.

Another of the predictions thought to be clearly fulfilled, was the following:

> Le sang de juste à Londres sera faute,
> Brulez par feu, de vingt et trois, les Six,
> La Dame antique cherra de place haute
> De meme secte plusieurs seront occis.
>
> [The blood of the just shall be wanting in London,
> Burnt by fire of three and twenty, the Six,
> The ancient dame shall fall from her high place,
> Of the same sect many shall be killed.]

It was supposed that the death of Charles I., and the fire of London, were here adumbrated; but the correspondence between the language and the facts is of the most shadowy kind. Another line, 'Le Senat de Londres metteront à mort le Roy,' appears a nearer hit at the bloody scene in front of Whitehall. There is also some felicity in 'Le Oliver se plantera en terra firme,' if we can render it as, 'Oliver will get a footing on the continent,' and imagine it as referring to Cromwell's success in Flanders. Still, even these may be regarded as only chance hits amongst a thousand misses. One learns with some surprise that, well on in the eighteenth century, there was a lingering respect for the dark sayings of Nostradamus. Poor Charles Edward Stuart, in his latter days, scanned the mystic volume, anxious to find in it some hint at a restoration of the right royal line of Britain.

Connected with Nostradamus and the town of Salon, there is a ghost-story of a striking character, which we believe is not much known, and may probably amuse the faculty of wonder in a considerable portion of the readers of the *Book of Days*.

It was in the month of April 1697, that a spirit, which some believed to be no other than that of the great prophet, appeared to a man of the humbler class at Salon, commanding him on pain of death to observe inviolable secrecy in regard of what he was about to deliver. 'This done, it ordered him to go to the intendant of the province, and require, in its name, letters of recommendation, that should enable him, on his arrival at Versailles, to obtain a private audience of the king. "What thou art to say to the king," continued the apparition, "thou wilt not be informed of till the day of thy being at court, when I shall

* Garencieres's Life of Nostradamus, prefixed to English edition of the Prophecies, 1672.

appear to thee again, and give thee full instructions. But forget not that thy life depends upon the secrecy which I enjoin thee on what has passed between us, towards every one, only not towards the intendant." At these words the spirit vanished, leaving the poor man half dead with terror. Scarcely was he come a little to himself, when his wife entered the apartment where he was, perceived his uneasiness, and inquired after the cause. But the threat of the spectre was yet too much present to his mind, to let her draw a satisfactory answer from him. The repeated refusals of the husband did but serve to sharpen the curiosity of the wife; the poor man, for the sake of quietness, had at length the indiscretion to tell her all, even to the minutest particulars: and the moment he had finished his confession, he paid for his weakness by the loss of his life. The wife, violently terrified at this unexpected catastrophe, persuaded herself, however, that what had happened to her husband might be merely the effect of an overheated imagination, or some other accident; and thought it best, as well on her own account, as in regard to the memory of her deceased husband, to confide the secret of this event only to a few relations and intimate friends.

'But another inhabitant of the town, having, shortly after, the same apparition, imparted the strange occurrence to his brother; and his imprudence was in like manner punished by a sudden death. And now, not only at Salon, but for more than twenty miles around, these two surprising deaths became the subject of general conversation.

'The same ghost again appeared, after some days, to a farrier, who lived only at the distance of a couple of houses * from the two that had so quickly died; and who, having learned wisdom from the misfortune of his neighhours, did not delay one moment to repair to the intendant. It cost him great trouble to get the private audience, as ordered by the spectre, being treated by the magistrate as a person not right in the head. "I easily conceive, so please your excellency," replied the farrier, who was a sensible man, and much respected as such at Salon, "that I must seem in your eyes to be playing an extremely ridiculous part; but if you would be pleased to order your sub-delegates to enter upon an examination into the hasty death of the two inhabitants of Salon, who received the same commission from the ghost as I, I flatter myself that your excellency, before the week be out, will have me called."

'In fact, François Michel, for that was the farrier's name, after information had been taken concerning the death of the two persons mentioned by him, was sent for again to the intendant, who now listened to him with far greater attention than he had done before; then giving him dispatches to Mons. de Baobefieux, minister and secretary of state for Provence, and at the same time presenting him with money to defray his travelling expenses, wished him a happy journey.

'The intendant, fearing lest so young a minister as M. de Baobefieux might accuse him of too great credulity, and give occasion to the court to make themselves merry at his expense, had enclosed with the dispatches, not only the records of the examinations taken by his sub-delegates at Salon, but also added the certificate of the lieutenant-general de justice, which was attested and subscribed by all the officers of the department.

Michel arrived at Versailles, and was not a little perplexed about what he should say to the minister, as the spirit had not yet appeared to him again according to its promise. But in that very night the spectre threw open the curtains of his bed, bid him take courage, and dictated to him, word for word, what he was to deliver to the minister, and what to the king, and to them alone. "Many difficulties will be laid in thy way," added the ghost, "in obtaining this private audience; but beware of desisting from thy purpose, and of letting the secret be drawn from thee by the minister or by any one else, as thou wouldst not fall dead upon the spot."

'The minister, as may easily be imagined, did his utmost to worm out the mystery: but the farrier was firm, and kept silence, swore that his life was at stake, and at last concluded with these words: that he might not think that what he had to tell the king was all a mere farce, he need only mention to his majesty, in his name, "that his majesty, at the last hunting-party at Fontainebleau, had himself seen the spectre; that his horse took fright at it, and started aside; that his majesty, as the apparition lasted only a moment, took it for a deception of sight, and therefore spoke of it to no one."

'This last circumstance struck the minister; and he now thought it his duty to acquaint the king of the farrier's arrival at Versailles, and to give him an account of the wonderful tale he related. But how great was his surprise, when the monarch, after a momentary silence, required to speak with the farrier in private, and that immediately!

'What passed during this extraordinary interview never transpired. All that is known is, that the spirit-seer, after having stayed three or four days at court, publicly took leave of the king, by his own permission, as he was setting out for the chase.

'It was even asserted that the Duc de Duras, captain of the guard in waiting, was heard to say aloud on the occasion: "Sire, if your majesty had not expressly ordered me to bring this man to your presence, I should never have done it, for most assuredly he is a fool!" The king answered smiling: "Dear Duras, thus it is that men frequently judge falsely of their neighbour; he is a more sensible man than you and many others imagine."

'This speech of the king's made great impression. People exerted all their ingenuity, but in vain, to decipher the purport of the conference between the farrier and the king and the minister Baobefieux. The vulgar, always credulous, and consequently fond of the marvellous, took it into their heads that the imposts, which had been laid on by reason of the long and burdensome war, were the real motives of it, and drew from it happy omens of a speedy relief; but they, nevertheless, were continued till the peace.

'The spirit-seer having thus taken leave of the king, returned to his province. He received money of the minister, and a strict command never to mention anything of the matter to any person, be he who he would. Roullet, one of the best artists of the time, drew and engraved the portrait of this

* Might not perhaps this circumstance, properly seized, have conduced to trace out the affair?

farrier. Copies are still existing in several collections of prints in Paris. That which the writer of this piece has seen, represented the visage of a man from about thirty-five to forty years of age; an open countenance, rather pensive, and had what the French term *physionomie de caractere.*'

THE TIR FEDERAL, OR RIFLE-SHOOTING MATCH IN SOLEURE.

THE Swiss have been famed for the use of the rifle long before English volunteers disputed the prize of all nations with them. Their national gathering is the greatest festival in the year, and is got up in so picturesque a style, that the tourist may well tarry a few days in order to have an opportunity of witnessing it, when he may also observe the national manners and costume more closely than he will be able to do in a hasty tour through the country. It is held at each of the capitals of the cantons in turn the first week in July, commencing invariably on a Sunday. On Saturday evening, all the hotels are crowded for the opening procession next Sunday morning. From six A.M. on that day until nine, on the occasion when the writer was present, the broad flight of steps leading up to the cathedral at Soleure was crowded by worshippers. Mass was repeated again and again to each relay, and then, the religious duties of the day being over, all gave themselves up to pleasure. The streets were one mass of people waiting for the procession. The burning sun of a beautiful summer-day lightened up the scene, the cannon roared, bands of music added their sweet tones, and the variety of a hundred gay and fantastic costumes dazzled the eye of the amused spectator in the windows. Then came the cry: 'Here is the procession.' At its head walked the juniors, with two pieces of cannon and fifty guns; behind them a man in the costume of William Tell, the patron of riflemen, preceded the body of markers, who were dressed in bright-red blouses with white cordings, carrying at the end of a stick the white disks which serve to mark the shots. Then came the military band, followed by the committee carrying the federal banner, bearing the motto: 'LIBERTY, EQUALITY, FRATERNITY.' The deputations of marksmen from each canton, in the greatest variety of picturesque costume, followed: those of Soleure wearing gray felt-hats, adorned with green ribbons; the Hanseatic towns, Bremen and Lubeck, sent their quota, dressed in rich green and gold coats, with a high-crowned hat

SWISS PEASANTS AT THE TIR FEDERAL.

adorned with a plume of feathers. Most of those present had a bouquet of flowers in the front of their hats, no doubt given by some fair friend.

The shooting-ground was about half a mile from the city, a beautiful plain, surrounded by the Vosges Mountains. A splendid avenue of trees led up to the gay pavilion of glass (see illustration on the following page), where the prizes for the successful competitors were hung. They consisted of watches, rifles, cups, gold and silver dishes, coffers, and purses filled with gold Napoleons, amounting in all to a hundred and fifty thousand francs. To the left was the stand for the shooters, a long covered shed opposite twenty-seven targets, furnished with long tables for the convenience of loading. At each successful shot a paper ticket was given to the marksman, which he stuck in the ribbon of his hat; at the end of the day they were presented and counted up, and he who could return into the city in the evening with a hatful received much applause. Not the least amusing part was to turn to the right, and walk

through the magnificent dining-room, and then into the temporary kitchens, where hundreds of cooks were preparing substantial roast and boiled joints of meat, with puddings and pies innumerable. The writer could not help thinking how much better they manage the commissariat department abroad than in England, where the cold pork-pie and glass of ale is the usual refreshment at rifle reviews. The women take a very active part in the success of their brothers or lovers. Most of them were without bonnets: the Unterwalden, in their singular fan-like lace head-dress; the Bernese, in their wide-brimmed hats; the Loèche, with the circle of plaited ribbon, giving a most singular aspect to the scene; whilst the velvet corsage, white habit-shirt and sleeves, silver chains, and short petticoat bordered with red, is the picturesque costume of most of the women (see illustration

HALL OF PRIZES AT THE TIR FEDERAL.

on the preceding page). The shooting usually lasts from Sunday to Sunday, though sometimes, from the number of competitors, it is prolonged for a few days. The holders of prizes receive an enthusiastic ovation, each returning to his family and business with the reassuring sentiment that he belongs to one vast family, bearing this device: 'One for all, and all for one.'

OLD SCARLETT.

Died, July 2, 1591, Robert Scarlett, sexton of Peterborough Cathedral, at the age of 98, having buried two generations of his fellow-creatures. A portrait of him, hung up at the west end of that noble church, has perpetuated his fame, and caused him to be introduced in effigy in various works besides the present. And what a lively effigy—short, stout, hardy, and self-complacent, perfectly satisfied, and perhaps even proud of his profession, and content to be exhibited with all its insignia about him! Two queens had passed through his hands into that bed which gives a lasting rest to queens and to peasants alike. An officer of Death, who had so long defied his principal, could not but have made some impression on the minds of bishop, dean, prebends, and other magnates of the cathedral, and hence we may suppose the erection of this lively portraiture of the old man, which is believed to have been only once renewed since it was first put up. Dr Dibdin, who last copied it, tells us that 'old Scarlett's jacket and trunk-hose are of a brownish red, his stockings blue, his shoes black, tied with blue ribbands, and the soles of his shoes red. The cap upon his head is red, and so also is the ground of the coat armour.'

The following verses below the portrait are characteristic of his age:

'You see old Scarlett's picture stand on hie;
But at your feet here doth his body lye.
His gravestone doth his age and death-time shew,
His office by heis token [s] you may know.
Second to none for strength and sturdy lymm,
A scare-babe mighty voice, with visage grim;
He had interd two queenes within this place
And this townes householders in his life's space
Twice over, but at length his own time came,
What he for others did, for him the same
Was done: no doubt his soule doth live for aye,
In heaven, though here his body clad in clay.'

The first of the queens interred by Scarlett was Catharine, the divorced wife of Henry VIII., who died in 1535 at Kimbolton Castle, in Huntingdonshire. The second was Mary Queen of Scots, who was beheaded at Fotheringay in 1587, and first interred here, though subsequently transported to Westminster Abbey.

A droll circumstance, not very prominent in Scarlett's portrait, is his wearing a short whip under his girdle. Why should a sexton be invested with such an article? The writer has not the least doubt that old Robert required a whip to keep off the boys, while engaged in his professional operations. The curiosity of boys regarding graves and funerals is one of their most irrepressible passions. Every grave-digger who works in a churchyard open to the public, knows this well by troublesome experience. An old man, who about fifty years

OLD SCARLETT, THE PETERBOROUGH SEXTON.

ago pursued this melancholy trade at Falkirk, in Scotland, always made a paction with the boys before beginning—'Noo, laddies, ye maun bide awa for a while, and no tramp back the mools into the grave, and I 'll be sure to bring ye a' forrit, and let ye see the grave, when it 's dune.'

CHILDREN DETAINED FOR A FATHER'S DEBT.

On the 2d of July 1839, a singular trial came on before the Tribunal de Première Instance, at Paris, to determine whether the children of a debtor may be detained by the creditor as a pledge for the debt. Mr and Mrs ——, with five children, and some domestic servants, lived for a time at a large hotel at Paris; and as they could not or would not pay their account, they removed to a smaller establishment, the Hôtel Britannique, the owner of which consented to make himself responsible for the debt to the other house. After the family had remained with him for a considerable time, Mr —— disappeared, and never returned to the hotel, sending merely a letter of excuses. Then Mrs —— went away, leaving the children and servants behind. The servants were discharged; but the hotel-keeper kindly supported the five children thus strangely left on his hands, until his bill had run up to the large sum of 20,000 francs (about £800). A

demand was then made upon him (without revealing to him the present dwelling-place of the parents) to deliver up the children; he refused, unless the bill was paid; whereupon a suit was instituted against him. M. Charles Ledru, the advocate for the parents, passed the highest encomiums on the generous hotel-keeper, and said that he himself would use all his influence to induce the father to pay the debt so indisputably due; but added, that his own present duty was to contend against the detention of the children as a pledge for the debt. The president of the tribunal, M. Debelleyme, equally praised the hotel-keeper, but decided that the law of France would not permit the detention of the children. They were given up, irrespective of the payment of the debt, which was left to be enforced by other tribunals.

JULY 3.

St Phocas, martyr, 303. St Gunthiern, abbot in Brittany, 6th century. St Bertran, bishop of Mans, 623. St Guthagon, recluse at Oostkerk, 8th century.

Born.—Louis XI. of France, 1423, *Bourges;* Henry Grattan, Irish parliamentary orator, 1746, *Dublin.*

Died.—Mary de Medicis, mother of Louis XIII. of France, 1642, *Cologne;* Ferdinand, Duke of Brunswick, 1792, *Brunswick.*

HENRY GRATTAN.

Ireland has great honour in producing Henry Grattan, and she will never be politically beyond hope while she continues to venerate his memory. With every temptation to become the tool of the British ministry, he came forward as the unflinching advocate of the just rights and independence of his country; a Protestant, he never ceased to claim equal rights for an opposite class of believers. In the blotted page of Irish history, it is truly a bright spot where Grattan (1780) obtains in the native parliament the celebrated resolution as to its sole competency to make laws for Ireland. An irreproachable private life admirably supports the grandeur of his public career.

An anecdote of Grattan's boyhood shews the possession of that powerful will without which there can be no true greatness: 'When very young, Mr Grattan had been frightened by stories of ghosts and hobgoblins, which nurses are in the habit of relating to children, so much so, as to affect his nerves in the highest degree. He could not bear being left alone, or remaining long without any person, in the dark. This feeling he determined to overcome, and he adopted a bold plan. In the dead of night he used to resort to a churchyard near his father's house, and there he used to sit upon the gravestones, whilst the perspiration poured down his face; but by these efforts he at length succeeded and overcame his nervous sensation. This certainly was a strong proof of courage in a child.'—*Memoirs of Henry Grattan by his Son* (1848), v. 212.

EXPIRATION OF THE CORNISH LANGUAGE.

The 3d of July is connected (in a very slight manner, it must be acknowledged) with an event of some importance—the utter death and extinction of one of the ancient provincial languages of England.

Many have been the conjectures as to the person and to the locality, where lived the last individual who could speak Cornish. Dr Borlase, who published his History in 1758, says that 'the language had altogether ceased, so as not to be spoken anywhere in conversation;' while Dr Bryce of Redruth affirms that the language had its last struggles for life, at or about the wild prominences of the Land's End. This fact Lhwyd, in a letter, March 10, 1701, corroborates. Our doubts are, however, settled by the detailed account of Dorothy Pentreath, *alias* Jeffries, who, born in 1681, lived at Mouse-hole, near Penzance, and conversed most fluently in the Cornish tongue. Her father, a fisherman, sent this young Sibyl at the age of twelve with fish to Penzance. In Cornish she sold them, no improbability, as not until over twenty could she speak a word of English. The name Pentreath signifies *the end of the sand.* The following lines, giving Cornish and English alternately, will serve to confirm the occupation of the Pentreaths:

TO NEIGHBOUR NICHOLAS PENTREATH.

Contreoak Nicholas Pentreath,
Neighbour Nicholas Pentreath,
Pa resso why doaz war an treath
When you come upon the sand,
Gen puseas, komero why wryth
With fish, take you care,
Tha geil compez, hedna yw fŷr
To do right, that is wise,
Ha cowz meaz Dega, dega,
And speak aloud Tythe, Tythe,
Enna ew ol guz dega gŵr.
There is all your true tythe.

The Hon. Daines Barrington, who travelled in Cornwall in 1768, had an interview with her, which is described in the *Archæologia*, vol. iii.: 'When we reached Mouse-hole, I desired to be introduced as a person who had laid a wager, that there was no one who could converse in Cornish. Upon which Dolly Pentreath spoke in an angry tone of voice for two or three minutes, in a language which sounded very much like Welsh. The hut in which she lived was in a very narrow lane, opposite to two rather better cottages, at the doors of which two other women stood, advanced in years, and who, I observed, were laughing at what Dolly Pentreath said to me. Upon this, I asked them whether she had not been abusing me; to which they answered: "Yes, very heartily, and because I supposed she could not speak Cornish." I then said they must be able to talk it; to which they answered, they could not speak it readily, but that they understood it, being only ten or twelve years younger than Dolly Pentreath.'

Six years after this visit, though bending with old age, and in her 87th year, Dolly Pentreath could walk six miles in bad weather, her intellect was unimpaired, and her memory so good that she recollected the gentleman who had such a curiosity to hear the Cornish language. The parish maintained her in her poverty, while her fortune-telling and gabbling Cornish also contributed to her maintenance. She was short of stature, and towards the end of her life somewhat deaf, but positive that she was the only person who could

speak or know anything about the ancient tongue of her country. She died January 1778, and was buried in Paul Churchyard, where her epitaph, supposed to have been written by Mr Thomson of Truro, ran thus:

'Coth Doll Pentreath eans ha dean,
Marow ha kledyz ed Paul pleu,
Na ed an Egloz, gan pobel brâs,
Bes ed Egloz—hay coth Dolly es.'

Old Doll Pentreath, one hundred aged and two,
Deceased, and buried in Paul parish too,
Not in the church with folks great,
But in the churchyard, doth old Dolly lie.

Thus much for Dolly. We also learn that the language was not entirely lost by her death; for a fisherman of Mouse-hole, in 1797, informed Mr Barrington, that one William Bodenoer was the last person of that place who could speak in Cornish. This man, some years younger than Dolly, frequently conversed with her, but their conversation was scarcely understood by any one of that place. Impossible as it is precisely to fix upon the very last conversationalist, all accounts agree in making Dorothy the latest fluent speaker. Though her successors may have understood the language, they were unable to maintain a dialogue in the manner in which she did. A letter from Bodenoer, dated July 3, 1776 (two years before Dorothy's death), will shew the condition of the language:

'Bluth vee Eue try Gevree a pemp,
Theatra vee pean boadjaek an poscas
Me rig deskey Cornoaek termen me vee mave,
Cornoaek ewe all ne,
Cea ves yen pobble younk.

My age is threescore-and-five,
I am a poor fisherman,
I learned Cornish when I was a boy.
Cornish is all forgot
With young people.'

Archæologia, vol. v.

Bodenoer died in 1794, leaving two sons, who knew not enough of the Cornish to converse in it. If the visitor to Penzance will direct his steps three miles west of that place, he will hear somewhat of Dorothy Pentreath, and of that language, which, now forgotten, found in her its last efficient representative.

EXTRAORDINARY CALCULATORS.

On the 3d of July 1839, some of the eminent members of the Academy of Sciences at Paris, including MM. Arago, Lacroix, Libri, and Sturm, met to examine a remarkable boy, whose powers of mental calculation were deemed quite inexplicable. The boy, named Vito Mangiamele, a Sicilian, was the son of a shepherd, and was about eleven years old. The examiners asked him several questions which they knew, under ordinary circumstances, to be tedious of solution—such as, the cube root of 3,796,416, and the 10th root of 282,475,249; the first of these he answered in half a minute, the second in three minutes. One question was of the following complicated character: 'What number has the following proportions, that if its cube is added to 5 times its square, and then 42 times the number, and the number 40 be subtracted from the result, the remainder is equal to 0 or zero?' M. Arago repeated this question a second time, but while he was finishing the last word, the boy replied: 'The number is 5!'

Such cases greatly puzzle ordinary mathematicians. Buxton, Colburn, and Bidder, have at different times exhibited this unaccountable power of accounting. Jedediah Buxton, although his grandfather was a clergyman and his father a schoolmaster, was so neglected in his education that he could not even write; his mental faculties were slow, with the one wonderful exception of his power of mental arithmetic. After hearing a sermon, he remembered and cared for nothing concerning it except the number of words, which he had counted during their delivery. If a period of time, or the size of an object, were mentioned in his hearing, he almost unconsciously began to count how many seconds, or how many hair's-breadths there were in it. He walked from Chesterfield to London on purpose to have the gratification of seeing George II.; and while in the metropolis, he was taken much notice of by members of the Royal Society. On one occasion he went to see Garrick in *Richard III.;* but instead of attending to the performance in the usual way, he found occupation in counting the number of words uttered by each performer. After striding over a field in two or three directions, he would tell the number of square inches it contained. He could number all the pints of beer he had drunk at all the houses he had ever visited during half a century. He once set himself to reckon how much a farthing would amount to if doubled 140 times; the result came out in such a stupendous number of pounds sterling as required 39 places of figures to represent it. In 1750 this problem was put to him: to find how many cubical eighths of an inch there are in a quadrangular mass measuring 23,145,789 yards long, 5,642,732 yards wide, and 54,965 yards thick; he answered this, as all the others, mentally. On one occasion he made himself what he called 'drunk with reckoning' the following: 'In 200,000 million cubic miles, how many grains of eight different kinds of corn and pulse, and how many hairs one inch long?' He ascertained by actual counting how many of each kind of grain, and how many hairs an inch long, would go to an inch cube, and then set himself about his enormous self-imposed task. He could suspend any of his problems for any length of time, and resume it at the point where he left off; and could converse on other subjects while thus employed. He could never give any account of the way in which he worked out his problems; nor did his singular but exceptional faculty bring him any other advantage than that of being invited to the houses of the gentry as a kind of show.

Zerah Colburn, who excited much interest in London in 1812, was a native of Vermont, in the United States. At six years old, he suddenly shewed extraordinary powers of mental calculation. By processes which seemed to be almost unconscious to himself, and were wholly so to others, he answered arithmetical questions of considerable difficulty. When eight years old, he was brought to London, where he astonished many learned auditors and spectators by giving correct solutions to such problems as the following: raise 8 up to

the 16th power; give the square root of 106,929: give the cube root of 268,336,125; how many seconds are there in 48 years? The answers were always given in a very few minutes—sometimes in a few seconds. He was ignorant of the ordinary rules of arithmetic, and did not know how or why particular modes of process came into his mind. On one occasion, the Duke of Gloucester asked him to multiply 21,734 by 543; something in the boy's manner induced the duke to ask how he did it, from which it appeared that the boy arrived at the result by multiplying 65,202 by 181, an equivalent process; but why he made this change in the factors, neither he nor any one else could tell. Zerah Colburn was unlike other boys also in this, that he had more than the usual number of toes and fingers; a peculiarity observable also in his father and in some of his brothers.

An exceptional instance is presented in the case of Mr Bidder, of this faculty being cultivated to a highly useful purpose. George Parker Bidder, when six years old, used to amuse himself by counting up to 100, then to 1000, then to 1,000,000; by degrees he accustomed himself to contemplate the relations of high numbers, and used to build up peas, marbles, and shot, into squares, cubes, and other regular figures. He invented processes of his own, distinct from those given in books on arithmetic, and could solve all the usual questions mentally more rapidly than other boys with the aid of pen and paper. When he became eminent as a civil engineer, he was wont to embarrass and baffle the parliamentary counsel on contested railway bills, by confuting their statements of figures almost before the words were out of their mouths. In 1856, he gave to the Institution of Civil Engineers an interesting account of this singular arithmetical faculty—so far, at least, as to shew that *memory* has less to do with it than is generally supposed; the processes are actually worked out *seriatim*, but with a rapidity almost inconceivable.

JULY 4.

St Finbar, abbot. St Bolcan, abbot. St Sisoes or Sisoy, anchoret in Egypt, about 429. St Bertha, widow, abbess of Blangy, in Artois, about 725. St Ulric, bishop of Augsburg, confessor, 973. St Odo, archbishop of Canterbury, confessor, 10th century.

Translation of St Martin.

That the Church of Rome should not only celebrate the day of St Martin's death (November 11), but also that of the transference of his remains from their original humble resting-place to the cathedral of Tours, shews conclusively the veneration in which this soldier-saint was held. (See under November 11.) The day continues to have a place in the Church of England calendar.

In Scotland, this used to be called St Martin of Bullion's Day, and the weather which prevailed upon it was supposed to have a prophetic character. It was a proverb, that if the deer rise dry and lie down dry on Bullion's Day, it was a sign there would be a good gose-harvest—gose being a term for the latter end of summer; hence gose-harvest was an early harvest. It was believed generally over Europe that rain on this day betokened wet weather for the twenty ensuing days.

Born.—Christian Gellert, German poet and fabulist, 1715, *Chemnitz, Saxony.*

Died.—Lord Saye and Seal, beheaded, 1450, *London;* William Birde, English composer of sacred music, 1623; Meric Casaubon, learned and controversial writer, 1671, *bur. Canterbury Cathedral;* Henry Bentinck, first Duke of Portland, 1726, *Jamaica;* Samuel Richardson, novelist, 1761; Fisher Ames, American statesman, President of Harvard College, 1808, *Boston, U. S.;* Richard Watson, bishop of Llandaff, 1816; John Adams, second president of the United States, 1826; Thomas Jefferson, third president of the United States, 1826; Rev. William Kirby, naturalist, 1850, *Barham, Suffolk;* Richard Grainger, the re-edifier of Newcastle-on-Tyne, 1861, *Newcastle.*

THOMAS JEFFERSON.

The celebrated author of the American Declaration of Independence, entered life as a Virginian barrister, and, while still a young man, was elected a member of the House of Burgesses for his state. When the disputes between the colonies and mother-country began, he took an active part in the measures for the resistance of taxation, and for diffusing the same spirit through the other provinces. Elected in 1775 to the Continental Congress, he zealously promoted the movement for a complete separation from England, and in the Declaration of Independence, which was adopted on the 4th of July 1776, he laid down the propositions, since so often quoted, that 'all men are created equal,' with 'an inalienable right' to 'life, liberty, and the pursuit of happiness,' and that 'governments derive their just powers from the consent of the governed.' When the cause of independence became triumphant, Mr Jefferson naturally took a high place in the administration of the new government. He successively filled the posts of governor of Virginia, secretary of state under the presidency of Washington, and vice-president under that of John Adams; finally, in 1801, attaining to the presidency, which he held for two terms or eight years. While Washington and Adams aimed at a strong, an aristocratic, and a centralising government, Jefferson stood up as the advocate of popular rights and measures. He headed the Liberal Republican, or, as it was afterwards called, the Democratic party. He laboured for civil and religious liberty and education. He secured the prohibition of the slave trade, and of slavery over a vast territory, and was in favour of universal emancipation. In Virginia, he secured the abolition of a religious establishment, and of entails, and the equal rights of both sexes to inheritance. The most important measure of his administration was the acquisition of Louisiana, including the whole territory west of the Mississippi, which was purchased of France for 15,000,000 dollars. His administration was singularly free from political favouritism. It is remembered as one of his sayings, that 'he could always find better men for every place than his own connections.'

After retiring from the presidency, he founded the university of Virginia, carried on an extensive correspondence, entertained visitors from all parts of the world, and enjoyed his literary and philosophical pursuits. He was married early in life, and had one daughter, whose numerous children were the solace of his old age. At the age of eighty, he wrote to John Adams, with whom, in spite of

political differences, he maintained a warm personal friendship: 'I have ever dreaded a doting age; and my health has been generally so good, and is now so good, that I dread it still. The rapid decline of my strength, during the last winter, has made me hope sometimes that I see land. During summer I enjoy its temperature; but I shudder at the approach of winter, and wish I could sleep through it with the dormouse, and only wake with him in the spring, if ever. They say that Stark could walk about his room.* I am told you walk well and firmly. I can only reach my garden, and that with sensible fatigue. I ride, however, daily, but reading is my delight.—God bless you, and give you health, strength, good spirits, and as much life as you think worth having.'

The death of Jefferson, at the age of eighty-three, was remarkable. Both he and his friend John Adams, the one the author and the other the chief advocate of the Declaration of Independence—each having filled the highest offices in the Republic they founded—died on the 4th of July 1826, giving a singular solemnity to its fiftieth anniversary.

On the tomb of Jefferson, at Monticello, he is described as the author of the Declaration of Independence, the founder of religious freedom in Virginia, and of the university of Virginia; but there is a significant omission of the fact, that he was twice president of the United States.

'THE FOURTH OF JULY.'

Where a country or a government has been baffled in its efforts to attain or preserve a hated rule over another people, it must be content to see its failure made the subject of never-ending triumph and exultation. The joy attached to the sense of escape or emancipation tends to perpetuate itself by periodical celebrations, in which it is not likely that the motives of the other party, or the general justice of the case, will be very carefully considered or allowed for. We may doubt if it be morally expedient thus to keep alive the memory of facts which as certainly infer mortification to one party as they do glorification to another: but we must all admit that it is only natural, and in a measure to be expected.

The anniversary of the Declaration of Independence, July 4, 1776, has ever since been celebrated as a great national festival throughout the United States, and wherever Americans are assembled over the world. From Maine to Oregon, from the Great Lakes to the Gulf of Mexico, in every town and village, this birthday of the Republic has always hitherto been ushered in with the ringing of bells, the firing of cannon, the display of the national flag, and other evidences of public rejoicing. A national salute is fired at sunrise, noon, and at sunset, from every fort and man of war. The army, militia, and volunteer troops parade, with bands of music, and join with the citizens in patriotic processions. The famous Declaration is solemnly read, and orators, appointed for the occasion, deliver what are termed *Fourth of July Orations*, in which the history of the country is reviewed, and its past and coming glories proclaimed. The virtues of the Pilgrim Fathers, the heroic exertions and sufferings of the soldiers of the Revolution, the growth and power of the Republic, and the great future which expands before her, are the staple ideas of these orations. Dinners, toasts, and speeches follow, and at night the whole country blazes with bonfires, rockets, Roman candles, and fireworks of every description. In a great city like New York, Boston, or Philadelphia, the day, and even the night previous, is insufferably noisy with the constant rattle of Chinese-crackers and firearms. In the evening, the displays of fireworks in the public squares, provided by the authorities, are often magnificent.

John Adams, second president of the United States, and one of the most distinguished signers of the Declaration of Independence, in a letter written at the time, predicted the manner in which it would be celebrated, and his prediction has doubtless done something to insure its own fulfilment. Adams and Jefferson, two of the signers, both in turn presidents, by a most remarkable coincidence died on the fiftieth anniversary of Independence, in the midst of the national celebration, which, being semi-centennial, was one of extraordinary splendour.

* General Stark, 'the victor of Bennington,' had just died at the age of ninety-three.

THE FAIRLOP OAK FESTIVAL.

The first Friday in July used to be marked by a local festival in Essex, arising through a simple yet curious chain of circumstances.

In Hainault Forest, in Essex, there formerly was an oak of prodigious size, known far and wide as the Fairlop Oak. It came to be a ruin about the beginning of the present century, and in June 1805 was in great part destroyed by an accidental fire. When entire—though the statement seems hardly credible—it is said to have had a girth of thirty-six feet, and to have had seventeen branches, each as large as an ordinary tree of its species. A vegetable prodigy of such a character could not fail to become a most notable and venerated object in the district where it grew.

Far back in the last century, there lived an estimable block and pump maker in Wapping, Daniel Day by name, but generally known by the quaint appellative of *Good Day*. Haunting a small rural retreat which he had acquired in Essex, not far from Fairlop, Mr Day became deeply interested in the grand old tree above described, and began a practice of resorting to it on the first Friday of July, in order to eat a rustic dinner with a few friends under its branches. His dinner was composed of the good old English fare, beans and bacon, which he never changed, and which no guest ever complained of. Indeed, beans and bacon became identified with the festival, and it would have been an interference with many hallowed associations to make any change or even addition. By and by, the neighbours caught Mr Day's spirit, and came in multitudes to join in his festivities. As a necessary consequence, trafficking-people came to sell refreshments on the spot; afterwards commerce in hard and soft wares found its way thither; shows and tumbling followed; in short, a regular fair was at last concentrated around the Fairlop Oak, such as Gay describes:

'Pedlars' stalls with glitt'ring toys are laid,
The various fairings of the country-maid.
Long silken laces hang upon the twine,
And rows of pins and amber bracelets shine.

Here the tight lass, knives, combs, and scissors spies,
And *looks* on thimbles with desiring eyes.
The mountebank now treads the stage, and sells
His pills, his balsams, and his ague-spells:
Now o'er and o'er the nimble tumbler springs,
And on the rope the vent'rous maiden swings;
Jack Pudding, in his party-coloured jacket,
Tosses the glove, and jokes at ev'ry packet:
Here raree-shows are seen, and Punch's feats,
And pockets picked in crowds and various cheats.'

Mr Day had thus the satisfaction of introducing the appearances of civilisation in a district which had heretofore been chiefly noted as a haunt of banditti.

Fun of this kind, like fame, naturally gathers force as it goes along. We learn that for some years before the death of Mr Day, which took place in 1767, the pump-and-block-makers of Wapping, to the amount of thirty or forty, used to come each first Friday of July to the Fairlop beans-and-bacon feast, seated in a boat formed of a single piece of wood, and mounted upon wheels, covered with an awning, and drawn by six horses. As they went accompanied by a band of musicians,

FAIRLOP OAK.

it may be readily supposed how the country-people would flock round, attend, and stare at their anomalous vehicle, as it hurled madly along the way to the forest. A local poet, who had been one of the company, gives us just a faint hint of the feelings connected with this journey:

'O'er land our vessel bent its course,
Guarded by troops of foot and horse;
Our anchors they were all a-peak,
Our crew were baling from each leak,
On Stratford bridge it made me quiver,
Lest they should spill us in the river.'

The founder of the Fairlop Festival was remarkable for benevolence and a few innocent eccentricities. He was never married, but bestowed as much kindness upon the children of a sister as he could have spent upon his own. He had a female servant, a widow, who had been eight-and-twenty years with him. As she had in life loved two things in especial, her wedding-ring and her tea, he caused her to be buried with the former on her finger, and a pound of tea in each hand—the latter circumstance being the more remarkable, as he himself disliked tea, and made no use of it. He had a number of little aversions, but no resentments. It changed the usual composed and amiable expression of his countenance to hear of any one going to law. He literally every day relieved the poor at his gate. He often lent sums of money to deserving persons, charging no interest for it. When he had attained a considerable age, the Fairlop Oak lost one of its branches. Accepting the fact as an omen of his own approaching end, he caused the detached limb of the tree to be fashioned into a coffin for himself, and this convenience he took care to *try*, lest it should prove too short. By his request, his body was borne in its coffin to Barking churchyard by water, in a boat, the worthy old gentleman having contracted a prejudice against all land vehicles, the living horse included, in consequence of being so often thrown from them in his various journeys.*

* *Fairlop and its Founder*, printed at Totham, 1847.

WILLIAM HUTTON'S 'STRONG WOMAN.'

William Hutton, the quaint but sensible Birmingham manufacturer, was accustomed to take a month's tour every summer, and to note down his observations on places and people. Some of the results appeared in distinct books, some in his autobiography, and some in the *Gentleman's Magazine*, towards the close of the last century and the beginning of the present. One year he would be accompanied by his father, a tough old man, who was not frightened at a twenty-mile walk; another year he would go alone; while on one occasion his daughter went with him, she riding on horseback, and he trudging on foot by her side. Various parts of England and Wales were thus visited, at a time when tourists' facilities were slender indeed. It appears from his lists of distances that he could 'do' fifteen or twenty miles a day for weeks together; although his mode of examining places led to a much slower rate of progress. One of the odd characters which he met with at Matlock, in Derbyshire, in July 1801, is worth describing in his own words. After noticing the rocks and caves at that town, he said: 'The greatest wonder I saw was Miss Phœbe Bown, in person five feet six, about thirty, well-proportioned, round-faced and ruddy; a dark penetrating eye, which, the moment it fixes upon your face, stamps your character, and that with precision. Her step (pardon the Irishism) is more manly than a man's, and can easily cover forty miles a day. Her common dress is a man's hat, coat, with a spencer above it, and men's shoes; I believe she is a stranger to breeches. She can lift one hundred-weight with each hand, and carry fourteen score. Can sew, knit, cook, and spin, but hates them all, and every accompaniment to the female character, except that of modesty. A gentleman at the New Bath recently treated her so rudely, that "she had a good mind to have knocked him down." She positively assured me she did not know what fear is. She never gives an affront, but will offer to fight any one who gives her one. If she has not fought, perhaps it is owing to the insulter being a coward, for none else would *give* an affront [to a woman]. She has strong sense, an excellent judgment, says smart things, and supports an easy freedom in all companies. Her voice is more than masculine, it is deep toned; the wind in her face, she can send it a mile; has no beard; accepts any kind of manual labour, as holding the plough, driving the team, thatching the ricks, &c. But her chief avocation is breaking-in horses, at a guinea a week; always rides without a saddle; and is supposed the best judge of a horse, cow, &c., in the country; and is frequently requested to purchase for others at the neighbouring fairs. She is fond of Milton, Pope, Shakspeare, also of music; is self-taught; performs on several instruments, as the flute, violin, harpsichord, and supports the bass-viol in Matlock church. She is an excellent markswoman, and, like her brother-sportsmen, carries her gun upon her shoulder. She eats no beef or pork, and but little mutton; her chief food is milk, and also her drink—discarding wine, ale, and spirits.

BISHOP WATSON.

Richard Watson was eminent as a prelate, politician, natural philosopher, and controversial theologian; but his popular fame may be said to depend solely on one little book, his *Apology for the Bible*, written as a reply to Paine's *Age of Reason*. A curious error has been, more than once, lately promulgated respecting this prelate. At a telegraphic soiree, held in the Free-trade Hall, Manchester, during the meeting of the British Association for the Advancement of Science, at that city, in 1861, it was confidently asserted that Bishop Watson had given the first idea of the electric telegraph. The only probable method of accounting for so egregious an error, is that Bishop Watson had been confounded with Sir William Watson, who, when an apothecary in London, conducted some electrical experiments in 1747, and succeeded in sending the electric current from a Leyden-jar through a considerable range of earth, or water, and along wires suspended in the open air on sticks. But, even he never had the slightest idea of applying his experiments to telegraphic purposes. In his own account of these experiments, he says: 'If it should be asked to what useful purposes the effects of electricity can be applied, it may be answered that we are not yet so far advanced in these discoveries as to render them conducive to the service of mankind.'

Bishop Watson was elected professor of chemistry at the university of Cambridge in 1769; and he gives us the following statement on the subject: 'At the time this honour was conferred upon me, I knew nothing at all of chemistry, had never read a syllable on the subject, nor seen a single experiment in it!' A very fair specimen of the consideration in which physical science was held at the English universities, during the dark ages of the last century. After studying chemistry for fourteen months, Watson commenced his lectures; but in all his printed works on chemistry, and other subjects, the word electricity is never once mentioned!

JULY 5.

St Modwena, virgin, of Ireland, 9th century. St Edana or Edæne, virgin, of same country. St Peter of Luxemburg, confessor, cardinal, and bishop of Metz, 1387.

Born.—John Broughton, noted pugilist, 1704, *London;* Mrs Sarah Siddons (*née* Kemble), tragic actress, 1755; C. A. Stothard, antiquarian draughtsman, 1786, *London.*

Died.—Queen Magdalen of Scotland, 1537; Cardinal Passionei, librarian of the Vatican, 1761; Sir Robert Strange, the 'prince of British line-engravers,' 1792, *London;* Mrs Dorothea Jordan (*née* Bland), comic actress, 1816, *St Cloud.*

JOHN BROUGHTON.

That regulated system of combat with the closed fists, which bears the name of Boxing, and which may be said to be peculiar to England, dates only

from the earlier half of the eighteenth century. The rules, including those notable ones regarding rounds, and the interval of half a minute between each, which give such a marked character to the practice—a sort of humanity relieving its barbarism—were the production of John Broughton, who kept a booth for the exhibition of boxing in the Tottenham Court Road; they are dated the 10th of August 1743. It seems to have been on the decline of sword-combat exhibitions in the reign of George I., that the *comparatively* harmless amusement of boxing arose. There appears to be no such thing known at an earlier date.

Broughton was the first who stood in the position of Champion—a distinction which he held for eighteen years. It gives a curious idea of the tastes of the English of his day, that his most notable patron was the king's second son, the Duke of Cumberland, so noted for his butcheries after the battle of Culloden. The duke probably attended Broughton's boxing-booth within a week of his going forth upon that famous expedition, in which the fate of a dynasty was decided; probably, it was one of the first places of amusement he went to after his triumphant return. He once took Broughton with him on a journey to the continent, and on shewing him the grenadier guards at Berlin, asked the pugilist what he thought of any of those fellows for a 'set-to;' to which Broughton is said to have answered, that he would have no objection to take up the whole regiment, if he were only allowed a breakfast between each two battles.

Broughton was admitted to have a constant originality, as well as great power, in his style of boxing, and he seems to have been a man of sense and ability, apart from his profession. He was at the very acme of his reputation, when he was so unfortunate as to fall into a quarrel with a butcher named Slack, who consequently challenged him. The champion himself, and the whole circle of his friends and admirers, regarded the challenger with contempt, and when the combat commenced, the betting was ten to one in Broughton's favour. But Slack contrived, at an early period of the contest, to hit Broughton between the eyes, and blinded him. The poor man had undiminished strength, but he was not able to see his antagonist. His royal patron, with characteristic brutality, called out to him: 'Why, Broughton, you can't fight—you are beat!'

['Proud Cumberland prances, insulting the slain.']

It was too true. The fight closed in fourteen minutes, with the defeat of the hitherto unmatched hero. 'The faces in the amphitheatre,' says the historian of the day, 'were of all manner of colours and lengths.' The duke was understood to have lost thousands on the occasion. Slack, by his adroit blow, gained six hundred pounds.

Broughton survived in obscurity, but in comparative affluence, for thirty-nine years, dying on the 8th of January 1789, at a very advanced age. The father, as he may well be called, of this 'truly English art,' lies buried in Lambeth churchyard.

QUEEN MAGDALEN.

The death of the French princess, Magdalen, consort of James V. of Scotland, is a very affecting incident. The young Scottish monarch had voyaged to France in the summer of 1536, to see the daughter of the Duc de Vendome, with a view to marriage; but, not affecting her on intimate acquaintance, he turned his thoughts to the royal family as likely to furnish him a better bride. The king, Francis I., received him with great kindness at a place to the south of Lyon, and thence conducted him to a castle where his family was residing. He found the Princess Magdalen unable to ride on horseback, as her mother and other ladies did, but obliged by weakness of health to be carried in a chariot. 'Yet, notwithstanding her sickness'—so the contemporary Scottish historian Lindsay informs us—'fra the time she saw the king of Scotland, and spak with him, she became so enamoured of him, and loved him so weel, that she wold have no man alive to her husband, but he allenarly [only].' Sage counsellors of both countries discommended the union; but the young princess easily induced her father to consent, and the consent of the king of Scotland followed. On the 1st of January, the pair were united in the church of Notre Dame, in the presence of seven cardinals and a great assemblage of the French nobility, amidst circumstances of great pomp and popular joy. 'Through all France that day, there was jousting and running of horse proclaimed, with all other manly exercise; as also skirmishing of ships through all the coasts; so that in towns, lands, seas, firths, castles, and towers, there was no man that might have heard for the *raird* [uproar] and noise of cannons, nor scarcely have seen for the vapours thereof. There was also within the town of Paris, cunning carvers and profound necromancers, who by their art caused things appear whilk wes not, as follows: fowls flying in the air spouting fire on others, rivers of water running through the town and ships fechtand therupon.'

With his young bride, and a hundred thousand crowns by way of dowry, gifted moreover with twenty war-horses, as many suits of elegant mail, two great war-ships, and a vast quantity of jewels and other minor articles, the young Scottish monarch set sail for his own country. Landing at Leith on Whit Sunday, the young queen, full of love for her husband and his country, knelt on the shore, took up a handful of sand, and kissed it, invoking God's blessing upon Scotland. She was received in Edinburgh with triumphs and shows of unexampled grandeur, with, what was far better, the affectionate reverence of the entire people. But the doom had already been passed upon her. She withered like an uprooted flower, and only forty days from her arrival, lay a corpse in her husband's palace. The death of this beautiful young creature in such interesting circumstances, made a deep impression on the national heart, and it is understood to have been the first occasion of a general mourning being assumed in Scotland.

JULY 6.

St Julian, anchoret, about 370. St Palladius, apostle of the Scots, bishop and confessor, about 450. St Moninna, of Ireland, virgin, 518. St Goar, priest and confessor, 575. St Sexburgh, abbess of Ely, 7th century.

Born.—John Flaxman, sculptor, 1755, *York;* Sir Thomas Stamford Raffles, governor of Java (1811—1816), author of a *History of Java*, founder of the Zoological Society, 1781.

Died.—Henry II. of England, 1189, *Chinon Castle;* Pope Benedict XI., 1304; Sir Thomas More, Chancellor of England, beheaded 1535, *London;* Edward VI. of England, 1553, *Greenwich;* Archbishop Grindal, 1583, *Croydon;* Humphry Wanley, learned scholar, 1726; Michael Bruce, poet, 1767, *Kinnesswood, Kinross-shire;* George Augustus Elliot, Lord Heathfield, military commander, 1790; Granville Sharpe, philanthropist, 1813, *Fulham;* Samuel Whitbread, statesman, 1815; Sir Henry Raeburn, painter, 1823, *Edinburgh;* Sir Thomas Munro, 1827, *Madras;* D. M. Moir, poet and miscellaneous writer, 1851, *Musselburgh, Scotland;* Andrew Crosse, electrician, 1855; Sir Francis Palgrave, historian, 1861.

SIR THOMAS MORE.

When Sir Thomas More was installed as lord chancellor, in the room of Cardinal Wolsey, the Duke of Norfolk, by the king's express command, commended him 'unto the people, there with great applause and joy gathered together,' for his *admirable wisdome, integritie, and innocencie, joined with most pleasant facilitie of witt;* praise which perfectly suited its subject.

Sir Thomas More united prudence with pleasantry, great and singular learning with simplicity of life, and unaffected humility with the proudest temporal greatness; he preferred the love of his family, and the quiet pleasures of his own household, to the favours of kings or delights of courts. It was only after the repeated urging of Henry, that at last he consented to relinquish his studious and secluded life at Chelsea; and it may truly be said that he was never happy after; for, besides his natural shrinking from public responsibility, and his disregard of worldly notoriety, he had a remarkably clear insight into Henry's character, and never put much faith in his abundant favours.

More was retained in the king's household like a personal friend, except that there must have been a degree of tyranny in his being kept thus continually from his own family. But his pleasantries amused the king and his queen, and his learning was useful to a monarch, who was writing a book which was to be the wonder of Christendom, and which had to be looked over, corrected, and arranged by Sir Thomas, as Sir Thomas himself admits, before Europe could be honoured with a glance at it. He was employed on several embassies alone, and in company with Wolsey; and finally, much against his will, he succeeded in 1529, to the highest honours, upon Wolsey's fall.

He filled the office of chancellor with a wisdom and unspotted integrity which were unexampled in his own time; and yet united with these virtues such graceful ease and agreeable manners, that it seemed to him no effort to be honest, and no difficulty to be just. When one woman sought to bribe him, by presenting him with a valuable cup, he ordered his butler to fill it with wine, and having drunk her health, returned it; and when another presented him with a pair of gloves, containing forty pounds, he accepted the gloves and returned the gold, declaring that 'he preferred his gloves without lining?'

More, though liberal-minded, was a stanch believer in the pope's supremacy, and had a great dread of heresy; and when Henry opposed the pope's will and decree by marrying Anne Boleyn, More resigned his chancellorship. He did not do so ostensibly on that account, but the king was shrewd enough to surmise his true reason. Henry really loved his servant, and did his utmost to obtain his approval of the new marriage, but the ex-chancellor preserved a discreet silence. The king, piqued by the neutrality of one whose opinion he valued, and on whom he fancied he had bestowed so many inestimable benefits, determined to make the late favourite acquiesce in his sovereign's will. More was invited to the coronation, and urged to appear, but he refused. He was threatened, but he only smiled. His name was put in the bill of attainder against the supposed accomplices of Joan of Kent, and then erased as a favour. But when the oath was put to him, which declared the lawfulness of the king's marriage, he would not take it, and so was committed to the Tower; and after many attempts, first to change him, and then to make him betray himself, so as to afford just ground for condemnation, he was tried and condemned unjustly, and beheaded, to the regret and shame of the whole nation, and all the world's astonishment and disgust.

The body of Sir Thomas More was first interred in St Peter's Church, in the Tower, and afterwards in Chelsea Church; but his head was stuck on a pole, and placed on London Bridge, where it remained fourteen days. His eldest and favourite daughter, Margaret Roper, much grieved and shocked at this exposure of her father's head, determined, if possible, to gain possession of it. She succeeded; and, according to Aubrey, in a very remarkable manner. 'One day,' says he, 'as she was passing under the bridge, looking on her father's head, she exclaimed: "That head has lain many a time in my lap, would to God it would fall into my lap as I pass under!" She had her wish, and it did fall into her lap!' Improbable as this incident may appear, it is not unlikely that it really occurred. For having tried in vain to gain possession of the head by open and direct means, she bribed or persuaded one of the bridge-keepers to throw it over the bridge, as if to make room for another, just when he should see her passing in a boat beneath. And she doubtless made the above exclamation to her boatmen, to prevent the suspicion of a concerted scheme between her and the bridge-keeper. However some of these particulars may be questioned, it appears certain that Margaret Roper gained possession of her father's head by some such means, for when summoned before the council for having it in her custody, she boldly declared that 'her father's head should not be food for fishes!' For this she was imprisoned, but was soon liberated, and allowed to retain her father's head, which she had enclosed in a leaden box, and preserved it with the tenderest devotion. She died in 1544, aged 36, and was buried in the Roper vault, in St Dunstan's Church,

Canterbury; and, according to her own desire, her father's head was placed in her coffin. But subsequently, for some cause not now known, it was removed from its leaden case, and deposited in a small niche in the wall of the vault, with an iron grating before it, where it now remains in the condition of a fleshless skull.

Margaret Roper was well skilled in Greek, Latin, and other languages; a proficient in the arts and sciences as then known; and a woman of remarkable determination and strength of character. A tradition, preserved in the Roper family, records that Queen Elizabeth offered her a ducal coronet, which she refused, lest it should be considered as a compromise for what she regarded as the judicial murder of her father.

HUMPHRY WANLEY, THE ANTIQUARY.

This laborious worker in the field of antiquarianism was the son of the author of that strange collection of curious, but ill-authenticated matters, the *Wonders of the Little World*, and was born March 21, 1671–2. He was placed to some mechanical business; but all the time he could command, he employed in searching for and reading ancient manuscripts, by copying and imitating which he acquired a particular facility in judging of their authenticity and dates. Dr Lloyd, bishop of Worcester, pleased with this extraordinary taste in so young a person, sent him to Oxford. He was next appointed by Harley, Earl of Oxford, to arrange his valuable collections of manuscripts and books; and his lordship's eldest son allowed Wanley a pension, and continued him in his situation of librarian till his death. His industry as a bibliographer was untiring, and various public libraries and collections of manuscripts benefited from his labours.

Humphry was a very unselfish being, and extremely faithful to his patrons. He was in the habit of collecting scarce articles for Lord Oxford's library. One day, having procured a rarity, he went to his lordship's town-house, where several cabinet ministers were assembled, and Wanley was desired to wait a few minutes. The weather was cold, and he became irritated by the delay; so he determined to retaliate by increasing the price for his treasure. When the ministers departed, Wanley was admitted to Lord Oxford.

'I have, my lord,' said Wanley, 'a most rare article, but it is very dear. It is the property of a widow, who has two daughters; they have seen better days. She would scarcely permit me to bring it, though I left a promissory-note for the hundred pounds she demanded, in case I did not return it.'

'A hundred pounds, Wanley; that is a great sum for so small a thing!'

'It is, my lord; but you have so often asked me to get it, that I thought I could not do less than shew it your lordship, particularly as it is quite perfect, and is the only copy known.'

'It is a large sum; however, I must have it. Give me pen, ink, and paper.' A draught was drawn for a hundred pounds, in presenting which his lordship said: 'Now, Wanley, perhaps you purchased this at some bookstall!'

Humphry expressed a seeming surprise, shrugged up his shoulders, and left the book with the peer, for what he really did give for it at a bookstall—*sixpence!*

Wanley died July 6, 1726, and was buried in the old church of St Marylebone, under a flat stone.

ANDREW CROSSE.

Andrew Crosse was a country gentleman, who spent his whole life at Fyne Court, on his patrimonial acres, six miles from Taunton, on the Quantock Hills. His leisure he employed in electrical experiments made on a gigantic scale. Shewing a large party, that had come from a distance to see his apparatus, two enormous Leyden-jars, which he charged by means of wires stretched for miles among the forest-trees, an old gentleman contemplated the arrangement with a look of grave disapprobation, and at length, with much solemnity, observed: 'Mr Crosse, don't you think it is rather impious to bottle the lightning?'

'Let me answer your question by asking another,' replied Mr Crosse, laughing. 'Don't you think, sir, it might be considered rather impious to bottle the rain-water?'

Whilst engaged in the construction of a variety of minerals, by subjecting various matters held in solution to electrical action, he, in 1837, hit on a discovery, which, blazoned abroad in the newspapers, raised round his name a storm of obloquy which happily his hearty good-nature enabled him to endure without discomfort.

Having mixed two ounces of powdered flint with six ounces of carbonate of potassa, fused them together in a strong heat, then reduced the compound to powder, and dissolved it in boiling-water, he obtained silicate of potassa, a portion of which he diluted in boiling water, slowly adding hydrochloric acid to super-saturation. This fluid he subjected to a long-continued electric action, through the intervention of a porous stone, in order to form, if possible, crystals of silica, but this failed. On the fourteenth day from the commencement of the experiment, he observed, through a lens, a few small whitish excrescences projecting from the middle of the electrified stone. On the eighteenth day, these projections had become enlarged, and struck out seven or eight filaments. On the twenty-sixth day, they assumed the forms of perfect insects, standing erect on a few bristles, which were their tails. On the twenty-eighth day they moved their legs, and soon after detached themselves from the stone, and began to move about. In the course of a few weeks, about a hundred insects had made their appearance. The smaller ones had six legs and the larger eight, and were pronounced as belonging to the genus *Acarus*.

At first Mr Crosse imagined that these insects must have originated from some *ova* in the water. He repeated the experiment, taking every conceivable care to subject his materials to processes destructive of life, but the *acari* duly reappeared under the same conditions. Others tried the experiment, with even more rigid pains to exclude and destroy imperceptible ova, but still *acari* came to life, walked about, fed, multiplied, and only died after frost, which always proved fatal to them. The discussion which followed these remarkable experiments still continues. Some hold that they are clear proofs of spontaneous generation, and of the possibility of animal creation wherever the requisite conditions are supplied. Others firmly maintain the impossibility of such new creation,

and assert that ova must needs be present, having eluded the contrivances to destroy or to strain them out. About the *Acarus Crossii*, as it was called, Crosse himself put forth no theory, drew no inferences, and attacked no established belief. He was very little of a theorist; he simply said, I did so and so, and so and so was the result. The abuse lavished on him for the inferences that might be drawn from his discovery was singularly out of place.

Mr Crosse was not wealthy, and his secluded life at home among the Somersetshire hills was first a necessity and then a habit. He was far from unsocial, and he excited in all who knew him the heartiest friendship. He was twice married; and died on the 6th July 1855, in the room in which, seventy-one years before, he had been born.

A MODERN HERMIT.

In the village of Newton Burgoland, which is a hamlet of the parish of Swepstone, near Ashby-de-la-Zouch, Leicestershire, is now (1863) living* an eccentric character, who styles himself 'The Old Hermit of Newton Burgoland.' Though he has resided here nearly fifteen years, his real name, William Lole, is scarcely known; and a stranger might search for him in vain, even in his own hamlet, unless he inquired for 'The Old Hermit.' Yet he is no recluse, no ascetic. It cannot be said of him:

> 'The moss his bed, the cave his humble cell;
> His food the fruits, his drink the crystal well.'

He lives among the haunts of men, in a comfortable cottage; he can enjoy a good dinner, can drink his glass of beer, and smoke his pipe with as much relish as any man. Yet, according to his own definition, he is entitled to the appellation of a hermit. 'True hermits,' says he, 'throughout every age, have been the firm abettors of freedom.' And, as regards his appearance, his fancies, and his habits, he is a hermit—a *solitaire*, in the midst of his fellow-beings. He wears a long beard, and has a very venerable appearance. In his dress he is the veriest dandy, if we regard its profuseness and singularity. He has a multitude of suits, all of an original and very fantastical description. They must have cost more than half his income, and have exhausted his utmost ingenuity to devise. He has no less than twenty different kinds of hats, each of which has its own name and form, with some emblem or motto on it—sometimes both. Here are a few examples:

No.	Name.	Motto or Emblem.
1.	Odd Fellows.	Without money, without friends, without credit.
5.	Bellows.	Blow the flames of freedom with God's word of truth.
7.	Helmet.	Will fight for the birthright of conscience, love, life, property, and national independence.
13.	Patent Tea-pot.	To draw out the flavour of the tea best—Union and Goodwill.
17.	Wash-basin of Reform.	White-washed face, and collyed heart.
20.	Bee-hive.	The toils of industry are sweet; a wise people live at peace.

* The Modern Hermit died in 1875.

The shapes of the hats, and the devices on them, are intended to symbolise some fact or sentiment.

The rest of his dress is as fantastical as his hats. He has twelve suits of clothes, each with a peculiar name, differing from the others, and, like his hats, intended to be emblematical. One dress, which he calls 'Odd Fellows,' is of white cotton or linen. It hangs loosely over the body, except

being bound round the waist with a white girdle, buckled in the front. Over his left breast is a heart-shaped badge, bearing the words, 'Liberty of conscience,' which he calls his 'Order of the Star.' The hat which he wears with this dress is nearly white, and of common shape, but has on it four fanciful devices, bound with black ribbon, and inscribed, severally, with these words: 'Bless, feed—good allowance—well clothed—all working-men.'

Another dress, which he calls 'Foresters,' is a kind of frock-coat, made of soft brown leather, slightly embroidered with braid. This coat is closed down the front with white buttons, and bound round the waist with a white girdle, fastened with a white buckle. The hat, slightly resembling a turban, is divided into black and white stripes, running round it.

Another dress, which he has named 'Military,' has some resemblance to the military costume at the beginning of the present century. The coat is sloped off at the waist, and faced with fur; dark knee-breeches, and buckled shoes. The hat belonging to this dress is no longer in existence. It was a large conspicuous article, a composition between the old-fashioned cocked-hat, and that worn by military commanders; but instead of the military plume, it had two upright peaks on the crown, not unlike the tips of a horse's ears. This hat, which he asserts cost five pounds, was the pride of his heart. He considered it a perfect specimen of exquisite taste and ingenuity. He preserved it with religious care, and never wore it but on important occasions.

On one of these occasions he arrayed himself in his 'Military,' and adjusted his pet-hat with consequential precision. Exulting in his fancied dignity, he sallied forth from his hermitage: but, forgetful of the hermit's humility, he strode along the road with a somewhat martial air. When, lo! he met a group of giddy, mischievous youths who were just looking out for a frolic. The old hermit's queer appearance, of course, attracted their notice. His fantastical hat, his antiquated military costume,

the whimsical mixture of his reverent and defiant air, might have conquered the gravity of a Stoic. No wonder the merry youths were convulsed with laughter. But nothing less than a practical joke would satisfy them. So they rushed round the old hermit, knocked off his hat, tossed it into the air, kicked it about for a football, and finally tore it into tatters. Thus perished our sage's pet-hat. Alas! for pets, whether old hermits' hats or young ladies' pug-dogs, they are sure to come to an untimely end. The old hermit still mourns over his lost hat, and descants of its glories with melancholy pleasure. 'Ah!' says he, 'it was a perfect beauty—a wonderful production! It cost me many a sleepless night to invent it. Many a meal I lost to save money to pay for it. I shall never have its like again. I cannot afford it. I grow old, and times grow harder with me, Ah! those audacious lads. Would they had had something better to do! It was downright cruelty to rob the poor old hermit of such a noble hat!' His mania for symbolisation pervades all his thoughts and doings. His garden is a complete collection of emblems. The trees, the walks, the squares, the beds, the flowers, the seats and arbours—are all symbolically arranged. In the passage leading into the garden are 'the three seats of Self-inquiry,' each inscribed with one of these questions: 'Am I vile? Am I a hypocrite? Am I a Christian?' Among the emblems and mottoes, which are marked by different-coloured pebbles or flowers, are these: 'The vessels of the tabernacle;' 'The Christian's armour—olive-branch, baptismal-font, breastplate of righteousness, shield of faith,' &c. 'Mount Pisgah;' a circle enclosing the motto—'Eternal love has wed my soul;' 'A bee-hive;' 'A church;' 'Sacred urn;' 'Universal grave;' 'Bed of diamonds;' 'A heart, enclosing the rose of Sharon;' All the implements used in gardening. 'The two hearts' bowers;' 'The lovers' prayer;' 'Conjugal bliss;' 'The Hermit's coat of arms;' 'Gossips' Court,' with motto: 'Don't tell anybody!' 'The kitchen-walk' contains representations of culinary utensils, with mottoes. 'Feast square' contains—'Venison pasty, Round of beef,' &c.; 'The Odd Fellow's Square,' with 'The hen-pecked husband put on water-gruel.' 'The oratory,' with various mottoes; 'The orchestry,' mottoes, 'God save our noble queen; Britons never shall be slaves,' &c. 'The sand-glass of Time;' 'The assembly-room;' 'The wedding-walk;' 'The Holy Mount;' 'Noah's ark, Rainbow, Jacob's ladder,' &c. 'The Bank of Faith;' 'The Saloon;' 'The Enchanted Ground;' 'The Exit'—all with their respective emblems and mottoes. Besides these fantastical devices, there are, or were, in his garden, representations of the inquisition and purgatory; effigies of the apostles; and mounds covered with flowers, to represent the graves of the Reformers. In the midst of the religious emblems stood a large tub, with a queer desk before it, to represent a pulpit. When his garden was full of visitors, as it often used to be, he would clamber into this tub, and harangue them in a long rambling tirade against popery, and all kinds of real or fancied religious and political oppression. He declaims vociferously against the pope as Antichrist and the enemy of humanity; and when he fled from Rome in the guise of a servant, our old hermit decked his hat with laurels, and, thus equipped, went to the Independent chapel, declaring that 'the reign of the man of sin was over.' He also raised a mock-gallows in his garden, and suspended on it an effigy of the pope, whimsically dressed, with many books sticking out of his pockets, which, he said, contained the doctrines of popery. Though he professes Christianity, and owns the Bible to be a divine revelation, yet he belongs to no religious community, and very rarely enters a place of worship. He is extremely poor, and how he ekes out a livelihood is a marvel; for though his house and garden are his own property, they yield him no income. His garden, which might have been made profitable, is so fully occupied with his whimsical devices, that it produces scarcely any fruit or vegetables. And often, when laying out some new fancy in his garden, he would be so engrossed with it, that he would have passed day after day without food, had not one kind neighbour and another carried him a ready-dressed meal. He gains a little, however, by opening his garden to tea-parties, on which occasions he supplies the visitors with tea-services, and charges them one shilling or sixpence a head, according to their condition in life. But this income, which is very scanty and precarious, lasts only during the summer season. Occasionally he prints little pamphlets or tracts, consisting of mottoes and trite sayings; but these, though sold at a high price, can scarcely pay the expense of printing. He is now in such poverty that he is

thankful for any assistance, which does not require him to relinquish his present mode of living. He has a brother in competent circumstances, who has offered to share his home with him; but, 'No,' says the old hermit, 'for what would then become of my garden? My heart is in my garden. I cannot leave it!'

JULY 7.

St Pantaenus, father of the church, 3d century. St Felix, bishop of Nantes, confessor, 584. St Edelburga, virgin, of Kent. St Hedda, bishop of the West Saxons, confessor, 705. St Willibald, bishop of Aichstadt, confessor, 790. St Benedict XI., pope and confessor, 1304.

Born.—Thomas, Earl of Arundel, collector of ancient sculptures, 1592; Emperor Nicolas of Russia, 1796.

Died.—Edward I. of England, 1307, *Burgh-on-Sands;* John Huss, burned at Constance, 1415; Dr John Eachard, 1697, *Cambridge;* Bishop Compton, 1713; Dr Thomas Blacklock, 'the blind poet,' 1791, *Edinburgh;* Richard Brinsley Sheridan, 1816, *London.*

THOMAS, EARL OF ARUNDEL—THE ARUNDELIAN MARBLES.

There is such a singularity in the idea of an English nobleman of the early part of the seventeenth century interesting himself in art and its treasures, that this peer stands out in a prominence much beyond what either his rank or personal qualities would have otherwise entitled him to. It does not seem to have been from any high conception of the value of beautiful things, that he busied himself so much in collecting relics of ancient sculpture in Italy. He was travelling there—the objects struck his fancy, and he thought of getting them brought home to England. Clarendon speaks of him as a rather illiterate man. More certainly, he was a man of great formality and stateliness—unbending—even a little austere—all of them qualities that one does not naturally associate with a lover of the fine arts for their own sake. From whatever motive, however, he acted, it was undoubtedly a remarkable service he performed to his country, to collect so many sculptures, medals, &c., at the time when such things were yet abundant, and when as yet his countrymen were so indifferent to them.

The Arundelian Marbles, as they came to be called, were all stored in and about a mansion which the earl possessed in the Strand, on the river side, between Essex House and Somerset House. His lordship's descendants acceding to the dukedom of Norfolk, the curiosities and their mansion became in time the property of that family. There is something melancholy, and a good deal that is surprising, in the ultimate history of the marbles.

An act of parliament having been obtained, empowering the then Duke of Norfolk, to let part of the site of the house and gardens to builders, at a reserved ground-rent, which was to accumulate in order to raise a fund for building a mansion-house for the family, on that part of the gardens which lay next the river—preparations were made for taking down the old buildings. The Royal Society, who had hitherto, by permission of the duke, held their meetings in Arundel House, had removed to Gresham College, taking with them the noble library which the duke had liberally presented to them.

'Arundel House,' says Mr Theobald,* 'being now about to be pulled down, great part of the furniture was removed to Stafford House, with the museum, &c. And as there were many fine statues, bas-relieves, and marbles, they were received into the lower part of the gardens, and many of them placed under a colonnade there; and the upper part of the ground next the Strand let to builders, who continued the street, next the Strand, from Temple Bar towards Westminster; and also to build thereon the several streets called Arundel, Norfolk, and Surrey Streets, leading from the Strand towards the river, as far as the cross-street, called Howard Street, which ran parallel with the Strand.

'When the workmen began to build next the Strand, in order to prevent encroachments, a cross-wall was built to separate the ground let to builders from that reserved for the family mansion; and many of the workmen, to save the expense of carrying away the rubbish, threw it over this cross-wall, where it fell upon the colonnade; and at last, by its weight, broke it down, and falling on the statues placed there, broke several of them. A great part of these in that sad condition, was purchased by Sir William Fermor, from whom the present Earl of Pomfret is descended. He removed these down to his seat at Easton Neston, in Northamptonshire, where he employed some statuary to repair such as were not too much demolished.

'Here these continued till the year 1755, when the countess made a present of them to the university of Oxford, for which she received their thanks in due state; and in the year following, the university celebrated a public act, where, in a set oration, and a full theatre, the countess was again complimented. Among this collection was the famous sleeping Cupid, lying on a lion's skin, strewed with roses, as emblems of silence and secrecy; Cupid having presented that flower to Harpocrates, the god of Silence, as a bribe to him to conceal the amours of his mother. Below the foot of Cupid, on the bed, is a lizard—by some supposed to be placed here as a known ingredient in love-charms; by others, as a watchful attendant to wake the sleeper on the approach of danger; and by others imagined to be an emblem of sleep itself, from its being torpid during great part of the year, and placed near a statue of Somnus on a monument at Rome. But the real design of the sculptor was rather to perpetuate his name by this symbol, which was Saurus, signifying a lizard.'

Some other of the broken statues, not thought worth replacing, were begged by Boyder Cuper, who had been gardener to the Arundel family, and were removed by him to decorate a piece of garden-ground, which he had taken opposite Somerset House water-gate, in the parish of Lambeth; this being then a place of resort for the citizens in holiday-time: in Mr Theobald's time, 1757, it was still called Cuper's, corruptly Cupid's gardens, and which Mr Theobald describes as 'much of the same nature as Sadler's Wells and Marylebone Gardens, called also a music-house, as they had always

* Letter to the president of the Society of Antiquaries. 1757.

music attending, and a large room for dancing, when the company were so disposed.' However, these 'broken statues' must have been of great merit; for Mr Freeman, of Fawley Court, near Henley, and Mr Edmund Waller, of Beaconsfield, happening to see the marbles, were struck with their beauty, and commissioned Mr Theobald to treat with Cuper for their purchase, leaving in his hands a bank-note of £100; eventually they were bought by Mr Theobald for £75, and were sent, part to Fawley Court, and part to Beaconsfield.

The remaining statues and fragments in Arundel gardens were removed, by permission of the crown, to a piece of waste-ground in the manor of Kennington, belonging to the Principality of Wales; of which piece of ground a grant was obtained, at a small rent, for a term of years, which was renewed. Such fragments as were thought not worth removing, were buried in the foundations of the buildings in the lower parts of Norfolk Street, and in the gardens. Mr Aislabie, who inhabited one of these houses, as Mr Theobald was told by the duke's steward, found a broken statue in his cellar, which he carried down to his seat in Yorkshire; and upon the same authority, Mr Theobald states, there was a sarcophagus placed in the cellar of the corner house, on the left hand, in the lower part of Norfolk Street.

The ground at Kennington, whither some of the marbles had been removed, was subsequently let for a timber-yard, and a wharf built thereon; and when the ground was cleared for rebuilding St Paul's Cathedral, great quantities of the rubbish were taken there, to raise the ground, which used to be overflowed every spring-tide; so that, by degrees, the statues and fragments were buried under the rubbish, and there lay almost forgotten for many years. About the year 1712, this piece of ground was rented by Mr Theobald's father, who, in digging foundations for buildings, frequently met with some of the fragments; of which the Earl of Burlington hearing, his lordship went to Kennington, to inspect the remains, and prevailed upon Mr Theobald to permit him to take his choice of a few specimens; these were conveyed to Chiswick House, where one piece of bas-relief was placed in the pedestal of an obelisk which he erected in his grounds. Mr Theobald next allowed Lord Petre to dig for fragments at Kennington, when six statues, some colossal, without heads or arms, were found lying close to each other, and were soon after sent to Worksop, the seat of the Duke of Norfolk, in Nottinghamshire.

Mr Theobald also found several blocks of grayish-veined marble, out of which he cut chimney-pieces and slabs for his house, the Belvedere, in Lambeth. He also found the fragment of a column, which he had conveyed to his seat, Waltham Place, in Berkshire, and there converted this fragment of precious art into a roller for his bowling-green!

These, however, were but a portion of the Arundel collection. The Duchess of Norfolk, who was divorced from the seventh duke in 1700, carried with her a fine collection of cameos, belonging to the Norfolk family, and valued at £10,000.

In 1720, a sale was made of another part of the collection at Stafford House. Mr Charles Howard, of Greystock, had a priced catalogue of this sale, with the names of the purchasers. The amounts were: Pictures sold for £812, 17*s.*; prints, £168, 17*s.* 4*d.*; drawings, £299, 4*s.* 7*d.*; japan, £698, 11*s.*; gilt and other plate, £462, 1*s.* 11¼*d.*; crystal vases, £364, 3*s.*; agate cups, £163, 16*s.*; jewels and other curiosities, £2467, 7*s.* 10*d.*; medals, £50, 10*s.* 6*d.*; odd lots of plate, £170, 6*s.* 7*d.*; cabinets and china, £1256, 19*s.*; household furniture, £1199, 3*s.*; several other odd lots, £738, 13*s.* 2*d.*—total, £8852, 0*s.* 11¼*d.* Besides which, there still remained, in several branches of the Norfolk family, many curious pieces of plate, jewels, &c. Mr Charles Howard possessed what was termed Archbishop Thomas à Becket's grace-cup, but which is really of Elizabethan work. Mr Howard also possessed the high-constable's staff, which he presented to the then Earl of Strafford.

At the revolution, in 1688, Henry, then Duke of Norfolk, who was a Protestant, came over with King William, and soon after obtained an act of parliament, by which the remainder of the Arundel garden-ground was leased for a term of forty-one years; which he accordingly let to Mr Stone, of New Inn, an attorney. The design of building a mansion was then laid aside, and the money which had accumulated for the purpose was paid over to the then duke; and thus disappeared Arundel House, never to be rebuilt; while its treasures were dispersed with little regard for their artistic value or interest.

RICHARD BRINSLEY SHERIDAN.

The remark of Buffon, that Genius is Patience, was well illustrated in the case of Sheridan. It fully appears from Moore's biography, that all the brilliant passages in Sheridan's plays were very carefully elaborated, written over and over again, and not left till they were incapable of further polish. So, also, the written draughts of his speeches remain to prove that all the showy passages were written two or three times over upon small detached pieces of paper or cards, often without any material change in their form. 'It is certain, says Moore, 'that even his *bon mots* in society were not always to be set down to the credit of the occasion; but that frequently, like skilful priests, he prepared the miracle of the moment beforehand. Nothing, indeed, could be more remarkable than the patience and tact with which he would wait through a whole evening for the exact moment when the shaft which he had ready feathered, might be let fly with effect.

'A curious instance,' adds the biographer, 'of the care with which he treasured up the felicities of his wit, appears in the use he made of one of those epigrammatic passages, which the reader may remember among the memorandums for his comedy of Affectation, and which in its first form ran thus: —"He certainly has a great deal of fancy and a very good memory; but, with a perverse ingenuity, he employs these qualities as no other person does —for he employs his fancy in his narratives, and keeps his recollection for his wit:—when he makes his jokes, you applaud the accuracy of his memory, and 'tis only when he states his facts that you admire the flights of his imagination.' After many efforts to express this thought more concisely, and to reduce the language of it to that condensed and elastic state, in which alone it gives force to the projectiles of wit, he kept the passage by him patiently for some years—till he at length found

an opportunity of turning it to account, in a reply, I believe, to Mr Dundas, in the House of Commons, when, with the most extemporaneous air, he brought it forth, in the following compact and pointed form :—"The right honourable gentleman is indebted to his memory for his jests, and to his imagination for his facts."'*

SHERIDAN'S FUNERAL.

The brilliant assemblage at Westminster Abbey on the day of Sheridan's funeral bore testimony to the estimation in which genius was held, apart from the special merit or usefulness of the purposes to which the genius had been applied. Those who looked to the dramatic career of Richard Brinsley Sheridan recognised in him the most brilliant writer of comedy that had appeared since the days of Congreve and Farquhar. Sheridan takes rank among those who belie their school-day reputation by their after-career. Both at Dublin and at Harrow, where he received his education, he was pronounced to be an 'impenetrable dunce,' with whom neither severity nor indulgence would avail; yet this was the 'dunce' who produced *The Rivals* in 1775, *The Duenna* and *St Patrick's Day* in 1776, *The School for Scandal* and *The Trip to Scarborough* in 1777, and *The Critic* in 1778; and then passed through a political career which spread over the period from 1780 to 1816. His celebrated Begum Speech, in connection with the trial of Warren Hastings, is ranked among the most brilliant orations ever known; and there can be little doubt that he might have risen to a high position among statesmen had he been true to himself. But his moral character was weak, even depraved. Though he sometimes aided the Whig party by his eloquence, he gradually degenerated into a mere amusing speaker, much enjoyed and much admired, but winning for himself very little esteem. His life, by degrees, became an ineffectual struggle against poverty. He borrowed from all who would lend to him, and had neither the will nor the power to redeem the debts. The Prince of Wales welcomed him to Carlton House as long as his flashes of brilliant wit were ready to enliven the assembled guests; but when Sheridan began to fail in health and spirits, the doors were closed against him. The like occurred at other mansions where he had been admired but never really esteemed. He was steeped in poverty for some time before his death. Leigh Hunt mentions that Sheridan on one occasion burst into tears at the degradation of being touched by a bailiff when arrested; while all the time he was callous to the moral degradation involved in that conduct which led to the arrest. When he was dead, some of those in high places regretted that they had deserted the brilliant wit during his declining years of poverty; while others, knowing that he had not really deserved their esteem, wished, nevertheless, to honour the memory of a man of undoubted though ill-regulated genius. A public funeral was resolved upon. The body was removed from Sheridan's house, in Saville Row, to Mr Peter Moore's residence in Great George Street, Westminster; and on the 13th of July, a funeral procession walked from thence to the abbey. Arrived at the chief entrance at the west end of the nave, the procession was received by the dignitaries of the abbey, who preceded it to the place of sepulture in that celebrated nook of the abbey known as Poet's Corner. The pall was supported by the Duke of Argyle, the Duke of Bedford, the Earl of Lauderdale, Lord Mulgrave, Lord Holland, and the bishop of London. The chief mourner, as representing the family, was Mr Charles Sheridan; while among the other mourners were their Royal Highnesses the Dukes of York and Sussex, the Marquis of Anglesea, the Earl of Rosslyn, the Earl of Harrington, the Earl of Bessborough, Earl Gower, the Earl of Yarmouth, Lord Sidmouth, Lord Grenville, Lord Lynedoch, Lord Erskine, Lord George Cavendish—together with Canning, Romilly, and others, who belonged rather to the aristocracy of intellect than to that of birth. A small space was found between the monuments of Shakspeare and Addison, and close to the grave of Garrick. There lies Sheridan, under the roof of the venerable building which contains the bones of Chatham, Pitt, Fox, Canning, Chaucer, Spenser, Ben Jonson, Congreve, Addison, Rowe, Gay, Betterton, Garrick, Purcell, Handel, Newton, Johnson, Barrow, South, Camden, Usher, and many others known to fame.

* Moore's *Life of Sheridan*, ii. 471.

THE MACARONIS.

In all periods and countries there have been persons, and even groups or classes of people, who sought to attract attention by eccentricities in dress. In England, during the last two centuries, we have had gallants, bloods, bucks, beaux, fribbles, macaronis, fops, monstrosities, corinthians, dandies, exquisites, and swells. Reeves, in his *God's Plea for Nineveh*, gives a curious vocabulary of dandyism in his account of a 'gallant' of the seventeenth century. 'He is, indeed,' says our Puritan author,

'the buffoon and baboon of the times. His mind is wholly set upon cuts and slashes, knots and roses, patchings and pinkings, jaggings and taggings, borderings and brimmings; half-shirts, half-arms, yawning breasts, gaping knees, arithmetical middles, geometrical sides, mathematical waists, musical heels, and logical toes.'

Amongst the dress-eccentricities of the eighteenth

century, none was more signal than the macaronis, though their reign was short, commencing about 1770, and coming to a close about 1775. The year of their ascendant was 1772, and the engraving on the preceding page represents a macaroni of that period; distinguished by an immense knot of artificial hair behind, a very small cocked-hat, an enormous walking-stick with long tassels, and a jacket, waistcoat, and small-clothes cut to fit the person as closely as possible. Their most remarkable peculiarity was the large knot of hair, thus celebrated in a satirical song:

'Five pounds of hair they wear behind,
The ladies to delight, O,
Their senses give unto the wind,
To make themselves a fright, O.
This fashion, who does e'er pursue,
I think a simple-tony;
For he's a fool, say what you will,
Who is a macaroni.'

It would appear that the macaronis originated among a number of young men, who had made the grand tour, and on their return, formed themselves into a club, which, from a dish of macaroni, then little known in England, being always placed upon the dinner-table, was called the Macaroni Club. A magazine writer of the time, evidently alluding to this origin, says: 'The macaronis are the offspring of a body, a many-headed monster in Pall Mall, produced by a demoniac committee of depraved taste and exaggerated fancy, conceived in the courts of France and Italy, and brought forth in England.' Horace Walpole, however, writing about the same time, gives the macaronis a different pedigree, ascribing their origin to the enormous wealth, lately gained by certain persons, through Clive's conquests in India, and asserts that their boundless extravagance soon dissipated it, and brought them to poverty. 'Lord Chatham,' he says, 'begot the East India Company, the East India Company begot Lord Clive, Lord Clive begot the macaronis, the macaronis begot Poverty, and all the race are still living.' In the following year, 1773, he writes: 'A winter without politics—even our macaronis entertain the town with nothing but new dresses, and the size of their nosegays. They have lost all their money, and exhausted their credit, and can no longer game for £20,000 a night.'

The macaronis took the town by storm. Nothing was fashionable that was not *à la macaroni*. Even the clergy had their wigs combed, their clothes cut, and their delivery refined *à la macaroni*. The shop-windows were filled with prints of the new tribe; there were engraved portraits of turf macaronis, military macaronis, college macaronis, and other varieties of the great macaroni race. At balls, no other than macaroni music could be danced to; at places of public amusements, macaroni songs, of which the following is a specimen, alone were sung to divert the company:

THE MACARONI.

AIR—*Nancy Dawson.*

Come listen all, and you shall hear,
Of all the beauties that appear,
And move in fashion's motley sphere,
The fat, the lean, the bony;
The boast, the glory of the age,
How young and old can now engage;
Each master, miss, and parent sage,
Is now a macaroni.

Each tries the other to outvie,
With foretops mounting to the sky,
And some you oft with tails may spy,
As thick as any pony;
Insipid gait, affected sneer,
With side-curls high above the ear,
That each may more the ass appear
Or shew the macaroni.

Each doctor's now become a prig,
That used to look so wise and big,
With stiffened and swingeing wig,
That got him all his money;
They've all thrown off the grave disguise,
Which made each quaking owl look wise,
For wig, of Whip the coachman's size,
To shew the macaroni.

The lawyer too's become a crop,
Instead of tail, a Tyburn top,
Alack-a-day! each barber's shop
Now looks but half so funny,
As when the windows once were graced,
Where stately wigs in rows were placed—
But these are days of wit and taste,
Huzza, for macaroni!

The priest that once with rose and band,
With formal wig, and hat in hand,
Sagacious phiz that might demand,
A bow from any tony;
Behold him now all debonair,
With tiny hat and tortured hair,
And while he prattles to the fair,
He shews the macaroni.

The cits that used, like Jerry Sneak,
To dress and walk out once a week,
And durst not to their betters speak,
Are all grown jolly crony;
Each sneak is now a buckish blade,
When in the Park, but talk of trade,
He thinks you mean him to degrade—
Each cit's a macaroni.

Who would not live in days like these,
In days of jollity and ease,
There's no exception to degrees,
My lord and John are cronies.
Each order and profession claim,
An equal right, an equal fame,
For nothing's equal to the name
Of modern macaronis.

The periodical literature, such as it was, of the time is very severe on the macaronis. 'No handsome fellow,' we read, 'will belong to them, because their dress is calculated to make the handsome ugly, and the ugly ridiculous. His hat, like his understanding, is very little, and he wears it in direct opposition to the manly beaver of our ancient heroes. He has generally an abundant quantity of hair, and well he may, for his head produces nothing else; if he has not a sufficient quantity of his own, he borrows it from his neighbours. His coat slouches down behind, and his shoes are reduced to the shape of slippers, on the surface of which appears a small circle of silver, which he tells us is a buckle. His manners are still more strange than his dress. He is the sworn foe of learning, and even sets simple orthography at defiance; for all learned fellows that can spell or write are either queer dogs or poor rogues. If you see him at a theatre, he will scarcely wink

without his opera-glass, which he will thrust into a lady's face, and then simper, and be "pruddigisly enteerteen'd with her confusion."'

After all, it is by no means improbable that the macaronis, eccentric fops as they certainly were, added somewhat to the progress of national refinement. Living in the days of six-bottle men, one grave charge brought against them was that they hated 'all drinking, except tea, capillaire, and posset.' In a very successful five-act drama of the day, entitled *The Macaroni*, the hero of the piece —the macaroni *par excellence*—is held up to ridicule, principally because he respects female virtue, and swears by such mild and milk-and-water oaths as, 'May I be deaf at the opera!' We now know how to appreciate these distinctions.

JULY 8.

St Procopius, martyr, about 303. Saints Kilian, Colman, and Totnan, martyrs, 688. St Withburge, virgin, of Norfolk, 743. St Grimbald, abbot of New Minstre, 903. Blessed Theobald, abbot of Vaux de Cernay, 1247. St Elizabeth, queen of Portugal, 1336.

Born.—John de la Fontaine, French writer of tales and fables, 1621, *Château-Thierry.*

Died.—Peter the Hermit, preacher of the first Crusade, 1115; Pope Gregory XV., 1623; Dr Robert South, eminent English preacher, 1716; Second Marshal Villeroi, 1730; Jean Pierre Niceron, useful writer, 1738, *Paris;* Jean Baseillac (Frere Côme), eminent French lithotomist, 1781; Torbern Bergmann, Swedish chemist and naturalist, 1784, *Medevi, near Upsala;* Edmund Burke, statesman, orator, and miscellaneous writer, 1797, *Beaconsfield, Bucks;* Sir Edward Parry, arctic voyager, 1855, *Ems.*

PETER THE HERMIT.

There is no more extraordinary episode in the annals of the world, than the History of the Crusades. To understand it, we must previously have some sense of the leading form which had been given to religion in the eleventh and twelfth centuries—an intense contemplation of the sufferings and merits of Christ, with a boundless feeling of gratitude and affection towards his name. Already had this feeling caused multitudes to pilgrimise through barbarous countries to pay their devotions on the scene of his passion. It needed but an accident to make the universal European sentiment take the form of some wild and wonderful series of acts.

In the north of France, there lived a man of low origin, named Peter, naturally active and restless, but who by various causes was drawn at last into a religious and anchoritic life, in which he became liable to visions and spiritual impulses, all thought by him to be divine. It was impressed upon him that the Deity had constituted him one of His special instruments on earth, and, as usual, others soon came to view him in that character, to thrill under his preachings, and to believe in his miraculous gifts.

The rage for pilgrimages to the East drew the hermit Peter from his retreat, and, like the rest, he went to Jerusalem, where his indignation was moved by the manner in which the Christians were treated by the infidels. He heard the relation of their sufferings from the lips of the patriarch Simeon, and with him in private lamented over them, and talked of the possibility of rescuing the sufferers. It was in these conversations that the project was formed of exciting the warriors of the West to unite together for the recovery of the Holy Land from the power of the infidels. Peter's enthusiasm now led him to believe that he was himself the man destined for this great work, and on one occasion, when he was kneeling before the holy sepulchre, he believed that he had a vision, in which Jesus Christ appeared to him, announced to him his mission, and ordered him to lose no time in setting about it. Impressed with this idea, he left Palestine, and proceeded to Rome, where Urban II. was then pope. Urban embraced the project with ardour, treated Peter the Hermit as a prophet, and enjoined him to go abroad and announce the approaching deliverance of Jerusalem. Peter thereupon set out on his new pilgrimage. He rode on a mule, bare-headed and bare-foot, clothed in a long frock and a hermit's mantle of coarse woollen cloth, girded with a rope. In this manner he proceeded through Italy, crossed the Alps, and wandered through France and the greater part of Europe, everywhere received as a saint, and spreading among all classes an amazing amount of zeal for the Crusade, which he was now openly preaching. The enthusiasm which followed his steps was wonderful; people crowded to obtain the favour of touching his garments, and even the hairs of his mule were preserved as holy relics. His miracles were a subject of general conversation, and nobody doubted for a moment the truth of his mission.

It was at this moment that the ambassadors of the Emperor Alexis Comnenus arrived in Rome, to represent to the pope the danger to which Constantinople was exposed from the invasions of the Turks, and to implore the assistance of the Western Christians. Pope Urban called a council, which met at Placenza, in Lombardy, at the beginning of March 1095. So great had been the effect of Peter's preaching, that no less than 200 archbishops and bishops, 4000 other ecclesiastics, and 30,000 laymen attended this council, which was held in the open air, in a plain near the city; but various subjects divided its attention, and it came to no decision relative to the war against the infidels. The pope found that the Italians, who were, even at this early period, less bigoted Catholics than the other peoples of Western Europe, were not very enthusiastic in the cause, and he resolved on calling another council, for the especial object of deliberating on the holy war, and in a country where he was likely to find more zeal. Accordingly, this council assembled in the November of the same year, at Clermont, in Auvergne; it was equally numerous with that of Placenza, and, which was of most importance, Peter the Hermit attended in person, seated on his mule, and in the costume in which he had preached the Crusade through so many countries. After some preliminary business had been transacted, Peter was brought forward, and he described the sufferings of the Christians in the East in such moving language, and was so well seconded by the eloquence of the pope, that the whole assembly was seized with a fit of wild enthusiasm, and burst into shouts of, 'God wills it! God wills it!' 'It is true,' exclaimed the pope, 'God wills it, indeed, and you here see fulfilled the

words of our Saviour, who promised to be present in the midst of the faithful when assembled in his name; it is he who puts into your mouths the words I have just heard; let them be your war-cry, and may they announce everywhere the presence of the God of armies!' The pope then held forth a cross, and told them all to take that as their sign, and wear it upon their breasts, and the proposal was adopted amid a scene of the most violent agitation. Ademar de Monteil, bishop of Puy, advanced, and was the first to assume the cross, and multitudes hastened to follow his example. They called upon Urban to take the command of the expedition, but he excused himself personally, and appointed to the command, as his delegate, the zealous bishop of Puy, who is said to have been distinguished as a warrior before he became an ecclesiastic.

Thus began the first Crusade. Armies—or rather crowds of men in arms—began now to assemble in various parts, in order to direct their march towards Constantinople. Among the first of these was the multitude who followed the preaching of Peter the Hermit, and who, impatient of delay, chose him for their leader, and were clamorous to commence their march. Peter, blinded by his zeal, accepted a position for which he was totally without capacity, and placed himself at their head, mounted on the same mule and in the same costume in which he had preached. His troop, starting from the banks of the Maas and the Moselle, and consisting originally of people of Champagne and Burgundy, was soon increased by recruits from the adjacent districts, until he numbered under his command from 80,000 to 100,000 men. They came chiefly from the simpler and more ignorant classes of society, and they had been told so much of God's direct interference, that they were led to believe that he would feed and protect them on the road, and they did not even take the precaution to carry provisions or money with them. They expected to be supported by alms, and they begged on the way. Peter's army was divided into two bodies, of which the first, commanded by a man whose mean social position may be conjectured by his name of Walter the Penniless (Gaultier sans Avoir), marched in advance. They were received with enthusiasm by the Germans, who crowded to the same standard, and all went well until they came to the banks of the Morava and the Danube, and encountered the Hungarians and Bulgarians, both which peoples were nominally Christians; but the former took no interest in the Crusades, and the latter were not much better than savages. Walter's band of Crusaders passed through Hungary without any serious accident, and reached the country of the Bulgarians, where, finding themselves entirely destitute of provisions, they spread over the country, plundering, murdering, and destroying, until the population, flying to arms, fell upon them, and made a great slaughter. Those who escaped, fled with their leader towards Greece, and reached Nissa, the governor of which place administered to their pressing necessities; and, having learned by misfortune the advantage of observing something like discipline, they proceeded with more order till at length they reached Constantinople, where they were treated well, and allowed to encamp and await the other division, which was approaching under the command of Peter the Hermit.

The zeal and incapacity of the latter led him into still greater disasters. In their passage through Hungary, the spots where some of the followers of Walter the Moneyless had been slaughtered, were pointed out to the Crusaders, and they were told that the Hungarians had entered into a plot for their destruction. Instead of enforcing the necessity of caution and discipline, Peter talked of vengeance, and sought only to inflame the passions of his followers. On their arrival at Semlin, they beheld the arms of some of the first band of Crusaders, who had been slain, suspended as a trophy over the gates, and Peter himself encouraged them to revenge their comrades. The inhabitants abandoned the town, fled, were overtaken, and 4000 of them slain, and their bodies thrown into the Danube, the waters of which carried them down to Belgrade. The Crusaders returned to Semlin, which was given up to plunder, and they lived there in the most licentious manner, until news came that the Hungarians had assembled a great army to attack them, and then they abandoned the town, and hastened their march across Bulgaria. Everywhere the violence and licentiousness of the Crusaders had spread terror, and they now found the country abandoned, and suffered fearfully from the want of provisions. The people of Nissa had armed and fortified themselves, so that the Crusaders did not venture to attack them, but, having obtained a supply of provisions, had continued their march, when the ill-behaviour of their rear-guard provoked a collision, in which a considerable number of the Crusaders were slaughtered. Peter, informed of this affair, instead of hastening his march, returned to obtain satisfaction, and the irritating behaviour of his troops provoked a still greater conflict, in which 10,000 of the Crusaders were slaughtered, and the rest fled and took refuge in the woods and marshes of the surrounding country. That night, Peter the Hermit, who had taken refuge on a hill, had only 500 men about him, but next day his band numbered 7000, and a few days afterwards the number had been increased to 30,000. With these he continued his march, and, as their disasters had rendered them more prudent, they reached Constantinople without further misfortunes, and rejoined their companions.

As the Emperor Alexis rather despised this undisciplined horde than otherwise, he received them with favour, and treated Peter the Hermit with the greatest distinction; but he lost no time in ridding himself of such troublesome visitors by transporting them to the other side of the Bosphorus. Those who had marched under the banner of Peter the Hermit, had now been joined by the remains of other similar hordes who had followed them, and who had experienced still greater disasters in passing through Hungary and Bulgaria; and, in addition to the other causes of disorder, they now experienced that of jealousy among themselves. They not only laid waste the country, and committed every sort of atrocity, but they quarrelled about the plunder; and, Peter himself having lost his authority, various individuals sought to be their leaders. The Italians and Germans, under the conduct of a chieftain named Renaud, separated from the rest of the army, left the camp which was established in the

fertile country bordering on the Gulf of Nicomedia, and penetrated into the mountains in the neighbourhood of Nicæa, where they were destroyed by the Turks. The main army of the Crusaders, who now acknowledged the nominal authority of Walter, but who paid little attention to the orders of their chieftains, hastened imprudently to revenge the Italians and Germans, and had reached the plain of Nicæa, when they found themselves unexpectedly surrounded by the numerous and better disciplined army of the Turks, and, after a useless resistance, the whole army was put to the sword, or carried into captivity, and a vast mound of their bones was raised in the midst of the plain.

Thus disastrously ended the expedition of Peter the Hermit. Of 300,000 men who had marched from Europe in the belief that they were going to conquer the Holy Land, all had perished, either in the disasters of the route, or in the battle of Nicæa. Peter had left them before this great battle, disgusted with their vices and disorders, and had returned to Constantinople, to declaim against them as a horde of brigands, whose enormous sins had caused God to desert them. From this time the Hermit became a second-rate actor in the events of the Crusade. When the more noble army of the Crusaders, under the princes and great warriors of the West, arrived at Constantinople, he joined them, and accompanied them in their march, performing merely the part of an eloquent and zealous preacher; but at the siege of Antioch, he attempted to escape the sufferings of the Christian camp by flight, and was pursued and overtaken by Tancred, brought back, and compelled to take an oath to remain faithful to the army. This disgrace appears to have been wiped out by his subsequent conduct; and he was among the first ranks of the Crusaders who came in sight of Jerusalem. The wearied warriors were cheered by the enthusiastic eloquence with which he addressed them on the summit of the Mount of Olives; and in the midst of the slaughter, when the holy city was taken, the Christian soldiers crowded round him, as people had crowded round him when he first proclaimed the Crusade, and congratulated him on the fulfilment of his prophecies.

Peter remained in the Holy Land until 1102, when he returned to Europe, with the Count of Montaign, a baron of the territory of Liege. On their way they were overtaken by a dreadful tempest, in which the Hermit made a vow to found a monastery if they escaped shipwreck. It was in fulfilment of this vow, that he founded the abbey of Neufmoutier, at Huy, on the Maas, in honour of the holy sepulchre. Here he passed the latter years of his life, and died in 1115. In the last century, his tomb was still preserved there, with a monumental inscription.

BURKE'S ESTATE—HIS DAGGER-SCENE IN THE HOUSE OF COMMONS.

It is very clear from the authentic biographies of Burke, that he entered upon literary and political life in London with little or no endowment beyond that which nature and a good education had given him. He wrote for his bread for several years, as many able but penniless Irishmen have since done and continue to do. At length, when several years past thirty, merging into a political career as private secretary, first to Single-speech Hamilton, and afterwards to the Marquis of Rockingham, he enters parliament for a small English burgh, and soon after—all at once—in 1767—he purchases an estate worth £23,000! In a large elegant house, furnished with all the adjuncts of a luxurious establishment, surrounded by 600 acres of his own land, driving a carriage and *four*, Burke henceforth appeared as a man of liberal and independent fortune. When surly but pure-hearted Samuel Johnson was shewn by him over all the splendours of Beaconsfield, he said: 'Non equidem invideo—miror magis'—I do not envy, I am only astonished; and then added, still more significantly: 'I wish you all the success which can be wished—by an honest man.' There was an unpleasant mystery here, which it was reserved for modern times to penetrate.

One theory on the subject, set forth so lately as 1853, by an ingenious though anonymous writer,* was that Burke was mainly indebted for the ability to purchase his estate to successful speculations in Indian stock. In Macknight's able work, *The Life and Times of Edward Burke*, published in 1858, an account of the transaction is given in tolerably explicit terms, but without leaving the character of Burke in the position which his admirers might wish. 'In 1767,' says this writer, 'when Lord Rockingham refused to return again to office, and Burke, though in very straitened circumstances, adhered faithfully to his noble leader, it then occurred to the marquis that it was incumbent on him to do something for the fortune of his devoted friend. He advanced £10,000 to Burke, on a bond that it was understood would never be reclaimed. With those £10,000, £5000 raised on mortgage from a Dr Saunders in Spring Gardens, and other £8000, doubtless obtained from the successful speculations of William and Richard Burke [his brothers] in Indian stock, Burke purchased the estate of Gregories. After the reverses of his relatives in the year 1769, all the money they had advanced to him was required. Lord Rockingham again came forward. From that time through many years of opposition, as Burke's fortune, so far from increasing, actually diminished under his unvarying generosity and the requirements of his position, this noble friend was his constant and unfailing resource. The loss of the agency for New York [by which Burke had £1000 a year for a short time] the marquis endeavoured to compensate by frequent loans. At the time of Lord Rockingham's death [1782], he may, on different occasions extending over fourteen years, have perhaps advanced on bonds, which though never formally required, Burke insisted on giving, the sum of about thirty thousand pounds.' It appears, in short, that this brilliant statesman and orator maintained his high historical place for thirty years, wholly through pecuniary means drawn by him from a generous friend. The splendid mansion, the vineries and statuary, the four-horsed carriage, even the kind-hearted patronage to such men of genius as Barry and Crabbe, were all supported in a way that implies the entire sacrifice of Burke's independence. It is very sad to think of in one whom there was so much reason

* See *Athenæum*, Nos. 1363 and 1364.

to admire; but it only adds another and heretofore undetected example to those we have, illustrating a fact in our political system, that it is no sphere for clever adventurers, independence in personal circumstances being the indispensable pre-requisite of political independence.

Burke's dagger-scene in the House of Commons is an obscure point in his life—no one at the time gave any good account of it. On this matter also we have latterly obtained some new light. The great Whig, as is well known, was carried by the French Revolution out of all power of sober judgment, and made a traitor, it might be said, to all his old affections. When at the height of the rabies, having to speak on the second reading of the Alien Bill, December 28, 1792, he called, in passing, at the office of Sir Charles M. Lamb, under-secretary of state. It was only three months from the massacres of Paris. England was in high excitement about the supposed existence of a party amongst ourselves, who were disposed to fraternise with the ensanguined reformers of France, and imitate their acts. Some agent for that party had sent a dagger to a Birmingham manufacturer,

BURKE'S DAGGER-SCENE IN THE HOUSE OF COMMONS.

with an order for a large quantity after the same pattern. It was a coarsely-made weapon, a foot long in the blade, and fitted to serve equally as a stiletto and as a pike-head. The Birmingham manufacturer, disliking the commission, had come up to the under-secretary's office, to exhibit the pattern dagger, and ask advice. He had left the weapon, which Burke was thus enabled to see. The illustrious orator, with the under-secretary's permission, took it along with him to the House, and, in the course of a flaming tirade about French atrocities, and probable imitations of them in England, he drew the dagger from his bosom, and threw it down on the floor, as an illustration of what every man might shortly expect to see levelled at his own throat. There were of course sentiments of alarm raised by this scene; but probably the more general feeling was one of derision. In this way the matter was taken up by Gillray, whose caricature on the subject we here reproduce in miniature, as a curious memorial of a crisis in our history, and also as giving a characteristic portrait of one of our greatest men.

WILLIAM HUNTINGTON'S EPITAPH.

When a man's epitaph is written by himself in anticipation of his death, there may generally be found in it some indication of his character, such as probably would not otherwise have transpired. Such was certainly the case in reference to William or the Rev. William Huntington, who loved to couple the designations 'coal-heaver' and 'sinner saved' with his name. On the 8th of July 1813, the remains of this eccentric man were transferred from a temporary grave at Tunbridge Wells to a permanent one at Lewes. The stone at the head of the grave was inscribed with an epitaph which he himself had written a few days before his death—leaving a space, of course, for the exact date. 'Here lies the Coal-heaver, who departed this life (July 1, 1813), in the (69th) year of his age; beloved of his God, but abhorred by men. The Omniscient Judge, at the Great Assize, shall ratify and confirm this, to the confusion of many thousands; for England and its metropolis shall know that there hath been a prophet among them. W. H. S. S.'—This S. S. meant 'sinner saved.'

The career of the man affords a clue to the state of mind which could lead to the production of such an epitaph. William Hunt was born in the Weald of Kent, of very poor parents. He complained, in later life, that 'unsanctified critics' laughed at him for his ignorance; and certain it is that he never could get over the defects of his education. He struggled for a living as an errand-boy, then as a labourer, then as a cobbler. While engaged in the last-named trade, he took up the business of a preacher. He would place his work on his lap, and a Bible on a chair beside him; and, while working for his family, he collected materials for his next sermon. At what time, or for what reason, he changed his name from Hunt to Huntington, is not clear; but we find him coming up from Thames-Ditton to London, 'bringing two large carts with furniture and other necessaries, besides a post-chaise well filled with children and cats.' He became a preacher at Margaret Street Chapel, and attached a considerable number of persons to him by his peculiar denunciatory style. In 1788, his admirers built him a chapel in Gray's Inn Road, which he named 'Providence Chapel.' When a person attributes to Providence the good that comes to him, his sentiment is at all events worthy of respect; but the peculiarity in Huntington's case was the whimsical way in which everyday matters were thus treated. When £9000 had been spent on the chapel, various gifts of chairs, a tea-caddy full of tea, a looking-glass, a bed and bedstead for

the vestry, 'that I might not be under the necessity of walking home in the cold winter nights' —are spoken of by him as things that Providence had sent him. He had a keen appreciation of worldly goods, however; for he refused to officiate in the chapel until the freehold had been made over absolutely to himself. Wishing afterwards to enlarge his chapel a little, he applied for a bit of ground near it from the Duke of Portland, but demurred at the ground-rent asked. Therefore, says he, 'finding nothing could be done with the earth-holders, I turned my eyes another way, and determined to build my stories in the heavens, where I should find more room and less cost'—in plain English, he raised the building another story. His manner towards his hearers was dogmatic and arrogant. Having once taken the designation of 'Sinner Saved,' he observed no bounds in addressing others. His pulpit-oratory, always vigorous, was not unfrequently interlarded with such expressions as—'Take care of your pockets!'—'Wake that snoring sinner!'—'Silence that noisy numbskull!'—'Turn out that drunken dog!' With a certain class of minds, however, Huntington had great influence. Some time after the death of his first wife, he married the widow of Sir James Sanderson, at one time lord mayor of London: by which alliance he became possessed of much property. On one occasion, a sale of some of his effects took place at his residence at Pentonville, when sixty guineas were given for an old arm-chair by one of his many admirers. Two or three books which he published were quite in character with the epitaph he afterwards wrote—an intense personal vanity pervading all else that might be good in him.

A KING AND HIS DUMB FAVOURITES.

King James I., although a remorseless destroyer of animals in the chase, had, like many modern sportsmen,* an intense fondness for seeing them around him, happy and well cared for, in a state of domesticity. In 1623, John Bannal obtained a grant of the king's interest in the leases of two gardens and a tenement in the Minories, on the condition of building and maintaining a house, wherein to keep and rear his majesty's newly imported silkworms.† Sir Thomas Dale, one of the settlers of the then newly formed colony of Virginia, returning to Europe on leave, brought with him many living specimens of American zoology; amongst them, some flying squirrels. This coming to his majesty's ears, he was seized with a boyish impatience to add them to the private menagerie in St James's Park. At the council-table, and in the circle of his courtiers, he recurs again and again to the subject, wondering that Sir Thomas had not given him the 'first pick' of his cargo of curiosities. He reminded them how the recently arrived Muscovite ambassador had brought him live sables, and, what he loved even better, splendid white gyrfalcons of Iceland; and when Buckingham suggested that, in the whole of her reign, Queen Elizabeth had never received live sables from the czar, James made special inquiries if such were really the case.

Henry Wriothesley, fourth Earl of Southampton, one of the council, and governor and treasurer of the Virginia Company, better known to us as the friend and patron of Shakspeare, wrote as follows to the state secretary, the Earl of Salisbury: 'Talking with the king by chance, I told him of the Virginian squirrels, which they say will fly, whereof there are now divers brought into England, and he presently and very earnestly asked me if none of them was provided for him, and whether your lordship had none for him—saying he was sure Salisbury would get him one of them. I would not have troubled you with this, but that you know full well how he is affected to these toys; and with a little inquiry of any of your folks, you may furnish yourself to present him at his coming to London, which will not be before Wednesday next—the Monday before to Theobald's, and the Saturday before to Royston.'

Some one of his loving subjects, desirous of ministering to his favourite hobby, had presented him with a cream-coloured fawn. A nurse was immediately hired for it, and the Earl of Shrewsbury commissioned to write as follows to Miles Whytakers, signifying the royal pleasure as to future procedure: 'The king's majesty hath commissioned me to send this rare beast, a white hind calf, unto you, together with a woman, his nurse, that hath kept it, and bred it up. His majesty would have you see it be kept in every respect as this good woman doth desire, and that the woman may be lodged and boarded by you, until his majesty come to Theobald's on Monday next, and then you shall know further of his pleasure. What account his majesty maketh of this fine beast you may guess, and no man can suppose it to be more rare than it is, therefore I know that your care of it will be accordingly. So in haste I bid you very heartily farewell. At Whitehall, this 6th Nov. 1611.

'*P. S.* The wagon and the men are to be sent home; only the woman is to stay with you, until his majesty's coming hither, and as long after as it shall please his majesty.'

About the year 1629, the king of Spain effected an important diversion in his own favour, by sending the king—priceless gift!—an elephant and five camels. 'Going through London, after midnight,' says a state-paper letter, 'they could not pass unseen,' and the clamour and outcry raised by some street-loiterers at sight of their ponderous bulk and ungainly step, roused the sleepers from their beds in every district through which they passed. News of this unlooked-for addition to the Royal Zoological Garden in St James' Park, is conveyed to Theobald's as speedily as horse-flesh, whip, and spur could do the work. Then arose an interchange of missives to and fro, betwixt the king, my lord treasurer, and Mr Secretary Conway, grave, earnest, and deliberate, as though involving the settlement or refusal of some treaty of peace. In muttered sentences, not loud but deep, the thrifty lord treasurer shews 'how little he is in love with royal presents, which cost his master as much to maintain as would a garrison.' No matter. Warrants are issued to the officers of the Mews, and to Buckingham, master of the horse, 'that the elephant is to be daily well dressed and fed, but that he should not be led forth to water,

* The Honourable Grantley Berkeley, Gage Earle Freeman, known as 'Premier Falconer of England,' &c.

† This article is the result of original research in the state papers.

nor any admitted to see him, without directions from his keeper, which they were to observe and follow in all things concerning that beast, as they will answer for the contrary at their uttermost peril.' The camels are to be daily grazed in the park, but brought back at night, with all possible precautions to screen them from the vulgar gaze. 'In the blessed graciousness of his majesty's disposition,' £150 was to be presented to Francisco Romano, who brought them over—though the meagre treasury was hardly able to yield up that sum, and her majesty's visit to 'the Bath' must be put off to a more convenient season, for want of money to bear her charges. Then Sir Richard Weston was commissioned by Mr Secretary Conway to estimate the annual cost of maintaining the royal quadruped, his master having decided to take the business into his own hands. He suggested economy, but does not seem to have succeeded, for the state papers for August 1623 furnish the following 'breefe noate what the chardges of the elephant and his keepers are in the yeare:

ffeeding for the elephant at 10s. per diem, is per an., ...	£180
To the 2 Spaniards that keep him, xx^{s}. per week, ...	52
To the 2 Englishmen, his keepers, xvi^{s}. per week, ...	41
Sum per ann. in toto .	£275, 12s.

Such is the gross amount, according to the manuscript, but not according to Cocker. Should the above be a specimen of Mr Secretary Conway's arithmetic, we can only hope his foreign policy was somewhat better than his figures. This calculation, however, by no means embraced every item of the costly bill of fare—'Besides,' adds the manuscript, 'his keepers afirme that from the month of September until April, he must drink (not water) but wyne—and from April unto September, he must have a gallon of wyne the daye.'

A pleasant time of it must this same elephant have had, with his modest winter-allowance of six bottles per diem, in exchange for the Spaniard's lenten quarters.

HENRY HALLAM.

Hallam holds a sort of coldly monumental place in the modern literary annals of England. His historical works on the Middle Ages, the English Constitution, and the progress of literature in Europe, are models of research, justness of generalisation, and elegance of expression. The writer, however, always seems to sit aloof. Like many other men of letters, whose work accorded with their taste, and who were safe by fortune or frugality from the more trying cares of life, he reached a great age, being at his death, in January 1859, eighty-two years old. In one respect, he resembled Burke—he had to submit, near the close of his own life, to the loss of a son whom he held to be a youth of the highest promise, and whom he regarded with doting affection. There is scarcely a more affecting chapter in English biography, than the account of the death of the younger Hallam, when travelling for the recovery of health under his father's care, and the account of the bringing home of the corpse by the sorrow-stricken old man, himself conscious that he must soon follow him into the dark and narrow house appointed for all living.

Perhaps the most valuable service Mr Hallam has rendered to his country, was the careful view he gave it of the progress of its political system. The grand virtue of that system—its distribution of power amongst a variety of forces, which check and counterpoise each other, so that liberty and order result in strict co-ordination—has been fully asserted and held up by him. Somewhat to the surprise of the Whig party, to which he had always been attached, he deprecated the great change which they proposed in the parliamentary representation in 1831. Conversing on this subject with one of the most influential members of the cabinet, he said: 'I am a Whig, as you are: a reform appears to me to be needed, but the reform you attempt is unreasonable. The object should be to perfect, not to change. To suppress certain abuses in the electoral system, and to extend the right of voting, is doubtless in conformity with the spirit of our institutions, and may be advantageous to the development of our public life; but it would be dangerous to give too large an extension to this measure. To grant universal suffrage, would be to hazard a change in the English constitution, and to disturb the harmonious working of a system which we owe to the sagacity and good-fortune of our forefathers. It is in the House of Commons that the union of the Crown, Lords, and Commons is at present effected, that their concerted action is initiated, and, in a word, the equilibrium of power is maintained. This equilibrium constitutes the very essence of the government of England. If the composition of the House of Commons is too essentially altered, by rendering elections too democratic, a risk is incurred of destroying this balance, and giving an irregular impulse to the state by introducing new elements. If once the principle of this bill be admitted, its consequences will extend; change will succeed to change, and the reform of one day will necessitate a fresh one the next. The government will gradually be transferred to the hustings. The representatives, elected by the democracy, will look to the quarter from which the wind of popular favour blows, in order to follow its direction; and English politics, abandoned to popular caprice, will deviate from their proper course, whilst

the English constitution will be shaken to its foundation.'*

LUNACY AND ASTRONOMY.

On the 9th of July 1787, a Dr Elliott, described in the journals of the day as 'one of the literati,' fired two pistols, apparently, at a lady and gentleman, while walking in Prince's Street, London. Neither, however, was injured, though both were very much frightened, and the lady's dress was singed by the closeness of the explosion. Elliott was arrested, committed to Newgate, and, a few days after, tried for an attempted murder, but acquitted on the technical point, that there was no proof of the pistols having been loaded with ball.

Unforeseeing this decision, Elliott's friends had set up a plea of insanity, and among other witnesses in support thereof, Dr Simmons, of St Luke's hospital for lunatics, was examined. This gentleman, whose long and extensive experience in cases of insanity, gave great weight to his evidence, testified that he had been intimately acquainted with Dr Elliott for more than ten years, and fully believed him to be insane. On being further pressed by the recorder to adduce any particular instance of Elliott's insanity, the witness stated that he had lately received a letter from the prisoner on the light of the celestial bodies, which indisputably proved his aberration of mind. The letter, which had been intended by the prisoner to have been laid before the Royal Society, was then produced and read in court. The part more particularly depended upon by the witness as a proof of the insanity of the writer, was an assertion that the sun is not a body of fire, as alleged by astronomers, 'but its light proceeds from a dense and universal aurora, which may afford ample light to the inhabitants of the surface (of the sun) beneath, and yet be at such a distance aloft as not to annoy them.' The recorder objected to this being proof of insanity, saying that if an extravagant hypothesis were to be considered a proof of lunacy, many learned and perfectly sane astronomers might be stigmatised as madmen.

Though the defence of insanity was not received, Elliott, as already observed, was acquitted on a legal point, but the unfortunate man died in prison, of self-inflicted starvation, on the 22d of July, having resolutely refused to take any food during the thirteen days which intervened between his arrest and death.

The story in itself is little more than a common newspaper report of an Old Bailey trial; but as Elliott's idea respecting the sun is that held by the first astronomers of the present day, we are afforded a curious instance of a not very generally recognised fact—namely, that the madness of one century may be the wisdom of its successor; while it is not improbable that the converse of the proposition may be equally as certain, so that a great deal of what we consider wisdom now, may be condemned as rank folly 'a hundred years hence.'

* Mignet's *Sketch of the Life of Mr Hallam*, read before the Institut of France, Jan. 4, 1862.

SUPERSTITIONS ABOUT NEW-BORN CHILDREN.

It is unlucky to weigh them. If you do, they will probably die, and, at anyrate, will not thrive. I have caused great concern in the mind of a worthy old monthly nurse by insisting on weighing mine. They have, however, all done very well, with the exception of one, the weighing of whom was accidentally forgotten to be performed.

The nurses always protested against the weighing, though in a timorous sort of way; saying that, no doubt it was all nonsense, but still it had better not be done.

It is not good for children to sleep upon bones—that is, upon the lap. There seems to be some sense in this notion; it is doubtless better for a child to be supported throughout its whole length, instead of hanging down its head or legs, as it might probably do if sleeping on the lap.

Hesiod, in his *Works and Days*, forbids children of twelve months, or twelve years old, to be placed ἐπ' ἀκινήτοισι—upon things not to be moved—which some have understood to mean *sepulchres:* if this is right, perhaps there is some connection between his injunction, and that which condemns the sleeping upon bones, though the modern bones are those of the living, and not of the dead.

Cats suck the breath of infants, and so kill them. This extremely unphilosophical notion of cats preferring exhausted to pure air, is frequently a cause of great annoyance to poor pussy, when, after having established herself close to baby, in a snug warm cradle, she finds herself ignominiously hustled out under suspicion of compassing the death of her quiet new acquaintance, who is not yet big enough to pull her tail.

When children first leave their mother's room, they must go *upstairs* before they go *down-stairs*, otherwise they will never rise in the world.

Of course it frequently happens that there is no 'upstairs,' that the mother's room is the highest in the house. In this case the difficulty is met by the nurse setting a *chair*, and stepping upon that with the child in her arms as she leaves the room. I have seen this done.

A mother must not go outside her own house-door till she goes to be 'churched.' Of course the *principle* of this is a good one. It is right, under such circumstances, the first use a woman should make of her restored strength, should be to go to church, and thank God for her recovery; but in practice this principle sometimes degenerates into mere superstition.

If you rock an *empty* cradle, you will rock a new baby into it. This is a superstition *in viridi observantiâ*, and it is quite curious to see the face of alarm with which a poor woman, with her tenth baby in her arms, will dash across a room to prevent the 'baby-but-one' from engaging in such a dangerous amusement as rocking the empty cradle.

In connection with this subject, it may be mentioned that there is a widely-spread notion among the poorer classes, that rice, as an article of food, prevents the increase of the population. How the populousness of India and China are accounted for on this theory, I cannot say; probably those who entertain it never fully realise the existence of 'foreign parts,' but it is certain that there was not long ago a great outcry against the giving of rice to poor people under the poor law, as it was said to be done with a purpose.

The Korban Beiram.

The Korban Beïram, or feast of sacrifices, is one of the greatest solemnities of the Mohammedan religion. On this day every family of the true believers offers a sheep to God, and the streets of their cities are filled with men carrying the destined victim on their backs. Among the Arabs the festival begins at the early hour of four A.M., when immense crowds collect at the residence of the nearest pacha or bey, awaiting his appearance in the court of the palace. The fanciful style of eastern costume renders the scene both original and picturesque. All the sheiks are arranged on one side: in the front stand the officers and ministers of the pacha. At five o'clock his highness, accompanied by the members of his family and his staff, makes his entrée: cannon are fired, the peculiar bands of the East play airs suitable for this religious ceremony. The chief-captain of the hussars of the palace announces to the crowd, in a solemn voice, that the hour of sacrifice has arrived, and that his highness, after prayer, will be present at this important act. All then adjourn to the mosque, the body of imams or priests entering with the suite of the pacha. As soon as the sacrifice is over, the pacha re-enters the court, and seated on an elevated throne, all those of high rank have the privilege of kissing his hand; the inferiors slightly touch it with their lips. This occupies an hour, when all retire to take coffee; the captain thanking the crowd for their presence as a mark of attachment to their ruler.

DON PANTALEON SA.

On the 10th of July 1653, Don Pantaleon Sa, a Portuguese nobleman, brother of the ambassador from that country to England, and a Knight of Malta, was beheaded on Tower Hill. The peculiar circumstances of Don Pantaleon's untimely fate, and a remarkable coincidence connected with the affair, render it not unworthy of our notice.

At that time there was, on the south side of the Strand, a kind of bazaar called the New Exchange; the buildings of the Adelphi now cover its site. It was opened in 1608 by James I., who named it 'Britain's Burse,' but in popular parlance it never received any other designation than the New Exchange. It consisted of four rows or walks—two on the ground-floor, and two upstairs, each being lined with small shops, where all kinds of fancy articles were sold. As a place to lounge in, to walk, and talk, and hear the news, as our American cousins say, the New Exchange succeeded to Paul's Walk; but, with this difference, Paul's Walk was only used by gentlemen; while the shops in the New Exchange being especially devoted to the sale of gloves, perfumes, fans, and other feminine necessities or luxuries, its walks were frequented by the gay and fashionable of both sexes. Many scenes in our old comedies are laid in this place; and most old libraries contain whity-brown pamphlets, entitled *News from the New Exchange*, or *New News from the New Exchange;* but as in most of these scurrility and indecency take the place of wit and humour, the less we say about them the better.

It happened that, in the November of 1652, Don Pantaleon was walking in the New Exchange, with some of his countrymen, when a quarrel arose between them and a young English gentleman of good family, named Gerrard. The cause of the quarrel, as is usual in such occurrences, was of a

DON PANTALEON SA.

most trivial kind. Mr Gerrard accused the Portuguese of speaking, in French, disparagingly of England; they, on the other hand, alleged that he rudely pushed between them, without any provocation. Whatever may have been the original cause, swords were drawn, and passes exchanged; but the good sense of a few unarmed Englishmen, who were present, stopped the fray, by separating the combatants, and hustling the Portuguese out of the Exchange, one of them with a cut cheek, leaving Gerrard slightly wounded in the shoulder. The next day, Don Pantaleon, with fifty well-armed followers, came to the Exchange, to take his revenge. Fortunately, few Englishmen were there at the time, but of these, four were severely wounded by the Portuguese, and a Mr Greenway,

while walking with his sister and a lady to whom he was betrothed, being mistaken for Gerrard, was killed by a pistol-shot through the head. A great and enraged crowd soon collected, before which the Portuguese retreated, taking shelter in their house of embassy.

Colonel Whaley, who commanded the horse-guard on duty, proceeded to disperse the crowd, and demand the criminals from the Portuguese ambassador. The latter insisted that, by the law of nations, his house was an inviolable sanctuary for all his countrymen; and begged that the circumstances should be at once made known to the Lord Protector. Cromwell sent a messenger, in reply, to state that if the criminals were not given up to the civil authorities, the soldiers would be withdrawn, and the mob left to do as they pleased in the matter. Under this threat, Don Pantaleon, three Portuguese, and 'an English boy,' were given up; they were confined in the guard-house for the night, and next day committed to Newgate. By the intercession of the Portuguese merchants, their trial was delayed till the 6th of July in the following year, when they were arraigned for the crime of murder.

At first, Don Pantaleon refused to plead, claiming the immunity of an ambassador; he holding a commission to act in that high capacity, in the event of his brother's death, or absence from England. On being told that, if he did not plead he would be submitted to the *press*, he pleaded not guilty. A mixed jury, of Englishmen and foreigners, brought in a verdict of guilty, and the five prisoners were sentenced to be hanged on the 8th. Every effort was made, by the Portuguese and other ambassadors, to save Don Pantaleon's life, but without avail. Either to supplications or threats, Cromwell made no other reply than, 'Blood has been shed, and justice must be satisfied.' The only mercy granted to Don Pantaleon was a respite of two days, from the 8th to the 10th, and a reprieve from the disgraceful death of hanging, Don Guimarez, the ambassador, having requested that he might be permitted to kill his brother with his own sword, rather than he should be hanged.

In the meantime, while Don Pantaleon was a prisoner in Newgate, awaiting his trial, Gerrard, with whom the unhappy quarrel had arisen, becoming concerned in a plot to assassinate Cromwell, was tried and condemned to be hanged also. And in his case, too, his gentle blood and profession of arms being taken into consideration, the punishment of hanging was changed to beheading. So, as Don Pantaleon, attended by a number of his brother's followers, was being conveyed in a mourning-coach with six horses, from Newgate to the place of execution, Gerrard was expiating his crime on the same scaffold to which the other was hastening. It has been said that they met on the scaffold, but without truth, though Don Pantaleon suffered immediately after Gerrard. The three other Portuguese were pardoned, but the person described as the 'English boy,' was hanged at Tyburn on the same day. The inflexible conduct of Cromwell on this occasion, gave him great credit, even among his enemies in England, for his justice; while it impressed foreign nations with a salutary sense of his power; and the case has ever since been considered as a precedent in all questions respecting the privileges of ambassadors.

THE TWO COUNTESSES OF KELLIE.

On this day, in the year 1781, Mr Methven Erskine, a cadet of the Kellie family, married at Edinburgh Joanna, daughter of the deceased Adam Gordon, of Ardoch, in Aberdeenshire. A brother of the gentleman, named Thomas, had, ten years before, married Anne, another daughter of Mr Gordon. These gentlemen were in the position of merchants, and there were at one time seventeen persons between them and the family titles; yet they lived to become, in succession, Earls of Kellie, being the last who enjoyed that peerage, separately from any other.*

It was by a series of very singular circumstances, hitherto unnarrated, that these two marriages came about. The facts were thus related to the writer in 1845, by a lady then upwards of ninety years of age, who had had opportunities of becoming well acquainted with all the particulars.

At Ardoch Castle—which is situated upon a tall rock overlooking the sea—the proprietor, Mr Gordon, was one evening, a little after the middle of the last century, alarmed by the firing of a gun, evidently from a vessel in distress near shore. A storm was raging, and he had every reason to fear that the vessel was about to be dashed against that iron-bound coast. Hastening down to the beach with lights and ropes, he and his servants looked in vain for the distressed vessel. Its fate was already accomplished, as the floating spars but too plainly shewed; but they looked in vain for any, dead or alive, who might have come from the wreck. At length they found a sort of crib which had been rudely cast ashore, containing, strange to say, a still live infant. The little creature, whose singular fate it had been to survive where so many stronger people perished, was carefully taken to the house and nursed. It proved to be a female child, evidently from its wrappings the offspring of persons of no mean condition, but with nothing about it to afford a trace as to whom these were.

Mr Gordon made some attempts to find the relatives of this foundling, but without effect. Hoping that she in time might be claimed, he caused her to be brought up along with his own daughters, and treated in all respects as one of them. The personal graces and amiable character of the child in time made him feel towards her as if she had actually stood in that relation to him. When she had attained to womanhood, a storm similar to that already spoken of occurred. An alarm-gun was fired, and Mr Gordon, as was his wont, hurried down to the beach, but this time to receive a ship-wrecked party, whom he immediately conducted to his house, and treated with his characteristic kindness. Amongst them was one gentleman-passenger, whom he took into his own parlour, and entertained at supper. After a comfortable night spent in the castle, this stranger was surprised at breakfast by the entrance of a troop of blooming young ladies, the daughters of his host, as he understood, but one of whom attracted his attention in a special manner. 'Is this young lady your daughter too?' he inquired of Mr Gordon. 'No,' replied his

* The title, in 1829, fell to the head of the Erskine family, John Francis, Earl of Mar.

host; 'but she is as dear to me as if she were.' And he then related her story. The stranger listened with increasing emotion, and at the close of the narration, said he had reason to believe that the young lady was his own niece. He then related the circumstances of a sister's return from India, corresponding to the time of the shipwreck, and explained how it might happen that Mr Gordon's inquiries for her relations had failed. 'She is now,' said he, 'an orphan; but, if I am not mistaken in my supposition, she is entitled to a handsome provision which her father bequeathed to her in the hope of her yet being found.'

Ere long, sufficient evidence was afforded to make it certain that the gentleman had really, by the strange accident of the shipwreck, found his long missing niece. It became necessary, of course, that she should pass under his care, and leave Ardoch—a bitter necessity to her, as it inferred a parting with so many friends dear to her. To mitigate the anguish of this separation, it was arranged that one of her so-called sisters, the Misses Gordon, should accompany her. Their destination was Gottenburg, where the uncle had long been settled as a merchant. Here closes all that was romantic in the history of the foundling, but there was to be a sequel of that nature in favour of Mr Gordon's children. Amongst the Scotch merchants settled in the Swedish port, was Mr Thomas Erskine, a younger son of a younger brother of Sir William Erskine of Cambo, in Fife, an offshoot of the family of the Earl of Kellie. To him was Miss Anne Gordon of Ardoch married in 1771. A younger brother, named Methven, who had pursued merchandise in Bengal, ten years later, married a sister of Miss Gordon, as has been stated. No one then dreamed that these gentlemen would ever come near to the peerage of their family; but in 1797 the baronet of Cambo became Earl of Kellie, and two years later, the title lighted on the shoulders of the husband of Anne Gordon. In short, these two daughters of Mr Gordon of Ardoch, became, in succession, Countesses of Kellie in consequence of the incident of the shipwrecked foundling, whom their father's humanity had rescued from the waves, and for whom an owner had so unexpectedly been found.

DRESS OF A LADY OF FASHION IN THE SEVENTEENTH CENTURY.

In a dramatic pastoral, entitled *Rhodon and Iris*, first acted at Norwich in 1631, we find the following list of the dress, ornaments, and toilet requisites of a fashionable lady of the period.

Chains, coronets, pendants, bracelets, and earrings;
Pins, girdles, spangles, embroideries, and rings;
Shadows, rebatoes, ribbands, ruffs, cuffs, falls,
Scarfs, feathers, fans, masks, muffs, laces, cauls,
Thin tiffanies, cobweb lawn, and farthingales,
Sweet falls, veils, wimples, glasses, crisping-pins,
Pots of ointment, combs, with poking sticks, and bodkins,
Coifs, gorgets, fringes, rolls, fillets, and hair-laces,
Silks, damasks, velvets, tinsels, cloth of gold,
Of tissues, with colours of a hundredfold.
But in her tires so new-fangled is she,
That which doth with her humour now agree,
To-morrow she dislikes. Now doth she swear
That a loose body is the neatest wear;
But, ere an hour be gone, she will protest,
A strait gown graces her proportion best;
Now calls she for a boisterous farthingale,
Then to her haunch she 'll have her garments fall;
Now doth she praise a sleeve that 's long and wide,
Yet by and by that fashion doth deride;
Sometimes, she applauds a pavement-sweeping train,
And presently dispraiseth it again;
Now she commends a shallow band so small,
That it may seem scarce any band at all;
But soon to a new fancy she doth reel,
And calls for one as big as a coach-wheel.
She 'll wear a flowing coronet to-day,
The symbol of her beauty's sad decay;
To-morrow, she a waving plume will try,
The emblem of all female levity,
Now in her hat, now in her hair is drest;
Now, of all fashions, she thinks change the best,
Nor in her weeds alone, is she so nice,
But rich perfumes she buys at any price;
Storax and spikenard, she burns in her chamber,
And daubs herself with civet, musk, and amber.

* * * *

Waters she hath to make her face to shine,
Confections, eke, to clarify her skin;
Lip-salve and cloths of a rich scarlet dye
She hath, which to her cheeks she doth apply;
Ointment, wherewith she sprinkles o'er her face,
And lustrifies her beauty's dying grace.

FASHIONABLE LADY OF THE SEVENTEENTH CENTURY.

CHILD SUCKLED BY A GOAT.

Whether the old story of Romulus and Remus is a myth or a record of genuine fact, we shall never know: most probably the former; but incidents of the same nature are sufficiently vouched. The *Swallow* frigate was, in July 1812, engaged in a severe action with a French frigate near Majorca. One of the sailors, named Phelan, had his wife on board. In such circumstances, the woman is always expected to assist the surgeons in attending on the sick and wounded. The two ships being engaged yard-arm and yard-arm, the slaughter was great, and the cockpit became

crowded with poor fellows in need of attention. While engaged in her service of kindness, the woman heard that her husband was wounded on deck. She rushed up, and reached the spot in time to catch poor Phelan in her arms. They kissed and embraced; but next instant a cannon-ball took off the unfortunate woman's head. The husband gave one agonised look at his dead wife, and then expired. When the rage of the battle was over, the two bodies were sewed up in a hammock and consigned to the deep. The hapless wife had, only three weeks before, given birth to an infant. The child was thus left an orphan, with no woman near it, and none but rough-handed, though kind-hearted, tars to tend it. They all declared their willingness to be fathers to the little one; but a mother was still wanting. It happened, however, that one of the officers had a female Maltese goat on board. The child was put to the goat, and followed his natural instinct by sucking. The animal became so accustomed to this proceeding, that she would lie down voluntarily to suckle the infant. Goat's milk is known to be very nourishing; and little Tommy (as the sailors called him) prospered with this substitute for a natural parent.

JULY 11.

St Pius I., pope and martyr, 157. St James, bishop of Nisibis, confessor, 350. St Hidulphus, bishop and abbot, 707. St Drostan, abbot of Dalcongaile, about 809.

Born.—Robert I. of Scotland, 1274, *Lochmaben;* Lalande, French mathematician, 1732, *Bourg en Bresse.*

Died.—Emperor Anthemius, murdered at Rome, 472; Jack Cade, leader of a peasant rebellion in England, killed near Lewes, 1450; Charles Macklin, comedian, 1797, *London;* General Alexander Hamilton, Vice-president of United States, killed in a duel, 1804.

CHARLES MACKLIN.

A rare and remarkable instance of length of days, combined with an arduous and successful theatrical career, is exhibited in the great age of Macklin, who died in his one hundred and seventh year. Born two months before his father was killed, fighting for King James at the battle of the Boyne, in 1690, Macklin died in 1797, thus witnessing the extremities of two centuries, and nearly having lived in three. As an actor, he was distinguished for his performance of Shylock, Sir Archy in his own comedy of *Love-à-la-Mode*, and other parts in which sarcasm forms the leading trait of character. His writings display the same sarcastic tone, and his best performances seem to have been reflections of his own personal disposition. Even his repartees were generally of the severe kind. For instance, on a dignitary of the church, who had a doubtful reputation for veracity, telling Macklin that a tradesman in the parish had called him a liar, the actor asked: 'What reply did you make?' 'I told him,' said the clergyman, 'that a lie was one of the things I dared not commit.' 'And why, doctor,' retorted Macklin, 'why did you give the fellow so mean an opinion of your courage?'

Macklin's shrewdness, knowledge of the world, long experience of life, and liberal ideas rendered his conversation peculiarly pleasant and instructive, when he was not in the sarcastic mood. Nor was he unaware of his failing in the latter respect. Alluding to it on one occasion, he said: 'It takes a long time for a man to learn the art of *neutralising* in conversation. I have, for a great part of my life, been endeavouring at it, but was never able to act up to it as I wished. I could never sit still hearing people assert what I thought wrong, without labouring to set them right, not considering how difficult it is to correct the errors of others, when we are so wedded to our own. But this folly generally attaches to men of inexperience and lively imagination: your dull fellows know better; they have little but neutrality to trust to, and soon find out the policy of it.'

Macklin's recollections of the very different manners and customs that prevailed in the earlier part of the last century, were very interesting. Then, the east and west of London were as totally distinct as two cities one hundred miles apart. The merchant then scarcely ever lived out of the city, his residence being invariably attached to his counting-house; his credit, in a great degree, depending upon the observance of this long-established practice. The first emigration of the city merchants westwards was about 1747, and then only as far as Hatton Garden; and even this removal was ventured upon by such only as had already realised large fortunes, and possessed reputations for wealth beyond any shadow of doubt. 'The lawyers, too,' said Macklin, 'lived mostly in the Inns of Court, or about Westminster Hall, and the players all resided in the vicinity of the theatres, so that they could attend rehearsal without inconvenience, or expense of coach-hire. But I do not know how the change has been effected; we, the actors, are all now looking out for high ground, squares, and genteel neighbourhoods, no matter how far distant from the theatres, as if local selection could give rhythm to the profession, or genteel neighbourhoods instantaneously produce good-manners.'

Macklin's last appearance on the stage, was in his hundredth year, in the character of Shylock. Even at that very great age, he was physically capable of performing the part with considerable vigour; but his mental powers were almost gone. In the second act, his memory totally failing him, he with great grace and solemnity came forward, and apologised to the audience. For a few years afterwards, he scarcely felt the infirmities of advanced age. He lived then, as he always had been accustomed to do, much from home; taking long walks, and frequenting a tavern in Duke's Court, every evening, where, though still by no means unready at putting down an impudent questioner by a biting sarcasm, he used to relate, with tolerable distinctness, many interesting anecdotes to gratified listeners. As his infirmities increased, he wandered feebly about the vicinity of Covent Garden, and often visited the theatre, more, apparently, from the force of habit, than from any amusement he derived from the performance. On these occasions, however full the house might be, the pit audience always made room for him in his accustomed seat—the centre of the last row, next to the orchestra.

Mr Kirkman relates a conversation he had with Macklin, less than a year before he died, which forms an interesting and not unpleasing picture of faculties still shrewd and vivacious, though fast fading into decay. As a specimen of the

conversation of a man upwards of one hundred and six years old, it is probably unique.

Kirkman. Are you not pleased when your friends come and converse with you?

Macklin. I am always very happy to see my friends, and I should be very happy to hold a—a—a—see there now——

Kirkman. A conversation you mean, sir?

Macklin. Ay, a conversation. Alas, sir! you see the wretched state of my memory; see there now, I could not recollect that common word—but I cannot converse. I used to go to a house very near this, where my friends assemble.... It was a—a—a [a company]; no that's not the word, a—a—club, I mean. I was the father of it, but I could not hear all; and what I did hear, I did not a—a—under—under—understand; they were all very attentive to me, but I could not be one of them. Indeed, I found, sir, that I was not fit to keep company, so I stay away.

Kirkman. But I perceive with satisfaction, sir, that your sight is good.

Macklin. O, sir! my sight like everything else begins to fail too; about two days ago, I felt a—a—a—there now—— I have lost it; a pain just above my left eye.

Kirkman. I think you appear at present free from pain.

Macklin. Yes, sir, I am pretty comfortable now; but I find my, my—a—a—my strength is all gone. I feel myself going gradually.

Kirkman. But you are not afraid to die?

Macklin. Not in the least, sir. I never did any person any serious mischief in my life; even when I gambled, I never cheated: I know that a—a—a—see there now—— death, I mean, must come, and I am ready to give it up.

Kirkman. I understand you were at Drury Lane Theatre last night.

Macklin. Yes, sir, I was there.

Kirkman. Yes, sir, the newspapers of this morning take notice of it.

Macklin. Do they?

Kirkman. Yes, sir;—the paragraph runs thus: 'Among the numerous visitors at Drury Lane Theatre last night, we observed the Duke of Queensberry and the veteran Macklin, whose ages together amount to one hundred and ninety-six.'

Macklin. The Duke of who?

Kirkman. The Duke of Queensberry, sir.

Macklin. I don't know that man. The Duke of Queensberry! The Duke of Queensberry! Oh! ay, I remember him now very well. The Duke of Queensberry old! Why, sir, I might be his father!* Ha, ha, ha!

Kirkman. Well, sir, I understand that you went to the Haymarket Theatre to see the *Merchant of Venice.*

Macklin. I did, sir.

Kirkman. What is your opinion of Mr Palmer's Shylock?

Macklin. Why, sir, my opinion is, that Mr Palmer played the character of Shylock in *one style.* In this scene there was a sameness, in that scene a sameness, and in every scene a sameness: it was all same, same, same!—no variation. He did not look the character, nor laugh the character, nor speak the character of Shakspeare's Jew. In the trial-scene, where he comes to cut the pound of flesh, he was no Jew. Indeed, sir, *he did not hit the part, nor did the part hit him.*'

Macklin seems to have been mainly indebted for his long life to a vigorous constitution. He never was an abstemious man. His favourite beverage was ale, porter, or white wine thickened to the consistence of a syrup with sugar. For many years before he died, his loss of teeth compelled him to eat only fish, hash, and other spoon-meats. For the last ten years of his existence, he had no fixed hour for meals. He ate when he was hungry, at any hour of the day or night, drank when he was thirsty, and went to bed or arose just as he felt inclined, without any reference to time. There can be no doubt that the constant care and attention of his devoted wife, combined with her thorough knowledge of his disposition, constitution, and temper, was partly the cause of the prolongation of his life.

* Macklin was right, and the newspaper wrong. The duke was then only in his seventy-first year.

ALEXANDER HAMILTON.

Although the name of Alexander Hamilton is not so popularly familiar as several others concerned in the construction of the American Union, yet there is scarcely another which so closely interests the profounder students of that momentous passage in the world's history. Of Hamilton's share in that work, Guizot testifies, 'that there is not one element of order, strength, and durability in the constitution which he did not powerfully contribute to introduce into the scheme and cause to be adopted.'

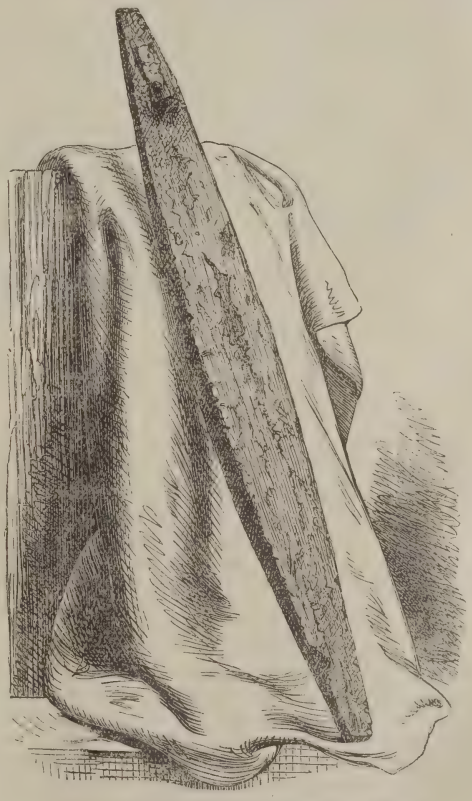
Hamilton's father was a Scotsman, and his mother a member of a Huguenot family, banished from France. He was born in 1757, on the island of Nevis; and whilst a youth serving as clerk in a merchant's office, a hurricane of more than ordinary violence occurred, and Hamilton drew up an account of its ravages, which was inserted in a West Indian newspaper. The narrative was so well written, and excited so much attention, that the writer was deemed born for something better than mercantile drudgery, and was sent to New York to prosecute his education. The dispute between Great Britain and the colonies had begun to grow very warm, and Hamilton soon distinguished himself by eloquent speeches in advocacy of resistance. With the ardour of youth he commenced the study of military tactics, and turned his learning to good account in the first action between the British and Americans at Lexington in 1775. In the course of the unhappy war which followed, Hamilton was Washington's most trusted and confidential aid. At the conclusion of hostilities he commenced practice at the bar, became secretary of the treasury under President Washington, and a leading actor in all those intricate, delicate, and perplexing discussions, which attended the consolidation of the thirteen independent colonies into one nation. Hamilton was the most conservative of republicans. He opposed the ultra-democratic doctrines of Jefferson, he was an ardent admirer of the English constitution, and he beheld the course of the French Revolution with abhorrence and dismay. But all the blessings which lay in store for America in the treasury of Hamilton's fine intellect, were lost by a cruel

mischance ere he had attained his forty-seventh year. With the feelings of an upright man, he had expressed his sense of the profligacy of Aaron Burr, who thereon challenged him to a duel. Hamilton had all reasonable contempt for such a mode of settling differences, but fearing, as he wrote, that 'his ability to be in future useful either in preventing mischief or effecting good was inseparable from a conformity to prejudice in this particular,' he weakly yielded. With every precaution of secrecy, he met his adversary at Weehardken, near New York. Colonel Burr fired, and his ball entered Hamilton's side, who fell mortally wounded, his pistol going involuntarily off as he staggered to the ground. After a day of agony, he expired on the 11th of July 1804. Never, except at Washington's death, was there such mourning in America.

Hamilton was a man under middle height, spare, erect, and of a most dignified presence. His writings in *The Federalist* are read by political philosophers with admiration to this day. He wrote rapidly, but with precision and method. His habit was to think well over his subject, and then, at whatever time of night, to go to bed and sleep for six or seven hours. On awaking, he drank a cup of strong coffee, sat down at his desk, and for five, six, seven, or even eight hours continued writing, until he had cleared the whole matter off his mind.

HURLING THE WHETSTONE: THE COUTEAU RODOMONT.

Our ancestors, with a strong love for practical jokes, and an equally strong aversion to falsehood and boasting, checked an indulgence in such



vices, when they became offensive, by very plain satire. A confirmed liar was presented with *a whetstone*, to jocularly infer that his invention, if he continued to use it so freely, would require sharpening. Hence, to 'win the whetstone,' was equivalent to being proclaimed the greatest liar in the company.

Annexed is a cut representing a man offering the whetstone to 'a pack of knaves,' being one of a series of twenty copper-plates of foreign execution (probably Dutch or Flemish) without date or name, but evidently of the time of Charles I., preserved in the Bridgewater Library. It is thus described in Mr Payne Collier's catalogue thereof: 'Hurling the whetstone,' was a phrase apparently equivalent to 'throwing the hatchet,' and the latter is derived from the tale of a man who was so incredibly skilful, that he was able to throw a hatchet at a distant object, and sever it; perhaps 'hurling the whetstone' was an exaggeration of a similar kind, easily connected with the hatchet. Underneath the preceding engraving are the following lines :—

> 'The whettstone is a knave that all men know,
> Yet many on him doe much cost bestowe:
> Hee 's us'd almost in every shoppe, but whye?
> An edge must needs be set on every lye.'

Shakspeare has an illustrative allusion to this satirical custom. In *As You Like It* (Act I. sc. 2), the entrance of the fool, Touchstone, is greeted by

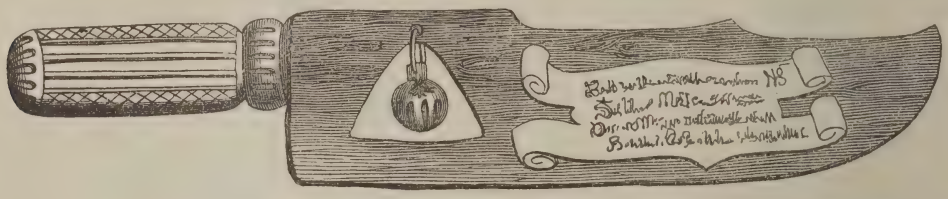
OLD WHETSTONE IN BRITISH MUSEUM.

Celia as a lucky event, 'fortune's work, who, perceiving our natural wits too dull to reason, hath sent this natural* for our whetstone: for always the dulness of the fool is the whetstone of his

* The old term for a born-fool.

wits.' In *Troilus and Cressida* (Act V. sc. 2), the same idea occurs when Thersites satirically alludes to the duplicity of Cressida in the words:

'Now she sharpens;—well said, *whetstone.*'



Ben Jonson has a more direct allusion to it, when he makes one of his characters declare of another, 'he will lie cheaper than any beggar, and louder than most clocks; for which he is right properly accommodated to the *whetstone*, his page!' thus branding both master and man as liars by collusion. A confirmed slanderer, whose allegations were his own invention, was sometimes publicly exposed with the whetstone hanging round his neck in the pillory, or on the stool of repentance.

The form of the old whetstone differed in some points from the modern one, as may be seen in our engraving on the preceding page, from one preserved in the British Museum. It is supplied with a loop for suspension at one end, and thus could be readily hung to the girdle of a butcher or artisan whose tools required sharpening, and might be as easily attached to the neck of any convicted liar.

Boasters, who occupied the time, or exhausted the patience of the company at a social gathering, were silenced in France and Germany by having delivered to them a wooden knife, called *couteau rodomont*, and *rodomont messer*, from the word *rodomontado*, applied to a rambling boastful narrative. They were kept at taverns, and placed beside the president of the table, and he stopped the troublesome speaker by ringing the bell in the blade, or blowing a whistle concealed in the handle of the knife, and then delivering it into the hands of the offender to guard until a greater boaster was found; this ceremony being greeted by peals of laughter, and words of mockery. Our engraving depicts one of these curious carving-knives, made at Nuremberg in the early part of the sixteenth century, bearing upon the bell the arms of the emperor, and on the blade descriptive verses from the pen of the renowned cobbler-poet, Hans Sachs. The rhymes are of the homeliest description, and allude as well to the folly as the immorality of falsehood. The utility of the implement is enforced in a couplet which runs along the back of the blade, and may be thus translated:

'Though made from wood, this knife is good,
To cut short tales from the lying brood.'

This knife was probably made about 1550. Sachs was born in 1494, and lived till 1576; he wrote abundantly, and on all subjects, in the early part of his century, and reckons his works in 1561 at 'a sum-total of six thousand and forty-eight pieces, great and small.' During the whole of his life he continued to work at his trade, although he found leisure enough to spin out a greater mass of rhyme than was ever produced by one man, if Lope de Vega, the Spaniard, be excepted. Very many of Sachs's poems were called forth by temporary circumstances; several are satirical; and those which he levelled at the Church of Rome, from the popularity of their style, did much in aid of the Reformation.

JULY 12.

Saints Nabor and Felix, martyrs, about 304. St John Gualbert, abbot, 1073.

Born.—Caius Julius Cæsar, 100 B. C.

Died.—Desiderius Erasmus, scholar, 1536, *Basel;* General St Ruth, killed at Aghrim, Ireland, 1691; Titus Oates, 1704; Christian G. Heyne (illustrator of ancient writings), 1814, *Gottingen;* Dr John Jamieson (Scottish Dictionary), 1838, *Edinburgh;* Mrs Tonna ('Charlotte Elizabeth'), controversial writer, 1846; Horace Smith, novelist, comic poet, 1849; Robert Stevenson, engineer of Bell Rock light-house, &c., 1850.

MRS TONNA.

It is quite possible to be an author and have one's books sold by thousands, and yet only attain a limited and sectional fame. Such was Mrs Tonna's case. We remember overhearing a conversation between a young lady and a gentleman of almost encyclopædic information, in which a book by Charlotte Elizabeth was mentioned. 'Charlotte Elizabeth!' exclaimed he; 'who is Charlotte Elizabeth?' 'Don't you know Charlotte Elizabeth?' rejoined she; 'the writer of so many very nice books.' She was amazed at his ignorance, and probably estimated his acquirements at a much lower rate afterwards.

'Charlotte Elizabeth,' Miss Browne, Mrs Phelan, finally Mrs Tonna, was the daughter of the rector of St Giles, Norwich, and was born in that city on the 1st of October 1790. As soon as she could read she became an indiscriminate devourer of books, and when yet a child, once read herself blind for a season. Her favourite volume was *Fox's Martyrs*, and its spirit may be said to have become her spirit. Shortly after her father's death, she entered into an unhappy marriage with one Captain Pelhan, whose regiment she accompanied to Canada for three years. On her return, she settled on her husband's estate in Kilkenny, and mingling with the peasantry, she came to the conclusion that all their miseries sprang out of their religion. She thereon commenced to write tracts and tales illustrative of that conviction, which attracted the notice and favour of the Orange party, with whom she cordially identified herself. As her writings became remunerative, her husband laid claim to the proceeds, and to preserve them from sequestration, she assumed the name of 'Charlotte Elizabeth.' Her life henceforward is merely a tale of unceasing literary activity. Having become totally deaf, her days were spent between her desk and her garden. In the editorship of magazines, and in a host of publications, she advocated her religious and Protestant principles with a fervour

which it would not be unjust to designate as, occasionally at least, fanatical. In 1837, Captain Pelhan died, and in 1841 she formed a happier union with Mr Tonna, which terminated with her death at Ramsgate on the 12th of July 1846. Mrs Tonna had a handsome countenance and in its radiance of intelligence and kindliness, a stranger would never imagine that he was in the presence of one whose religion and politics, theoretically, were those of the days of Elizabeth rather than of Victoria, and who was capable of saying in all earnestness, as she once did say to a young Protestant Irish lady of our acquaintance, on their being introduced to each other, 'Well, my dear, I hope you hate the Paapists!'

THE FEMALE HEAD-DRESSES OF 1776.

On the 12th of July 1776, Samuel Foote appeared at the Haymarket theatre in the character of Lady Pentweazle, wearing one of the enormous female head-dresses which were then fashionable—not meaning, probably, anything so serious as the reform of an absurdity, but only to raise a laugh, and bring an audience to his play-house. The dress is stated to have been stuck full of feathers of an extravagant size; it extended a yard wide; and the whole fabric of feathers, hair, and wool dropped off his head as he left the stage. King George and Queen Charlotte, who were present,

A FEMALE HEAD-DRESS OF 1776.

laughed heartily at the exhibition; and her majesty, wearing an elegant and becoming head-dress, supplied a very fitting rebuke to the absurdity which the actor had thus satirised. There are numerous representations to be met with in books of fashions, and descriptions in books of various kinds, of the head-dress of that period. Sometimes it was remarkable simply for its enormous height; a lofty pad or cushion being placed on the top of the head, and the hair combed up over it, and slightly confined in some way at the top. Frequently, however, this tower was bedizened in a most extravagant manner, necessarily causing it to be broad as well as high, and rendering the whole fabric a mass of absurdity. It was a mountain of wool, hair, powder, lawn, muslin, net, lace, gauze, ribbon, flowers, feathers, and wire. Sometimes these varied materials were built up, tier after tier, like the successive stages of a pagoda. The *London Magazine*, in satirizing the fashions of 1777, said:

'Give Chloe a bushel of horse-hair and wool,
Of paste and pomatum a pound,
Ten yards of gay ribbon to deck her sweet skull,
And gauze to encompass it round.
Of all the bright colours the rainbow displays,
Be those ribbons which hang on the head;
Be her flounces adapted to make the folks gaze,
And about the whole work be they spread;
Let her flaps fly behind for a yard at the least,
Let her curls meet just under her chin;
Let these curls be supported, to keep up the jest,
With an hundred instead of one pin.'

The *New Bath Guide*, which hits off the follies of that period with a good deal of sarcastic humour, attacked the ladies' head-dresses in a somewhat similar strain:

'A cap like a hat
(Which was once a cravat)
Part gracefully plaited and pin'd is,
Part stuck upon gauze,
Resembles macaws
And all the fine birds of the Indies.

But above all the rest,
A bold Amazon's crest
Waves nodding from shoulder to shoulder;
At once to surprise
And to ravish all eyes
To frighten and charm the beholder.

In short, head and feather,
And wig altogether,
With wonder and joy would delight ye;
Like the picture I've seen
Of th' adorable queen
Of the beautiful bless'd Otaheite.

Yet Miss at the Rooms*
Must beware of her plumes,
For if Vulcan her feather embraces,
Like poor Lady Laycock,
She 'd burn like a haycock,
And roast all the Loves and the Graces.'

The last stanza refers to an incident in which a lady's monstrous head-dress caught fire, leading to calamitous results.

BELL LEGENDS.

Church-bells are beginning to awake a regard that has long slumbered. They have been deemed, too, recently, fit memorial of the mighty dead. Turrets, whose echoes have repeated but few foot-falls for a century, have been intrepidly ascended, and their clanging tenants diligently scanned for word or sign to tell their story. Country clergymen, shewing the lions of their parishes to archæological excursionists, have thought themselves happy in the choice of church-bells as the subject of the address expected of them. And it will be felt that some of the magic of the International

* The Pump-rooms at Bath, a place of great resort for fashionables.

Exhibition was due to the tumultuous reverberations of the deep, filling, quivering tones of the many bells.

In monkish medieval times, church-bells enjoyed peculiar esteem. They were treated in great measure as voices, and were inscribed with Latin ejaculations and prayers, such as—Hail, Mary, full of grace, pray for us; St Peter, pray for us; St Paul, pray for us; St Katharine, pray for us; Jesus of Nazareth, have mercy upon us; their tones, swung out into the air, would, ecstatically, appear to give utterence to the supplication with which they were inscribed. A bell in St Michael's church, Alnwick, says, in quaint letters on a belt that is diapered with studs, 'Archangel Michael, come to the help of the people of God.' A bell at Compton Basset, which has two shields upon it, each bearing a chevron between three trefoils, says, 'Blessed be the name of the Lord.' Many bells are found to have identical inscriptions; there is, however, great variety, and further search would bring much more to light.

In those old times, pious queens and gentlewomen threw into the mass of metal that was to be cast into a bell their gold and silver ornaments; and a feeling of reverence for the interceding voices was common to gentle and simple. At Sudeley Castle, in the chapel, there is a bell, dated 1573, that tells us of the concern which the gentle dames of the olden time would take in this manufacture. It says, 'St George, pray for us. The Ladie Doratie Chandos, Widdowe, made this.' They were sometimes cast in monasteries under the superintendence of ecclesiastics of rank. It is written that Sir William Corvehill, 'priest of the service of our Lady,' was a 'good bell-founder and maker of frames;' and on a bell at Sealton, in Yorkshire, we may read that it was made by John, archbishop of Graf. One of the ancient windows on the north side of the nave of York minster is filled with stained-glass, which is divided into subjects representing the various processes of bell-casting, bell-cleaning, and bell-tuning, and has for a border a series of bells, one below another; proving that the associations with which bells were regarded rendered them both ecclesiastical and pictorial in the eyes of the artists of old.

The inscriptions on ancient bells were generally placed immediately below the haunch or shoulder, although they are sometimes found nearer the sound bow. The legends are, with few exceptions, preceded by crosses. Coats of arms are also of frequent occurrence, probably indicating the donors. The tones of ancient bells are incomparably richer and softer, more dulcet, mellow, and sufficing to the ear than those of the present iron age.

King Henry VIII., however, looked upon church-bells only as so much metal that could be melted down and sold. Hence, in the general destruction and distribution of church-property in his reign, countless bells disappeared, to be sold as mere metal. Many curious coincidences attended this wholesale appropriation. Ships attempting to carry bells across the seas, foundered in several havens, as at Lynn, and at Yarmouth; and, fourteen of the Jersey bells being wrecked at the entrance of the harbour of St Malo, a saying arose to the effect, that when the wind blows the drowned bells are ringing. A certain bishop of Bangor, too, who sold the bells of his cathedral, was stricken with blindness when he went to see them shipped; and Sir Miles Partridge, who won the Jesus bells of St Paul's, London, from King Henry, at dice, was, not long afterwards hanged on Tower Hill. Notwithstanding the regal and archiepiscopal disregard of bells, they did not, altogether, pass from popular esteem. Within the last half century, at Brenckburne, in Northumberland, old people pointed out a tree beneath which, they had been told when they were young, a treasure was buried. And when this treasure was sought and found, it turned out to be nothing more than fragments of the bell of the ruined priory church close by. Tradition recounts that a foraging-party of moss-trooping Scots once sought far and near for this secluded priory, counting upon the contents of the larders of the canons. But not a sign or a track revealed its position, for it stands in a cleft between the wooded banks of the Coquet, and is invisible from the high lands around. The enraged and hungry marauders—says the legend—had given up the search in despair, and were leaving the locality, when the monks, believing their danger past, bethought themselves to offer up thanksgivings for their escape. Unfortunately, the sound of the bell, rung to call them to this ceremony, reached the ears of the receding Scots in the forest above, and made known to them the situation of the priory. They retraced their steps, pillaged it, and then set it on fire.

After the Reformation, the inscriptions on bells were addressed to man, not to Heaven; and were rendered in English. There is an exception to this rule, however, at Sherborne, where there is a fire-bell, 1652, addressed conjointly to Heaven and man: 'Lord, quench this furious flame; Arise, run, help, put out the same.' Many of the legends on seventeenth-century bells reflect the quaint times of George Herbert:

> 'When I ring, God's prayses sing;
> When I toule, pray heart and soule;'

and, 'O man be meeke, and lyve in rest;' 'Geve thanks to God;'

> 'I, sweetly tolling, men do call
> To taste on meate that feeds the soule,'

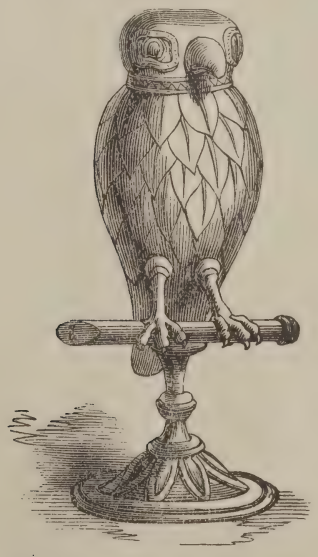
are specimens of this period. More vulgar sentiments subsequently found place. 'I am the first, although but small, I will be heard above you all,' say many bells coarsely. A bell at Alvechurch says still more uncouthly, 'If you would know when we was run, it was March the twenty-second 1701.' 'God save the queen,' occurs on an Elizabethan bell at Bury, Sussex, bearing date 1599; and on several others of the reign of Queen Anne, in Devonshire, and on one in Magdalen College, Oxford. 'God save our king,' is found first written on a bell at Stanford-upon-Soar, at the date of the accession of James I., 1603; it is of frequent occurrence on later bells; and the same sentiment is found produced in other forms, one of which is 'Feare God and honner the king, for obedience is a vertuous thing.'

We have one bell that is dedicated to a particular service. It is the great bell of St Paul's, London, which is only tolled on the death of sovereigns. The ordinary passing bell, now commonly called the dead-bell, used to be rung when the dying person was receiving the sacrament, so that those who wished to do so could pray for him at this

moment; but it is now only rung after death, simply to inform the neighbourhood of the fact. In the same way the sanctus-bell used to be rung in the performance of mass, when the priest came to the words 'Sancte, Sancte, Sancte, Deus Sabaoth,' so that those persons unable to attend, might yet be able to bow down and worship at this particular moment. For this reason, the bell was always placed in a position where it might be heard as far as possible. In the gables of the chancel arches of ancient churches, are seen small square apertures, whose use few people can divine. It was through these that the ringers watched the services below, so as to be able to ring at the right time.

The great bell of Bow owes its reputation to the nursery legend of 'Oranges and lemons, said the bells of St Clement's;' not to any superior characteristics, for it is exceeded in size and weight by many others. English bells, generally, are smaller than those of foreign countries; perhaps for the reason that scientific ringing is not practised abroad; and all effect must be produced by the bells themselves, not by the mode in which they are handled. The more polite the nation, it is argued, the smaller their bells. The Italians have few bells, and those that they have are small. The Flemish and Germans, on the other hand, have great numbers of large bells. The Chinese once boasted of possessing the largest bells in the world; but Russia has borne off the palm, or in other words carried away the bell, by hanging one in Moscow Cathedral, measuring 19 feet in height, and 63 feet 11 inches round the rim. By the side of these proportions our Big Bens and Big Toms are diminutive. The great bell of St Paul's is but 9 feet in diameter, and weighs but 12,000 lbs. The largest bell in Exeter Cathedral weighs 17,470 lbs.; the famous Bow Bell but 5800 lbs. York, Gloucester, Canterbury, Lincoln, and Oxford, can also eclipse our familiar friend.

France possesses a few ancient bells; some of them are ornamented with small bas-relievos of the Crucifixion, of the descent from the Cross, fleurs-de-lis, seals of abbeys and donors; and others have inscriptions of the same character as our own, each letter being raised on a small tablet more or less decorated. There was a bell in the abbey-church of Moissac (unfortunately recast in 1845), which was of a very rare and early date. An inscription on it, preceded by a cross, read, *Salve Regina misericordiæ*. Between the two last words was a bas-relief of the Virgin, and after them three seals; then followed a line in much smaller characters, 'Anno Domini millesimo cc° LXX. tercio Gofridus me fecit et socios meos. Paulus vocor.' French bells were sometimes the gifts of kings and abbots; and were in every way held in as great esteem as those of our own country. In the accounts of the building of Troyes Cathedral, there is mention of two men coming to cast the bells, and of the canons visiting them at their work and stimulating them to perform it well, by harangues and by chanting the Te Deum. The canons finally assisted at the consecration of the bells.



Bells have their literature as well as legends. Their histories are written in many russet-coloured volumes, in Latin, in French, and in Italian. These have been published in different parts of Europe, in Paris, in Leipsic, in Geneva, in Rome, in Frankfort, in Pisa, in Dresden, in Naples, in the fifteenth, sixteenth, seventeenth, and eighteenth centuries. They take the forms of dissertations, treatises, descriptions, and notes. Early English writers confined themselves more especially to elucidating the art of ringing in essays bewilderingly technical. The names of the different permutations read like the reverie of a lunatic—single bob, plain bob, grandsire bob, single bob minor, grandsire treble, bob major, caters, bob royal, and bob maximus; and the names of the parts of a bell are quite as puzzling to the uninitiated. There are the canons, called also *ansa*, the haunch, otherwise *cerebrum vel caput*, the waist, *latus*, the sound-bow, the mouth, or labium, the brim, and the clapper. There is a manuscript in the British Museum of the 'Orders of the Company of ringers in Cheapside, 1603,' the year of Queen Elizabeth's death. And a work published in 1684, the last year of the reign of Charles II., called *The School of Recreation, or Gentleman's Tutor*, gives ringing as one of the exercises in vogue. There are, besides these, *True Guides for Ringers, and Plain Hints for Ringers*, a poem in praise of ringing, written in 1761, by the author of *Shrubs of Parnassus*, and other curious tracts of no value beyond their quaintness. Schiller has sung the song of the bell in vigorous verse; and in our own day the subject has received much literary care at the hands of more than one country clergyman.

There is another bell legend to be told. On the eve of the feast of Corpus Christi, to this day, the choristers of Durham Cathedral ascend the tower, and in their fluttering white robes sing the Te Deum. This ceremony is in commemoration of the miraculous extinguishing of a conflagration on that night, A.D. 1429. The monks were at midnight prayer when the belfry was struck by lightning and set on fire; but though the flames raged all that night and till the middle of the next day, the tower escaped serious damage and the bells were uninjured—an escape that was imputed to the special interference of the incorruptible St Cuthbert, enshrined in the cathedral. These bells, thus spared, are not those that now reverberate among the house-tops on the steep banks of the Wear. The registry of the church of St Mary le Bow, Durham, tells of the burial of Thomas Bartlet, February 3, 1632, and adds, 'this man did cast the abbey bells the summer before he dyed.'

The great bell in Glasgow Cathedral, tells its own history, mournfully, in the following inscription: 'In the year of grace, 1583, Marcus Knox, a merchant in Glasgow, zealous for the interest of the Reformed Religion, caused me to be fabricated in Holland, for the use of his fellow-citizens of Glasgow, and placed me with solemnity in the Tower of their Cathedral. My function was announced by the impress on my bosom: ME AUDITO, VENIAS, DOCTRINAM SANCTAM UT DISCAS, and I was taught to proclaim the hours of unheeded time. One hundred and ninety-five years had I sounded these awful warnings, when I was broken by the hands of inconsiderate and unskilful men. In the year 1790, I was cast into the furnace, refounded at London, and returned to my sacred vocation. Reader! thou also shalt know a resurrection; may it be to eternal life! Thomas Mears fecit, London, 1790.'

SIGNALS FOR SERVANTS.

The history of the invention and improvement of the manifold appliances for comfort and convenience in a modern house of the better class, would not only be very curious and instructive, but would also teach us to be grateful for much that has become cheap to our use, though it would have been troublesome and costly to our ancestors, and looked on by them as luxurious. We turn a tap, and pure water flows from a distant river into our dressing-room; we turn another, and gas for lighting or firing is at our immediate command. We pull a handle in one apartment, and the bell rings in a far-distant one. We can even, by directing our mouth to a small opening beside the parlour fireplace, send a whisper along a tube to the servants' hall or kitchen, and thus obtain what we want still more readily. We can now scarcely appreciate the time and trouble thus saved. Hand-bells or whistles were the only signals used in a house a century and a half ago. In an old comedy of the reign of Charles II., the company supposed to be assembled at a country-house of the better class, are summoned to dinner by the cook knocking on the dresser with a rolling-pin! It was usual to call servants by ringing hand-bells; which, thus becoming table-ornaments, were frequently enriched by chasing. Walpole possessed a very fine one, which he believed to be the work of Cellini, and made for Pope Clement VII.* He also had a pair of very curious silver owls, seated on perches formed into whistles, which were blown when servants were wanted. They were curious and quaint specimens of the workmanship of the early part of the seventeenth century; and one of them is here engraved for the first time, from a

sketch made during the celebrated sale at Strawberry Hill in 1842. It may be worth noting, as a curious instance of the value attached by connoisseurs to rare curiosities, that these owls were bought at prices considerably above their weight in gold; and the taste for collecting has so much increased, that there is little doubt they would now realise even higher prices.

JULY 13.

St Anacletus, martyr, 2d century. St Eugenius, bishop of Carthage, and his companions, martyrs, 505. St Turiaf, Turiave or Thivisiau, bishop of Dol, in Brittany, about 749.

Festival of the Miracles.

This day (July 13), if Sunday, or the first Sunday after the 13th, begins the festival of the Miracles at Brussels, which lasts for fifteen days. The first day, Sunday, however, is the grand day of celebration; for on this takes place the public procession of the Holy Sacrament of the Miracles. We had an opportunity of witnessing this locally celebrated affair on Sunday, July 15, 1860, and next day procured from one of the ecclesiastical officials a historical account of the festival, of which we offer an abridgment.

In the year 1369, there lived at Enghien, in Hainault, a rich Jew, named Jonathan, who, for purposes of profanation, desired to procure some consecrated wafers. In this object he was assisted by another Jew, named Jean de Louvain, who resided in Brussels, and had hypocritically renounced Judaism. Jean was poor, and in the hope of reward gladly undertook to steal some of the wafers from one of the churches. After examination, he found that the church of St Catherine, at Brussels, offered the best opportunity for the theft. Gaining access by a window on a dark night in October, he secured and carried off the pix containing the consecrated wafers; and the whole were handed to Jonathan, who gave his appointed reward. Jonathan did not long survive this act of sacrilege. He was assassinated in his garden, and his murderers remained unknown. After his death, his widow gave the pix, with the wafers, to a body of Jews in Brussels, who, in hatred of Christianity, were anxious to do the utmost indignity to the wafers. The day they selected for the purpose was Good Friday, 1370. On that day, meeting in their synagogue, they spread the holy wafers, sixteen in number, on a table, and with horrid imprecations proceeded to stab them with poniards. To their amazement, the wounded wafers spouted out blood, and in consternation they fled from the spot! Anxious to rid themselves of objects on which so very extraordinary a miracle had been wrought, these wicked Jews engaged a woman, named Catherine, to carry the wafers to Cologne, though what she was to do with them there is not mentioned. Catherine fulfilled her engagement, but with an oppressed conscience she, on her return, went and revealed all to the rector of the parish church. The Jews concerned in the sacrilege were forthwith brought to justice. They were condemned to be burned, and their execution took place May 22, 1370. Three of the wafers were restored to the clergy of St Guduli, where they have ever since remained as objects of extreme veneration. On several occasions they have done

good service to the inhabitants of Brussels, in the way of stopping epidemics. On being appealed to by a solemn procession in 1529, a grievous epidemic at once ceased. From 1579 to 1585, during certain political troubles in the Netherlands, there were no processions in their honour; and they were similarly neglected for some years after the great revolution of 1789—92. But since Sunday, July 14, 1804, the annual procession has been resumed, and the three wafers shewing the miraculous marks of blood, have been exposed to the adoration of the faithful in the church of St Guduli. It is added in the authoritative account, that certain indulgences are granted by order of Pius VI. to all who take part in the procession, and repeat daily throughout the year, praises and thanks for the most holy sacrament of the Miracles. In the openings of the pillars along both sides of the choir of St Guduli, is suspended a series of Gobelin tapestries, vividly representing the chief incidents in the history of the Miracles, including the scene of stabbing the wafers.

BERTRAND DU GUESCLIN.

This flower of French chivalry was of a noble but poor family in Brittany. 'Never was there so bad a boy in the world,' said his mother, 'he is always wounded, his face disfigured, fighting or being fought; his father and I wish he were peaceably underground.' All the masters engaged to teach him, gave up the task in despair, and to the end of his life he could neither read nor write. A tournay was held one day at Rennes, to which his father went; his son, then about fourteen, secretly followed him, riding on a miserable pony: the first knight who retired from the lists found the young hero in his hostelry, who, throwing himself at his knees, besought him to lend him his horse and arms. The request was granted, and Du Guesclin, preparing in all haste, flew to the combat, and overthrew fifteen adversaries with such address and good grace as to surprise all the spectators. His father presented himself to run a course with him, but Bertrand threw down his lance. When persuaded to raise his visor, the paternal joy knew no bounds; he kissed him tenderly, and henceforward took every means to insure his advancement.

His first campaign with the French army was made in 1359, where he gave full proof of his rare valour, and from that time he was the much-feared enemy of the English army, until taken prisoner by the Black Prince at the battle of Navarete, in Spain, in 1367. In spite of the repeated entreaties of both French and English nobles, the prince kept him more than a year at Bordeaux, until it was whispered that he feared his rival too much to set him free. Hearing this, Edward sent for Du Guesclin and said: 'Messire Bertrand, they pretend that I dare not give you your liberty, because I am afraid of you.' 'There are those who say so,' replied the knight, 'and I feel myself much honoured by it.' The prince coloured, and desired him to name his own ransom. 'A hundred thousand florins,' was the reply. 'But where can you get so much money?' 'The king of France and Castile, the pope, and the Duke of Anjou will lend it to me, and were I in my own country, the women would earn it with their distaffs.' All were charmed with his frankness, and the Princess of Wales invited him to dinner, and offered to pay twenty thousand francs towards the ransom. Du Guesclin, kneeling before her, said: 'Madame, I believed myself to be the ugliest knight in the world, but now I need not be so displeased with myself.' Many of the English forced their purses on him, and he set off to raise the sum; but on the way he gave with such profusion to the soldiers he met that all disappeared. On reaching home, he asked his wife for a hundred thousand francs he had left with her, but she also had disposed of them to needy soldiers; this her husband approved of, and returning to the Duke of Anjou and the pope, he received from them forty thousand francs, but on his way to Bordeaux these were all disposed of, and the Prince of Wales asking if he had brought the ransom, he carelessly replied: 'That he had not a doubloon.' 'You do the magnificent!' said the prince. 'You give to everybody, and have not what will support yourself; you must go back to prison.' Du Guesclin withdrew, but at the same time a gentleman arrived from the French king prepared to pay the sum required. He was raised to the highest post in the kingdom, that of Connétable de France, in 1370, amidst the acclamations and joy of the whole nation; yet, strange to say, after all his services, he lost the confidence of the king a few years after, who listened to his traducers, and wrote a letter most offensive to the hero's fidelity. Du Guesclin immediately sent back the sword belonging to his office of Connétable; but the cry of the whole nation was in his favour. The superiority of his military talents, his generosity and modesty had extinguished the feelings of jealousy which his promotion might have created. Charles acknowledged that he had been deceived, and sent the Dukes of Anjou and Bourbon to restore the sword, and appoint him to the command of the army in Auvergne, where his old enemies the English were pillaging. He besieged the castle of Randan, and was there attacked with mortal disease, which he met with the intrepid firmness which characterised him, and with the sincere piety of a Christian. At the news of his death, the camp resounded with groans, his enemies even paying homage to his memory; for they had promised to surrender on a certain day if not relieved, and the commander marched out, followed by his garrison, and kneeling beside the bier, laid the keys upon it.

The king ordered him to be buried at St Denis, at the foot of the mausoleum prepared for himself. The funeral cortège passed through France amidst the lamentations of the people, followed by the princes of the blood, and crowds of the nobility. This modest epitaph was placed on his grave: 'Ici

gist noble homme, Messire Bertrand du Guesclin, Comte de Longueville et Connétable de France, qui trépassa au Chastel neuf de Randan le 13me Jour de Juillet 1380. Priez Dieu pour lui.'

A very rare phenomenon was seen after his death—the chief place in the state was vacant, and no one would take it. The king offered it to the Sire de Couci; he excused himself, recommending Du Guesclin's brother-in-arms, De Clisson; but he and Sancerre both declared that after the grand deeds that had been wrought, they could not satisfy the king, and it was only filled up at the beginning of the following reign by Clisson accepting the dignity.

RICHARD CROMWELL.

This day, 1712, died Richard Cromwell, eldest son of Oliver, and who, for a short time after his father (between September 3, 1658, and May 25, 1659), was acknowledged Protector of these realms. He had lived in peaceful obscurity for fifty-three years after giving up the government, and was ninety when he died. The ex-Protector, Richard, has usually been spoken of lightly for resigning without any decisive effort to maintain himself in his place; but, perhaps, it is rather to the credit of his good sense, that he retired as he did, for the spirit in which the restoration of Charles II. was soon after effected, may be regarded as tolerable proof that any obstinate attempt to keep up the Cromwellian rule, would have been attended with great hazard. While it never has been, and cannot be, pretended that Richard was aught of a great man, one cannot but admit that his perfect negativeness after the Restoration, had in it something of dignity. That he could scarcely ever be induced to speak of politics, was fitting in one who had been at the summit of state, and found all vanity and instability. There was, moreover, a profound humour under his external negativeness. His conduct in respect of the addresses which had come to him during his short rule, was not that of a common-place character. When obliged to leave Whitehall, he carried these documents with him in a large hair-covered trunk, of which he requested his servants to take particular care.

'Why so much care of an old trunk?' inquired some one; 'what on earth is in it?'

'Nothing less,' quoth Richard, 'than the lives and fortunes of all the good people of England.'

Long after, he kept up the same joke, and even made it a standing subject of mirth among his friends. Two new neighbours, being introduced to his house, were very hospitably entertained in the usual manner, along with some others, till the company having become merry, Richard started up with a candle in his hand, desiring all the rest to follow him. The party proceeded with bottles and glasses in hand, to the garret, where, somewhat to the surprise of the new guests, who alone were uninitiated, the ex-Protector pulled out an old hairy trunk to the middle of the floor, and seating himself on it, proposed as a toast, 'Prosperity to Old England.' Each man in succession seated himself on the trunk, and drank the toast; one of the new guests coming last, to whom Mr Cromwell called out: 'Now, sit light, for you have the lives and fortunes of all the good people of England under you.' Finally, he explained the freak by taking out the addresses, and reading some of them, amidst the laughter of the company.

RICHARD CROMWELL.

SUPERSTITIONS, SAYINGS, &C., CONCERNING DEATH.

If a grave is open on Sunday, there will be another dug in the week.

This I believe to be a very narrowly limited superstition, as Sunday is generally a favourite day for funerals among the poor. I have, however, met with it in one parish, where Sunday funerals are the exception, and I recollect one instance in particular. A woman coming down from church, and observing an

open grave, remarked: 'Ah, there will be somebody else wanting a grave before the week is out!' Strangely enough (the population of the place was then under a thousand), her words came true, and the grave was dug for *her*.

If a corpse does not stiffen after death, or if the *rigor mortis* disappears before burial, it is a sign that there will be a death in the family before the end of the year.

In the case of a child of my own, every joint of the corpse was as flexible as in life. I was perplexed at this, thinking that perhaps the little fellow might, after all, be in a trance. While I was considering the matter, I perceived a bystander looking very grave, and evidently having something on her mind. On asking her what she wished to say, I received for answer that, though she did not put any faith in it herself, yet people *did* say that such a thing was the sign of another death in the family within the twelvemonth.

If every remnant of Christmas decoration is not cleared out of church before Candlemas-day (the Purification, February 2), there will be a death that year in the family occupying the pew where a leaf or berry is left.

An old lady (now dead) whom I knew, was so persuaded of the truth of this superstition, that she would not be contented to leave the clearing of her pew to the constituted authorities, but used to send her servant on Candlemas-eve to see that her own seat at anyrate was thoroughly freed from danger.

Fires and candles also afford presages of death. Coffins flying out of the former, and winding-sheets guttering down from the latter. A winding-sheet is produced from a candle, if, after it has guttered, the strip, which has run down, instead of being absorbed into the general tallow, remains unmelted: if, under these circumstances, it curls over away from the flame, it is a presage of death to the person in whose direction it points.

Coffins out of the fire are hollow *oblong* cinders spirted from it, and are a sign of a coming death in the family. I have seen cinders, which have flown out of the fire, picked up and examined to see what they presaged; for coffins are not the only things that are thus produced. If the cinder, instead of being *oblong*, is *oval*, it is a cradle, and predicts the advent of a baby; while, if it is *round*, it is a purse, and means prosperity.

The howling of a dog at night under the window of a sick-room, is looked upon as a warning of death's being near.

Perhaps there may be some truth in this notion. Everybody knows the peculiar odour which frequently precedes death, and it is possible that the acute nose of the dog may perceive this, and that it may render him uneasy: but the same can hardly be alleged in favour of the notion, that the screech of an owl flying past signifies the same, for, if the owl did scent death, and was in hopes of prey, it is not likely that it would screech, and so *give notice of its presence*.

Suffolk. C. W. J.

THE HOT WEDNESDAY OF 1808.

Farmers, and others engaged in outdoor pursuits, men of science, and others engaged in observations on meteorological phenomena, have much reason to doubt whether the reported temperatures of past years are worthy of reliance. In looking through the old journals and magazines, degrees of winter cold and summer heat are found recorded, which, to say the best of it, need to be received with much caution; seeing that the sources of fallacy were numerous. There was one particular Wednesday in 1808, for instance, which was marked by so high a temperature, as to obtain for itself the name of the 'Hot Wednesday;' there is no doubt the heat was great, even if its degree were overstated. At Hayes, in Middlesex, two thermometers, the one made by Ramsden, and the other by Cary, were observed at noon, and were found to record 90° F. in the shade. Men of middle age at that time, called to mind the 'Hot Tuesday' of 1790, which, however, was several degrees below the temperature of this particular Wednesday. Remembering that the average heat, winter and summer, of the West Indies, is about 82°, it is not surprising that men fainted, and horses and other animals died under the pressure of a temperature so unusual in England as 8° above this amount. In the shade, at an open window looking into St James's Park, a temperature of 94° was observed. In a shop-window, on the shady side of the Strand, a thermometer marked 101°; but this was under the influence of conducted and radiant warmth from surrounding objects. At Gainsborough, in Lincolnshire, two thermometers, made by Nairne and Blunt respectively, hanging in the shade with a northern aspect, marked 94° at one o'clock on the day in question. In the corresponding month of 1825, observers were surprised to find a temperature of 85° marked in the quadrangle of the Royal Exchange at four o'clock in the 19th, 86½° at one o'clock on the same day, 87° at Paris, and 91° at Hull; but all these were below the indications noticed, or alleged to be noticed, in 1808. It is now known, however, better than it was in those days, that numerous precautions are necessary to the obtainment of reliable observations on temperature. The height from the ground, the nature and state of the ground, the direction in reference to the points of the compass, the vicinity of other objects, the nature of those objects as heat-reflectors, the covered or uncovered state of the space overhead—all affect the degree to which the mercury in the tube of a thermometer will be expanded by heat: even if the graduation of the tube be reliable, which is seldom the case, except in high-priced instruments. On this account all the old newspaper statements on such matters must be received with caution, though there is no reason to doubt that the Hot Wednesday of 1808 was really a very formidable day.

PHILIP AUGUSTUS OF FRANCE.

The name of Philip Augustus is better known in English history than those of most of the earlier French monarchs, on account of his relations with the chivalrous Richard Cœur-de-Lion and the unpopular King John. Philip's reign was a benefit

to France, as he laboured successfully to overcome feudalism, and strengthen and consolidate the power of the crown. He came to the throne when he was only fifteen years of age, and already displayed a vigour of mind which was beyond his years. One of the earlier acts of his reign, was the persecution of the Jews, who, on the charge of having crucified a Christian child at Easter, were stripped of their possessions, and banished from France; but this was less an act of religious bigotry, than probably an expedient for enriching his treasury. While King Henry II. of England lived, Philip encouraged the two young English princes, Geoffrey and Richard, in rebelling against their father, because he aimed at getting possession of the English territories in France; and after Henry's death, he professed the closest friendship for Richard, who succeeded him on the throne, and joined with him in the third Crusade. This, however, was the result neither of religious zeal nor of sincere friendship; for, as is well known to all readers, he quarrelled with King Richard on the way to the East, and became his bitter enemy, and soon abandoned the crusade and returned home. He was restrained by his oath, and still more by the threats of the pope, and by the fear of incurring the odium of all Western Europe, from attacking King Richard's possessions during his absence; but he intrigued against him, incited his subjects to rebellion, assisted his brother John in his attempt to usurp his throne, and when Richard had been seized and imprisoned by the emperor of Austria, he offered money to that monarch to induce him to keep him in confinement.

By the death of Richard Cœur-de-Lion, Philip was released from a powerful and dangerous enemy, and he soon commenced hostilities against his successor, King John, with whom he had previously been in secret and not very honourable alliance. The result of this war was, that in 1204, King John was stripped of his Norman duchy, which was reunited to the crown of France, and the English king gained from his Norman subjects the derisive title of Jehan sans Terre, which was Anglicised by the later English annalists into John Lack-land. Philip's plans of aggrandisement in the north and west were no doubt assisted by the absence of the great barons of the south, who might have embarrassed him in another crusade, in which they conquered not Jerusalem, but Constantinople and Greece. Philip invaded and occupied Brittany, and other provinces which were under English influence and rule, while King John made a feeble and very short attempt at resistance. These events were followed by the terrible crusade against the heretical Albigeois, which Philip encouraged, no doubt from motives of crafty policy, and not from either religious bigotry or attachment to the pope. Nevertheless, the pope, as is well known, was so well satisfied with Philip's conduct in this cause, that he struck the English nation with the interdict, and nominally deposed King John from his throne, transferred the crown of England by his authority to the head of Philip Augustus, and authorised him to go and take possession of it by force, promising the privilege of crusaders in this world and the next to all who should assist him in this undertaking. This expedition was retarded by a war with the Count of Flanders, which led to a coalition between the count, the emperor of Germany, and the king of England, against the French king; but the war was ended advantageously for Philip, by his victory in the battle of Bouvines. Philip now found sufficient occupation for a while in regulating the internal affairs of his own country, and in resisting the rather undisguised aspirations of his subjects for popular liberty; while his enemy, King John, was engaged in a fiercer struggle with his own barons; but there had been a change which Philip did not expect, for the pope, who hated everything like popular liberty, no sooner saw that it was for this object, in some degree, that the English barons were fighting, than he altered his policy, took King John under his protection, and forbade the king of France to interfere further. Philip had no love for the pope, and was seldom inclined to submit to any control upon his own will; and when the English barons, in their discouragement, sought his assistance, and offered the crown of England to his son, the prince Louis (afterwards King Louis VIII. of France), he accepted and sent Louis with an army to England, in defiance of the pope's direct prohibition. The death of King John, and the change of feelings in England which followed that event, finally put an end to his ambitious hopes in that direction. The remainder of Philip's reign presented no events of any great importance except the renewal of the war in the south, in which the first Simon de Montford was slain in the year 1218. Philip Augustus died at Mantes, on the 14th of July 1223, at the age of fifty-eight, leaving the crown of France far more powerful than he had found it.

Philip's accession to the throne of France, when he was only a child, was accompanied by a rather romantic incident. His father, who, as was then usual, was preparing to secure the throne to his son by crowning him during his lifetime, and who was residing, in a declining state of health, at Compiègne, gave the young prince permission to go to the chase with his huntsmen. They had hardly entered the forest, before they found a boar, and the hunters uncoupled the hounds, and pursued it till they were dispersed in different directions among the wildest parts of the woods. Philip, on a swift horse, followed eagerly the boar, until his steed slackened its pace through fatigue, and then the young prince found that he was entirely separated from his companions, and ignorant of the direction in which he might hope to find them. After he had ridden backwards and forwards for some time, night set in, and the prince, left thus alone in the midst of a vast and dreary forest, became seriously alarmed. In this condition he wandered about for several hours, until at last, attracted by the appearance of a light, he perceived at a distance a peasant who was blowing the fire of a charcoal kiln. Philip rode up to him, and told him who he was, and the accident which had happened to him, though his fear was not much abated by the collier's personal appearance, for he was a large, strong, and rough-looking man, with a forbidding face, rendered more ferocious by being blackened with the dust of his charcoal, and he was armed with a formidable axe. His behaviour, however, did not accord with his appearance, for he immediately left his charcoal, and conducted the prince safely back to Compiègne; but fear and fatigue threw the child into

so violent an illness, that it was found necessary to postpone the coronation more than two months.

MARAT.

The sanguinary fanaticism of the French Revolution has no representative of such odious and repulsive figure as Marat, the original self-styled 'Friend of the People.' By birth a Swiss, of Calvinistic parents, he had led a strange skulking life for five-and-forty years—latterly, a sort of quack mediciner—when the great national crisis brought him to the surface as a journalist and member of the Convention. Less than five feet high, with a frightful countenance, and maniacal

MARAT.

eye, he was shrunk from by most people as men shrink from a toad; but he had frantic earnestness, and hesitated at no violence against the enemies of liberty, and so he came to possess the entire confidence and affection of the mob of Paris. His constant cry was for blood; he literally desired to see every well-dressed person put to death. Every day his paper, *L'Ami du Peuple*, was filled with clamorous demands for slaughter, and the wish of his heart was but too well fulfilled. By the time that the summer of 1793 arrived, he was wading in the blood of his enemies. It was then that the young enthusiastic girl, Charlotte Corday, left her native province, for Paris, to avenge the fate of her friend, Barbaroux. She sought Marat at his house—was admitted to see him in his hot bath—and stuck a knife into his heart. His death was treated as a prodigious public calamity, and his body was deposited, with extravagant honours, in the Pantheon; but public feeling took a turn for the better ere long, and the carcass of the wretch was then ignominiously extruded.

To contemporaries, the revolutionary figure of Marat had risen like a frightful nightmare: nobody seemed to know whence he had come, or how he had spent his previous life. There was, however, one notice of his past history published in a Glasgow newspaper,* four months before his death, rather startling in its tenor; which, nevertheless, would now appear to have been true. It was as follows: 'From an investigation lately taken at Edinburgh, it is said that Marat, the celebrated orator of the French National Convention, the humane, the mild, the gentle Marat, is the same person who, a few years ago, taught tambouring in this city under the name of John White. His conduct while he was here was equally unprincipled, if not as atrocious, as it has been since his elevation to the legislatorship. After contracting debts to a very considerable amount, he absconded, but was apprehended at Newcastle, and brought back to this city, where he was imprisoned. He soon afterwards executed a summons of *cessio bonorum* against his creditors, in the prosecution of which, it was found that he had once taught in the academy at Warrington, in which Dr Priestley was tutor; that he left Warrington for Oxford, where, after some time, he found means to rob a museum of a number of gold coins, and medallions; that he was traced to Ireland, apprehended at an assembly there in the character of a German count; brought back to this country, tried, convicted, and sentenced to some years' hard labour on the Thames. He was refused a *cessio*, and his creditors, tired of detaining him in jail, after a confinement of several months, set him at liberty. He then took up his residence in this neighbourhood, where he continued about nine months, and took his final leave of this country about the beginning of the year 1787.

'He was very ill-looked, of a diminutive size, a man of uncommon vivacity, a very turbulent disposition, and possessed of a very uncommon share of legal knowledge. It is said that, while here, he used to call his children Marat, which he said was his family name.'

These revelations regarding Marat were certainly calculated to excite attention. Probably, however, resting only on an anonymous newspaper paragraph, they were little regarded at the time of their publication. It is only of late years that we have got any tolerably certain light regarding Marat's life in England. It now appears that he was in this country in 1774, when thirty years of age, being just the time when the differences between the American colonists and the mother-country were coming to a crisis. In that year he published, in English, a huge pamphlet (royal 8vo, price 12*s.*), under the title of '*The Chains of Slavery*: a work wherein the clandestine and villainous attempts of princes to ruin liberty are pointed out, and the dreadful scenes of despotism disclosed; to which is prefixed An Address to the Electors of Great Britain, in order to draw their timely attention to the choice of proper representatives in the next Parliament.—Becket, London.' Most likely, this work would meet with but little encouragement in England, for the current of public feeling ran in the opposite direction. In 1776, we find him dating from 'Church Street, Soho,' a second and much less bulky pamphlet on a wholly different subject—*An Inquiry into the Nature, Cause,*

* *Star* of March 4, 1793: see *Notes and Queries*, September 24, 1859.

and Cure of a Singular Disease of the Eyes, hitherto unknown, and yet common, produced by the use of certain Mercurial Preparations. By J. P. Marat, M.D. He here vented some quackish ideas he had regarding eye-disease, and out of which he is said at one time to have made a kind of living in Paris. In the prefatory address to the Royal Society, he lets out that he had been in Edinburgh in the previous August (1775). It is stated, but we do not know on what authority, that, in the Scottish capital, he tried to support himself by giving lessons in French.* He probably was not there long, but quickly migrated to the academy at Warrington. Nor was he there long either. The next incident in his life was the Oxford felony, adverted to in the Glasgow *Star*. At least there can be little doubt that the following extract from a letter of Mr Edward Creswell, of Oxford, dated February 12, 1776, refers to Marat under an assumed name:

'. . . I shall now tell you a piece of news respecting a robbery which was committed here lately. . . . About a week ago, a native of France, who calls himself M. le Maitre, and was formerly a teacher in Warrington Academy, being invited here by a gentleman of this college to teach the French language, came over, and met with great encouragement in the university, but, happening to get acquainted with Mr Milnes, a gentleman of Corpus Christi College, who is the keeper of the museum and several other natural curiosities, he prevailed on him, by repeated importunities, to let him have a view of them. Accordingly, they both went together, and after M. le Maitre had viewed them a great while, Mr Milnes, from the suspicions he entertained of his behaviour, under pretence of getting rid of him, told him that several gentlemen were waiting at the door for admittance, and that he must now go out immediately; but the Frenchman excused himself by saying he would retire into the other apartments, and whilst the strangers that were admitted were surveying the curiosities with more than ordinary attention, this artful villain retired from them, and concealed himself under a dark staircase that led into the street, where he stayed till the company had gone out, after which he stole away medals and other coins to the amount of two hundred pounds and upwards, and got clear off with his booty. It was somewhat observable that he was often seen lurking near the museum some time before this affair happened, and very frequently desired to be admitted as soon as he had got a view of the medals. I am sorry I have not time to tell you a few more particulars concerning this transaction, but shall defer it till I know further about it.'

In a subsequent letter, Mr Creswell informed his correspondent that the Frenchman who robbed the museum was tried, and being found guilty, was 'sentenced to work on the river Thames for five years.'

These extracts appear, with due authentication, in the *Notes and Queries* (September 16, 1860), and they are supported in their tenor by the publications of the day. The robbery of the Ashmolean Museum at Oxford by a person styled at first 'a Swiss hair-dresser,' and afterwards 'Le Mair, now a prisoner in Dublin,' is noticed in the *Gentleman's Magazine* for February and March 1776. Subsequently, it is stated in the same work under September 1, that 'Petre le Maitre, the French hair-dresser, who robbed the museum at Oxford of medals, &c., to a considerable amount, was brought by *habeas corpus* from Dublin, and lodged in Oxford Castle.' Unfortunately, this record fails to take notice of the trial.

What a strange career for a Swiss adventurer from first to last! A pamphleteer for the illumination of British electors, a pamphleteer for a quack cure for the eyes, a teacher of languages at Edinburgh, an usher at the Warrington Academy under the sincere and profound Priestley, a felon at Oxford, a *forçat* for five years on the Thames, afterwards a teacher of tambouring at Glasgow, running into debt, and going through a struggle for white-washing by the peculiar Scotch process of *cessio bonorum*, which involves the preliminary necessity of imprisonment; finally, for a brief space, the most powerful man in France, and, in that pride of place, struck down by a romantic assassination—seldom has there been such a life. One can imagine, however, what bitterness would be implanted in such a nature by the felon's brand and the long penal servitude, and even by the humiliation of the *cessio bonorum*, and how, with these experiences rankling beyond sympathy in the wretch's lonely bosom, he might at length come to revel in the destruction of all who had deserved better than himself.

* *Biographie Universelle*, art. 'Marat.'

'DE HERETICO COMBURENDO.'

Amongst the last victims of the religious persecution under Mary, were six persons who formed part of a congregation caught praying and reading the Bible, in a by-place at Islington, in May 1558. Seven of the party had been burned at Smithfield on the 27th of June; the six who remained were kept in a miserable confinement at the palace of Bonner, bishop of London, at Fulham, whence they were taken on the 14th of July, and despatched in a similar manner at Brentford.

While these six unfortunates lay in their vile captivity at Fulham, Bonner felt annoyed at their presence, and wished to get them out of the way; but he was sensible, at the same time, of there being a need for getting these sacrifices to the true church effected in as quiet a way as possible. He therefore penned an epistle to (apparently) Cardinal Pole, which has lately come to light, and certainly gives a curious idea of the coolness with which a fanatic will treat of the destruction of a few of his fellow-creatures when satisfied that it is all right.

'Further,' he says, 'may it please your Grace concerning these obstinate heretics that do remain in my house, pestering the same, and doing much hurt many ways, some order may be taken with them, and in mine opinion, as I shewed your Grace and my Lord Chancellor, it should do well to have them brent in Hammersmith, a mile from my house here, for then I can give sentence against them here in the parish church very quietly, and without tumult, and having the sheriff present, as I can have him, he, without business or stir, [can] put them to execution in the said place, when otherwise the thing [will need a] day in [St] Paul's, and with more comberance than now it needeth. Scribbled in haste, &c.'

Bonner was a man of jolly appearance, and

usually of mild and placid speech, though liable to fits of anger. In the ordinary course of life, he would probably have rather done one a kindness than an injury. See, however, what fanaticism made him. He scribbles *in haste* a letter dealing with the lives of six persons guilty of no real crime, and has no choice to make in the case but that their condemnation and execution may be conducted in a manner as little calculated to excite the populace as possible.

BEAR-BAITING.

In the account which Robert Laneham gives of the festivities at Kenilworth Castle, in 1575, on the reception of Queen Elizabeth by her favourite minister, the Earl of Leicester, there is a lively though conceited description of the bear and dog combats which formed part of the entertainments prepared for her majesty, and which took place on the sixth day of her stay (Friday, 14th July). There were assembled on this occasion thirteen bears, all tied up in the inner court, and a number of ban-dogs (a small kind of mastiff). 'The bears were brought forth into the court, the dogs set to them, to argue the points even face to face. They had learned counsel also o' both parts; what, may they be counted partial that are retain[ed] but a to [to one] side? I ween no. Very fierce both tone and tother, and eager in argument; if the dog, in pleading, would pluck the bear by the throat, the bear, with traverse, would claw him again by the scalp; confess an a [he] list, but avoid a [he] could not, that was bound to the bar; and his counsel told him that it could be to him no policy in pleading. Therefore thus with fending and fearing, with plucking and tugging, scratching and biting, by plain tooth and nail to [the one] side and tother, such expense of blood and leather was there between them, as a month's licking, I ween, will not recover; and yet [they] remain as far out as ever they were. It was a sport very pleasant of these beasts, to see the bear with his pink eyes leering after his enemy's approach, the nimbleness and weight of the dog to take his advantage, and the force and experience of the bear again to avoid the assaults; if he were bitten in one place, how he would pinch in another to get free; if he were taken once, then what shift, with biting, with clawing, with roaring, tossing, and tumbling, he would work to wind himself from them, and when he was loose, to shake his ears twice or thrice, with the blood and the slaver about his phisnomy, was a matter of goodly relief.'

In the twelfth century, the baiting of bulls and bears was the favourite holiday pastime of Londoners; and although it was included in a proclamation of Edward III., among 'dishonest, trivial, and useless games,' the sport increased in popularity

BEAR-GARDEN, BANKSIDE, SOUTHWARK.

with all classes. Erasmus, who visited England in the reign of Henry VIII., speaks of 'many herds' of bears regularly trained for the arena; the rich nobles had their bearwards, and the royal establishment its 'master of the king's bears.' For the better accommodation of the lovers of the rude amusement, the Paris Garden Theatre was erected at Bankside, the public being admitted at the charge of a penny at the gate, a penny at the entry of the scaffold, and a penny for quiet standing. When Queen Mary visited her sister during her confinement at Hatfield House, the royal ladies were entertained with a grand baiting of bulls and bears, with which they declared themselves 'right

well contented.' Elizabeth took especial delight in seeing the courage of her English mastiffs pitted against the cunning of Ursa and the strength of Taurus. On the 25th of May 1559, the French ambassadors 'were brought to court with music to dinner, and after a splendid dinner, were entertained with the baiting of bears and bulls with English dogs. The queen's grace herself, and the ambassadors, stood in the gallery looking on the pastime till six at night.' The diplomatists were so gratified, that her majesty never failed to provide a similar show for any foreign visitors she wished to honour.

Much as the royal patron of Shakspeare and Burbage was inclined to favour the players, she waxed indignant when the attractions of the bear-garden paled before those of the theatre; and in 1591 an order issued from the privy-council forbidding plays to be acted on Thursdays, because bear-baiting and such pastimes had usually been practised on that day. This order was followed by an injunction from the lord mayor to the same effect, in which his lordship complained, 'that in divers places, the players do use to recite their plays to the great hurt and destruction of the game of bear-baiting, and such-like pastimes, which are maintained for her majesty's pleasure.'

An accident at the Paris Garden in 1583, afforded the Puritans an opportunity for declaring the popular sport to be under the ban of Heaven—a mode of argument anticipated years before by Sir Thomas More in his Dialogue. 'At Beverley late, much of the people being at a bear-baiting, the church fell suddenly down at evening-time, and overwhelmed some that were in it. A good fellow that after heard the tale told, "So," quoth he, "now you may see what it is to be at evening-prayers when you should be at the bear-baiting!"' Some of the ursine heroes of those palmy-days of bear-baiting have been enshrined in verse. Sir John Davy reproaches the law-students with

> 'Leaving old Plowden, Dyer, and Brooke alone,
> To see old Harry Hunks and Sackerson.'

The last named has been immortalised by Shakspeare in his *Merry Wives of Windsor*—Slender boasts to sweet Anne Page, 'I have seen Sackerson loose twenty times; and have taken him by the chain: but, I warrant you, the women have so cried and shrieked at it, that it passed.'

James I. prohibited baiting on Sundays, although he did not otherwise discourage the sport. In Charles I.'s reign, the Garden at Bankside was still a favourite resort, but the Commonwealth ordered the bear to be killed, and forbade the amusement. However, with the Restoration it revived, and Burton speaks of bull and bear baiting as a pastime 'in which our countrymen and citizens greatly delight and frequently use.' On the 14th of August 1666, Mr Pepys went to the Paris Garden, and saw 'some good sports of the bulls tossing the dogs, one into the very boxes;' and that it had not lost the countenance of royalty, is proved by the existence of a warrant of Lord Arlington's for the payment of ten pounds to James Davies, Esq., master of his majesty's bears, bulls, and dogs, 'for making ready the rooms at the bear-garden, and baiting the bears before the Spanish ambassadors, the 7th of January last' (1675).

After a coming bear-baiting had been duly advertised, the bearward used to parade the streets with his champions. 'I'll set up my bills,' says the sham bearward in *The Humorous Lovers*, 'that the gamesters of London, Horsleydown, Southwark, and Newmarket may come in, and bait him before the ladies. But first, boy, go fetch me a bagpipe; we will walk the streets in triumph, and give the people notice of our sport.' Sometimes the bull or bear was decorated with flowers, or coloured ribbons fastened with pitch on their foreheads, the dog who pulled off the favour being especially cheered by the spectators. The French advocate, Misson, who lived in England during William III.'s reign, gives a vivid description of 'the manner of these bull-baitings, which are so much talked of. They tie a rope to the root of the horns of the bull, and fasten the other end of the cord to an iron ring fixed to a stake driven into the ground; so that this cord, being about fifteen feet long, the bull is confined to a space of about thirty feet diameter. Several butchers, *or other gentlemen*, that are desirous to exercise their dogs, stand round about, each holding his own by the ears; and when the sport begins, they let loose one of the dogs. The dog runs at the bull; the bull, immovable, looks down upon the dog with an eye of scorn, and only turns a horn to him, to hinder him from coming near. The dog is not daunted at this, he runs round him, and tries to get beneath his belly. The bull then puts himself into a posture of defence; he beats the ground with his feet, which he joins together as closely as possible, and his chief aim is not to gore the dog with the point of his horn (which, when too sharp, is put into a kind of wooden sheath), but to slide one of them under the dog's belly, who creeps close to the ground, to hinder it, and to throw him so high in the air that he may break his neck in the fall. To avoid this danger, the dog's friends are ready beneath him, some with their backs, to give him a soft reception; and others with long poles, which they offer him slantways, to the intent that, sliding down them, it may break the force of his fall. Notwithstanding all this care, a toss generally makes him sing to a very scurvy tune, and draw his phiz into a pitiful grimace. But unless he is totally stunned with the fall, he is sure to crawl again towards the bull, come on't what will. Sometimes a second frisk into the air disables him for ever; but sometimes, too, he fastens upon his enemy, and when once he has seized him with his eye-teeth, he sticks to him like a leech, and would sooner die than leave his hold. Then the bull bellows and bounds and kicks, all to shake off the dog. In the end, either the dog tears out the piece he has laid hold on, and falls, or else remains fixed to him with an obstinacy that would never end, did they not pull him off. To call him away, would be in vain; to give him a hundred blows, would be as much so; you might cut him to pieces, joint by joint, before he would let him loose. What is to be done then? While some hold the bull, others thrust staves into the dog's mouth, and open it by main force.'

In the time of Addison, the scene of these animal combats was at Hockley in the Hole, near Clerkenwell. The *Spectator* of August 11, 1711, desires those who frequent the theatres merely for a laugh, would 'seek their diversion at the bear-garden,

where reason and good-manners have no right to disturb them.' Gay, in his *Trivia*, says:

'Experienced men, inured to city ways,
Need not the calendar to count their days.
When through the town, with slow and solemn air,
Led by the nostril walks the muzzled bear;
Behind him moves, majestically dull,
The pride of Hockley Hole, the surly bull.
Learn hence the periods of the week to name—
Mondays and Thursdays are the days of game.'

The over-fashionable amusement had fallen from its high estate, and was no longer upheld by the patronage of the higher classes of society. In 1802, a bill was introduced into the Commons for the suppression of the practice altogether. Mr Windham opposed the measure, as the first result of a conspiracy of the Jacobins and Methodists to render the people grave and serious, preparatory to obtaining their assistance in the furtherance of other anti-national schemes, and argued as if the British Constitution must stand or fall with the bear-garden; and Colonel Grosvenor asked, if 'the higher orders had their Billington, why not the lower orders their Bull?' This extraordinary reasoning prevailed against the sarcasm of Courtenay, the earnestness of Wilberforce, and the eloquence of Sheridan, and the House refused, by a majority of thirteen, to abolish what the last-named orator called 'the most mischievous of all amusements.' This decision of the legislature doubtless received the silent approval of Dr Parr, for that learned talker was a great admirer of the sport. A bull-baiting being advertised in Cambridge, during one of his last visits there, the doctor hired a garret near the scene of action, and taking off his academic attire, and changing his notorious wig for a night-cap, enjoyed the exhibition *incog.* from the windows. This predilection was unconquerable. 'You see,' said he, on one occasion, exposing his muscular hirsute arm to the company, 'that I am a kind of taurine man, and must therefore be naturally addicted to the sport.'

It was not till the year 1835 that baiting was finally put down by an act of parliament, forbidding the keeping of any house, pit, or other place for baiting or fighting any bull, bear, dog, or other animal; and after an existence of at least seven centuries, this ceased to rank among the amusements of the English people.

AN EXPLOSION IN THE COURT OF KING'S BENCH.

On the 14th of July 1737, when the courts were sitting in Westminster Hall, between one and two o'clock in the afternoon, a large brown-paper parcel, containing fireworks, which had been placed, unobserved, near the side-bar of the Court of King's Bench, exploded with a loud noise, creating great confusion and terror among the persons attending the several courts. As the crackers rattled and burst, they threw out balls of printed bills, purporting that, on the last day of term, five libels would be publicly burned in Westminster Hall. The libels specified in the bills were five very salutary but most unpopular acts of parliament, lately passed by the legislature. One of these printed bills, being taken to the Court of King's Bench, the grand-jury presented it as a wicked, false, and scandalous libel; and a proclamation was issued for discovering the persons concerned in this 'wicked and audacious outrage.' A reward of £200 was offered for the detection of the author, printer, or publisher of the bills; but the contrivers of this curious mode of testifying popular aversion to the measures of parliament were never discovered.

DESTRUCTION OF THE BASTILE—THE MAN IN THE IRON MASK.

The 14th of July will ever be a memorable day in French history, as having witnessed, in 1789, the demolition, by the Paris populace, of the grim old fortress identified with the despotism and cruelty of the falling monarchy. It was a typical incident, representing, as it were, the end of a wicked system, but unfortunately not inaugurating the beginning of one milder and better. Much heroism was shewn by the multitude in their attack upon the Bastile, for the defenders did not readily submit, and had a great advantage behind their lofty walls. But their triumph was sadly stained by the massacre of the governor, Delaunay, and many of his corps.

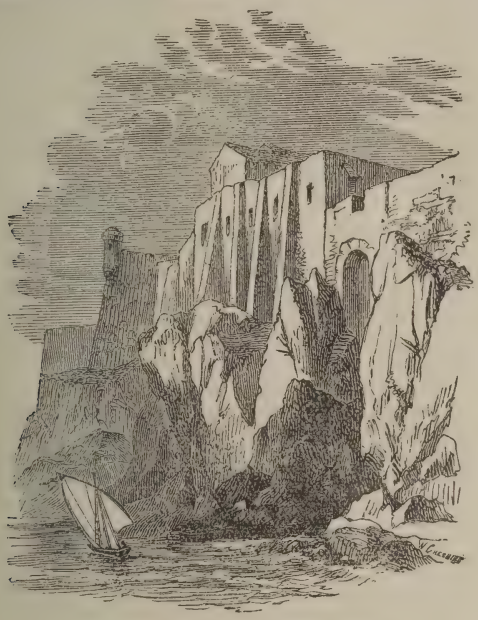
'It was now,' says Lamartine, 'that the mysteries of this state-prison were unveiled—its bolts broken—its iron doors burst open—its dungeons and subterranean cells penetrated—from the gates of the towers to their very deepest foundations and their summits. The iron rings and the chains, rusting in their strong masonry, were pointed out, from which the victims were never released, except to be tortured, to be executed, or to die. On those walls they read the names of prisoners, the dates of their confinement, their griefs and their prayers—miserable men, who had left behind only those poor memorials in their dungeons to attest their prolonged existence and their innocence! It was surprising to find almost all these dungeons empty. The people ran from one to the other: they penetrated into the most secret recesses and caverns, to carry thither the word of release, and to bring a ray of the free light of heaven to eyes long lost to it; they tore the locks from the heavy doors, and those heavy doors from the hinges; they carried off the heavy keys; all these things were displayed in triumph in the open court. They then broke into the archives, and read the entries of committals. These papers, then ignominiously scattered, were afterwards collected. They were the annals of arbitrary times, the records of the fears or vengeance of ministers, or of the meaner intrigues of their favourites, here faithfully kept to justify a late exposure and reproach. The people expected to see a spectre come forth from these ruins, to testify against these iniquities of kings. The Bastile, however, long cleared of all guilt by the gentle spirit of Louis XVI., and by the humane disposition of his ministers, disappointed these gloomy expectations. The dungeons, the cells, the iron collars, the chains, were only worn-out symbols of antique secret incarcerations, torture, and burials alive. They now represented only recollections of old horrors. These vaults restored to light but seven prisoners—three of whom, gray-headed men, were shut up legitimately, and whom family motives had withdrawn from the judgments of the ordinary courts of law. Tavernier and Withe, two of them, had become insane. They

saw the light of the sun with surprise; and their incurable insanity caused them to be sent to the madhouse of Charenton, a few days after they had enjoyed fresh air and freedom. The third was the Count de Solages, thirty-two years before sent to this prison at his father's request. When restored free to Toulouse, his home, he was recognised by none, and died in poverty. Whether he had been guilty of some crime, or was the victim of oppression, was an inexplicable enigma. The other four prisoners had been confined only four years, and on purely civil grounds. They had forged bills of exchange, and were arrested in Holland on the requisition of the bankers they had defrauded. A

DESTRUCTION OF THE BASTILE.

royal commission had reported on their cases; but nothing was now listened to against them. Whatever had been branded by absolute authority, must be innocent in the eyes of the prejudiced people. These seven prisoners of the Bastile became victims —released, caressed, even crowned with laurels, carried in triumph by their liberators like living spoil snatched from the hands of tyranny, they were paraded about the streets, and their sufferings avenged by the people's shouts and tears. The intoxication of the victors broke out against the very stones of the place, and the embrasures, torn from the towers, were soon hurled with indignation into the ditches.'

It was asserted at the time, and long afterwards believed—though there was no foundation for the averment—that the wasted body of the famous state-prisoner, called the Man in the Iron Mask, had been found chained in a lower dungeon, with the awful mask still upon the skull!



Speculations had long been rife among French historians, all tending to elucidate the mystery connected with that celebrated prisoner. By some, it was hinted that he was the twin-brother of Louis XIV., thus frightfully sacrificed to make his senior safe on his throne; others affirmed him to be the English Duke of Monmouth; others, a son of Oliver Cromwell; many, with more reason, inclining to think him a state-prisoner of France, such as the Duke de Beaufort, or the Count de Vermandois. It was reserved for M. Delort, at a comparatively recent period, to penetrate the mystery, and enable the late Lord Dover to compile and publish, in 1825, his *True History* of this unfortunate man; the facts being gathered from the state archives of France, and documentary evidence of conclusive authority.

It appears that this mysterious prisoner was Count Anthony Matthioli, secretary of state to Charles III., Duke of Mantua, and afterwards to his son Ferdinand, whose debauched habits, and consequent need, laid him open to a bribe from Louis XIV. for permission to place an army of occupation in his territory, with a view to establish French influence in Italy. Matthioli had expressed his readiness to aid the plot; had visited Paris, and had a secret interview with the king, who presented him with a valuable ring and a considerable sum of money; but when the time came for vigorous action, Matthioli, who appears to have been intriguing with the Spanish court for a better bribe, placed all obstacles and delays in the way of France. The French envoy, the Baron Asfeld, was arrested by the Spanish governor of the Milanese; and the French court found that their diplomacy was betrayed. Louis determined to satisfy his wounded pride and frustrated ambition, by taking the most signal vengeance on Matthioli. The unfortunate secretary was entrapped at a secret interview on the frontier, and carried to the French garrison at Pignerol, afterwards to the fortress of Exiles; when his jailer, St Mars, was appointed governor of the island of St Marguérite (opposite Cannes), he was immured in the fortress there, and so remained for eleven years. In the autumn of 1698, St Mars was made governor of the Bastile, and thither Matthioli was conveyed, dying within its gloomy walls on the 19th of November 1703. He had then been twenty-four years in this rigorous confinement, and had reached the age of sixty-three.

Throughout this long captivity, Louis never shewed him any clemency. The extraordinary precautions against his discovery, and the one which appears to have been afterwards resorted to, of obliging him to wear a mask during his journeys,

or when he saw any one, are not wonderful, when we reflect upon the violent breach of the law of nations which had been committed by his imprisonment. Matthioli, at the time of his arrest, was actually the plenipotentiary of the Duke of Mantua for concluding a treaty with the king of France; and for that very sovereign to kidnap him, and confine him in a dungeon, was one of the most flagrant acts of violence that could be committed; one which, if known, would have had the most injurious effects upon the negotiations of Louis with other sovereigns; nay, would probably have indisposed other sovereigns from treating at all with him. The confinement of Matthioli is decidedly one of the deadliest stains that blot the character of Louis XIV.

The prison of Matthioli, in the fortress of St Marguérite, is now, for the first time, engraved from an original sketch. It is one of a series of five, built in a row on the scarp of the rocky cliff. The

PRISON OF MAN IN IRON MASK.

walls are fourteen feet thick; there are three rows of strong iron gratings placed equidistant within the arched window of Matthioli's room, a large apartment with vaulted roof, and no feature to break its monotony, except a small fireplace beside the window, and a few shelves above it. The Bay of Cannes, and the beautiful range of the Esterel mountains, may be seen from the window; a lovely view, that must have given but a maddening sense of confinement to the solitary prisoner. It is on record, that his mind was seriously deranged during the early part of his imprisonment; what he became ultimately, when all hope failed, and a long succession of years deadened his senses, none can know—the secret died with his jailers.

There is a tradition, that he attempted to make his captivity known, by scratching his melancholy tale on a metal dish, and casting it from the window; that it was found by a fisherman of Cannes, who brought it to the governor, St Mars, thereby jeopardising his own life or liberty, for he was at once imprisoned, and only liberated on incontestable proof being given of his inability to read. After this, all fishermen were prohibited from casting their nets within a mile of the island. Matthioli was debarred, on pain of death, from speaking to any but his jailer; he was conveyed from one dungeon to the other in a sedan-chair, closely covered with oil-cloth, into which he entered in his cell, where it was fastened so that no one should see him; his jailers nearly smothered him on his journey to St Marguérite; and afterwards the black mask seems to have been adopted on all occasions of the kind. Lord Dover assures us, that it has been a popular mistake to affirm this famed mask was of iron; that, in reality, it was formed of velvet, strengthened by bands of whalebone, and secured by a padlock behind the head.

The same extraordinary precautions for concealment followed his death that had awaited him in life. The walls of his dungeon were scraped to the stone, and the doors and windows burned, lest any scratch or inscription should betray the secret. His bedding, and all the furniture of the room, were also burned to cinders, then reduced to powder, and thrown into the drains; and all articles of metal melted into an indistinguishable mass. By this means it was hoped that oblivion might surely follow one of the grossest acts of political cruelty in the dark record of history.

JULY 15.

St Plechelm, bishop and confessor, apostle of Guelderland, 732. St Swithin or Swithun, confessor, bishop and patron of Winchester, 862. St Henry II., emperor of Germany, 1024.

St Swithin's Day.

The pranks played by tradition with the memory of various noted individuals, saintly and otherwise, display not unfrequently the most whimsical anomalies both as regards praise and blame. Whilst the sordid and heretical George of Cappadocia has been transformed into the gallant and chivalrous St George, the patron saint of England, and the mirror of all knightly virtues, it has been the misfortune of the patriotic and virtuous St Swithin to be associated in the popular mind with drunkenness and excess, and at best to enjoy only a mythical reputation as the hero of a well-known saying in connection with the state of the weather on the anniversary of his so-called translation.

The common adage regarding St Swithin, as every one knows, is to the effect that, as it rains or is fair on St Swithin's Day, the 15th of July, there will be a continuous track of wet or dry weather for the forty days ensuing.

> 'St Swithin's Day, if thou dost rain,
> For forty days it will remain:
> St Swithin's Day, if thou be fair,
> For forty days 'twill rain nae mair.'

The explanation given by Brand in his *Popular Antiquities* of this saying—an explanation which has been pretty currently received as correct—is as follows. St Swithin, bishop of Winchester, was a

man equally noted for his uprightness and humility. So far did he carry the latter quality, that, on his death-bed, he requested to be buried, not within the church, but outside in the churchyard, on the north of the sacred building, where his corpse might receive the eaves-droppings from the roof, and his grave be trodden by the feet of the passers-by. His lowly request was complied with, and in this neglected spot his remains reposed till about a hundred years afterwards, when a fit of indignation seized the clergy at the body of so pious a member of their order being allowed to occupy such a position; and on an appointed day they all assembled to convey it with great pomp into the adjoining cathedral of Winchester. When they were about to commence the ceremony, a heavy rain burst forth, and continued without intermission for the forty succeeding days. The monks interpreted this tempest as a warning from Heaven of the blasphemous nature of their attempt to contravene the directions of St Swithin, and, instead of disturbing his remains, they erected a chapel over his grave, at which many astounding miracles were performed. From this circumstance, it is stated, arose the popular belief of the anniversary of the attempted translation of St Swithin being invested with a prophetic character in reference to the condition of the weather for the ensuing six weeks.

This statement is specious, but unfortunately rests on no authority whatever, and indeed has been traced by an annotator on Brand to no more trustworthy source than a cutting from an old newspaper. So far from the account of the repugnance of the saint to his transference from the churchyard to the church being borne out by the real facts of the case, these are diametrically the other way; and from what has been actually ascertained, the translation of St Swithin was, instead of being a disastrous failure, accomplished with the utmost *éclat* and success. For the most recent history of this celebrated personage we are indebted to the Rev. John Earle, professor of Anglo-Saxon in the university of Oxford, who has published a fac-simile and translation of a Saxon manuscript of the tenth century—the earliest fragment which we possess regarding St Swithin—along with an ingenious essay, in which he has collected all the reliable data connected with the saint that can be obtained. These are far indeed from being either numerous or ample, but, such as they are, may be considered as exhaustive on this subject.

Swithin, or Swithun, was born in the neighbourhood of Winchester, probably about the year 800. He became a monk of the Old Abbey of Winchester, and gradually rose to be prior of that community. He seems to have gained the favour of Egbert, king of Wessex, who intrusted him with the education of his son and successor, Ethelwulf. An authentic record of Swithin at this period is furnished by a charter granted by King Egbert in 838, and bearing the signatures of Elmstan, *episcopus*, and Swithunus, *diaconus*. Elmstan dying in 852, Swithin was appointed his successor in the see of Winchester, a situation which he filled with great credit and usefulness. Through his endeavours great improvements were effected on the city, including the erection of several churches, and the spanning of the Itchen by a fine stone bridge, the first of the kind which had been seen in these parts. After the accession of Ethelwulf, he acted as that monarch's counsellor in all matters relating to religion and the peaceful arts, whilst the charge of military and foreign affairs was assumed by Alstan, bishop of Sherbourne. It has been imagined that he was chosen by Ethelwulf to accompany his son, the great Alfred, then a boy, on his visit to Rome, and also that he acted as mediator betwixt Ethelwulf and his eldest son, the rebellious Ethelbald. Swithin seems to have died about 862, leaving directions that he should be buried in a vile place, under the eaves-droppings on the north side of Winchester church. Mr Earle conjectures that he may have chosen this locality for sepulture, to put a stop to the common superstitious prejudices against burial in that part of the churchyard. Whatever may have been his reasons, his request was acceded to, and there he would probably have been permitted to rest undisturbed, had it not suited the policy of Dunstan, more than a hundred years afterwards, to revive the popular veneration for Swithin, in furtherance of his own schemes for the establishment of monastic discipline, for Swithin appears to have been a maintainer of the stricter conventual rule, which Dunstan zealously sought to enforce; and he had, moreover, earned a most enduring mark of distinction, by being the first to get introduced the system of tithes as a provision for the clergy. This was during the reign of Ethelwulf, who was induced by Swithin to set apart a tenth of his lands for religious uses, though the payment of tithes as a legal obligation was not introduced till the time of Athelstan, nor finally established till under King Edgar. In addition to the reasons just detailed, the cathedral of Winchester was then rebuilding under Bishop Ethelwold, a confederate of Archbishop Dunstan; and the enrichment of the new temple by the possession of some distinguished relics was a most desirable object. The organised plan was now accordingly put into execution, and ingenious reports were circulated regarding certain miraculous appearances made by Swithin. The account of these forms the subject of the Saxon fragment above referred to, edited by Mr Earle. According to this, Bishop Swithin appeared one night in a dream to a poor decrepit smith, and requested him to go to a certain priest, named Eadsige, who, with others, had been ejected for misconduct from the abbey of Old-Minster, and desire him, from Swithin, to repair to Bishop Ethelwold, and command him to open his (Swithin's) grave, and bring his bones within the church. The smith, in reply to the orders of his ghostly visitant, stated that Eadsige would not believe him, whereupon Swithin rejoined that he would find the reality of the vision confirmed by going to his stone coffin, and pulling therefrom an iron ring, which would yield without the least difficulty. The smith was still unconvinced, and Swithin had to repeat his visit twice; after which the smith went to the bishop's tomb, and withdrew the ring from the coffin with the greatest ease, as had been foretold. He then delivered Swithin's message to Eadsige, who hesitated for a while, but at last communicated it to Bishop Ethelwold. Contemporaneously, various wonderful miracles took place at Bishop Swithin's tomb, including the cure of a deformed man, who was relieved of his hump, in the most astonishing manner, by praying

at the grave; and of another individual, who recovered by the same means from a grievous ailment in his eyes. These preternatural occurrences were all duly reported to King Edgar, who thereupon gave directions for the formal translation of the relics of St Swithin from the grave in the churchyard to the interior of the cathedral, where they were enclosed in a magnificent shrine, and placed in a conspicuous position. A few years afterwards, the church, which had previously been dedicated to the apostles Peter and Paul, changed these guardians for St Swithin, who continued its patron saint till the time of Henry VIII., who ordered the name of the Holy Trinity to be substituted. A splendid ceremonial and feast accompanied the translation, which was effected on 15th July 971, 108 years after the death of Swithin. It ought to be remarked, that, though distinguished by the prefix of *Saint*, Swithin was never regularly canonised by the pope, a practice not introduced till nearly 200 years after his translation, which is the only ceremony on which he rests his claim to the title. He is thus emphatically what Mr Earle calls 'a home-made saint.' It will be noticed that the above narrative completely contradicts Mr Brand's account of a supposed supernatural interposition on the part of Swithin to prevent his translation. No event or natural phenomenon, which could be construed into such, is alluded to by any of the various authors—Monk Wolstan and others—who subsequently wrote histories of St Swithin. On the contrary, the weather seems to have been most propitious, whilst the community at large, so far from regarding these proceedings of their rulers as an unhallowed contravention of the wishes of the holy man, seemed rather to have rejoiced in the honours bestowed on his relics, and to have feasted and revelled to the utmost. How, then, did the popular notion about St Swithin's Day arise? Most probably, as Mr Earle remarks, it was derived from some primeval pagan belief regarding the meteorologically prophetic character of some day about the same period of the year as St Swithin's. Such adaptations, it is well known, were very frequent on the supplanting throughout Europe of heathenism by Christianity. Many of our popular customs and beliefs can indeed be only satisfactorily explained by tracing them to such a source.

In further confirmation of this view, it is to be observed, that in various countries of the European continent the same belief prevails, though differences exist as to the period of the particular day in question. Thus, in France, St Médard's Day (June 8), and the day of Saints Gervais and Protais (June 19), have a similar character ascribed to them:

'S'il pleut le jour de Saint Médard,
Il pleut quarante jours plus tard;
S'il pleut le jour de Saint Gervais et de
Saint Protais,
Il pleut quarante jours après.'

It is a little curious that St Médard should have the post of a rainy saint assigned him, as the celebrated fête at Salency, where the young maiden who has enjoyed the highest reputation during the preceding year for good-conduct receives a prize, and is crowned with a chaplet of roses, takes place on his day, and is said to have been instituted by him. A somewhat ludicrous account is given of the origin of the peculiar characteristic of St Médard's Day. It is said that, Médard being out with a large party one hot day in summer, a heavy fall of rain suddenly took place, by which all were thoroughly drenched, with the exception of the saint himself, round whose head an eagle kept continually fluttering; and by sheltering him with his wings till his return home, accomplished effectually the purposes of an umbrella. In Belgium they have a rainy saint, named St Godeliève; whilst in Germany, among others, a character of this description is ascribed to the day of the Seven Sleepers.

The belief in the peculiar characteristics of St Swithin's Day is thus alluded to in *Poor Robin's Almanac* for 1697:

'In this month is St Swithin's Day,
On which, if that it rain, they say,
Full forty days after it will,
Or more or less, some rain distil.
This Swithin was a saint, I trow,
And Winchester's bishop also,
Who in his time did many a feat,
As popish legends do repeat:
A woman having broke her eggs,
By stumbling at another's legs,
For which she made a woful cry.
St Swithin chanced for to come by,
Who made them all as sound or more,
Than ever that they were before.
But whether this were so or no,
'Tis more than you or I do know.
Better it is to rise betime,
And to make hay while sun doth shine,
Than to believe in tales and lies,
Which idle monks and friars devise.'

In the next century, Gay remarks in his *Trivia*—

'Now if on Swithin's feast the welkin lours,
And every penthouse streams with hasty showers,
Twice twenty days shall clouds their fleeces drain,
And wash the pavement with incessant rain.
Let not such vulgar tales debase thy mind;
Nor Paul nor Swithin rule the clouds and wind!'

The question now remains to be answered, whether the popular belief we have been considering has any foundation in fact, and here the observations at Greenwich for the 20 years preceding 1861, must be adduced to demonstrate its fallacy. From these we learn that St Swithin's Day was wet in 1841, and there were 23 rainy days up to the 24th of August; 1845, 26 rainy days; 1851, 13 rainy days; 1853, 18 rainy days; 1854, 16 rainy days; and, in 1856, 14 rainy days. In 1842, and following years, St Swithin's Day was dry, and the result was in 1842, 12 rainy days; 1843, 22 rainy days; 1844, 20 rainy days; 1846, 21 rainy days; 1847, 17 rainy days; 1848, 31 rainy days; 1849, 20 rainy days; 1850, 17 rainy days; 1852, 19 rainy days; 1855, 18 rainy days; 1857, 14 rainy days; 1858, 14 rainy days; 1859, 13 rainy days; and, in 1860, 29 rainy days. It will thus be seen, by the average of the foregoing 20 years, that the greatest number of rainy days, after St Swithin's Day, had taken place when the 15th of July was dry. It is, indeed, likely enough that a track of wet weather, or the opposite, may occur at this period of the year, as a change generally takes place soon after midsummer, the character of which will depend much on the state of the previous spring. If this has been for the

greater part dry, it is very probable that the weather may change to wet about the middle of July, and *vice versâ*. But that any critical meteorological influence resides in the 15th, seems wholly erroneous.

Hone, in his *Everyday Book*, quotes an amusing instance of a lady, a stanch believer in St Swithin, who, on his day one year being fine, expressed her belief in an approaching term of fine weather, but, a few drops of rain having fallen in the evening, changed her tune, and maintained that the next six weeks would be wet. Her prediction was not accomplished, the weather having been remarkably fine. 'No matter,' she would say, when pressed on the point, 'if there has been no rain during the day, there certainly has been during the night.' Her opinion of St Swithin's infallibility was in nowise to be shaken. The same author mentions a pretty saying current in some parts of the country when rain falls on St Swithin's Day: 'St Swithin is christening the apples.'

It is only to be remarked, in conclusion, that the epithet of the 'drunken saint,' sometimes applied to St Swithin, is a base slander on the worthy bishop's memory. True, the Saxons were rather noted for their convivial habits, and St Swithin, doubtless, had no objection to a cheerful glass in moderation. But no aberrations whatever, on the score of temperance, are recorded of him. The charge belongs clearly to the same category as that veracious statement in the popular ditty, by which St Patrick, the apostle of Ireland, is represented as a lover of potheen, and initiating his converts in the art of manufacturing that liquor.

JAMES, DUKE OF MONMOUTH.

Monmouth's tragic history has redeemed from contempt a person who was naturally a mediocrity, and something of a fool. Born in 1650, the eldest natural son of the young exiled Charles II., brought into prominence as a beautiful boy at the Restoration, he was thought to have his fortune made by being married to the girl Countess of Buccleuch, then considered the greatest heiress in the three kingdoms, seeing that her family estates were reckoned at five thousand a year! But there was something horrible and revolting in uniting two mere children in marriage for interested reasons, and nature avenged herself by introducing alienation between them, though not till they had become the direct ancestors of the line of the Dukes of Buccleuch.

There was always a hankering notion that a secret marriage had existed between Charles II. and Lucy Waters, the mother of Monmouth. Charles took formal steps for declaring the contrary to be the truth; but, nevertheless, the love the king had for his handsome son, and perhaps a few suspicious facts, kept alive the idea in the young man's heart. The oppressed dissenters took him up as one in whom they might have hopes, if legitimacy could be established. So it was not wonderful, when his essentially weak character is considered, that he should have set up pretensions to the throne against his uncle James II., though nothing could be for himself more ruinously unfortunate.

His ill-starred expedition in June 1685, the rebellion he headed, his defeat at Sedgemore, and the subsequent circumstances, have all been rendered familiar to the present generation by the animated narration of Macaulay. The exact particulars of his capture are less known, and are very interesting. It appears that the duke rode from the field along with Lord Gray, and proceeded to Woodyates, where they quitted their horses, and the duke assumed the clothes of a peasant. He then walked on with the design of reaching Bournemouth, in order, if possible, to get shipping for the continent. An alarm from the appearance of his enemies interrupted this plan, and he fled across the country to a wild tract of ground called Shag's Heath. There was here a patch of cultivated ground, divided by hedges, enclosed by a ditch, and bearing crops of rye and pease in full summer growth. It bore the name of the Island, by reason that it was entirely surrounded by ground in an opposite condition. On the report of a woman, that she had seen a man enter that enclosure, the dragoons surrounded it—'beat' it in all directions—and at length, on the ensuing day, when about to depart in despair, lighted upon the would-be king, skulking in a ditch under fern. The spot is still indicated with precision by a tree, which is popularly called Monmouth's Ash. It was with some difficulty he was identified, so great was the change which the mean attire and three days of personal neglect, starvation, and terror had wrought upon his once graceful form. The woman, Ann Farrant, who had given the information regarding his entering the Island, was considered by the peasantry to have never thriven after her ungracious act.

Amongst the articles found upon Monmouth's person, was a little pocket-book containing notes of various journeys, and a number of charms or spells. This volume, recovered from a book-stall at Paris, was shewn in 1849, at a meeting of the Royal Irish Academy in Dublin, and is now in the British Museum. The charms are found to be for such purposes as learning how a sickness is to end, and whether a friend will continue faithful; to heal certain maladies, and make gray hair turn black. There are also cabalistic and astrological figures, which have not been explained. The character of this part of the contents of the book is in conformity with a statement which has come from Colonel William Legge, the officer who conducted Monmouth to London after his capture. This gentleman reported that, on their journey, the duke shewed him several charms he had about his person, which he said he had got when in Scotland, but which he now saw to be only 'foolish conceits.'* It must be admitted that Monmouth was not singular in trusting to such conceits. We may here well remember that his

* Note in Dartmouth's edition of Burnet.

truly 'cruel uncle,' James II., a very few years afterwards, was induced to pause in his advance against the Prince of Orange, and to return from Salisbury to London, by a bleeding at his nose!

WINTHROP MACKWORTH PRAED.

The name of Praed is one far less familiar to the public than it deserves to be. Some writers with great natural gifts have obstinately stood in their own light—have written so obscurely that the world would not be at the trouble of deciphering their meaning; but the subject of our present notice wrote as clearly as Cowper, and yet remains comparatively unknown on this side of the Atlantic. The Americans, with their usual quickness, long ago perceived his merits, and published his poetical works, but have included in the edition many poems which Praed never wrote, and many which, for his literary fame, he had better not have written. A small volume might, however, be made up of his selected writings, which would, in its line, be without a rival. As an author of Verses of Society —and those not of transitory interest, or on altogether frivolous themes—he is far superior to Thomas Moore, to the Hon. William Spencer (a writer far more widely known than Praed), and indeed to any poet of the class, whom we can call to mind, whether celebrated for those efforts alone, or exercising powerful pinions, as in Moore's case, in such short 'swallow flights of song.' He combined no small portion of the wit of Hood, with an elegance to which Hood could not lay claim; while in his soberer pieces he reminds one of Crabbe dancing—that is to say, they have all the naturalness of the *Tales of the Hall*, mingled with a certain graceful humour. *The Vicar* is a charming poem of the latter class.

His talk was like a stream which runs
With rapid change from rocks to roses;
It slipped from politics to puns;
It passed from Mahomet to Moses;
Beginning with the laws which keep
The planets in their radiant courses,
And ending with some precept deep
For dressing eels or shoeing horses.

He was a shrewd and sound divine,
Of loud dissent the mortal terror;
And when by dint of page and line,
He 'stablished truth or startled error,
The Baptist found him far too deep;
The Deist sighed with saving sorrow,
And the lean Levite went to sleep
And dreamt of eating pork to-morrow.

He wrote, too, in a quiet way,
Small treatises and smaller verses,
And sage remarks on chalk and clay,
And hints to noble lords and nurses;
True histories of last year's ghost;
Lines to a ringlet or a turban,
And trifles for the *Morning Post*,
And nothings for Sylvanus Urban.

He did not think all mischief fair,
Although he had a knack of joking;
He did not make himself a bear,
Although he had a taste for smoking.
And when religious sects ran mad,
He held, in spite of all his learning,
That if a man's belief is bad,
It will not be improved by burning.

And he was kind, and loved to sit
In the low hut or garnished cottage,
And praise the farmer's homely wit,
And share the widow's homelier pottage.
At his approach complaint grew mild,
And when his hand unbarred the shutter,
The clammy lips of fever smiled
The welcome that they could not utter.

He always had a tale for me
Of Julius Cæsar or of Venus;
From him I learned the rule of three,
Cat's-cradle, leap-frog, and Quæ genus;
I used to singe his powdered wig,
To steal the staff he put such trust in,
And make the puppy dance a jig
When he began to quote Augustine.

That Praed should have gathered so little fame is the more remarkable as, when alive, he had a reputation even superior to his merits. The friend and contemporary of Macaulay at Cambridge, he awakened an equal expectation of future greatness in all who knew them both. He carried off as many university prizes as the embryo historian; he divided with him the applause of the undergraduate audience in *the Union;* and in the poems which the friendly rivals contributed at that period to *Knight's Magazine*, Praed (with one glorious exception, *The Battle of Naseby*) surpassed Macaulay altogether. It is only in the pages of that extinct serial, and here and there in other dead periodicals, that the treasures of Praed's muse can be found. In politics, Praed was a Conservative, and in the Songs of the Civil Wars which Macaulay and he contributed to the pages of Mr Knight, took the Cavalier side, as will be seen in the following passage from his ballad of *Marston Moor.*

'To horse! to horse! Sir Nicholas, the clarion's note is high!
To horse! to horse! Sir Nicholas, the big drum makes reply!
Ere this hath Lucas marched, with his gallant cavaliers,
And the bray of Rupert's trumpets grows fainter in our ears.
To horse! to horse! Sir Nicholas! White Guy is at the door,
And the Raven whets his beak o'er the field of Marston Moor.

Up rose the Lady Alice from her brief and broken prayer,
And she brought a silken banner down the narrow turret-stair;
Oh! many were the tears that those radiant eyes had shed,
As she traced the bright word "Glory" in the gay and glancing thread;
And mournful was the smile which o'er those lovely features ran.
As she said, "It is your lady's gift, unfurl it in the van!"

"It shall flutter, noble wench, where the best and boldest ride,
Midst the steel-clad files of Skippon, the black dragoons of Pride;
The recreant heart of Fairfax shall feel a sicklier qualm,
And the rebel lips of Oliver give out a louder psalm;

When they see my lady's gewgaw flaunt proudly on their wing,
And hear the loyal soldier's shout, "For God and for the King!"

'Tis noon. The ranks are broken, along the royal line
They fly, the braggarts of the court! the bullies of the Rhine!
Stout Langdale's cheer is heard no more, and Astley's helm is down,
And Rupert sheaths his rapier, with a curse and with a frown,
And cold Newcastle mutters, as he follows in their flight,
"The German boar had better far have supped in York to-night!"

The knight is left alone, his steel-cap cleft in twain,
His good buff jerkin crimson'd o'er with many a gory stain:
Yet still he waves his banner, and cries amid the rout,
"For Church and King, fair gentlemen! spur on, and fight it out!"
And now he wards a Roundhead's pike, and now he hums a stave,
And now he quotes a stage-play, and now he fells a knave.

God aid thee now, Sir Nicholas! thou hast no thought of fear;
God aid thee now, Sir Nicholas! for fearful odds are here!
The rebels hem thee in, and at every cut and thrust,
"Down, down," they cry, "with Belial! down with him to the dust!"
"I would," quoth grim old Oliver, "that Belial's trusty sword,
This day were doing battle for the Saints and for the Lord!"

The tendencies of Praed induced the Conservative party to entertain great hopes of him in parliament; but in that arena, although he sat for some years, he made no figure. In 1830, he was elected for Truro; in 1835, for Yarmouth, and finally for Aylesbury; he was Secretary of the Board of Control under the Conservative government in 1835. When he died, still young, a lament arose from a large circle of friends that he had done so little, and that little only as a fashionable poet. But a first-rate fashionable poet is surely equal to a second-rate politician, and more than this, there was really no reason to suppose that Praed would ever become. He exercised his talents in the direction for which they were best fitted, and acquitted himself excellently well. He wrote at least half-a-dozen poems which deserve to live as long as the language, and to be popular while humour, elegance, and pathos still command a welcome.

The biography of Winthrop Mackworth Praed is comprised in his poems. They are all he *did* with which mankind at large has any concern. The darling of a fashionable and intellectual circle, he lived the usual butterfly life of his class, except for the parliamentary experiments above alluded to. His influence upon his contemporaries—clearly traceable, by the by, in Macaulay's early poetic efforts—was doubtless very considerable, but we have no means of estimating it.

There are certain men to whom the public is not introduced except by proxy—such as Sidney Walker, and Arthur H. Hallam—and whose merits we are required to take upon trust. Men of judgment to whom they were justly dear, and who estimated them highly, evidence warmly in their favour; at last, half irritated that we refuse to welcome a shadow, they publish their Literary Remains. In nine cases out of ten, the disappointment of the public thereupon is made rudely manifest, and the reputation that has been sought to be established is blown to the winds. At the head of all authors of this class stands Mackworth Praed, but with this important difference, that his Remains—although no pious British hand has yet collected them—more than bear out all that we hear of his merits from private sources. It is impossible to question the social charms of the man who could write the following poem, which fitly concludes this sketch—'a poem,' says Miss Mitford, 'as truthful as if it had been written in prose by Jane Austen.'

THE BELLE OF THE BALL.

'Years, years ago, ere yet my dreams,
Had been of being wise or witty;
Ere I had done with writing themes,
Or yawned o'er this infernal "Chitty,"
Years, years ago, while all my joys
Were in my fowling-piece and filly,
In short, while I was yet a boy,
I fell in love with Laura Lily.

I saw her at a country ball
There where the sound of flute and fiddle,
Gave signal, sweet in that old hall,
Of hands across and down the middle;
Hers was the subtlest spell by far,
Of all that sets young hearts romancing,
She was our queen, our rose, our star,
And when she danced—Oh, heaven! her dancing!

She talked of politics or prayers,
Of Southey's prose, or Wordsworth's sonnets,
Of daggers, or of dancing bears,
Of battles, or the last new bonnets;
By candle-light, at twelve o'clock,
To me it mattered not a tittle,
If those bright lips had quoted Locke,
I might have thought they murmured Little.

Through sunny May, through sultry June,
I loved her with a love eternal;
I spoke her praises to the moon,
I wrote them for the Sunday journal.
My mother laughed; I soon found out
That ancient ladies have no feeling.
My father frowned; but how should gout
Find any happiness in kneeling?

She was the daughter of a dean,
Rich, fat, and rather apoplectic;
She had one brother just thirteen,
Whose colour was extremely hectic;
Her grandmother, for many a year,
Had fed the parish with her bounty;
Her second-cousin was a peer,
And lord-lieutenant of the county.

But titles and the three-per-cents,
And mortgages and great relations,
And India Bonds, and tithes and rents,
Oh! what are they to love's sensations?
Black eyes, fair foreheads, clustering locks,
Such wealth, such honours Cupid chooses;
He cares as little for the stocks,
As Baron Rothschild for the Muses.

She sketched: the vale, the wood, the beach
Grew lovelier from her pencil's shading;
She botanised: I envied each
Young blossom on her boudoir fading;
She warbled Handel: it was grand,
She made the Catalani jealous;
She touched the organ: I could stand
For hours and hours and blow the bellows.

She kept an album, too, at home,
Well filled with all an album's glories;
Paintings of butterflies and Rome;
Pattern for trimming; Persian stories;
Soft songs to Julia's cockatoo;
Fierce odes to famine and to slaughter,
And autographs of Prince Le Boo,
And recipes for elder-water.

And she was flattered, worshipped, bored,
Her steps were watched, her dress was noted,
Her poodle-dog was quite adored,
Her sayings were extremely quoted.
She laughed, and every heart was glad,
As if the taxes were abolished:
She frowned, and every look was sad,
As if the opera were demolished.

She smiled on many just for fun—
I knew that there was nothing in it:
I was the first, the only one,
Her heart had thought of for a minute.
I knew it, for she told me so,
In phrase that was divinely moulded;
She wrote a charming hand, and oh!
How neatly all her notes were folded.

Our love was like most other loves—
A little glow, a little shiver;
A rosebud and a pair of gloves,
And "Fly not yet," upon the river;
Some jealousy of some one's heir;
Some hopes of dying broken-hearted;
A miniature; a lock of hair;
The usual vows; and then we parted.

We parted: months and years rolled by,
We met again some summers after;
Our parting was all sob and sigh!
Our meeting was all mirth and laughter!
For in my heart's most secret cell
There had been many other lodgers;
And she was not the ball-room belle,
But only Mistress—something—Rogers!

W. M. Praed was born in 1802 and died in 1839.

THE FIRST HULKS ON THE THAMES.

English statesmen, in past days, felt a difficulty which the lapse of time has rendered very little more soluble than before: viz., the best kind of secondary punishment to adopt for offenders against the law—the most effective mode of dealing with criminals, who deserve some punishment less awful than that of death. Whipping, transportation, silent imprisonment, and imprisonment with hard labour, have all had their advocates, as being most effective for the purpose in view; and if the first of these four has given way before the advanced humanity of English society, the other three still form a debatable ground among thinking persons. Early in the reign of George III., there were so many kinds of crime for which capital punishments were inflicted, that executions used to take place in London nearly every week, giving rise to a very unhealthy tone of feeling among the lower class. It was as a means of devising a severe mode of punishment short of death, that the *Hulks* on the Thames were introduced, in 1776. 'Hulk' is a nautical name for any old ship, applied to temporary purposes after its sea-going qualities have become impaired; it has often been applied to prison-ships, fashioned out of old men-of-war; but these prison-ships have sometimes been constructed for this special purpose, and yet the term 'hulk' remains in use as a short and easy designation. The avowed object in 1776, was 'to employ prisoners in some kind of hard labour for the public benefit;' the severity and the continuance of the labour being made dependent on the good-conduct of each prisoner. Special care was to be taken that the imprisonment, while on the one hand not cruel, should on the other not be *comfortable*. 'They [the prisoners] are to be employed in as much labour as they can sustain; to be fed with legs and shins of beef, ox-cheek, and such other coarse food; to have nothing to drink but water or small-beer; to be clad in some squalid uniform; never to be visited without the consent of the overseers; and never to be supplied with any gifts from other persons, either in money or otherwise.' The Thames between Woolwich and Barking being much choked with mud, it was deemed a useful work to employ convicts in dredging. A vessel was built, neither a ship, tender, nor lighter, but combining something of all three: on a plan approved by the king in council. Part of the stern was decked in as a sleeping-place for the convicts, part of the forecastle was enclosed for the overseer, and the rest of the vessel was open. There were overhanging platforms, on which the men could stand to work; and on one of these was 'a machine called a David, with a windlass, for raising the ballast'—which was probably the same thing as sailors now call a *davit*. The vessel had space for about thirty tons of sand, mud, or ballast, dredged up from the Thames.

Such was the hulk or prison-ship, which was placed under the management of Mr Duncan Campbell, a sort of superintendent of convicts. On the 15th of July, in the above-named year, the first party of convicts, chained two and two by the leg, entered the ship, and commenced their labours off Barking Creek. Many violent encounters took place before the convicts could be brought to understand the reality of the system. On one occasion, several of them attempted to get off their chains; they were flogged, and made to work harder as a consequence. On another occasion, five of them slipped down into a boat, and rowed off; they were pursued, and fired at; two were killed, one wounded, and two recaptured. One day, during a violent north wind, the hulk was driven across from Barking Creek to Woolwich; fourteen of the convicts rose on the keepers, compelled them to keep below, and escaped; a naval officer meeting them on the Greenwich road, persuaded eight of them to return to the vessel; of the six who refused, some were afterwards captured and hanged. In a further instance, eight convicts effectually escaped; they seized the arm-chest, took pistols, intimidated the keepers, and made off in an open boat. This system of working in hulks had a long trial on the Thames, but gradually gave way to other arrangements.

JULY 16.

St Eustathius, confessor, patriarch of Antioch, 338. St Elier, or Helier, hermit and martyr.

Born.—Carneades, founder of the 'New Academy' school of philosophy, 217 B. C., *Cyrene;* Joseph Wilton, sculptor, 1722, *London;* Sir Joshua Reynolds, celebrated painter, 1723, *Plympton, Devonshire.*

Died.—Anne Askew, martyred at Smithfield, 1546; Tommaso Aniello (by contraction *Masaniello*), celebrated revolutionary leader, murdered by the populace at Naples, 1647; John Pearson, bishop of Chester, author of *Exposition of the Creed,* 1686, *Chester;* François Le Tellier, Marquis de Louvois, chancellor of France, 1691, *Paris;* Dr Thomas Yalden, poet, 1736; Peter III., czar of Russia, husband to the Empress Catharine, strangled, 1762; Jean Louis Delolme, writer on the British constitution, 1806; John Adolphus, historical writer, 1845, *London;* Margaret Fuller Ossoli, American authoress, perished at sea, 1850; Pierre Jean de Beranger, distinguished French lyrical poet, 1857, *Paris.*

MARGARET FULLER OSSOLI.

Not in England nor in France is the influence of women on society so active and so manifest as in New England. The agitation there for Women's Rights is merely an evidence of actual power, seeking its recognition in civic insignia. Every student of American society has noted the wide diffusion of intellectual ability, along with an absence of genius, or the concentration of eminent mental gifts in individuals. There is an abundance of cleverness displayed in politics, letters, and arts—there is no want of daring and ambition—but there is a strange lack of originality and greatness. The same is true of the feminine side of the people. A larger number of educated women, able to write well and talk well, it would be difficult to find in any European country, but among them all it would be vain to look for a Madame de Staël, or a Miss Martineau. Perhaps those are right who cite Margaret Fuller as the fairest representative of the excellences, defects, and aspirations of the women of New England.

She was the daughter of a lawyer, and was born at Cambridge Port, Massachusetts, on the 23d of May 1810. Her father undertook to educate her himself, and finding her a willing and an able scholar, he crammed her with learning, early and late, in season and out of season. Her intellect became preternaturally developed, to the life-long cost of her health. By day, she was shewn about as a youthful prodigy; and by night, she was a somnambulist, and a prey to spectral illusions and nightmare. As she advanced into womanhood, she pursued her studies with incessant energy. 'Very early I knew,' she once wrote, 'that the only object in life is to grow.' She learned German, and made an intimate acquaintance with the writings of Goethe, which she passionately admired. Her father died in 1835, leaving her no fortune, and to maintain herself, she turned schoolmistress. Her reputation for learning, and for extraordinary eloquence in conversation, had become widely diffused in and around Boston, and her acquaintance was sought by most people with any literary pretensions. About this time, she was introduced to Mr Emerson, who describes her as rather under the middle height, with fair complexion and fair strong hair, of extreme plainness, with a trick of perpetually opening and shutting her eyelids, and a nasal tone of voice. She made a disagreeable impression on most persons, including those who subsequently became her best friends; and to such an extreme, that they did not wish to be in the same room with her. This was partly the effect of her manners, which expressed an overweening sense of power, and slight esteem of others, and partly the prejudice of her fame, for she had many jealous rivals. She was a wonderful mimic, and could send children into ecstasies with her impersonations; but to this faculty she joined a dangerous repute for satire, which made her a terror to grown people. 'The men thought she carried too many guns, and the women did not like one who despised them.' Mr Emerson, at their first meeting, was repelled. 'We shall never get far,' said he to himself, but he was mistaken. Her appearance, unlike that of many people, was the worst of Miss Fuller. Her faults and weaknesses were all superficial, and obvious to the most casual observer. They dwindled, or were lost sight of, in fuller knowledge. When the first repulse was over, she revealed new excellences every day to those who happily made her their friend. 'The day was never long enough,' says Mr Emerson, 'to exhaust her opulent memory; and I, who knew her intimately for ten years—from July 1836 to August 1846—never saw her without surprise at her new powers. She was an active, inspiring companion and correspondent. All the art, the thought, and the nobleness in New England, seemed related to her and she to them.'

The expression of her self-complacency was startling in its thoroughness and frankness. She spoke in the quietest manner of the girls she had formed, the young men who owed everything to her, and the fine companions she had long ago exhausted. In the coolest way she said to her friends: 'I now know all the people worth knowing in America, and I find no intellect comparable to my own!' Some, who felt most offence at these arrogant displays, were yet, on further reflection, compelled to admit, that if boastful, they were at anyrate not far from true. Her sympathies were manifold, and wonderfully subtle and delicate; and young and old resorted to her for confession, comfort, and counsel. Her influence was indeed powerful and far-reaching. She was no flatterer. With an absolute truthfulness, she spoke out her heart to all her confidants, and from her lips they heard their faults recited with submission, and received advice as though from an oracle.

It was in conversation that Miss Fuller shone. She would enter a party, and commence talking to a neighbour. Gradually, listeners would collect around her until the whole room became her audience. On such occasions she is said to have discoursed as one inspired; and her face, lighted up with feeling and intellect, dissolved its plainness, if not deformity, in beauty of expression. Some of her friends turned this faculty to account, by opening a conversation-class in Boston in 1839, over which Miss Fuller presided. She opened the proceedings with an extempore address, after which discussion followed. The class was attended by some of the most intellectual women of the American Athens, and very favourable memories

are preserved of the grace and ability with which the president did her share of duty.

Much of Miss Fuller's freedom and force of utterance deserted her when she essayed to write, and her friends protest against her papers being regarded as any fair index of her powers. She edited for two years *The Dial*, a quarterly given to the discussion of transcendental and recondite themes, and then resigned her office to Mr Emerson. In 1844, she removed to New York, and accepted service as literary reviewer to the *New York Tribune;* a post for which she was singularly unfitted. The hack-writer of the daily press is always ready to spin a column or two on any new book on instant notice, but Miss Fuller could only write in ample leisure, and when in a proper mood, which mood had often to be waited for through several days. Happily, Mr Horace Greeley, the editor of the *Tribune*, appreciated the genius of the reviewer, and allowed her to work in her own way.

In 1846, an opportunity occurred for a visit to Europe, long an object of desire; and after a tour through England, Scotland, and France, she made a prolonged stay in Italy, and in December 1847, she was married to Count Ossoli, a poor Roman noble, attached to the papal household. Concerning him she wrote to her mother: 'He is not in any respect such a person as people in general expect to find with me. He had no instructor except an old priest, who entirely neglected his education; and of all that is contained in books he is absolutely ignorant, and he has no enthusiasm. On the other hand, he has excellent practical sense; has been a judicious observer of all that has passed before his eyes; has a nice sense of duty, a very sweet temper, and great native refinement. His love for me has been unswerving and most tender.' The conjunction of the intellectual Yankee woman with the slow Roman noble, utterly destitute of that culture which she had set above all price, seemed to many as odd as inexplicable. It was only another illustration of the saying, that extremes meet; and those who know how impossible it is for books and the proudest fame to fill a woman's heart (and Margaret Fuller had a great and very tender heart), will not wonder that she felt a strange and happy peace in Ossoli's simple love.

She was a friend of Mazzini's, and when, in 1848, revolution convulsed almost every kingdom on the continent, she rejoiced that Italy's day of redemption had at last dawned. During the siege of Rome by the French, she acted as a hospital nurse, and her courage and activity inspired extraordinary admiration among the Italians. When Rome fell, her hopes for her chosen country vanished, and she resolved to return to America. 'Beware of the sea!' had been the warning of a fortune-teller to Ossoli when a boy. In spite of gloomy forebodings, they set sail from Leghorn in a merchant-ship. At the outset of the voyage, the captain sickened and died of confluent small-pox in its most malignant form. Ossoli was next seized, and then their infant boy, but both recovered, though their lives were despaired of. At last the coast of America was reached, when, on the very morning of the day they would have landed, 16th July 1850, the ship struck on Fire Island beach. For twelve hours, during which the vessel went to pieces, they faced death. At last crew and passengers were engulfed in the waves, only one or two reaching the land alive. The bodies of Ossoli and his wife were never found, but their child was washed ashore, and carried to Margaret's sorrowing mother.

DE BERANGER.

Notwithstanding the 'De' prefixed to his name, the illustrious French songster was of the humblest origin. In youth, the natural energies of his intellect led him to authorship; but he was at first like to starve by it, and had at one moment serious thoughts of enlisting as a soldier in the expedition to Egypt, when he was succoured by the generosity of Lucien Bonaparte, who conferred on him the income he was entitled to as a member of the Institute. It was not without cause, and a cause honourable to his feelings, that Béranger was ever after a zealous Bonapartist. Béranger is, without doubt, the most popular poet of France: men of literature, citizens, workmen, peasants, everybody, in fact, sings his songs. Yet his modesty was never spoiled by flattery; when a professor of high standing spoke in his presence of his 'immortal works;' he replied: 'My dear friend, I believe really that I am overpraised; permit me to doubt the immortality of my poems. At the opening of my career, the French song had no other pretension than to enliven a dessert. I asked if it would not be possible to raise its tone, and use it as the interpreter of the ideas and feelings of a generous nation. At a dinner given by M. Laffitte, where Benjamin Constant was present, I sang one of my first songs, when the latter declared that a new horizon was opened to poetry. This encouraged me to persevere.'

The circumstances of the times favoured the poet; he never ceased to sing the glories of France, and particularly of the Empire. Yet he is most truly himself in those little dramas, where, placing a single person on the scene, he expresses the national feeling, such as *Le Vieux Sergent, Le Roi d'Ivetôt;* whilst he was said to be the only man who knew how to make riches popular, he had another secret, how to render his own poverty almost as inexhaustible in kindnesses as the rich. He never would receive anything, and lived to the last on the profits of his works, leaving his small fortune to be divided among a few poor and old friends.

ROYAL VISIT TO MERCHANT TAILORS' HALL.

On the 16th of July 1607, James I., accompanied by Henry, Prince of Wales, visited the Merchant Tailors' Company of London, at their hall, in Threadneedle Street. The records of the company contain several interesting notices of this royal visit. A short time previous to its taking place, a meeting was held to consult how the king could be best entertained; and Alderman Sir John Swynnerton was entreated 'to confer with Mr Benjamin Jonson, the poet, about a speech to be made to welcome his majesty, and for music, and other inventions.' From the same source we also glean the following account of the entertainment:

'At the upper end of the hall, there was a chair of estate, where his majesty sat; and a very proper child, well-spoken, being clothed like an Angel of Gladness, with a taper of frankincense burning in his hand, delivered a short speech, containing

eighteen verses, devised by Mr Ben. Jonson, which pleased his majesty marvellously well. And upon either side of the hall, in the windows near the upper end, were galleries made for music, in either of which were seven singular choice musicians, playing on their lutes, and in the ship, which did hang aloft in the hall, were three rare men and very skilful, who sung to his majesty; wherein it is to be remembered, that the multitude and noise was so great, that the lutes and songs could scarcely be heard or understood. And then his majesty went up into the king's chamber, where he dined alone at a table which was provided only for his majesty, in which chamber were placed a very rich pair of organs, whereupon Mr John Bull, doctor of music, and brother of this company, did play all the dinner-time.'

After dinner, James was presented with a purse of gold; but on being shewn a list of the eight kings, and other great men, who had been members of the company, he declined to add his name to it; stating that he already belonged to another guild, but that his son, the Prince of Wales, should at once become a Merchant Tailor. Then all descended to the great hall, where the prince, having dined, was presented with a purse of gold, and the garland being put on his head, he was made free of the company amidst loud acclamations of joy. During this ceremony, the king stood in a new window made for the purpose, 'beholding all with a gracious kingly aspect.'

'After all which, his majesty came down to the great hall, and sitting in his chair of estate, did hear a melodious song of farewell by the three rare men in the ship, being apparelled in watchet * silk, like seamen, which song so pleased his majesty, that he caused it to be sung three times over.'

MOCK-ELECTION IN THE KING'S BENCH.

In the old bad system of imprisonment for debt, there were many evils, but none worse than the enforced idleness undergone by the prisoners. It is easy to understand how a man who had been long kept in prison came out a worse member of society than he went in. The sufferers, in general, made wonderful struggles to get their time filled up, though it was too often with things little calculated for their benefit. Sometimes special amusements were got up amongst them. In 1827, the inmates of the King's Bench Prison, in London, devised one of such a nature, that public attention was attracted by it. It was proposed that they should elect a member to represent '*Tenterden*' (a slang name for the prison) in parliament. Three candidates were put up, one of whom was Lieutenant Meredith, an eccentric naval officer. All the characteristics of a regular election were burlesqued. Addresses from the candidates to the 'worthy and independent electors' were printed and placarded about the walls of the prison; squibs were written, and songs sung, disparaging the contending parties; processions were organised with flags, trappings, and music, to take the several candidates to visit the several 'Collegians' (i.e., prisoners) in their rooms; speeches were made in the courtyards, full of grotesque humour; a high-sheriff and other officers were chosen to conduct the proceedings in a dignified way; and the electors were invited to 'rush to the poll' early on Monday morning, the 16th of July. The turnkeys of the prison entered into the fun. While these preliminary plans were engaging attention, a creditor happened to enter the prison; and seeing the prisoners so exceedingly joyous, declared that such a kind of imprisonment for debt could be no punishment; and he therefore liberated his debtor. Whether owing to this singular result of prison-discipline (or indiscipline), or an apprehension of evils that might follow, Mr Jones, marshal of the prison, stopped the whole proceedings on the morning of the 16th. This, however, he did in so violent and injudicious a way as to exasperate the whole of the prisoners—some of whom, although debtors, were still men of education and self-respect. They resented the language used towards them, and the treatment to which they were subjected; until at length a squad of Foot-guards, with fixed bayonets, forcibly drove some of the leaders into a filthy 'black-hole' or place of confinement. The matter caused a few days' further excitement, both within and without the prison; and it was generally thought that a more good-humoured course of proceeding on the part of the marshal would have brought the whole affair to a better ending.

* Blue.

AN APPLE-STALL DISCUSSED IN PARLIAMENT.

A case which attracted some notice and created some amusement in 1851, serves, although trifling in itself, to illustrate the tenacity with which *rights* of any kind are maintained in England. During a period of several years, strollers in Hyde Park, particularly children, were familiar with the 'White Cottage,' a small structure near the east end of the Serpentine, at the junction of several footpaths. In this cottage Ann Hicks dispensed apples, nuts, gingerbread, cakes, ginger-beer, &c. It had grown up from a mere open stall to something like a small tenement, simply through the pertinacious applications of the stall-keeper to persons in office. Until 1843, there was an old conduit at that spot, once connected with a miniature water-fall, but occupied then by Ann Hicks for the purposes of her small dealings. This was pulled down, and her establishment was reduced to a mere open stall. Ann Hicks, who appears to have been an apt letter-writer, wrote to Lord Lincoln, at that time Chief Commissioner of Woods and Forests, stating that her stall consisted merely of a table with a canvas awning, and begging for permission to have some kind of lock-up into which she could place her wares at night. She was therefore allowed to make some such wooden erection as those which have long existed near the Spring Garden corner of St James' Park. She wrote again, after a time, begging for a very small brick enclosure, as being more secure at night than one of wood; this was unwillingly granted, because quite contrary to the general arrangements for the management of the park; but as she was importunate, and persuaded other persons to support her appeal, permission was given. Ann Hicks put a wide interpretation on this kindness, for she not only built a little brick room, but she built a little window as well as a little door to it. She wrote again, saying that her locker was not large enough; might she make it a little higher, to afford space for her ginger-beer bottles? Yes, provided the total height did not exceed five feet. She wrote again, might she repair the roof, which was becoming leaky? Obtaining permission, she not only repaired the roof, but protruded a little brick chimney through it; and advancing still further, she made a little brick fireplace, whereon she could conduct small

cooking operations. She wrote again, stating that the boys annoyed her by looking in at the little window: might she put up a few hurdles, to keep them at a distance? This being allowed, she gradually moved the hurdles further and further outwards, till she had enclosed a little garden. Thus the open stall developed into a miniature tenement. Lord Seymour came into office as chief-commissioner in 1850, and found that Ann Hicks had given the officials as much trouble as if she had been a person of the first consequence. Preparations were at that time being made for the great Exhibition of 1851, and it was deemed proper to remove obstructions as much as possible from the Park. Ann Hicks was requested to remove the white cottage. She flatly refused, asserting that the ground was her own by vested right. She told a story to the effect that, about a hundred years earlier, her grandfather had saved George II. from peril in the Serpentine; that, as a reward, he had obtained permission to hold a permanent stall in the park; that he had held this during a long life, and then his son, and then Ann Hicks; and that she had incurred an expenditure of £130 in building the white cottage. After due inquiry, no evidence could be found other than that Ann Hicks had long had a stall in that spot. Lord Seymour, wishing to be on the right side, applied to the Duke of Wellington, as ranger of Hyde Park; and the veteran, punctual and precise in small matters as in great, caused the whole matter to be investigated by a solicitor. The result was that Ann Hicks's story was utterly discredited, and she was ordered to remove—receiving, at the same time, a small allowance for twelve months as a recompense. She resisted to the last, and became a source of perpetual annoyance to every one connected with the park. When the cottage was removed, and the money paid, she placarded the trees in the park with accusations against the commissioners for robbing her of her rights. She pestered noblemen and members of parliament to intercede in her favour, and even wrote to the Queen. She gradually gave up the pretended vested right, and put in a claim for mere charity. Nevertheless, in July of the following year, when the Exhibition was open, the case was brought before parliament by Mr Bernal Osborne. Full explanations were given by the government, and the agitation died out. Many foreigners were in England at the time, and the matter afforded them rather a striking proof of the jealousy with which the nation regards any supposed infractions by the government of the rights of private persons—even to so small a matter as an apple-stall.

OLD SUBURBAN TEA-GARDENS.

London has so steadily enlarged on all sides, and notably so within the present century, that the old suburbs are embraced in new streets; and a comparatively young person may look in vain for the fields of his youthful days. 'The march of brick and mortar' has invaded them, and the quiet country tea-garden to which the Londoner wended across grass, may now be transformed to a glaring gin-palace in the midst of a busy trading thoroughfare.

Readers of our old dramatic literature may be amused with the rustic character which invests the residents of that portion of the outskirts of old London comprehended between King's Cross and St John's Wood, as they are depicted by Ben Jonson in his *Tale of a Tub*. The action of the drama takes place in St Pancras Fields, the country near Kentish Town, Tottenham Court, and Marylebone. The *dramatis personæ* seem as innocent of London and its manners as if they were inhabiting Berkshire, and talk a broad-country dialect. This northern side of London preserved its pastoral character until a comparatively recent time, it being not more than twenty years since some of the marks used by the Finsbury archers of the days of Charles II., remained in the Shepherd and Shepherdess Fields, between the Regent's Canal and Islington. From White Conduit House, the view was unobstructed over fields to Highgate. The pretorium of a Roman camp was visible where Barnsbury Terrace now stands; the remains of another, as described by Stukely, were situated opposite old St Pancras Church; and hordes of cows grazed where the Euston Square terminus of our great midland railway is now placed, and which was then Rhodes' Farm. At the commencement of the present century, the country was open from the back of the British Museum to Kentish Town; the New Road, from Tottenham to Battlebridge, was considered unsafe after dark; and parties used to collect at stated points to take the chance of the escort of the watchman in his half-hour round. Hampstead and Highgate could only be reached by 'short stages,' going twice a day; and a journey there, once or twice in the summer, was the furthest and most ambitious expedition of a Cockney's year. Both villages abounded in inns, with large gardens in their rear, overlooking the pleasant country fields towards Harrow, or the extensive and more open land towards St Alban's and the valley of the Thames. 'Jack Straw's Castle' and 'The Spaniards' still remain as samples of these old 'rural delights.' The features of the latter place, as they existed more than a century since, have been preserved by Chatelaine, in a

THE SPANIARDS, 1745.

small engraving he executed about 1745, and which we here copy. The formal arrangement of trees and turf, in humble imitation of the Dutch taste introduced by William III., and exhibited at Hampton Court and Kensington palaces, may be noted in this humbler garden.

For those who cared not for such distant pleasures, and who could not spare time and money to climb the hills that bounded the Londoner's northern horizon, there were 'Arcadian bowers' almost

beneath the city walls. Following the unfragrant Fleet ditch until it became a comparatively clear stream in the fields beyond Clerkenwell, the citizen found many other wells, each within its own shady garden. The Fleet was anciently known as 'the river of wells,' from the abundance of these rills, which were situated on its sloping banks, and swelled its tiny stream. 'The London Spa' gave the name to the district now known as Spa-fields, Rosomon's Row being built on its site. The only representation of the gardens occurs in the frontispiece to an exceedingly rare pamphlet, published in 1720, entitled *May-day, or the Origin of Garlands*, which appears to be an elaborate puff for the establishment, as we are told in grandiloquent rhymes:

'Now ninepin alleys and now skittles grace
The late forlorn, sad, desolated place;
Arbours of jasmine, fragrant shades compose,
And numerous blended companies enclose.
The spring is gratefully adorn'd with rails,
Whose fame shall last till the New River fails!'

Situated in the low land near by (sometimes termed Bagnigge Marsh), was a well and its pleasure-grounds, known as 'Black Mary's Hole.' Spring Place, adjoining Exmouth Street, marks its locality now; it obtained its name from a black woman named Mary Woolaston, who rented it in the days of Charles II. Another 'hole,' of worse repute, was in the immediate vicinity, and is better known to the reader of London literature as 'Hockley-in-the-Hole.' There assembled on Sundays and holidays the Smithfield butchers, the knackers of Turnmill Street, and the less respectable denizens of Field Lane, for dog-fights and pugilistic encounters. 'That men may be instructed by brutes, Æsop, Lemuel Gulliver, and Hockley-in-the-Hole, shew us,' says the author of *The Taste of the Town*, 1731; adding, with satiric slyness: 'Who can view dogs tearing bulls, bulls goring dogs, or mastiffs throttling bears, without being animated with their daring spirits.' It became the very type of low blackguardism, and was abolished by the magistracy at the close of the last century.

A short distance further north, in the midst of ground encircled by the Fleet River, stood the more famous Bagnigge Wells, long the favoured resort of Londoners, as it added the attraction of a concert-room to the pleasure of a garden. The house was traditionally said to have been a country residence of Nell Gwynn, the celebrated mistress of Charles II.; and her bust was consequently placed in the post of honour, in the Long Room, where the concerts were given. The house was opened for public reception about the year 1757, in consequence of the discovery, by Mr Hughes, of two mineral springs (one chalybeate, the other cathartic), which had been covered over, but by their percolation, injured his favourite flower-beds. Mineral waters being then much sought after, he took advantage of his springs, and opened his gardens to the public with much success. In *The Shrubs of Parnassus*, 1760, is a curious poetical description of the company usually seen:

'Here ambulates th' Attorney, looking grave,
And Rake, from Bacchanalian rout uprose,
And mad festivity. Here, too, the Cit,
With belly turtle-stuffed, and Man of Gout
With leg of size enormous. Hobbling on,
The pump-room he salutes, and in the chair
He squats himself unwieldy. Much he drinks,
And much he laughs, to see the females quaff
The friendly beverage.'

There is a pleasing mezzotint engraving (now very scarce), which was published by the great printseller of the day, Carington Bowles, in St Paul's Churchyard, 1780, depicting two fair visitors

A BAGNIGGE WELLS SCENE, 1780.

to the gardens, breaking through the laws against plucking flowers. It is entitled, 'A Bagnigge Wells Scene, or no resisting Temptation.' It is copied above. The gardens at that time were extensive, and laid out in the old-fashioned manner, with clipped trees, walks in formal lines, and a profusion of leaden statues. A fountain was placed in the centre, as shewn in our cut. A Dutch Cupid half-choking a swan was the brilliant idea it shadowed forth. The roof of the temple is seen above the trees to the left; it was a circular domed colonnade, formed by a double row of pillars and pilasters; in its centre was a double pump, one piston supplying the chalybeate, the other the cathartic water; it was encircled by a low balustrade. A grotto was the other great feature of the garden; it was a little castellated building of irregular hexagonal form, covered with shells, stones, glass, &c., forming two apartments open to the gardens. The waters were drunk for the charge of threepence each person, or delivered from the pump-room at eightpence per gallon. As a noted place for tea-drinking, it is frequently alluded to by authors of the last century. In the prologue to Colman's comedy, *Bon Ton*, 1776, a vulgar city-madam from Spital-fields thus defines that phrase:

'*Bone Tone's* the space 'twixt Saturday and Monday,
And riding in a one-horse chair on Sunday.
'Tis drinking tea on summer afternoons
At Bagnigge Wells with china and gilt spoons.'

There is a print of the company in the great room, styled, 'The Bread and Butter Manufactory, or the

Humours of Bagnigge Wells.' Miss Edgeworth alludes to it in one of her tales as a place of vulgar resort; and a writer of 1780 says:

> 'The Cits to Bagnigge Wells repair,
> To swallow dust, and call it air.'

The gardens were much curtailed in 1813, when the bankruptcy of the proprietors compelled a general sale on the premises. They gradually sank in repute; the Long-room was devoted to threepenny concerts; and the whole was ultimately destroyed in 1841, when a public-house was erected on the site of the old tavern. A relic of the oldest house remained over a side-door at the end of the garden, consisting of a head in high-relief, and an inscription: 'S. T. This is Bagnigge House neare the Pinder a Wakefeilde. 1680.' The latter was the sign of another house of entertainment in Gray's Inn Lane; and nearly opposite to it, within a short distance of King's Cross, was another garden, where St Chad's Well offered its cure to invalids. The New Underground Railway cuts through the whole of this marshy district, once so redolent of healing springs, and to which we may bid adieu in the grandiloquent words of the author quoted above:

> 'Farewell, sweet vale! how much dost thou excel
> Arno or Andalusia!'

Passing along the great main-road to Islington from Smithfield (St John Street Road), we find on the banks of the New River, at that point where it crosses the road, a theatre still bearing the name of Sadler's Wells, and occupying the site of that

SADLER'S WELLS, 1745.

old sanatorium. The aspect of the house in 1745 is shewn in our engraving, from a view published at that period. The reader who is familiar with the works of Hogarth, will recognise the entrance-gate and portion of the house in the background to his print of 'Evening,' one of the 'Four Times of the Day.' The well was a medicinal spring, once the property of the monks of Clerkenwell, reputed for its cures before the dissolution of the priory in Henry VIII.'s reign, when this well was ordered to be stopped up as a relic of superstition. In the reign of Charles II., the house and grounds were in the hands of a surveyor of the highway named Sadler, who employed men to dig gravel in his garden, leading to the rediscovery of the well under an arch of stone. This happened in 1683. With great business tact, Mr Sadler engaged a certain 'T.G., Doctor of Physick,' to write 'A True and Exact Account of Sadler's Well; or, the New Mineral Waters lately found at Islington,' in which it was recommended as equal in virtue to that of Tunbridge. He built a music-house, and succeeded in making it 'so frequented, that there are five or six hundred people there constantly every morning.' After a few years, that attraction ceased; but as a place of amusement, it never failed in popularity. In 1690, it was known as Miles's Music-house; to him succeeded Francis Forcer, the son of a musician, who introduced rope-dancers, tumblers, &c., for the public amusement; no charge was made for this, but only paid for in the drink visitors ordered. While under these managements, the premises appear to have been a tea-garden with a music-room, on the plan of Bagnigge Wells; but in 1765, one Rosoman, an eminent builder, took the lease, pulled down the old building, and erected a theatre on the site. Opposite to the Wells, on the south side of the New River, was another favourite tea-garden, 'The Sir Hugh Middleton,' which still exists as an ordinary public-house, minus the garden. In Hogarth's print, already alluded to, it appears as a country hostel, with a luxuriant vine trained over its wooden front; the scenery beyond is a Cockney arcadia, with milk-maids and cows, open fields and farm-tenements, to the Middlesex alps at Highgate.

Turning round the New River head, 'Merlin's Cave,' another tea-garden, wooed the traveller; but if he resolutely crossed the New Road, he came to White Conduit House, on the extreme verge of London, situated on the high land just above the tunnel connecting the Regent's and Paddington canals. It took its name from the contiguous conduit originally constructed for the use of the Charter-house, and once bore the initials of Thomas

WHITE CONDUIT HOUSE, 1827.

Sutton, its founder, and the date 1641. Our cut represents the aspect of both buildings, as they stood in 1827. The Conduit was then in a pitiable state of neglect—denuded of the outer case of stone,

a mere core of rubble; the house was a low-roofed building, with a row of clipped trees in front, and a large garden in the rear, well supplied with arbours all round for tea-drinking; and such was its popularity at the commencement of this century, that fifty pounds was often taken on a Sunday afternoon for sixpenny tea-tickets. Its bread was as popular as the buns of Chelsea; and 'White Conduit loaves' was a London cry, listened for by such old ladies as wished to furnish a tea-table luxury to their friends. On week-days, it was a kind of minor Vauxhall, with singing and fire-works; on great occasions, the ascent of a balloon crowded the gardens, and collected thousands of persons in the fields around. It was usual for London 'roughs' to assemble in large numbers in these fields for foot-ball play on Easter Monday; occasionally 'the fun' was diversified by Irish faction-fights; the whole neighbourhood is now covered with houses. The old tea-garden was built upon and the house destroyed in 1849; a large public-house marking the site of the older building we engrave.

Field-paths, with uninterrupted views over the country, led toward St Pancras, where another well and public garden invited strollers with its sanitary promises. The way between this place and London was particularly unsafe to pedestrians after dark, and robberies between here and Gray's Inn Lane were common in the early part of the last century. About half a mile to the west, the Jew's Harp Tavern invited wayfarers to Primrose Hill, being situated close to the south of the present Regent's Park Barracks.

Marylebone Gardens was the most important of these north-western places of amusement. It was situated opposite the old parish church, on ground now covered by Devonshire Street and Beaumont Street. It is mentioned by Pepys, two years after the great fire of London, as 'a pretty place' to walk in. Its bowling-alleys were famous, and here Sheffield, Duke of Buckingham, 'bowled time away' in the days of Pope and Gay. The latter author alludes to this place more than once in the *Beggar's Opera*, as a rendezvous for the dissipated, putting it on a level with one of bad repute already mentioned. He alludes to the dog-fights allowed here in one of his Fables:

> 'Both Hockley-hole and Marybone
> The combats of my dog have known.'

After 1740, it became more respectable—a shilling was charged for admission, an orchestra was erected; the gardens were occasionally illuminated, fêtes given, and a rivalry to Vauxhall attempted, which achieved a certain amount of success. Balls and concerts were given; Handel's music was played under Dr Arne's direction; Chatterton wrote a burlesque burletta after the fashion of *Midas*, entitled *The Revenge*, which was performed in 1770; but after many vicissitudes, the gardens were closed within the next eight years, and the site turned to more useful purposes.

Pursuing the road toward Paddington, 'The Yorkshire Stingo,' opposite Lisson Grove, invited the wayfarer to its tea-garden and bowling-green; it was much crowded on Sundays, when an admission fee of sixpence was demanded at the doors. For that a ticket was given, to be exchanged with the waiters for its value in refreshments; a plan very constantly adopted in these gardens, to prevent the intrusion of the lowest classes, or of such as might only stroll about them without spending anything. The Edgeware Road would point the way to Kilburn Wells, which an advertisement of 1773 assures us were then 'in the utmost perfection, the gardens enlarged and greatly improved, the great room being particularly adapted to the use and amusement of the politest companies, fit for either music, dancing, or entertainment.'

The south-western suburb had also its places of resort. 'Cromwell Gardens,' and 'The Hoop and Toy,' at Brompton; 'The Fun,' at Pimlico, celebrated for its ale; 'The Monster,' and 'Jenny's Whim,' in the fields near Chelsea. Walpole, in one of his letters, says that at Vauxhall he 'picked up Lord Granby, arrived very drunk from Jenny's Whim.' Angelo, in his *Pic-nic* or *Table-talk*, describes it as 'a tea-garden, situated, after passing a wooden bridge on the left, previous to entering the long avenue, the coach-way to where Ranelagh once stood.' This place was much frequented from its novelty, being an inducement to allure the curious by its amusing deceptions, particularly on their first appearance there. Here was a large garden, in different parts of which were recesses; and treading on a spring, taking you by surprise, up started different figures, some ugly enough to frighten you; like a Harlequin, Mother Shipton, or some terrific animal. In a large piece of water, facing the tea-alcoves, large fish or mermaids were shewing themselves above the surface. This queer spectacle was kept by a famous mechanist, who had been employed at one of the winter theatres.' The water served less reputable purposes in 1755, when, according to a notice in *The Connoisseur*, it was devoted to 'the royal diversion of duck-hunting.'

This disgraceful 'diversion' gave celebrity to a house in St George's Fields, which took for its sign 'The Dog and Duck,' though originally known as

THE DOG AND DUCK, 1780.

'St George's Spa.' It was established, like so many of these places, after the discovery of a mineral spring, about the middle of the last century. 'As a public tea-garden,' says a writer in 1813, 'it was within a few years past a favourite resort of the vilest dregs of society, until properly suppressed by the magistrates.' The site forms part of the ground upon which the great lunatic asylum, known as New Bethlehem Hospital, now stands; and in the boundary-wall is still to be seen the sculptured figure of a seated dog holding a duck

in his mouth, which once formed the sign of the tea-garden. The 'sport' consisted in hunting unfortunate ducks in a pond by dogs; the diving of the one, and the pursuit of the others, gratifying the brutal spectators, who were allowed to bring their dogs to 'the hunt,' on the payment of sixpence each; the owner of the dog who caught and killed the duck might claim that prize.

Closer to London, but on the same side of the Thames, was Lambeth Wells, where concerts were occasionally given; 'The Apollo Gardens' (on the site of Maudsley's factory, in the Westminster Road), with an orchestra in its centre, and alcoves for tea-drinking, the walls of which were covered with pictures—a very common decoration to the wooden boxes in all these gardens, giving amusement to visitors in examining them. 'Cuper's Gardens' were opposite Somerset House, the present Waterloo Bridge Road running over what was once its centre. They were called after the original proprietor, a gardener, named Boydell Cuper, who had been in the service of the famous collector, Thomas, Earl of Arundel, whose antique marbles are still at Oxford. Cuper begged from him such as were mutilated, and stuck them about his walks. In 1736, an orchestra was added to its attractions; it subsequently became famed for its fireworks; but ultimately most so for the loose society it harboured, and for which it was deprived of its licence in 1753.

In addition to these the inhabitants of Southwark might disport in 'Finch's Grotto,' situated in Gravel Lane, Southwark; 'The Jamaica Tavern,' or 'St Helena Gardens,' Rotherhithe; so that London was literally surrounded with these popular places of resort; as alluded to by the Prussian D'Archenholz, who, in his account of England (published toward the close of the last century), observes: 'The English take a great delight in the public gardens, near the metropolis, where they assemble and drink tea together in the open air. The number of these in the neighbourhood of the capital is amazing, and the order, regularity, neatness, and even elegance of them are truly admirable. They are, however, very rarely frequented by people of fashion; but the middle and lower ranks go there often, and seem much delighted with the music of an organ, which is usually played in an adjoining building.' Now, owing to the altered tastes of the age, scarcely one of them exists, and they will be remembered only in the pages of the topographer.

JULY 17.

Saints Speratus and his companions, martyrs, 3d century. St Marcellina, eldest sister of St Ambrose, about 400. St Alexius, confessor, 5th century. St Ennodius, bishop of Pavia, confessor, 521. St Turninus, confessor, 8th century. St Leo IV., pope and confessor, 855.

Born.—Dr Isaac Watts, well-known divine and writer of hymns, 1674, *Southampton;* Adrian Reland, oriental scholar and author, 1676, *Ryp, North Holland.*

Died.—Robert Guiscard the Norman, Duke of Apulia, 1085, *Corfu;* Jacques Arteveldt, brewer in Ghent, and popular leader, slain, 1344; Janet, Lady Glammis, burnt as a witch on Castle Hill of Edinburgh, 1537; Marchioness of Brinvilliers, noted poisoner, executed at Paris, 1676; Sir William Wyndham, noted Tory orator, 1740, *Wells, Somersetshire;* Charlotte Corday, assassin of Marat, guillotined, 1793; Dr John Roebuck, distinguished manufacturing chemist, and founder of the Carron Ironworks, 1794; Charles, second Earl Grey, prime minister to William IV., 1845; Sir Francis Nathaniel Conyngham, Marquis Conyngham, 1876, *London.*

THE MARCHIONESS OF BRINVILLIERS.

It is a melancholy fact that the progress of civilisation, along with the innumerable benefits which it confers on the human race, tends to develop and bring forth a class of offences and crimes which are almost, if not wholly, unknown in the earlier and less sophisticated stages of society. Whilst violence and rapine are characteristics of primitive barbarism and savage independence, commercial fraud and murder by treachery but too often spring up as their substitutes in peaceful and enlightened times. As long as human nature continues the same, and its leading principles have ever hitherto been unchanging, so long must the spirit of evil find some mode of expression, veiled though it may be under an infinite variety of disguises, and yet not without undergoing a gradual softening down which optimists would fondly regard as a promise of its ultimate suppression.

The crime of poisoning, it has often been remarked, is like assassination—the offspring of a polished and voluptuous age. In proof of this, we need only look to its horrible and astounding frequency in Italy and France during the sixteenth and seventeenth centuries. One of the most notable instances of its occurrence is the case of the Marchioness of Brinvilliers, whose nefarious practices, coupled with her distinguished rank, have exalted her to the very pinnacle of infamy. She was the daughter of M. Dreux d'Aubray, who held the office of lieutenant-civil in the capital of France during the reign of Louis XIV. In 1651, she was married to the Marquis of Brinvilliers, a son of the president of the Chamber of Accounts, and the heir of an immense fortune, to which his wife brought a very considerable accession. The marchioness is described as a woman of most prepossessing appearance, both as regards agreeableness of person and as impressing the beholder with a sense of virtue and amiability. Never was the science of physiognomy more completely stultified. Beneath that fair and attractive exterior was concealed one of the blackest and most depraved hearts that ever beat within a female bosom. A career of degrading sensuality had, as afterwards appeared by her own confession, exerted on her its natural and corrupting influence almost from her childhood. No special evidence of its fruits, however, became prominently manifest till her acquaintance with a certain Sieur Godin, commonly called St Croix, who had made her husband's acquaintance in the course of military service, and for whom the latter conceived such an overweening affection that he introduced him into, and made him an inmate of, his house. An intimacy, which was soon converted into a criminal one,

sprang up between him and the marchioness, who also not long afterwards procured a separation from her husband on the ground of his pecuniary recklessness and mismanagement. Freed now from all the restraints by which she had hitherto been held, she indulged so shamelessly her unlawful passion for St Croix, that public decency was scandalised, and her father, after several ineffectual attempts to rouse M. de Brinvilliers to a sense of his conjugal degradation, procured a *lettre de cachet*, by which her paramour was committed to the Bastile. Here St Croix became acquainted with an Italian named Exili, an adept in poisons, who taught him his arts, and on their release, after about a twelvemonth's confinement, became an inmate of his house. The intimacy of St Croix with the marchioness was at the same time renewed, but more cautiously, so as to save appearances, and even to enable the latter to regain the affection of her father; a necessary step towards the accomplishment of the schemes in view. Avarice and revenge now conspired with illicit love, and the horrid design was conceived of poisoning her father and the other members of her family, so as to render herself sole heir to his property. Tutored by St Croix, she mixed up poison with some biscuits which she distributed to the poor, and, more especially, to the patients of the Hôtel Dieu, as an experiment to test the quantity necessary for a fatal effect.

Having thus prepared herself for action, the marchioness commenced with the murder of her father, which she effected by mixing some poison with his broth when he was residing at his country seat. The symptoms ordinarily exhibited in such cases ensued, but the patient did not die till after his return to Paris. No suspicions on this occasion seem to have rested on the marchioness, who forthwith proceeded to effect the deaths of her two brothers, one of whom succeeded their father in his office of lieutenant-civil, and the other was a counsellor of the parliament of Paris. This she accomplished by means of a man named La Chaussée, who had formerly lived as a footman with St Croix, and then transferred his services to the brothers D'Aubray, who occupied together the same house. Under the guidance of his former master, this miscreant administered poison to them on various occasions, which destroyed first the lieutenant and then the counsellor; but so well had the semblance of fidelity been maintained, that the latter bequeathed to La Chaussée a legacy of a hundred crowns in consideration of his services. One member of the marchioness's family still remained, her sister Mademoiselle D'Aubray, whose suspicions, however, were now aroused against her sister, and by her vigilance and circumspection she escaped the snares laid for her life.

The singular deaths of M. D'Aubray and his sons excited considerable attention, and the belief came to be strongly entertained that they had been poisoned. Yet no suspicion alighted on the marchioness or St Croix, and they might have succeeded in escaping the punishment due to their crimes, had it not been for a singular accident. Whilst the latter was busied one day with the preparation of his poisons, the mask which he wore to protect himself from their effects dropped off, and he was immediately suffocated by the pernicious vapours. Having no relations to look after his property, it was taken possession of by the public authorities, who, in the course of their rummaging, discovered a casket, disclosing first a paper in the handwriting of the deceased, requesting all the articles contained in it to be delivered unexamined to the Marchioness de Brinvilliers. These consisted of packets of various kinds of poison, a promissory-note by the marchioness in St Croix's favour for 1500 livres, and a number of her letters to him, written in the most extravagantly amatory strain. Even now, had it not been for the imprudence of La Chaussée in presenting sundry claims on St Croix's succession, it might have been difficult to substantiate his guilt and that of his employers. He was indicted at the instance of the widow of the lieutenant-civil, the younger D'Aubray; and having been brought before the parliament of Paris, was condemned to be broken alive on the wheel, after having been first subjected to the torture for the discovery of his accomplices. On the rack, he made a full confession; in consequence of which a demand was made on the authorities of Liege for the tradition to the French government of the Marchioness of Brinvilliers, who had fled thither on hearing of the proceedings instituted after the death of St Croix. This abandoned woman had, previous to quitting Paris, made various attempts, by bribery and otherwise, to obtain possession of the fatal casket; but finding all these ineffectual, made her escape by night across the frontier into the Netherlands. Given up here by the Council of Sixty of Liege to a company of French archers, she was conducted by them to Paris, not without many offers, on her part, of large sums of money to the officers to let her go, and also an endeavour to commit suicide by swallowing a pin. Previous to, and during her trial, she made the most strenuous declarations of her innocence; but the accumulated proof against her was overwhelming; and, notwithstanding the very ingenious defence of her counsel, M. Nivelle, she was found guilty by the parliament, and condemned to be first beheaded and then burned. This sentence was pronounced on the 16th of July 1676, and executed the following day. On hearing the verdict against her, she retracted her former protestations, and made a full and ample confession of her crimes. One of the doctors of the Sorbonne, M. Pirot, who attended her as spiritual adviser during the twenty-four hours' interval between her sentence and death, has left a most fervid description of her last moments. According to his account, she manifested so sincere and pious a contrition for her enormities, and gave such satisfactory evidences of her conversion, that he, the confessor, would have been willing to exchange places with the penitent! The great painter, Le Brun, secured a good place for himself at her execution, with the view of studying the features of a condemned criminal in her position, and transferring them to his canvas. We are informed also, that among the crowds who thronged to see her die were several ladies of distinction. This last circumstance can hardly surprise us, when we recollect that, three quarters of a century later, the fashion and beauty of Paris sat for a whole day to witness, as a curious spectacle, the barbarities of the execution of Damiens.

CHARLES VII.
OF FRANCE AND JEANNE DARC.

LA PUCELLE, FROM HER MONUMENT AT ORLEANS.

HIS day is memorable in the history of France, as that on which it may be considered to have been saved from the lowest state of helpless wretchedness to which foreign invasion had ever reduced that kingdom—at least, since the invasions of the Normans. Under a succession of princes, hardly raised above imbecility, torn to pieces by the feuds of a selfish and rapacious aristocracy, the kingdom of France had seen its crown surrendered to a foreigner, the king of England; its legitimate monarch, a weak-minded and slothful prince, had been driven into almost the last corner of his kingdom which was able to give him a shelter, and almost his last stronghold of any importance was in imminent danger of falling into the hands of his enemies, when, by a sudden turn of fortune, on the 17th of July 1429, Charles VII., relieved from his dangers, was crowned at Rheims, and all this wonderful revolution was the work of a simple peasant-girl.

The very origin, and much of the private history of this personage are involved in mystery, and have furnished abundant subjects of discussion for historians. There is even some doubt as to her real name; but the French antiquaries seem now to be agreed that it was Darc, and not D'Arc, and that it had no relation whatever to the village of Arc, from which it was formerly supposed to be derived. Hence the name of Joan of Arc, by which she is popularly known in England, is a mere mistake. There was the more room for doubt about her name, because in France, during her lifetime, she was usually spoken of as La Pucelle, or The Maid; or at most she was called Jeanne la Pucelle—Jeanne the Maid. Jeanne was born at Domremi, a small village on the river Meuse, at the extremity of the province of Champagne, it is supposed in the latter part of the year 1410, and was the youngest child of a respectable family of labouring peasants, named Jacques and Isabelle Darc. The girl appears to have laboured from childhood under a certain derangement of constitution, physically and mentally, which rendered her mind peculiarly open to superstitious feelings, and made her subject to trances and visions. The prince within whose territory her native village stood, the Duke of Bar, was a stanch partisan of Charles VII., who, as he had never been crowned, was still only spoken of as the dauphin, while on the other side of the river lay the territory of the Duke of Lorraine, an equally violent adherent of the Duke of Burgundy and the English party. It is not surprising, therefore, if the mind of the young Jeanne became preoccupied with the troubles of her unhappy country; the more so as she appears to have possessed much that was masculine in form and character. Under such feelings she believed at length that she saw in her visions St Michael the Archangel, who came to announce to her that she was destined to be the saviour of France, and subsequently introduced to her two female saints, Catherine and Margaret, who were to be her guides and protectors. She believed that her future communications came from these, either by their appearance to her in her trances, or more frequently by simple communications by a voice, which was audible only to herself.

She stated that she had been accustomed to these communications four or five years, when, in June 1428, she first communicated the circumstance to her parents, and declared that the voice informed her that she was to go into France to the Dauphin Charles, and that she was to conduct him to Rheims, and cause him to be crowned there. An uncle, who believed at once in her mission, took her to Vaucouleurs, the only town of any consequence in the neighbourhood, to ask its governor, Robert de Baudricourt, to send her with an escort to the court of the dauphin; but he treated her statement with derision, and Jeanne returned with her uncle to his home. However, the story of the Maid's visions had now been spread abroad, and created a considerable sensation; and Robert de Baudricourt, thinking that her story and her enthusiasm might be turned to some account, sent a report of the whole affair to court. News arrived about this time of the extreme danger of Orleans, closely besieged by the English, and, in the midst of the excitement caused by this intelligence, Jeanne spoke with so much vehemence of the necessity of being immediately sent to the dauphin, that two young gentlemen of the country, named Jean de Novelonpont and Bertrand de Poulengi, moved by her words, offered to conduct her to Chinon, where Charles was then holding his court. This, however, was rendered unnecessary by the arrival of orders from the court, addressed to Robert de Baudricourt. It appears that Charles's advisers thought also that some use might be made of the maiden's visions, and Baudricourt was directed to send her immediately to Chinon. The inhabitants of Vaucouleurs subscribed the money to pay the expenses of her journey, her uncle and another friend bought her a horse, and Robert de Baudricourt gave her a sword; and she cut her hair short, and adopted the dress of a man. Thus equipped, with six attendants, among whom were the two young gentlemen just mentioned, Jeanne left Vaucouleurs on the 18th of February 1429, and, after escaping some dangers on the way, arrived at Chinon on the 24th of the same month.

Such is the account of the commencement of Jeanne's mission, as it came out at a subsequent period on her trial. On her arrival at Chinon, Charles VII. appears to have become ashamed of the whole affair, and it was not till the 27th, after various consultations with his courtiers and ecclesiastics, that he at length consented to see her. No doubt, every care had been taken to give effect to the interview, and when first introduced, although Charles had disguised himself so as not to be distinguished from his courtiers, among whom he had placed himself, she is said to have gone direct

to him, and fallen on her knees before him, and, among other things to have said: 'I tell thee from the Lord, that thou art the true heir of France, and the son of the king. This declaration had a particular importance, because it had been reported abroad, and seems to have been very extensively believed, that Charles was illegitimate. Charles now acknowledged that he was perfectly satisfied of the truth of the Maid's mission, and the belief in it became general, and was confirmed by the pretended discovery of a prophecy of Merlin, which foretold that France was to be saved by a virgin, who was to come from the Bosc-Chesnu. This, which meant the Wood of Oaks, was the name of the wood on the edge of which her native village of Domremi stood. Other precautions were taken, for it was necessary to dispel a prejudice which was rising against her—namely, that she was a witch—and she was carried to Poitiers, to be examined before a meeting of the ecclesiastics of Charles's party, who were assembled there, and who gave their opinion in her favour. She then returned to Chinon, while the young Duke of Alençon went to Blois, to collect the soldiers and the convoy of provisions and munitions of war, which the maiden was to conduct into Orleans. Jeanne now assumed the equipment and arms of a soldier, and was furnished with the usual attendance of the commander of an army. She went to Tours, to prepare for her undertaking; and while there, caused an emblematical standard to be made, and announced, on the authority of information received from her voices, that near the altar of St Catherine, in the church of Fierbois, a sword lay buried, which had five crosses engraved on the blade, and which was destined for her use. An armourer of Tours was sent to the spot, and he brought back a rusty sword, which he said had been found under the circumstances she described, and which answered to her description.

Reports of these proceedings had been carried into Orleans, and had raised the courage and resolution of the inhabitants and garrison, while the besiegers were greatly alarmed, for they also seem to have believed in Jeanne's mission in one sense, and expected that they would have to contend with Satanic agency. They believed from the first that she was a witch. At length, on the 27th of April, Jeanne left Blois with the convoy, accompanied by some of the military chiefs of the dauphin's party, and leading a force of 6000 or 7000 men. The enthusiasm she created produced an effect beyond anything that could be expected, and after serious disasters, the English were obliged, on the 8th of May, to raise the siege. The Maid herself carried the news of this great triumph to Charles VII., who was at Loche, and insisted on his repairing immediately to Rheims to be crowned. But, though he received her with honour, he exhibited none of her enthusiasm, and refused to follow her advice. In fact, his council had decided on following a totally different course of military operations to that which she wished; but they were at length persuaded to agree to the proposal for hastening the coronation, as soon as the course of the Loire between them and Rheims could be cleared of its English garrisons. The army was accordingly placed under the command of the Duke of Alençon, with orders to act by Jeanne's counsels. Gergeau, where the Duke of Suffolk commanded, was soon taken, and the garrison massacred. Having received considerable reinforcements, commanded by the Count of Vendôme, the Maid marched against the English forces, under the command of the celebrated Talbot, carried the bridge of Meung by force on the 15th of June, and reduced Beaugenci to capitulate in the night of the 17th. In their retreat, the English were overtaken and defeated with great slaughter, and Talbot himself was made prisoner. Charles shewed no gratitude for all these services, but listened to the councils of favourites, who were jealous of the maiden's fame, and who now began to throw obstacles in her way. He refused to yield to her proposal to attack Auxerre, and Troyes was only taken in contradiction to the dauphin's intentions. Châlons surrendered without resistance, and on the 16th, the French army came in view of Rheims, which was immediately abandoned by the English and Burgundian troops which formed its garrison. Next day, Charles VII. was crowned in the cathedral of Rheims with the usual ceremonies, and from this moment he received more openly the title of king.

From this moment the history of Jeanne Darc is one only of ingratitude and treachery on the part of those whom she had served, and who, intending only to use her as an instrument, seem to have believed that her utility was now at an end. Further successes, however, attended the march of the army to Paris, where the mass of the English forces were collected, under the command of the regent, Bedford. To the great grief of the Maid, the attack upon Paris was abandoned; and during the operations against the French capital, an accident happened, which was felt as an unfortunate omen, and disturbed the mind of the Maid herself. In anger at some soldiers who had disobeyed her orders, she struck them with the flat of the sword of Fierbois, which was supposed to have been sent to her from Heaven, and the blade broke. It seemed to many as though her principal charm was broken with it. The events which occurred during the winter were comparatively of small importance, but on the approach of spring, Jeanne, who was detained unwillingly at court, made her escape from it, and hastened to Lagni, on the Marne, which was besieged by the English and Burgundians, where she displayed her usual enthusiasm, though she was haunted by sinister thoughts, and believed that her voices told her of approaching disaster. After the Easter of 1430, the Duke of Bedford prepared to attack the important town of Compiègne, and on his way had laid siege to Choisi; whereupon Jeanne left Lagni, repaired to Compiègne, and immediately hastened with a body of troops to relieve Choisi. But she was ill seconded, was frustrated in her design, and deserted by her troops, and was obliged to retire sorrowfully into Compiègne, which was soon afterwards regularly besieged. Jeanne displayed her usual courage, but she was an object of dislike to the French governor, and was no longer regarded with the same enthusiasm by the soldiery as before. On the 23d of May, Jeanne went out of Compiègne at the head of a detachment of troops, to attack an English post, but after a desperate combat, she was obliged to retreat before superior numbers. As they approached Compiègne, one division of their pursuers made a rush to get before them, and cut

off their retreat; on which the French fled in disorder, and, to their consternation, when they reached the head of the bridge of Compiègne, they found the barrier closed, and were left for some time in this terrible position. At length the barrier was opened, and the French struggled through, and then it was as suddenly closed again, before Jeanne—who, as usual, had taken her post in the rear—could get through. Whether this were done intentionally or not, is uncertain, but only a few soldiers were left with her, who were all killed or taken, while she managed to get clear of her assailants, and rode back to the bridge, but no notice was taken of her cries for assistance. In despair, she attempted to ride across the plain, but she was surrounded by her enemies, and one of the archers dragged her from her horse. She was thus secured and carried a prisoner to Marigni, where the Duke of Burgundy came to her. She was finally sold to the English, and delivered up as their prisoner in the month of October. During the intermediate period, the court of France had made no effort to obtain her liberation, or even shewn any sympathy for her fate.

The latter may be soon told. The question as to what should be done with the prisoner was soon taken out of the hands of her captors. No sooner was it known that the Maid was taken, than the vicar-general of the inquisition in France claimed her as a person suspected of heresy, under which name the crime of sorcery was included. When no attention had been paid to this demand—for it seems to have been thought doubtful on which of the two political sides of the great dispute the inquisition stood—another ecclesiastic, the bishop of Beauvais, a man of unscrupulous character, who was at this time devoted to the English interests, claimed her as having been taken within his diocese, and therefore under his ecclesiastical jurisdiction. After apparently some hesitation, it was determined to yield to this demand, and she was removed to Rouen, where Bedford had decided that the trial should take place, and where she appears to have been treated in her prison with great rigour and cruelty. Justice was as little observed in the proceedings on her trial, which began on the 21st of February 1431, and which ended, as might be expected, in her condemnation. The conduct of Bishop Cauchon and his creatures throughout was infamous in the extreme, but, on the whole, the proceedings resembled very much those of trials for witchcraft and heresy in general, and probably a very large portion of the inhabitants of England and France conscientiously believed her to be a witch. We judge, in such cases, by the sentiments of the age in which they occurred, and not by our own. On the morning of the 30th of May, Jeanne the Maiden was burned as a witch and heretic in the old market of Rouen, where a memorial to her has since been erected.*

A COMFORTABLE BISHOP OF OLD TIMES.

July 17, 1506, James Stanley was made bishop of Ely. He was third son of the noted Thomas Stanley, who was created Earl of Derby in 1485, for his conduct on Bosworth Field. It is thought to have been by the influence of his step-mother, the Countess of Richmond, the king's mother, that he attained the dignity; and her historian calls it 'the worst thing she ever did.' Stanley was, indeed, a worldly enough churchman—*armis quam libris peritior*, more skilled in arms than in books, he has been described—'ane great viander as any in his days,' so another contemporary calls him—yet not wanting in the hospitality and the bountifulness to churches and colleges, which ranked high among the clerical virtues of his age. Having been warden of Manchester, he lies buried in the old collegiate (now cathedral) church there, in a side-chapel built by himself. Some lines about him, which occur in a manuscript History of the Derby Family, are worth quoting for the quaintness of their style, and the pleasant tenderness with which they touch upon his character:

'. . . . little priest's metal was in him . . . .
A goodly tall man, as was in all England,
And sped well in matters that he took in hand.
Of Ely many a day was he bishop there,
Builded Somersame, the bishop's chief manere:
Ane great viander as was in his days:
To bishops that then was this was no dispraise.
Because he was a priest, I dare do no less,
But leave, as I know not of his hardiness:
What priest hath a blow on the one ear, [will] suddenly
Turn the other likewise, for humility?
He would not do so, by the cross in my purse;
Yet I trust his soul fareth never the worse.
For he did acts boldly, divers, in his days,
If he had been no priest, had been worthy praise.
God send his soul to the heavenly company,
Farewell, godly James, Bishop of Ely!'

A DANISH KING'S VISIT TO ENGLAND IN 1606.

On the 17th of July 1606, King Christian IV. of Denmark arrived in England, on a visit to his brother-in-law and sister, the king and queen of Great Britain. Christian was a hearty man, in the prime of life, fond of magnificence, and disposed to enjoy the world while it lasted. His relative, King James, was of similar disposition, though of somewhat different tastes. To him nothing was more delightful than a buck-hunt. Christian had more relish for gay suppers, and the society of gay ladies. During the three weeks he spent in England, he was incessantly active in seeing sights and giving and receiving entertainments. 'The month of his stay,' says Wilson, 'carried with it a pleasing countenance on every side, and recreations and pastimes flew as high a flight as love mounted on the wings of art and fancy, the suitable nature of the season on time's swift foot, could possibly arrive at. The court, city, and some parts of the country, with banquetings, barriers, and other gallantry, besides the manly sports of wrestling and brutish sports of baiting wild beasts, swelled to such a greatness, as if there were an intention in every particular man, this way, to have blown up himself.'

Another writer, named Roberts, describes the dresses of the king of Denmark's followers with all the gusto of a man-milliner. 'His pages and guard of his person were dressed in blue velvet embroidered with silver lace; they wore white

* See *Book of Days*, vol. i. p. 702, for a brief article stating grounds of doubt which have lately risen among French antiquaries as to the heretofore unquestioned fact of the death of La Pucelle at Rouen.

hats with silver bands, and white and blue stockings. His trumpeters had white satin doublets, and blue velvet hose, trimmed with silk and silver lace; their cloaks were of sundry colours, their hats white with blue and gold bands. His common soldiers wore white doublets, and blue hose trimmed with white lace. His trumpeters were led by a sergeant in a coat of carnation velvet, and his drummer rode upon a horse, with two drums, one of each side the horse's neck, whereon he struck two little mallets of wood, a thing very admirable to the common sort, and much admired. His trunks, boxes, and other provision for carriage were covered with red velvet trimmed with blue silk.'

Sir John Harrington, in a letter which has been printed in Park's *Nugæ Antiquæ*, gives us a lively picture of the carousals which marked the presence of this northern potentate at the British court.

'I came here,' says Sir John, 'a day or two before the Danish king came; and from the day he did come, until this hour, I have been well-nigh overwhelmed with carousals and sports of all kinds. The sports began each day in such manner and such sort as well-nigh persuaded me of Mohammed's paradise. We had women, and indeed wine too, in such plenty as would have astonished each sober beholder. Our feasts were magnificent, and the two royal guests did most lovingly embrace each other at table. I think the Dane hath strangely wrought on our good English nobles; for those, whom I never could get to taste good liquor, now follow the fashion, and wallow in beastly delights. The ladies abandon their sobriety, and seem to roll about in intoxication. One day a great feast was held, and after dinner the representation of Solomon's temple, and the coming of the queen of Sheba, was made, or (as I may better say) was meant to have been made before their majesties, by device of the Earl of Salisbury and others. But, alas! as all earthly things do fail to poor mortals in enjoyment, so did prove our presentment thereof. The lady who did play the queen's part, did carry most precious gifts to both their majesties; but, forgetting the steps arising to the canopy, overset her caskets into his Danish majesty's lap, and fell at his feet, though I rather think it was in his face. Much was the hurry and confusion; cloths and napkins were at hand, to make all clean. His majesty then got up, and would dance with the queen of Sheba; but he fell down and humbled himself before her, and was carried to an inner chamber, and laid on a bed of state; which was not a little defiled with the presents of the queen, which had been bestowed upon his garments; such as wine, cream, beverage, jellies, cakes, spices, and other good matters. The entertainment and show went forward, and most of the presenters went backward, or fell down; wine did so occupy their upper chambers. Now did appear, in rich dress, Hope, Faith, and Charity. Hope did essay to speak, but wine rendered her endeavours so feeble that she withdrew, and hoped the king would excuse her brevity; Faith was then all alone, for I am certain she was not joined with good works, and left the court in a staggering condition; Charity came to the king's feet, and seemed to cover the multitude of sins her sisters had committed: in some sort she made obeisance, and brought gifts; but said she would return home, as there was no gift which Heaven had not already given his majesty. She then returned to Hope and Faith, who were both in the lower hall. Next came Victory, in bright armour, and presented a rich sword to the king, who did not accept it, but put it by with his hand; and by a strange medley of versification, did endeavour to make suit to the king. But Victory did not triumph long; for, after much lamentable utterance, she was led away, like a silly captive, and laid to sleep on the outer steps of the ante-chamber. Now, did Peace make entrance, and strive to get forward to the king; but I grieve to tell how great wrath she did discover unto those of her attendants; and, much contrary to her semblance, most rudely made war with her olive-branch, and laid on the pates of those who did oppose her coming.'

It is supposed to have been from the fact of the extreme bacchanalianism practised by Christian at home, that Shakspeare attributed such habits to the king in *Hamlet*. The northern monarch was, however, duly anxious that his servants should practise sobriety. While he was in England, a marshal took care that any of them getting drunk should be sharply punished.

Christian appears to have been quite an enthusiastic sight-seer. Although he was observed to express no approbation, he wandered incessantly about the metropolis, 'so that neither Powles, Westminster, nor the Exchange escaped him.' He was also fond of the amusements of the tilting-yard. 'On a solemn tilting-day,' writes Sir Dudley Carleton, 'the king of Denmark would needs make one; and in an old black armour, without plume or basses, or any rest for his lance, he played his prizes so well, that Ogerio himself never did better. At a match between our king and him, running at the ring, it was his hap never almost to miss it; while ours had the ill-luck scarce ever to come near it, which put him in no small impatience.'

The custom of making extravagant gifts at leave-takings was a characteristic feature of that sumptuous style of living amongst the high-born and wealthy, prevalent during the seventeenth century. James, so long as his exchequer continued pretty well replenished, distinguished himself by the magnificence of his princely largess. Indeed, taking into account the vast sums lavished on favourites, in addition to the debts of impoverished nobles, paid by him once and again, we are no ways astonished at the unkingly pecuniary straits to which he was continually reduced. A letter preserved amongst the state-papers, dated August 20, 1606, descriptive of the leave-taking between James and Christian of Denmark, narrates the following specimen of reckless profusion in the former, at a time when his necessities were so notoriously great, that his own subjects caricatured him as a beggar with his pockets turned inside out. 'The two kings,' says Sir Dudley Carleton, 'parted on Monday sevennight, as well pleased with each other as kings usually are upon interview. The gifts were great on our king's side, and only tolerable on the other. Imprimis, a girdle and hangers, with rapiers and daggers set with stones, which I heard valued by a goldsmith at £15,000. Then the old cup of state, which was the chief ornament of Queen Elizabeth's rich cupboard, of £1000 price; Item, a George, as rich as could be made in proportion; Item, a saddle

embroidered with rich pearls ; four war-steeds with their appropriate furniture and caparisons ; two ambling geldings and two nags. To the king of Denmark's six counsellors were given £2000 worth of plate, and each of them a chain of £100 ; and to twenty-two gentlemen, chains of £50 apiece ; and £1000 in money to the servants, the guard, and the sailors in the ship the king went in. The king of Denmark gave nothing to the king, as I heard, but made an offer of his second ship, in hope to have it requited with the *White Bear;* but that match was broken off by my Lord of Salisbury, and he had his own given back with thanks. To the king's children he gave £6000, and as much to the king's household.' Then follows a word-picture of a royal naval banquet in the year 1606, sketched with infinite humour, and strikingly illustrative of the social habits of that age. James takes leave of his brother on shipboard. 'The feasting was plenteous, but not riotous at court ; but at the ships they played the seamen for good-fellowship. First at Chatham, where twenty-two of the king's were set out in their best equipage, and two especially, the *Elizabeth Jonas* and the *Bear*, trimmed up to feast in, betwixt which there was a large railed bridge built upon masts, and in the midst betwixt them both, butteries and kitchens built upon lighters and flat-boats. All things were there performed with such order and sumptuousness, that the king of Denmark confessed that he would not have believed such a thing could have been done, unless he had seen it. At the Danish ships, where was the last farewell, what was wanting in meat and other ceremony was helped out with drink and gunshot ; for at every health—of which there were twenty—the ship the kings were in made nine shot ; and every other, there being eight in all, three ; and the two blockhouses at Gravesend, where the fleet lay, each of them, six ; at which I must tell you, by the way, our king was little pleased, and took such order in his own ships as not to be annoyed by the smell of powder ; but good store of healths made him so hearty, that he bid them at the last "shoot and spare not," and very resolutely commanded the trumpets to sound him a point of war.'

'Give me the cups ;
And let the kettle to the trumpet speak,
The trumpet to the cannoneer without,
The cannons to the heaven, the heaven to earth,
Now the king drinks to Hamlet.'

RICH BEGGARS.

There are multitudes of instances of beggars who, amid squalor, rags, and dirt utterly miserable, contrive to amass considerable sums of money. For obvious reasons, they generally conceal their wealth during life, and it is only when the breath is out of their body that the golden hypocrisy is discovered. Usually, the hoarded coins are found sewn up in rags or straw-beds, or otherwise hidden in holes and corners ; it is only in a few instances that the beggar ventures to invest his money in a bank. Among the many recorded examples of rich beggars, have been Daniel Eagle, who begged for thirty years in London, and lived in a room which was never entered by any one but himself, and never cleaned during the whole period ; after his death, coins to the value of £25 were found there.—Margaret Coles, who died in wretched filth in St Giles's, at the age of 101, and in whose hovel was found £30 in gold and silver, and £10 in copper.—Margaret Everett, an equally squalid beggar, who left £150 behind her.—Esther Davies, who died in London at the advanced age of 103, and who for thirty years had the double chances of a street-beggar and a parish pauper ; she left £160.—Mary Wilkinson, beggar and bone-grubber, whose rags of clothing concealed £300 in money.—Alice Bond, who had risen to the dignity of £300 in the funds, besides £50 in guineas, half-guineas, and seven-shilling pieces, and £23 in silver.—Frances Beet, whose bed and rickety furniture yielded a booty of no less than £800.—And 'Poor Joe all alone,' a famous character about a century ago, who wore a long beard, and had not lain in a bed for fifty years ; he left £3000, and with it a will, by which he bequeathed all the money to certain widows and orphans. Foreign countries are not without instances of like kind. Witness the case of Dandon, of Berlin, who died in 1812 ; he was competent to teach as a professor of languages during the day, and went out begging at night. After his death, 20,000 crowns were found secreted under the floor of his room. He had refused to see a brother for thirty-seven years, because he once sent him a letter without prepaying the postage. This Dandon, however, was an example rather of the miser than of the beggar, popularly so considered.

Some beggars have been remarkable quite as much for their eccentricity, as for the amount of money they left behind them. Such was the case with William Stevenson, who died at Kilmarnock on the 17th of July 1817. Although bred a mason, the greater part of his life was spent as a beggar. About the year 1787, he and his wife separated, making this strange agreement—that whichever of them was the first to propose a reunion, should forfeit £100 to the other. According to the statements in the Scotch newspapers, there is no evidence that they ever saw each other again. In 1815, when about 85 years old, Stevenson was seized with an incurable disease, and was confined to his bed. A few days before his death, feeling his end to be near, he sent for a baker, and ordered twelve dozen burial-cakes, a large quantity of sugared biscuit, and a good supply of wine and spirits. He next sent for a joiner, and instructed him to make a good, sound, dry, roomy, 'comfortable' coffin. Next he summoned a grave-digger, whom he requested to select a favourable spot in the churchyard of Riccarton, and there dig a roomy and comfortable grave. This done, he ordered an old woman who attended him, to go to a certain nook, and bring out £9, to pay all these preliminary expenses : assuring her that she was remembered in his will. Shortly after this he died. A neighbour came in to search for his wealth, which had been shrouded in much mystery. In one bag was found large silver pieces, such as dollars and half-dollars, crowns and half-crowns ; in a heap of musty rags, was found a collection of guineas and seven-shilling pieces ; and in a box were found bonds of various amounts, including one for £300—giving altogether a sum of about £900. A will was also found, bequeathing £20 to the old woman, and most of the remainder to distant relations, setting aside sufficient to give a feast to all the beggars who chose to come and see his body 'lie in state.' The influx was immense ; and after the funeral, all retired to a barn which had been fitted up for the occasion ; and there they indulged in revelries but little in accordance with the solemn season of death.

One curious circumstance regarding a beggar connected with the town of Dumfries, we can mention on excellent authority : a son of his passed through the class of Humanity (Latin), in the university of Edinburgh, under the superintendence of Professor Pillans.

JULY 18.

St Symphorosa, and her seven sons, martyrs, 120. St Philastrius, bishop of Brescia, confessor, 4th century. St Arnoul, martyr, about 534. St Arnoul, bishop of Metz, confessor, 640. St Frederic, bishop of Utrecht, martyr, 838. St Odulph, canon of Utrecht, confessor, 9th century. St Bruno, bishop of Segni, confessor, 1125.

Born.—Dr John Dee, astrologer and mathematician, 1527, *London;* Zachary Ursinus, celebrated German divine, 1534, *Breslau;* Dr Robert Hooke, natural philosopher, 1635, *Freshwater, Isle of Wight;* Saverio Bettinelli, Italian author, 1718, *Mantua;* Gilbert White, naturalist, 1720, *Selborne.*

Died.—Pope John XVIII., 1009; Godfrey of Bouillon, king of Jerusalem, 1100; Francesco Petrarca *(Petrarch)*, great Italian poet and sonneteer, 1374, *Arqua, near Padua;* Abraham Sharp, mechanist and calculator, 1742, *Little Horton, Yorkshire;* Thomas Sherlock, bishop of London, 1761, *Fulham.*

REV. GILBERT WHITE.

Gilbert White is one of those happy souls who without painful effort, in the quiet pursuit of their own pleasures, have registered their names among the *dii minores* of literature. Biography scarcely records a finer instance of prolonged peaceful and healthful activity. His life seems to have been a perfect idyll.

Selborne, with which White's name is indissolubly associated, is a village of one straggling street, about fifty miles from London, situated in a corner of Hampshire, bordering on Sussex. In the house in which he spent his life and in which he died, White was born on the 18th July 1720. His father was a gentleman of comfortable income, who educated him for a clergyman. He gained a fellowship at Oxford, and served as a proctor, to the surprise of his family, who thought it a strange office for one of his habits, and that he would be more observant of the swallows in the Christchurch meadows than the undergraduates in the High Street. He had frequent opportunities of accepting college livings, but his fondness for 'the shades of old Selborne, so lovely and sweet,' outweighed every desire for preferment. In his native village he settled, and the ample leisure secured from clerical duty he devoted to the minute and assiduous study of nature. He was an outdoor naturalist, and kept diaries in which the progression of the seasons, and every fact which fell under his eye, were entered with the exactness which a merchant gives to his ledger. The state of the weather, hot or cold, sunny or cloudy, the variations of the wind, of the thermometer and barometer, the quantity of rain-fall, the dates on which the trees burst into leaf and plants into blossom, the appearance and disappearance of birds and insects, were all accurately recorded. On the 21st of June, he tells us that house-martins, which had laid their eggs in an old nest, had hatched them, and got the start of those which had built new nests by ten days or a fortnight. He relates that dogs come into his garden at night, and eat his gooseberries; that rooks and crows destroy an immense number of chaffers; and that, but for them, the chaffers would destroy everything. His neighbours' crops, fields, and gardens, cattle, pigs, poultry, and bees were all looked after. He chronicled his ale and beer, as they were brewed by his man Thomas. The births of his nephews and nieces were duly entered, to the number of sixty-three.

Selborne was a choice home for a naturalist. It is a place of great rural beauty, and of thorough seclusion. The country around is threaded with deep sandy lanes overgrown with stunted oaks, hazels, hawthorns, and dog-roses, and the banks are covered with primroses, strawberries, ferns, and almost every English wild-flower. In White's time, the roads were usually impassable for carriages in winter, and Selborne held little intercourse with the world. Once a year, White used to visit Oxford, leaving the registration of the weather to Thomas, who was well versed in his master's business. Happily, White's brothers had an interest in natural history only second to his own, and with them and other congenial friends he kept up a lively correspondence. It was by the persuasion of his brother Thomas, a fellow of the Royal Society, that he was induced to overcome a horror of publicity and reviewers, and to issue in quarto, in 1789, the *Natural History of Selborne*, compiled from a series of letters addressed to Thomas Pennant and Daines Barrington. Four years afterwards, he died, 26th June 1793, aged seventy-three. His habits were regular and temperate, his disposition social and cheerful; he was a good story-teller, and a favourite with young and old, at home and abroad. His autobiography is in his book, and ardent admirers who have haunted Selborne for further particulars concerning the philosophical old bachelor, have learned little more than was spoken by an old dame, who had nursed several of the White family: 'He was a still, quiet body: there wasn't a bit of harm in him, I'll assure ye, sir; there wasn't indeed!'

The paternal acres of White at Selborne are, of course, to the great body of British naturalists, a classic ground. By a happy chance, they were long in the possession of Professor Bell, an eminent naturalist, fully competent to appreciate the sentimental charm which invests them, and of a social character to banish envy among his brethren even for such an extraordinary piece of good-fortune. In 1877, Bell published an edition of White's classical work, in two volumes. Since the death of Professor Bell in 1879, the home of the naturalist has passed into other hands.

WAYLAND SMITH'S CAVE.

This now well-known monument of a remote antiquity stands in the parish of Ashbury, on the western boundaries of Berkshire, among the chalk-hills which form a continuation of the Wiltshire downs, in a district covered with ancient remains. It is simply a primitive sepulchre, which, though now much dilapidated, has originally consisted of a rather long rectangular apartment, with two lateral chambers, formed by upright stones, and roofed with large slabs. It was, no doubt, originally covered with a mound of earth, which in course of time has been in great part removed. It belongs to a class of monuments which is usually called Celtic, but, if this be a correct denomination, we must take it, no doubt, as meaning Celtic during

the Roman period, for it stands near a Roman road, the Ridgway, which was the position the Romans chose above all others, while the Britons in the earlier period, if they had any high-roads at all, which is very doubtful, chose in preference the tops of hills for their burial-place. A number of early sepulchral monuments might be pointed out in different parts of our island, of the same class, and more important than Wayland Smith's Cave, but it has obtained an especial celebrity through two or three circumstances.

In the first place, this is the only monument of the kind which we find directly named in an Anglo-Saxon document. It happened to be on the

WAYLAND SMITH'S CAVE.

line of boundary between two Anglo-Saxon estates, and, therefore, became a marked object. In the deed of conveyance of the estate in which this monument is mentioned, of a date some time previous to the Norman Conquest, it is called Welandes Smiththan, which means Weland's Smithy, or forge, so that its modern name, which is a mere slight corruption from the Anglo-Saxon one, dates itself from a very remote period. In the time of Lysons, to judge from his account of it, it was still known merely by the name of Wayland Smith, so that the further corruption into Wayland Smith's Cave appears to be of very recent date. It is also worthy of remark, that the Anglo-Saxon name appears to prove that in those early times the monument had been already uncovered of its earth, and was no longer recognised as a sepulchral monument, for the Anglo-Saxons would hardly have given the name of a forge, or smithy, to what they knew to be a tomb; so that we have reason for believing that many of our cromlechs and monuments of this description had already been uncovered of their mounds in Anglo-Saxon times. They were probably opened in search of treasure.

But, perhaps, the most curious circumstance of all connected with this monument is its legend. It has been the popular belief among the peasantry in modern times, that should it happen to a traveller passing this way that his horse cast a shoe, he had only to take the animal to the 'cave,' which they supposed to be inhabited by an invisible, to place a groat on the copestone, and to withdraw to a distance from which he could not see the operation, and on his return, after a short absence, he would find his horse properly shod, and the money taken away. To explain this, it is necessary only to state that, in the primitive Anglo-Saxon and Teutonic mythology, Weland was the mythic smith, the representative of the ancient Vulcan, the Greek Hephaistos. We have a singular proof, too, of the extreme antiquity of the Berkshire story, in a Grecian popular legend which has been preserved by the Greek scholiast on Apollonius Rhodius. We are told that one of the localities which Hephaistos, or Vulcan, especially haunted was the Vulcanian islands, near Sicily; and the scholiast tells us, that 'it was formerly said that, whoever chose to carry there a piece of

unwrought iron, and at the same time deposit the value of the labour, would, on presenting himself there on the following morning, find it made into a sword, or whatever other object he had desired.' We have here, at this very remote period, precisely the same legend, and connected with the representative of the same mythic character, as that of the Berkshire cromlech; and we have a right, therefore, to assume that the same legend had existed in connection with the same character, at that far-distant period before the first separation of the different branches of the Teutonic family, and when Weland, and Hephaistos, and Vulcan were one.

All our readers know how skilfully our great northern bard, Sir Walter Scott, introduced the Berkshire legend of Wayland Smith into the romance of *Kenilworth*, and he has thus given a celebrity to the monument which it would never otherwise have enjoyed. Yet, although in his story the mythic character of Wayland Smith is lost, and he stands before us a rather commonplace piece of humanity, yet every reader must feel interested in knowing something of the real character of the personage, whose name is famous through all medieval poetry in the west, and who held a prominent place in the heathen mythology of our early Saxon forefathers. His story is given in the *Eddas*.

Weland, as we have said, was the Vulcan of the Teutonic mythology. He was the youngest of the three sons of Wade, the alf, or demi-god; and when a child, his father intrusted him to the dwarfs in the interior of the mountains, who lived among the metals, that they might instruct him in their wonderful skill in forging, and in making weapons and jewellery, so that, under their teaching, the youth became a wonderful smith. The scene of this legend is placed by the Edda in Iceland, where the three brothers, like all Scandinavian heroes, passed much of their time in hunting, in which they pursued the game on skates. In the course of these expeditions, they settled for a while in Ulfdal, where, one morning, finding on the banks of a lake three Valkyrier, or nymphs, with their elf-garments beside them, they seized and took them for their wives, and lived with them eight years, at the end of which period the Valkyrier became tired of their domestic life, and flew away during the absence of their husbands. When the three brothers returned, two of them set off in search of their fugitive spouses; but Weland remained patiently at home, working in his forge to make gold rings, which he strung upon a willow-wand, to keep them till the expected return of his wife. There lived at this time a king of Sweden, named Niduth, who had two sons, and a daughter named Baudvild, or, in the Anglo-Saxon form of the name, Beadohild. The possession of a skilful smith, and the consequent command of his labour, was looked upon as a great prize; and when Niduth heard that Weland was in Ulfdal, he set off, with a strong body of his armed followers, to seek him. They arrived at his hut while he was away hunting, and, entering it, examined his rings, and the king took one of them as a gift for his daughter, Baudvild. Weland returned at night, and made a fire in his hut to roast a piece of bear's flesh for his supper; and when the flames arose, they gave light to the chamber, and Weland's eyes fell on his rings, which he took down and counted, and thus found that one was missing. This circumstance was to him a cause of joy, for he supposed that his wife had returned and taken the ring, and he laid him down to slumber; but while he was asleep, King Niduth and his men returned, and bound him, and carried him away to the king's palace in Sweden. At the suggestion of the queen, they hamstringed him, that he might not be able to escape, and placed him in a forge in a small island, where he was compelled to work for the king, and where anybody but the latter was forbidden to go under severe penalties. Weland brooded over his revenge, and accident offered him the first opportunity of indulging it. The greediness of the king's two sons had been excited by the reported wealth of Weland's forge, and they paid a secret visit to it, and were astonished at the treasures which the wily smith presented to their view. He promised that they should have them all, if they would come to him in the utmost secrecy early next morning; but when they arrived, he suddenly closed the door, cut off their heads, and buried their bodies in the marshy ground on which the forge was built. He made of the skulls, plated with silver, drinking-cups for the king's table; of their eyes, gems for the queen; and of their teeth, a collar of pearls, which he sent as a present to the princess. The latter was encouraged to seek Weland's assistance to mend her ring, which had been accidentally broken; and, to conceal the accident from her father, she went secretly to the forge, where the smith completed his vengeance by offering violence to her person, and sent her away dishonoured. While he had been meditating vengeance, Weland had also been preparing the means of escape, and now, having fitted on a pair of wings of his own construction, he took flight from his forge. He halted for a moment on the wall of the enclosure of the palace, where he called for the king and queen, told them all the circumstances of the murder of their sons and the dishonour of their daughter, and then continued his flight, and was heard of no more. The Princess Baudvild, in due time, gave birth to a daughter, who also was a celebrated hero of the early German mythology. It will be remarked, that the lameness of Weland is accounted for in a different manner from that of Vulcan in the more refined mythology of the classical ages.

As the various branches of the Teutonic race spread towards the west, they carried with them their common legends, but soon located them in the countries in which they settled, and after a few generations they became established as local legends. Thus, among the Scandinavians, the scene of Weland's adventures was laid in Iceland and Sweden; while among the earlier Teutons, it appears to have been fixed in some part of Germany; and the Anglo-Saxons, no doubt, placed it in England. We have found the name, and one of the legends connected with it, fixed in a remote corner of Berkshire, where they have been preserved long after their original import was forgotten. It is one of the most curious examples of the great durability of popular legends of all kinds. We know that the whole legend of Weland the smith was perfectly well known to the Anglo-Saxons to a late period of their monarchy.

THE AUTHOR OF 'BARON MUNCHAUSEN.'

Who is there that has not, in his youth, enjoyed *The Surprising Travels and Adventures of Baron Munchausen, in Russia, the Caspian Sea, Iceland, Turkey, &c.*, a slim volume—all too short, indeed—illustrated by a formidable portrait of the baron in front, with his broad-sword laid over his shoulder, and several deep gashes on his manly countenance? I presume they must be few.

This book appears to have been first published, in a restricted form, by one Kearsley, a bookseller in Fleet Street, in 1786; a few years afterwards, it was reprinted, with a considerable addition of palpably inferior matter, by H. D. Symonds of Paternoster Row. The author's name was not given, and it has, till a very recent date, remained little or not at all known. There can hardly be a more curious piece of neglected biography.

The author of the baron's wonderful adventures is now ascertained to have been Rodolph Eric Raspe, a learned and scientific German, who died in the latter part of 1794 at Mucross, in the south of Ireland, while conducting some mining operations there. Much there was of both good and ill about poor Raspe. Let us not press matters too hard against one who has been able to contribute so much to the enjoyment of his fellow-creatures. But, yet, let the truth be told. Be it known, then, that this ingenious man, who was born at Hanover in 1737, commenced life in the service of the landgrave of Hesse Cassel as professor of archæology, inspector of the public cabinet of medals, keeper of the national library, and a councillor, but disgraced himself by putting some of the valuables intrusted to him in pawn, to raise money for some temporary necessities. He disappeared, and was advertised for by the police as the Councillor Raspe, a man with red hair, who usually appeared in a scarlet dress embroidered with gold, but sometimes in black, blue, or gray clothes.* He was arrested at Clausthal, but escaped during the night, and made his way to England, where he chiefly resided for the remainder of his days.

It will be heard with pain, that before this lamentable downbreak in life, Raspe had manifested decided talents in the investigation of questions in geology and mineralogy. He published at Leipsic, in 1763, a curious volume in Latin, on the formation of volcanic islands, and the nature of petrified bodies. In 1769, there was read at the Royal Society in London, a Latin paper of his, on the teeth of elephantine and other animals found in North America, and it is surprising at what rational and just conclusions he had arrived. Raspe had detected the specific peculiarities, distinguishing these teeth from those of the living elephant, and saw no reason for disbelieving that some large kinds of elephants might formerly live in cold climates; being exactly the views long after generally adopted on this subject.

The exact time of the flight to England is not known; but in 1776, he is found publishing in London a volume on *Some German Volcanoes and their Productions*—necessarily extinct volcanoes—thus again shewing his early apprehension of facts then little if at all understood, though now familiar.

* *Biographie Universelle.*

And in the ensuing year, he gave forth a translation of the Baron Born's Travels in Tameswar, Transylvania, and Hungary—a mineralogical work of high reputation. In 1780, Horace Walpole speaks of him as 'a Dutch savant,' who has come over here, and who was preparing to publish two old manuscripts 'in infernal Latin,' on oil-painting, which proved Walpole's own idea that the use of oil-colours was known before the days of Van Eyck. 'He is poor,' says the virtuoso of Strawberry Hill; the natural sequel to which statement is another three months later: 'Poor Raspe is arrested by his tailor.' 'I have sent him a little money,' adds Walpole, 'and he hopes to recover his liberty; but I question whether he will be able to struggle on here.'* By Walpole's patronage, the book was actually published in April 1781.

In this year, Raspe announced a design of travelling in Egypt, to collect its antiquities; but while the scheme was pending, he obtained employment in certain mines in Cornwall. He was residing as 'storemaster' at Dalcoath Mines, in that district, when he wrote and published his *Travels of Baron Munchausen.*† Previously to this time, his delinquency at Cassel having become known, the Royal Society erased his name from their honorary list; and he threatened, in revenge, to print in the form of their Philosophical Transactions the *Unphilosophical Transactions* of the English savans, with their characters. This matter seems to have blown over.

And now we have to introduce our hero in a new connection with English literature. The facts are fully known to us, and there can be no harm in stating them. Be it understood, then, that Raspe paid a visit to Scotland in the summer and autumn of 1789, for the professed purpose of searching in various districts for minerals. It was announced in the *Scots Magazine* for October, that he had discovered copper, lead, iron, cobalt, manganese, &c.; that the marble of Tiree, the iron of Glengarry, and the lead on the Breadalbane property were all likely to turn out extremely well. From Sutherland he had brought specimens of the finest clay; there was 'every symptom of coal,' and a fine vein of heavy spar had been discovered. He had now begun his survey of Caithness. From another source we learn that a white saline marble in Icolmkill had received his attention.‡ As to Caithness, here lay probably the loadstone that had brought him into Scotland, in the person of Sir John Sinclair of Ulbster, a most benevolent gentleman, who, during a long life, was continually engaged in useful projects, chiefly designed for the public benefit, and of novel kinds. With him Raspe took up his abode for a considerable time, at his spray-beaten castle on the Pentland Firth; and members of the family still speak of their father's unfailing appreciation of the infinite intelligence and facetiousness of his visitor's conversation. Sir John had, some years before, discovered a small vein of yellow mundick on the moor of Skinnet, four miles from Thurso. The Cornish miners he consulted told him that the mundick was itself of no value, but a good sign of other valuable minerals not far off. In

* See *Index to Walpole's Correspondence.*
† *Gentleman's Magazine*, Nov. 1856.
‡ Walker's *Econ. Hist. of Hebrides*, ii. 379.

their peculiar jargon, 'white mundick was a good *horseman*, and always rode on *a good load*.'* Sir John now employed Raspe to examine the ground, not designing to mine it himself, but to let it to others if it should turn out favourably. For a time, this investigation gave the proprietor very good hopes. Masses of a bright heavy mineral were brought to Thurso Castle, as foretastes of what was coming. But, in time the bubble burst, and it was fully concluded by Sir John Sinclair, that the ores which appeared were all brought from Cornwall, and planted in the places where they were found. Miss Catherine Sinclair has often heard her father relate the story, but never with the slightest trace of bitterness. On the contrary, both he and Lady Sinclair always said, that the little loss they made on the occasion was amply compensated by the amusement which the mineralogist had given them, while a guest in their house.

Such was the author of *Baron Munchausen*, a man of great natural penetration and attainments, possessed of lively general faculties, and well fitted for a prominent position in life. Wanting, however, the crowning grace of probity, he never quite got his head above water, and died in poverty and obscurity. It will be observed that, in his mining operations in Caithness, he answers to the character of Dousterswivel in the *Antiquary;* and there is every reason to believe that he gave Scott the idea of that character, albeit the baronet of Ulbster did not prove to be so extremely imposed upon as Sir Arthur Wardour, or in any other respect a prototype of that ideal personage. Of all Raspe's acknowledged works, learned, ingenious, and far-seeing, not one is now remembered, and his literary fame must rest with what he probably regarded as a mere *jeu d'esprit*. It may be remarked that a translation of the Baron into German was published by the ingenious Bürger in 1787. This was very proper, for most of the marvels were of German origin. Some of those connected with hunting are to be found, 'in a dull prosy form, in Henry Bebel's *Facetiæ*, printed in Strasburg in 1508; others of the tales are borrowed from Castiglioni's *Cortegians*, and other known sources.'†

BATTLE OF HALIDON HILL.

July 19, 1333, is the date of a remarkable battle between the Scots and English at Halidon Hill. Stowe's account of the conflict is picturesque and interesting, though not in every particular to be depended on. The youthful Edward III. had laid siege to Berwick; and a large Scottish army, animated, doubtless, by recollections of Bannockburn, came to relieve the town. 'At length,' says Stowe, 'the two armies appointed to fight, and setting out upon Halidon Hill [near Berwick], there cometh forth of the Scots camp a certain stout champion of great stature, who, for a fact by him done, was called *Turnbull*. He, standing in the midst between the two armies, challenged all the Englishmen, any one, to fight with him a combat. At length Robert Venale, knight, a Norfolk-man, requesting licence of the king, being armed, with his sword drawn, marcheth toward the champion, meeting by the way a certain black mastiff dog, which waited on the champion, whom with his sword he suddenly strake, and cut him off at his loins; at the sight whereof the master of the dog slain was much abashed, and in his battle more wary and fearful; whose left hand and head also afterward this worthy knight cut off. After this combat both the armies met, but they fighting scarce half an hour, certain of the Scots being slain, they closed their army (which was in three) all in one battle; but at length flying, the king followed them, taking and chasing them into lakes and pits for the space of five miles.' The honest chronicler sets down the loss of the Scots infantry on this occasion at 35,000, besides 1300 horsemen, being more than ten times the loss of the British at Waterloo. Such exaggerations are common among the old chroniclers, and historians generally, before the days of statistics. More probably, the slain on the side of the vanquished did not exceed two thousand. It will be heard with some surprise, that there is preserved a song, in the English language, written at the time upon this victory of King Edward. It appears as one of a series, composed upon the king's wars, by one Lawrence Minot, of whom nothing else is known.* It opens with a strain of exultation over the fallen pride of the Scots, and then proceeds to a kind of recital of facts—

'A little fro that foresaid town [Berwick],
Halidon Hill, that is the name,
There was crackèd many a crown
Of wild Scots,† and als of tame.‡
There was their banner borne all down,
To mak sic boast they war' to blame;
But, nevertheless, ay are they boune
To wait England with sorrow and shame.

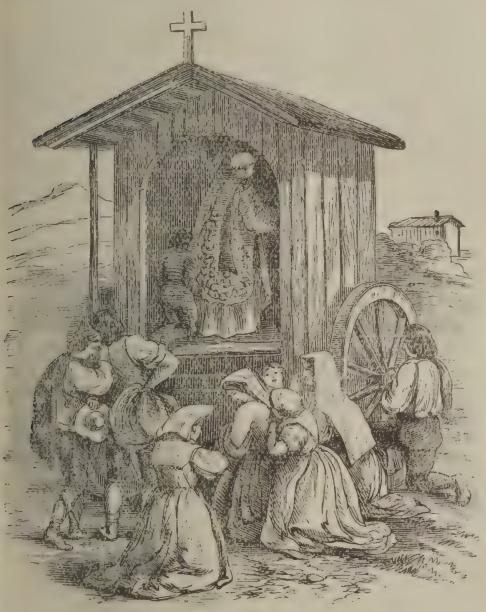
Shame they have, as I hear say;
At Dundee now is done their dance;
And went they must another way,
Even through Flanders into France.
On Philip Valois fast cry they,
There for to dwell, and him avance;
And nothing list them than of play,
Sin' them is tide this sary chance.

* See *Political Poems and Songs relating to English History*. Published under direction of the Master of the Rolls. 1859. Vol. i.

† Highlanders. ‡ Lowlanders.

This sary chance is them betide,
For they were false and wonder fell;
For cursed caitiffs are they kid,
And full of treason, sooth to tell.
Sir John the Cumin had they hid,
In haly kirk they did him quell; *
And therefore many a Scottis bride
With dole are dight that they must dwell.'

The bard then changes to another strain, in which he joyfully proclaims how King Edward had revenged Bannockburn:



'Scots out of Berwick and of Aberdeen,
At the Bannockburn war ye too keen;
There slew ye many saikless, as it was seen,
And now has King Edward wroken it, I ween:
It is wroken, I ween, weel worth the while,
War it with the Scots, for they are full of guile.

Where are the Scots of St John's town?
The boast of your banner is beaten all down;
When ye boasting will bide, Sir Edward is boune
For to kindle you care, and crack your crown;
He has cracked your crown, well worth the while;
Shame betide the Scots, for they are full of guile.'

* * * *

THE CAMPAGNA OF ROME DURING THE MONTH OF JULY.

In Italy, July is the month of bread; August, the month of wine: in the first, the Roman peasants reap; in the second, they gather the grapes. The harvest-people come, for the most part, from

MASS IN THE CAMPAGNA.

the Neapolitan provinces, especially the Abruzzi mountains; they leave their homes, carrying their families with them, pitch their tents every night for sleeping, and might be taken for Bedouin hordes or gipsy tribes. They hire their labour for the small sum of twenty baiocchi a day, out of which they manage to save in order to carry home a little treasure. The Roman Campagna is by no means an uncultivated desert; the greater part is ploughed, and produces wheat, but, on account of miasma, it is uninhabited and uninhabitable, and the cultivators of the ground are obliged to come from great distances. On Sunday, the priests attend and perform mass for the reapers in a kind of movable church drawn by oxen, and provided with all the necessary apparatus for the celebration of the service. Mass in the Campagna is a very picturesque scene: strong brawny men in their shirt-sleeves and short trousers; women in the satin dress which was the one worn at their marriage, and is used for the Sunday costume ever after; children of every age, from the nursling playing on its mother's breast or peacefully sleeping in the cradle; hunters, who sometimes join the assembly with their dogs; the priest officiating in the wooden chapel suspended between the two-wheeled wagon; still further, the tents supported by two poles; the horses tranquilly grazing; the harnessed oxen, which will soon carry away the nomade edifice to another spot; the beautiful blue hills which surround the verdant, golden landscape; the burning sun shedding torrents of light and fire over all nature; the deep silence, scarcely interrupted by the words of the priest, the prayers of the crowd, the neighing of the horses, or the humming of insects—all unite to form a scene interesting both in a physical and moral sense.

When the reaping is over, then comes the operation of thrashing, which they call *la trita*. For this purpose, they prepare a level thrashing-floor on which to spread the sheaves; fasten together six horses, and make them tread over the straw until the grain has all fallen out. When finished, they rake up the straw, stack it, and pile up the grain into heaps, on the top of which they place a cross.

* Alluding to the murder of Cumin by Robert Bruce in the Greyfriars' Church at Dumfries.

LETTER FRANKING.

Long before the legal settlements of the post-office in the seventeenth century, the establishment of the *post* was kept up at the instance of the reigning sovereign for his special service and behoof. Under the Stuarts, the postal resources of the kingdom were greatly developed, and all classes were made to share alike in the benefits of the post. Cromwell made many improvements in the post-office, though the reasons which he assigned for so doing, 'that they will be the best means to discover and prevent many dangerous and wicked designs against the commonwealth,' are open to exception and censure, viewed as we view post-office espionage at this date. In the reign of the second Charles, the post-office for the first time became the subject of parliamentary enactments, and it was at this time that the franking privilege, hitherto enjoyed by the sovereign and the executive alone, was extended to parliament. A committee of the House of Commons, in the year 1735, reported 'that the privilege of franking letters by the knights, &c., chosen to represent the Commons in parliament, began with the creating of a post-office in the kingdom by act of parliament.' The bill here referred to was introduced into the House of Commons in 1660, and it contained a proviso

securing the privilege. The account of the discussion on the clause in question is somewhat amusing. Sir Walter Earle proposed that 'members' letters should come and go free during the time of their sittings.' Sir Heneage Finch (afterwards Lord Chancellor Finch) said, indignantly, 'It is a real *poor mendicant* proviso, and below the honour of the House.' Many members spoke in favour of the measure, Serjeant Charlton urging that 'letters for counsel on circuit went free.' The debate was nearly one-sided, but the speaker, Sir Harbottle Grimstone, on the question being called, refused for a considerable time to put it, saying, 'He felt ashamed of it.' The clause, however, was eventually put, and carried by a great majority. When the bill, with its franking proviso, was sent up to the Lords, they threw out the clause, as there was no provision made in it, 'that the Lords' own letters should pass free!' Some years later, this omission was supplied, and both Houses had the privilege guaranteed to them, neither Lords nor Commons feeling the arrangement below their dignity. It is important to notice, that at the time of which we are speaking, the post-office authorities had much more control over the means of conveyance than they have at the present day. With both inland and packet conveyance the postmasters-general had entire control. At the present day, contracts are made with the different railway companies, &c., for inland conveyance, and the packet-service is under the management of the Board of Admiralty. Without this knowledge, it would be difficult to account for the vast and heterogeneous mass of articles which were passed free through the post-office by a wide stretch of the privilege under notice. In old records of the English post-office still preserved, we find lists of these franked consignments; the following, culled from a number of such, is sufficient to indicate their character:

'Fifteen couple of hounds, going to the king of the Romans with a free pass.' 'Two maid-servants, going as laundresses to my Lord Ambassador Methuen.' 'Docter Crichton, carrying with him a *cow* and divers necessaries.' 'Three suits of *cloaths*, for some nobleman's lady at the court of Portugal.' 'Two bales of stockings for the use (?) of the ambassador to the crown of Portugal.' 'A deal-case, with four flitches of bacon, for Mr Pennington of Rotterdam.'

When the control of the packet-service passed out of the hands of the post-office authorities, and when the right of franking letters became properly sanctioned and systematised, we hear no more of this kind of abuses of privilege. The franking system was henceforth confined to passing free through the post any letter which should be endorsed on the cover with the signature of a member of either house of parliament. It was not necessary, however, that parliament should be in session, or that the correspondence should be on the affairs of the nation (though this was the original design of the privilege) to insure this immunity from postage; and this arrangement, as might have been expected, led to various forms of abuse. Members signed large packets of covers at once, and supplied them to friends in large quantities; sometimes they were sold; they have been known to have been given to servants in lieu of wages, the servants selling them again in the ordinary way of business. Nor was this all. So little precaution seems to have been used, that thousands of letters passed through the post-office with forged signatures of members. To such an extent did these and kindred abuses accumulate, that whereas in 1715, £24,000 worth of franked correspondence passed through the post-office, in 1763 the amount had increased to £170,000. During the next year, viz., in 1764, parliament enacted that no letter should pass free through the post-office unless the whole address was in the member's own handwriting, and his signature attached likewise. It is obvious that this arrangement would materially lessen the frauds practised upon the public revenue of the country. But even these precautions were not sufficient, for fresh regulations were rendered necessary in the year 1784. This time it was ordered that all franks should be dated—the month to be given in full—and further, that all such letters should be put into the post on the same day.

From 1784 to the date of the penny-postage era, the estimated value of franked letters was £80,000 annually. No further reforms were, however, attempted, till Sir Rowland Hill advocated the very radical and indispensable reform of entirely abrogating the privilege. In the bill, which through his unceasing energy was introduced into parliament in 1839, no provision was made such as had existed for a couple of centuries.

Writing on this subject, and having mentioned the name of the founder of the penny-post system, we may advert to an anecdote which has been mistakingly reported regarding him.

Coleridge the poet, when a young man, visiting the Lake District, halted at the door of a wayside inn at the moment when the rural post-messenger was delivering a letter to the barmaid of the place. Upon receiving it, she turned it over and over in her hand, and then asked the postage of it. The postman demanded a shilling. Sighing deeply, however, the girl handed the letter back, saying she was too poor to pay the required sum. The young poet at once offered to pay the postage, and in spite of the girl's resistance, which the humane tourist deemed quite natural, did so. The postman had scarce left the place, when the young barmaid confessed that she had learned all that she was likely to know from the letter; that she had only been practising a preconceived trick; she and her brother having agreed that a few hieroglyphics on the back of a post-letter should tell her all she wanted to know, whilst the letter would contain no writing. 'We are so poor,' she added, 'that we have invented this manner of corresponding and franking our letters.' Mr Hill, having heard of this incident, introduced it into his first pamphlet on postal reform, as a lively illustration of the absurdity of the old system. It was by an inadvertency on the part of a modern historical writer that Mr Hill was ever described as the person to whom the incident happened.

DRINKING-FOUNTAIN IN 1685.

The desirableness of providing public drinking-fountains, similar to those which originated a few years ago in Liverpool, and are now becoming general in London and other large towns, seems to have occurred to some benevolent persons almost two centuries ago.

Sir Samuel Morland, who was a most ingenious as well as benevolent character, purchased a house at Hammersmith in 1684, where, for many years, he chiefly resided. Observing the scarcity of good drinking-water in his neighbourhood, and knowing how seriously the poor would suffer from the want of such a necessary of life, he had a well sunk near his own house, and constructed over it an ingenious pump, a rare convenience in those days, and consigned it gratuitously for the use of the public. A tablet, fixed in the wall of his own house, bore the following record of his benefaction: 'Sir Samuel Morland's Well, the use of which he freely gives to all persons, hoping that none who shall come after him will adventure to incur God's displeasure, by denying a cup of cold water (provided at another's cost, and not their own) to either neighbour, stranger, passenger, or poor thirsty beggar. July 8, 1685.' The pump has been removed, but the stone bearing the inscription was preserved in the garden of the house, afterwards known by the name of Walbrough House. Sir Samuel Morland was an interesting character. He was the son of a country clergyman in Berkshire, and was born about 1625. He was educated at Winchester School, and at Magdalen College, Cambridge. In 1653, he went to Sweden in the famous embassy of Bulstrode Whitelock, and subsequently became assistant to Secretary Thurloe. Afterwards he was sent by Cromwell to the Duke of Savoy, to remonstrate against the persecution of the Waldenses; and, on his return, he published a *History of the Evangelical Churches of the Valley of Piedmont*. But he distinguished himself chiefly by his mechanical inventions; among which are enumerated the speaking-trumpet, the fire-engine, a capstan for heaving anchors, and the steam-engine. If not the original inventor of these, as is questioned, he certainly effected great improvements in them. He constructed for himself a coach, with a movable kitchen in it, so fitted with clockwork machinery, that he could broil steaks, roast a joint of meat, and make soup, as he travelled along the road. The side-table in his dining-room was furnished with a large fountain of water; and every part of his house bore evidence of his ingenuity. He was created a baronet by Charles II. in 1660, and died in 1696, having been four times married.

LARGE-WHEEL VEHICLES IN 1771.

Many ingenious inventions go completely out of sight, when the accounts relating to them are confined to newspapers and journals of temporary interest; unless some historian of industrial matters fixes them in a book, or in a cyclopædic article, down they go, and subsequent inventors may re-invent the self-same things, quite unconscious of what had been done. We believe that this is, to a considerable extent, the case with Mr Moore's large-wheel vehicles brought out in London in 1771. Of course, few readers now a days need to be told that a vehicle with large wheels will move more easily than one with wheels of smaller diameter; like as the latter will move more easily than one that rests upon mere rollers. Reduced friction and greater leverage result; and it depends upon other considerations how far this enlargement of wheel may be carried: in other words, a great number of circumstances combine to settle the best size for a carriage-wheel to work in the streets of London. Mr Moore has no halo of glory around him; but he certainly succeeded in shewing, to the wonderment of many Londoners, that large wheels do enable vehicles to roll with comparative ease over the ground. The journals and magazines of that year contain many such announcements as the following: 'On Saturday evening, Mr Moore's new constructed coach, which is very large and roomy, and is drawn by one horse, carried six persons and the driver, with amazing ease, from Cheapside to the top of Highgate Hill. It came back at the rate of ten miles an hour, passing coaches-and-four, and all other carriages it came near on the road.' Another account gives a description of the vehicle itself, which was evidently a remarkable one on other accounts besides the size of wheel: 'Mr Moore has hung the body, which is like that of a common coach reversed, between two large wheels, nine feet and a half in diameter, and draws it with a horse in shafts. The passengers sit sideways within; and the driver is placed upon the top of the coach.' On one occasion, Mr Moore went in his curious coach, with five friends, to Richmond, where he had the honour of being presented to George III., who passed great commendations on the vehicle. Mr Moore appears not to have forgotten the exigencies of good traffic, and the heavy pull to which horses are often subjected in the streets of the metropolis. We read (19th July) that Mr Moore experimented on a cart with two wheels, and drawn by two horses, which conveyed twenty-six sacks of coals from Mr De Paiba's wharf, in Thames Street, to Mr Moore's house in Cheapside, and repeated this in four successive journeys—an amount of work which, it was said, would require twice as many horses with a cart of ordinary construction. On another day, we are told something about the construction of the vehicle: 'Mr Moore's new invented coal-carriage, the wheels of which are fifteen feet high, passed through the streets, attended by a great concourse of people. Two horses abreast drew two chaldrons and two sacks of coals with more ease and expedition than the common carts do one chaldron with three horses at length.' And on another occasion, 'the coal-carriage was tried on Friday evening, with thirty-one sacks, making two chaldrons and a half, drawn by two horses only to the foot of Holborn Hill, when a third was put to it, to help them up the hill. This they performed with as much ease as one chaldron is commonly done by three horses.' Notices of this kind ceased to appear about the autumn of the year; and Mr Moore, for reasons to us unknown, passed into the limbo of forgotten inventors.

JULY 20.

THE NORFOLK COMMOTION.

The intolerable tyranny of the feudal system, aggravated by the enclosure of common lands by those who obtained grants of ecclesiastical estates, at the suppression of monastries, drove the people of several of the English counties into open, though unconnected insurrection. The most formidable of these risings taking place in the county of Norfolk, local historians and ancient chroniclers have given it the distinctive appellation of 'the Norfolk Commotion!' The first outbreak, early in the summer of 1549, was merely a village riot, in which some fences were destroyed; but one Robert Kett, a tanner, an energetic man of rude and ready eloquence, taking the leadership, the number of insurgents increased so rapidly, that, in a few days, he encamped on Mousehold Heath, about a mile from the city of Norwich, with a following of some twenty thousand men. Kett's first duty in this position being to feed his forces, he, styling himself the king's friend and deputy, issued warrants licensing 'all men to provide and bring into the camp at Mousehold, all manner of cattle and provision of victuals in what place soever they may find the same, so that no violence or injury be done to any honest or poor man.' Such was the effects of these warrants, that a fat sheep was sold in the camp for fourpence; and bullocks, deer, and other provisions at proportionate prices. Having thus provided for his commissariat, Kett

KETT, THE REBEL, UNDER THE OAK OF REFORMATION.

drew up, in form of a petition to the king, a list of the grievances under which the populace laboured, praying for their immediate redress. This petition is remarkably suggestive of its period, when a great part of the agricultural population were in a state of serfdom, one item praying 'that all bondmen may be made free, for God made all free, with his precious blood-shedding.' Strange to say, two of the grievances have been cause of complaint in our own day; namely, the great number of rabbits kept by large landed proprietors, and the differences in the size of the bushel measure in various localities.

While waiting the result of the petition, Kett maintained good order among his followers, daily

holding a court and administering justice under the wide-spreading branches of a tree, named in consequence the Oak of Reformation. The reformed liturgy was read at the same place night and morning, by one of the vicars of Norwich, whom the insurgents had pressed into their service as chaplain; and other clergymen were not only invited to address them, but permitted to rebuke their rebellious conduct in the boldest manner.

The 20th of July 1549 was, for good or evil, the turning-point of the rebellion. On that day, the king's reply to the petition was delivered to Kett, with all due formality, by the York herald. It was to the effect that a parliament would be called in the following October, to consider and redress the petitioners' grievances; and that a general pardon would be granted to all, who should at once lay down their arms, and return to their respective homes. When York herald read the proclamation of pardon at the Oak of Reformation, some of the insurgents cried out, 'God save the king!' But Kett said, 'Kings are won't to pardon wicked persons, not just and innocent men!' The herald then called Kett a traitor, and ordered his sword-bearer to arrest 'that captain of mischief;' but, the crowd beginning a great stir on every side, he was glad to depart in safety. The departure of the herald being considered tantamount to a declaration of war, the people of Norwich attempted to fortify and defend their city. But Kett attacking it with cannon, soon gained possession of it, leading the mayor and some of the principal inhabitants prisoners to the camp at Mousehold. And, with a grim kind of humour, the insurgents issued a mock-proclamation, stating such was their store of provisions, especially of fish, that a cod's head could be sold, at the Oak of Reformation, for one half-penny—the name of the unfortunate mayor being Codd. But his imprisonment was of the lightest kind, and, indeed, it does not appear that the rebels put any one to death in cold blood. There was one person, however, a lawyer, who had the reputation of being able to raise spirits, with fearful signs and wonders. It is not clear what they would have done to him, on his hiding-place among thorns and briers being made known to them by a woman; but as they were hauling him with all reproach and contumely, he caused a tempest to arise, 'mighty showers fell mixed with hail,' and thus he made his escape.

It is uncertain how long this lawless state of affairs had lasted, before government made a serious attempt to restore order. The dates given of the events connected with Kett's rebellion, are exceedingly contradictory and confused. Early in August, the Marquis of Northampton, with Lord Sheffield, many knights, and 1500 men, arrived at Norwich, sent by the council to put down the rebellion. Kett did not dispute the entrance of the royal troops into the city, but attacked them the same night, when the wearied soldiers were reposing after their long march. He again attacked them in the following morning, when Lord Sheffield and a great number being killed, the remainder fled back to London, 'hiding themselves in caves, groves, and woods by the way.'

The unexpected defeat of Northampton rendered the strongest measures necessary. An army, that had been prepared to march against Scotland, was sent, under the Earl of Warwick, to subdue the rebels in Norfolk. Warwick, entering Norwich, encamped his troops in the market-place; but Kett succeeded in capturing the royal ammunition and artillery. This loss compelled the earl to shut himself up in the city, and act on the defensive, while the rebels played upon him with his own artillery. At this juncture, Warwick's officers, considering the city to be untenable, urged upon him the immediate necessity of his leaving it. To this the stout earl 'valiantly answered, by God's grace not to depart the city, but would deliver it or leave his life. With these words he drew his sword, as did also the rest of the nobles, who were all there gathered together, and commanded after a warlike manner—and, as is usually done in greatest danger—that they should kiss one another's swords, making the sign of the holy cross, and by an oath, and solemn promise by word of mouth, every man to bind himself to other, not to depart from the city, before they had utterly banished the enemy, or else fighting manfully, had bestowed their lives cheerfully for the king's majesty.'

A welcome reinforcement of 1400 German mercenaries, determined Warwick to attack the rebels in their strong position on Mousehold Heath. But the infatuated men did not wait for the attack. Relying on an ancient prophecy, which foretold that

> 'The country gnoffes, Hob, Dick, and Hick,
> With clubs and clouted shoon,
> Shall fill the vale,
> Of Dussinsdale,
> With slaughtered bodies soon;
> The heedless men, within the dale,
> Shall there be slain both great and small'—

Kett left his vantage-ground upon the hill, and with twenty ensigns of war displayed, marched down into the vale. Warwick at once saw and embraced the opportunity offered by his enemy's folly. In the battle which ensued, the insurgents were defeated with great slaughter. Two thousand of the insurgents were killed in Dussinsdale, and 1500 more were destroyed by Warwick's cavalry, in the wild flight that followed. A few, barricading themselves among their carts and wagons, fought desperately; and Warwick, wishing to spare their lives, sent a herald to summon them to surrender. But they, drinking to one another, in sign of good-luck, vowed to spend their lives fighting manfully, rather than trust to false promises of pardon. The earl, grieved, however, at the thought of so many brave men perishing, went to them himself, and pledged his honour that their lives would be spared. 'Then every man laid down his weapons, and, as with one mouth cried: "God save King Edward!"'

A great number were hanged on the Oak of Reformation. Kett was made prisoner, and conveyed to London, but was subsequently sent back to Norwich, and hanged alive in chains on the top of the castle. His brother William, a butcher, who had also taken a leading part in the insurrection, was hanged in the same barbarous manner on the steeple of Wymondham church. Yet the rebellion, thus fiercely trampled out, led to important results, which it is not our province but that of the historian to enumerate and explain.

CURIOUS ADVERTISEMENTS OF TWO CENTURIES AGO.

It was in the reign of Charles II. that the public journals first began to be, to any considerable extent, the vehicles of advertisements. In that era many *annonces* of an extremely curious kind were made, as will fully appear from the following examples, freshly selected by a correspondent:

'Whereas John Pippin, whose grandfather, father, and himself have been for above 190 years past famous throughout all England for curing the rupture, making the most easie trusses of all sorts, both for men, women, and children, being lately deceased; This is to certifie to all persons that Eleanor Pippin, the widow, who in his lifetime made all the trusses which he sold, lives still at "The Three Naked Boys," near the Strand Bridge, where she makes all manner of trusses. She also hath a gentleman to assist in the fitting of them upon men, he being intrusted by the said John Pippin in his lifetime.'—1679–80.

'At the sign of the "Golden Pall and Coffin," a coffin-maker's shop, at the upper end of the Old Change, near Cheapside, there are ready made to be sold, very fashionable laced and plain dressings for the dead of all sizes, with very fashionable coffins, that will secure any corps above ground without any ill scent or other annoyance as long as shall be required.'—1679–80.

'The much approved necklaces of Joynts, of the great traveller J. C., which absolutely eases children in breeding teeth, by cutting them, and thereby preventing feavers, convulsions, &c., are sold by T. Burrel, at the "Golden Ball," under St Dunstan's Church, in Fleet Street.'—1679.

'One Robert Taylor, a dancing-master, being in company of several neighbours in Covent Garden on Monday night last, about 10 of the clock, upon occasion of some words, killed one Mr Price, of the same place, at the "Three Tuns'" Tavern, in Shandois Street. The said R. Taylor is a person of middle stature, hath a cut across his chin, a scar in his left cheek, having two fingers and a thumb of one hand burnt at the ends shorter than the other, round visaged, thick lipt, his own hair being of a light brown under a periwig; he lived in James Street, in Covent Garden. Whoever apprehends him, and gives notice thereof to Mr Reynolds, bookseller, in Henrietta Street, Covent Garden, shall have 10 pounds reward. And whereas it was printed in last week's *Intelligence* that he was taken, you are to take notice that it is most notoriously false.'—1679.

'The certain cure of agues of all sorts is performed by a physitian of known integrity; they who desire his assistance may repair to his house, which is the first door on the right hand in Gun-Yard, in Houndsditch. His hours are from 8 in the morning till 2 in the afternoon.'—1680.

'William Deval, at the sign of the "Angel and Stilliards," in St Ann's Lane, near Aldersgate, London, maketh Castile, marble, and white sope, as good as any man sells; tryed and proved, and sold at very reasonable rates.'—1680.

'Whereas one John Stuart, of a tall stature, black brows, a wart upon his cheek, in a black periwig, and a tawny or black suit, and campaign coat, has been lately intrusted to sell several pieces of black worsted, crapes, hair chamblets, black philemot, and sky-coloured mohairs, watered and unwatered; with which goods he is run away, and cannot yet be heard of. Whoever gives notice of the man and goods (who, it is thought, is gone towards Ireland) to Mr Howard, in Milk Street Market, shall have 40*s.* reward.'—1680.

'A book in quarto, bound in parchment, about a quire of paper, near all writ out, being several accompts for work done, being missing out of a shop near Cheapside Conduit: supposed to fall off the stall, or other wayes, by some accident, lost about the middle of September last. If any will bring the said book to Mr Hifftell's Coffee-house, in Cheapside, near the Nagg's Head Tavern, shall have 10*s.* reward.'—1680.

'October the 29th.—There was dropt out of a balcony, in Cheapside, a very large watch-case, studded with gold; if any person hath taken it up, and will bring it to Mr Fells, a goldsmith, at the sign of the "Bunch of Grapes," in the Strand; or to Mr Benj. Harris, at the sign of the "Stationers' Armes," in the Piaza, under Royal Exchange, in Cornhill, shall have a guinney reward.'—1680.

'This is to give notice to all the *Marshals*, both in the city and countrey, that may be desirous to come to their namesake's feast, which will be the 13th of November 1679, at Mr Edward *Marshal's* house, at the sign of the "Cock," in Fleet Street, where the tickets are delivered, and at Mr *Marshal's*, bookseller, at the "Bible," in Newgate Street.'—1680.

'There is a side of a shop, ready furnished with all sorts of millinary goods, to be sold, and the said side of a shop to be let, all at reasonable rates; at the "Naked Boy," near Strand Bridge. Inquire at the said shop, or at the house of Mr Van Auker, merchant, in Lime Street.'—1680.

'At Tobias' Coffee-house, in Pye Corner, is sold the right drink, called Dr Butler's Ale, it being the same that was sold by Mr Lansdale in Newgate Market. It is an excellent stomack drink, it helps digestion, expels wind, and dissolves congealed phlegm upon the lungs, and is therefore good against colds, coughs, ptisical and consumptive distempers; and being drunk in the evening, it moderately fortifies nature, causeth good rest, and hugely corroborates the brain and memory.'—1680.

'At the "Miter," near the west end of St Paul's, is to be seen a rare collection of curiosityes, much resorted to, and admired by persons of great learning and quality; amongst which a choyce *Egyptian Mummy*, with hieroglyphics; the *Ant-Beare* of Brazil; a *Remora*; a *Torpedo*; the huge *Thigh-bone of a Gyant*; a *Moon-Fish*; a *Tropick-bird*, &c.'—1664.

'Without Bishopsgate, near Hog Lane, over against the Watch-house, liveth one Jacob Summers, a weaver; who maketh and selleth town-velvets at reasonable rates.'—1664.

'Lost upon the 13th inst., a little blackamoor boy in a blew livery, about 10 years old, his hair not much curled, with a silver collar about his neck, inscribed "Mrs Manby's blackamoor, in Warwick Lane." Whoever shall give notice of him to Mrs Manby, living in the said lane, or to the "Three Cranes," in Pater-Noster Row, shall be well rewarded for his peynes.'—1664.

'Whereas his sacred majesty (Charles II.) has been pleased, after the example of his royal

ancestors, to incorporate the musitians in England, for the encouragement of that excellent quality, and the said corporation to impower all that profess the said science, and to allow and make free such as they shall think fit. This is to give notice to persons concern'd, that the said corporation sits once a week in "Durham Yard," in pursuance of the trust and authority to them committed by his most gracious majesty.'—1664.

'At the "Angel and Sun," in the Strand, near Strand Bridge, is to be sold every day, fresh *Epsum-water*, *Barnet-water*, and *Tunbridge-water; Epsum-ale*, and *Spruce-beer*.'—1664.

'These are to give notice to the heirs and trustees of *William Hinton*, some time one of the servants of the late king; and to the heirs or trustees of the estate of one *Christopher King*, and *Mr Francis Braddock*, sometimes of *London*, gent.; that there is a discovery of a concealment of some estate belonging to them or some of them, or to some persons claiming from them; whereof they may be informed if they repair to Mr *John Bellinger* at his house in Clifford's Inn Lane, in Fleet Street.'—1663.

'Stolne on Fryday night, the 10th instant, from *Peter Bennier*, his majesty's sculptor, between Whitehall and Charing Cross, one blackmore cast from the life, and three or four other heads. If any person can bring notice of the blackmore to the said *Peter Bennier*, at his house over against the signe of the "Golden Balle," they shall be very well payd for their payns.'—1663.

'*Fortescutus Illustratus:* or, a commentary on that nervous treatise—*De Laudibus Legum Angliæ*. Written by Sir John Fortescue, knight; first, Lord Chief-justice; after, Lord Chancellor to King Henry Sixth. Which treatise was dedicated to Prince Edward, that king's son and heir; whom he attended in his retirement into France, and to whom he legally and affectionately imparted himself in the vertue and variety of his excellent discourse. He purposely wrote to consolidate his princely minde in the love and approbation of the good laws of England, and of the laudible customes of this his native country. The heroicke designe of whose excellent judgment and loyal addiction to his prince, is humbly endeavoured to be revived, admired, and advanced. By *Edward Waterhouse*, Esq. Sold by *Thomas Dicas*, at the *Hen and Chickens*, in St Paul's Church-yard.'—1663.

'A young brindled mastiff, cropt with three notches on the rump, four white feet, and a white streak down the face, was lost on Fryday was seven-night, July 31. 'Tis one of the king's dogs, and whoever gives notice of him at the porter's lodge in Whitehall, shall have a very good reward.'—1663.

A TORNADO IN CHESHIRE.

The 20th of July 1662, was marked in Lancashire and Cheshire by a storm of prodigious violence, accompanied by a fall of heavy hailstones. What, however, chiefly distinguished the day, was a travelling vortex or whirlwind, which produced some remarkable effects, and is thus vividly described in a volume, entitled *Admirable Curiosities*, &c., published in London in 1682.

'In the same day,' says this narration, 'in the afternoon, in the forest of Maxfield [Macclesfield], there arose a great pillar of smoke, in height like a steeple, and judged twenty yards broad, which, making a most hideous noise, went along the ground six or seven miles, levelling all the way; it threw down fences and stone walls, and carried the stones a great distance from their places, but happening upon moorish ground [moor-land] not inhabited, it did the less hurt. The terrible noise it made so frightened the cattle, that they ran away, and were thereby preserved; it passed over a cornfield, and laid it as low with the ground as if it had been trodden down by feet; it went through a wood, and turned up above an hundred trees by the roots; coming into a field full of cocks of hay ready to be carried in, it swept all away, so that scarce a handful of it could afterwards be found, only it left a great tree in the middle of the field, which it had brought from some other place. From the forest of Maxfield, it went up by a town called Taxal, and thence to Wailey Bridge [Whaley Bridge], where, and nowhere else, it overthrew an house or two, yet the people that were in them received not much hurt, but the timber was carried away nobody knew whither. From thence it went up the hills into Derbyshire, and so vanished. This account was given by Mr Hurst, minister of Taxal, who had it from an eye-witness.'

FORMIDABLE ATTACK BY BEES.

Huber, Bevan, and other naturalists who have studied the extraordinary habits and instincts of bees, have not yet succeeded in discovering the various circumstances which lead those insects to attack man in a hostile spirit. How far revenge, or retaliation for injuries received, influences them, is but imperfectly known. There is proof that, when the queen-bee dies, the hive is thrown into confusion and agitation; and it has been supposed by many persons that the insects, at such a time, would seek to attack any one who may have been concerned in the death of the great mother. This, whether right or wrong, was the suggested explanation of an extraordinary attack by bees in Prussia, in 1820. As narrated in the *Berliner Zeitung*, the incident was as follows: On the 20th of July, M. Eulert, a merchant of Berlin, was travelling with his wife from Wittenberg to that city; they were in a private carriage, and a coachman was driving. While passing along the high-road, between Kroppstadt and Schmogelsdorf, the coachman observed the horses to rub uneasily against each other, as if stung by a horse-fly. Suddenly a swarm of bees appeared, or a collection of swarms, numerous beyond all reckoning. They covered the carriage, horses, travellers, and coachman, but especially the living beings. They attacked the mouth, nose, eyes, and ears of each horse, until the poor animals, quite overcome, lay down unresisting. The coachman lost his hat while endeavouring to aid the horses, and the bees then fastened upon his head with such avidity, that his poor skull became covered with a matted mass of bees, hair, and blood; he threw himself on the ground in desperation, and became for a time insensible. Madame Eulert, as soon as the attack began, covered her face with her hood, got out of the carriage, hastened to a neighbouring field, and threw herself, face downwards, on the grass. M. Eulert then alighted, and shouted for help; but while his mouth was open, some of the bees entered it, and increased his troubles. He then covered his face and neck with a handkerchief, and ran to a place where he saw three peasants looking on; but they were too much alarmed to help him, and so he ran on further. He then met a woodman, a carrier with a cart, and three horses, and some labourers. After much entreaty, the carrier agreed to put his horses into a neighbouring stable, and to accompany M. Eulert, as did the others, all carrying dry hay and straw to burn. Arrived at the spot, they found Madame Eulert still

lying, face downward, on the grass, very little injured. The poor coachman was lying nearly insensible, and for forty-eight hours his case was precarious. After burning much hay and straw to drive away the bees, M. Eulert and his helpers were able to examine the suffering horses; one was so maddened by the stinging it had received, that it died the same day; the other was taken to Schmogelsdorf, and placed under the care of a veterinary surgeon, but the poor animal died on the following day. M. Eulert, in attempting afterwards to assign a probable reason for this fierce attack, supposed that when the horses had been seen to rub against each other, a queen-bee was annoying one of them; that the rubbing crushed her; and that the attack by the swarm was an expression of the bees' resentment for the murder of their queen. Others sought no further than this for an explanation —that there were, at that time, no less than 2000 hives of bees in the commune of Schmogelsdorf; and that this number (greatly beyond the usual limit) increased the probability of attacks on men and animals.

JULY 21.

St Praxedes, virgin, 2d century. St Zoticus, bishop and martyr, about 204. St Victor of Marseilles, martyr, beginning of 4th century. St Barhadbeschiabas, deacon and martyr, 354. St Arbogastus, bishop of Strasburg, confessor, about 678.

Born.—Matthew Prior, English poet, 1664, *Winborne, Dorsetshire.*

Died.—Darius III., king of Persia, murdered by Bessus, 330 B. C.; Pope Nicholas II., 1061; William Lord Russell, beheaded in Lincoln's-Inn-Fields, 1683; James Butler, Duke of Ormond, 1688; Daniel Sennertus, learned physician, 1637, *Wittemberg;* Robert Burns, national poet of Scotland, 1796, *Dumfries;* Peter Thelusson, celebrated *millionaire*, 1797, *Plastow, Essex.*

THE DEATH AND FUNERAL OF BURNS, FROM THE NEWSPAPERS OF THE TIME.

'On the 21st [July, 1796] died, at Dumfries, after a lingering illness, the celebrated Robert Burns. His poetical compositions, distinguished equally by the force of native humour, by the warmth and tenderness of passion, and by the glowing touches of a descriptive pencil, will remain a lasting monument of the vigour and the versatility of a mind guided only by the lights of nature and the inspiration of genius. The public, to whose amusement he has so largely contributed, will learn with regret that his extraordinary endowments were accompanied with frailties which rendered him useless to himself and family. The last months of his short life were spent in sickness and indigence, and his widow, with five infant children, and the hourly expectation of a sixth,

BURNS'S MONUMENT AT DUMFRIES.

is now left without any resource but what she may hope from the regard due to the memory of her husband.

'A subscription for the widow and children of poor Burns is immediately to be set on foot, and there is little doubt of its being an ample one.

'Actuated by the regard which is due to the shade of such a genius, his remains were interred on Monday last, the 25th July, with military honours and every suitable respect. The corpse having been previously conveyed to the town-hall of Dumfries, remained there till the following ceremony took place: The military there, consisting of the Cinque Port Cavalry, and the Angusshire Fencibles, having handsomely tendered their services, lined the streets on both sides to the burial-ground. The Royal Dumfries Volunteers, of which he was a member—in uniform, with crape on their left arms, supported the bier; a party of that corps, appointed to perform the military obsequies, moving in slow, solemn time to the "Dead March in Saul," which was played by the military band—preceded in mournful array with arms reversed. The principal part of the inhabitants and neighbourhood, with a number of particular friends of the bard, from remote parts, followed in procession; the great bells of the churches tolling at intervals. Arrived at the churchyard gate, the funeral-party, according to the rules of that exercise, formed two lines, and leaned their heads on their firelocks, pointed to the ground. Through this space the corpse was carried. The party drew up alongside the grave, and, after the interment, fired three volleys over it. The whole ceremony presented a solemn, grand, and affecting spectacle, and accorded with the general regret for the loss of a man whose like we shall scarce see again.'

EPITAPH.

'Consigned to earth, here rests the lifeless clay,
Which once a vital spark from Heaven inspired;
The lamp of genius shone full bright as day,
Then left the world to mourn its light retired.
While beams that splendid orb which lights the spheres—
While mountain streams descend to swell the main—
While changeful seasons mark the rolling years—
Thy fame, O Burns, let Scotia still retain!'

To these interesting notices may here be fitly appended, what, apart from intrinsic merit, may be considered the most remarkable production ever penned regarding Burns. It was at the centenary of his birth, January 25, 1859, that a great festival was held at the Crystal Palace, Sydenham, in honour of the memory of the Scottish national poet. Many personal relics of the illustrious dead were shewn; there was a concert of his best songs. Then it was announced to the vast and highly-strung auditory, that the offered prize of fifty guineas had brought together 621 poems by different authors, in honour of Burns's memory; out of which the three gentlemen judges had selected one as the best; and this was forthwith read by Mr Phelps, the eminent tragedian, with thrilling effect. It proved to be the composition of a young countrywoman of Burns, up to that time scarcely known, but who was in some respects not less wonderful, as an example of genius springing up in the lowly paths of life—her name, ISA CRAIG. There was an enthusiastic call for the youthful prize-holder, and had she been present, she would have received honours exceeding in fervour those at the laureation of Petrarch; but Miss Craig was then pursuing her modest duties in a distant part of London, unthinking of the proceedings at Sydenham. The poem was as follows:

We hail this morn,
A century's noblest birth;
A Poet peasant-born,
Who more of Fame's immortal dower
Unto his country brings,
Than all her Kings!

As lamps high set
Upon some earthly eminence—
And to the gazer brighter thence
Than the sphere-lights they flout—
Dwindle in distance and die out,
While no star waneth yet;
So through the past's far-reaching night
Only the star-souls keep their light.

A gentle boy—
With moods of sadness and of mirth,
Quick tears and sudden joy—
Grew up beside the peasant's hearth.
His father's toil he shares;
But half his mother's cares
From his dark searching eyes,
Too swift to sympathise,
Hid in her heart she bears.

At early morn,
His father calls him to the field;
Through the stiff soil that clogs his feet,
Chill rain and harvest heat,
He plods all day; returns at eve outworn,
To the rude fare a peasant's lot doth yield;
To what else was he born?

The God-made King
Of every living thing
(For his great heart in love could hold them all);
The dumb eyes meeting his by hearth and stall—
Gifted to understand!—
Knew it and sought his hand;
And the most timorous creature had not fled,
Could she his heart have read,
Which fain all feeble things had bless'd and sheltered.

To Nature's feast—
Who knew her noblest guest
And entertain'd him best—
Kingly he came. Her chambers of the east
She drap'd with crimson and with gold,
And pour'd her pure joy-wines
For him the poet-soul'd.
For him her anthem roll'd
From the storm-wind among the winter pines,
Down to the slenderest note
Of a love-warble, from the linnet's throat.

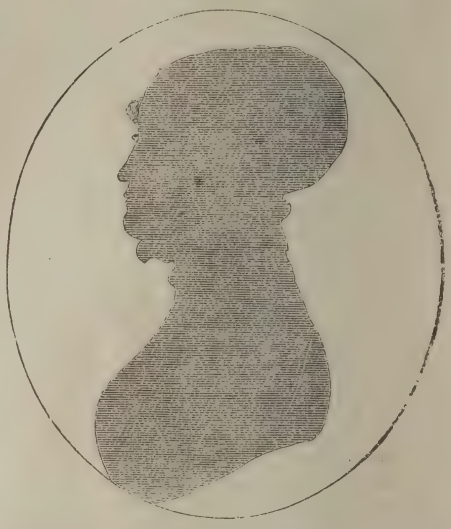
But when begins
The array for battle, and the trumpet blows,
A King must leave the feast, and lead the fight
And with its mortal foes—
Grim gathering hosts of sorrows and of sins—
Each human soul must close.
And Fame her trumpet blew
Before him; wrapp'd him in her purple state;
And made him mark for all the shafts of fate,
That henceforth round him flew.

Though he may yield
Hard-press'd, and wounded fall
Forsaken on the field;
His regal vestments soil'd;
His crown of half its jewels spoil'd;
He is a king for all.

Had he but stood aloof!
Had he array'd himself in armour-proof
Against temptation's darts!
So yearn the good; so those the world calls wise,
With vain presumptuous hearts,
Triumphant moralise.

Of martyr-woe
A sacred shadow on his memory rests;
Tears have not ceas'd to flow;
Indignant grief yet stirs impetuous breasts.
To think—above that noble soul brought low,
That wise and soaring spirit, fool'd, enslav'd—
Thus, thus he had been saved!

It might not be
That heart of harmony
Had been too rudely rent;
Its silver chords, which any hand could wound,
By no hand could be tun'd,
Save by the Maker of the instrument,
Its every string who knew,
And from profaning touch his heavenly gift withdrew.



Regretful love
His country fain would prove,
By grateful honours lavish'd on his grave;
Would fain redeem her blame
That he so little at her hands can claim,
Who unrewarded gave
To her his life-bought gift of song and fame.

The land he trod
Hath now become a place of pilgrimage;
Where dearer are the daisies of the sod
That could his song engage.
The hoary hawthorn, wreath'd
Above the bank on which his limbs he flung
While some sweet plaint he breath'd;
The streams he wander'd near;
The maidens whom he lov'd; the songs he sung;
All, all are dear!

The arch blue eyes—
Arch but for love's disguise—
Of Scotland's daughters, soften at his strain;
Her hardy sons, sent forth across the main
To drive the ploughshare through earth's virgin soils,
Lighten with it their toils;
And sister-lands have learn'd to love the tongue
In which such songs are sung.

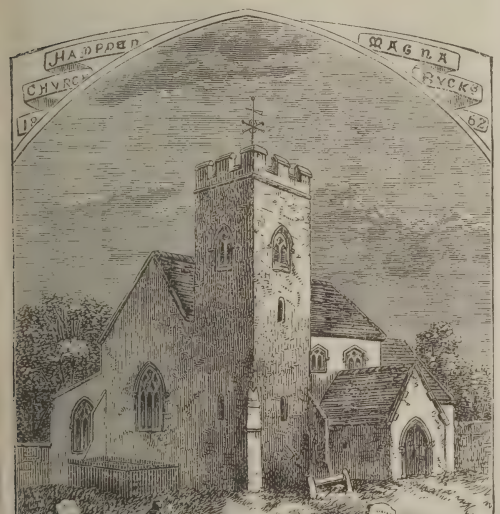
For doth not Song
To the whole world belong!
Is it not given wherever tears can fall,
Wherever hearts can melt, or blushes glow,
Or mirth and sadness mingle as they flow,
A heritage to all?

The widow of Burns survived him a time equal to his own entire life—thirty-eight years—and died in the same room in which he had died, in their humble home at Dumfries, in March 1834. The celebrity he gave her as his 'bonnie Jean,' rendered her an object of much local interest; and it is pleasant to record, that her conduct throughout her long widowhood was marked by so much good sense, good principle, and general amiableness and worth, as to secure for her the entire esteem of society. One is naturally curious about the personality of a poet's goddess; and much silent criticism had Mrs Burns accordingly to endure. A sense of being the subject of so much curiosity made her shrink from having any portraiture of herself taken; but one day she was induced, out of curiosity regarding silhouettes, to go to the studio of a wandering artist in that style, and sit to him. The result is here represented. The reader will

SILHOUETTE OF MRS BURNS, WIDOW OF THE POET.

probably have to regret the absence of regularity in the mould of the features; yet the writer can assure him that, even at the age of fifty-eight, Jean was a sightly and agreeable woman. It is understood that, in her youth, while decidedly comely, her greatest attractions were those of a handsome figure—a charm which came out strongly when engaged in her favourite amusement of dancing.

PETER THELUSSON.



Peter Thelusson was born in France, of a Genevese family, and as a London merchant trading in Philpot Lane, he acquired an enormous fortune. He died on the 21st of July 1797, and when his will was opened, its provisions excited in the public mind mingled wonder, indignation, and alarm. To his dear wife, Ann, and children he left £100,000; and the residue of his property, amounting to upwards of £600,000, he committed to trustees, to accumulate during the lives of his three sons, and the lives of their sons, and when sons and grandsons were all dead, then the entire property was to be transferred to his eldest great-grandson. Should no heir exist, the accumulated property was to be conveyed to the sinking fund for the reduction of the national debt. Various calculations were made as to the probable result of the accumulation. According to the lowest computation, it was reckoned that, at the end of seventy years, it would amount to £19,000,000. Some estimated the result at far higher figures, and saw, in the fulfilment of the bequest, nothing short of a national disaster. The will was generally stigmatised as unwise or absurd, and, moreover, illegal. The Thelusson family resolved to test its legality, and raised the question in Chancery. Lord Chancellor Loughborough, in 1799, pronounced the will valid, and on appeal to the House of Lords, his

decision was unanimously affirmed. The will, though within the letter of the law, was certainly adverse to its spirit, which 'abhors perpetuities,' and an act was passed by parliament in 1800, rendering null all bequests for the purposes of accumulation for longer than twenty years after the testator's death.

Thelusson's last grandson died in 1856. A dispute then arose whether Thelusson's eldest great-grandson, or the grandson of Thelusson's eldest son, should inherit. The House of Lords decided, on appeal in 1859, that Charles S. Thelusson, the grandson of Thelusson's eldest son, was the heir. It is said that, instead of about a score of millions, by reason of legal expenses and accidents of management, little more than the original sum of £600,000 fell to his lot.

HAMPDEN'S BURIAL AND DISINTERMENT.

The parish church of Great Hampden, the burial-place of the Hampden family, is situated in the south-eastern part of Buckinghamshire, three miles from Great Missenden, through which passes the turnpike-road from Aylesbury to London. It is a pretty village church, with a flamboyant window at the west end, and other interesting features; and, standing embosomed in trees, in a secluded but elevated position, has a strikingly picturesque and pleasing appearance. The chancel contains many memorials of the Hampden family, whose bodies lie interred beneath. Here also was buried John Hampden, commonly called 'the Patriot.'

HAMPDEN CHURCH.

On Sunday morning, June 18, 1643, while encamped at Watlington, in Oxfordshire, he received intelligence that Prince Rupert, with a large body of troopers, had been ravaging, during the night, the neighbourhood of Chinnor and Wycombe, and was returning to Oxford, laden with spoil, and carrying off two hundred prisoners. Hampden, without waiting for his own regiment of infantry, placed himself at the head of a body of troopers, and galloped off with all speed in pursuit of the plunderers. On arriving at Chalgrove, instead of finding, as he expected, a retreating enemy, he beheld them drawn up in order of battle in the open field, waiting his approach. An encounter ensued, and, in the first onset, Hampden was severely wounded. Finding himself powerless, and seeing his troops in disorder and consternation, he left the battle-field. While the bells of his peaceful little church were chiming for morning-worship, Hampden was riding, in agonies of pain, to Thame, where he placed himself under surgical care. On the following Sunday, a large company of soldiers, chiefly Hampden's 'green coats,' entered the park-gates which opened into that noble avenue of beeches, nearly a mile in extent, which still forms the magnificent approach to Hampden House, and its adjoining church. With their drums and banners muffled, with their arms reversed and their heads uncovered, those soldiers moved slowly up the avenue, chanting the 90th Psalm, and carrying with them the dead body of their lamented colonel. The bell tolled solemnly as they approached, and crowds of mourners were assembled to receive the melancholy cortege. Hampden was much beloved, especially in his own county, and by his own tenantry and dependants. The weather-beaten faces of many sturdy yeomen were that day bedewed with tears. 'Never,' says Clough, 'were heard such piteous cries at the death of one man as at Master Hampden's.' 'His death,' says Clarendon, 'was as great a consternation to his party as if their whole army had been defeated, or cut off.' A grave was dug for him near his first wife's, in the chancel of the little church, where from childhood he had been wont to worship. And there, in the forty-ninth year of his age, was buried 'John Hampden, the patriot,' June 25, 1643.*

Nearly two centuries later, on July 21, 1828, Hampden's death was the occasion of a more extraordinary scene in this church, owing to the actual cause of it having been differently stated. Clarendon, and other contemporary writers, attributed it to the effects of two musket-balls received in his shoulder from the fire of his adversaries; whereas Sir Robert Pye, who married Hampden's daughter, asserted that his death was caused by the bursting of his own pistol, which so shattered his hand, that he died from the effects of the wound. To decide which of these statements was correct, Lord Nugent, who was about to write the biography of Hampden, obtained permission to examine his body, and for this purpose a large party, on the day above named, assembled in Hampden church, among whom were Lord Nugent; Counsellor, afterwards Lord Denman; the rector of the parish; Mr Heron, the Earl of Buckinghamshire's agent; Mr George Coventry, and 'six other young gentlemen;

* Hampden's burial occurred on Sunday, June 25, and is thus recorded in the parish register: '1643: *N.B.*—John Hampden, Esquire, Lord of Hampden, buried June 25th.' The writer is indebted for this extract to the Rev. F. Aspitel, the present rector, who thus remarks on the entry: 'It is in the handwriting of Lenthall, the successor of Spurtow, in this rectory, who appears to have found, on his coming into the living in November 30, 1643, that the register had not been kept since May of the year before, and who therefore proceeded to post it up, forgetting, at first, the burial of Hampden, and then inserting it at the head of the entries in its proper place, with "*N.B.*" at the beginning of the line.'

twelve grave-diggers and assistants, a plumber, and the parish clerk.'

The work began at an early hour in the morning, by turning up the floor of the church. The dates and initials on several leaden coffins were examined; but on coming to the coffin supposed to be Hampden's, the plate was found 'so corroded that it crumbled and fell into small pieces on being touched,' which rendered the inscription illegible. But from this coffin lying near the feet of Hampden's first wife, to whom he had himself erected a memorial, it was concluded to be his; and 'it was unanimously agreed that the lid should be cut open, to ascertain the fact.' The plumber descended 'and commenced cutting across the coffin, then longitudinally, until the whole was sufficiently loosened to roll back the lead, in order to lift off the wooden lid beneath, which came off nearly entire. Beneath this was another wooden lid, which was also raised without being much broken. The coffin was filled up with saw-dust, 'which was removed, and the process of examination commenced. Silence reigned. Not a whisper or a breath was heard. Each stood on the tiptoe of expectation, awaiting the result. Lord Nugent descended into the grave, and first removed the outer cloth, which was firmly wrapped round the body, then the second, and a third. Here a very singular scene presented itself. No regular features were apparent, although the face retained a deathlike whiteness, and shewed the various windings of the blood-vessels beneath the skin. The upper row of teeth was perfect, and those that remained in the under-jaw, on being taken out and examined, were found

JOHN HAMPDEN.

quite sound. A little beard remained on the lower part of the chin; and the whiskers were strong, and somewhat lighter than his hair, which was a full auburn brown.' The coffin was now raised from the grave, and placed on a trestle in the centre of the church. The arms, which 'nearly retained their original size, and presented a very muscular appearance,' were examined. The right arm was without its hand, which had apparently been amputated. On searching under the clothes, the hand, or rather a number of small bones enclosed in a separate cloth, was found, but no finger-nails were discovered, although on the left hand they remained almost perfect. The resurrectionists 'were now perfectly satisfied' that Hampden's hand had been shattered by the bursting of his pistol. Still it was possible that he might have been wounded at the same time in the shoulder by a musket-ball from the enemy; and to corroborate or disprove this statement, a closer examination was made. 'It was adjudged necessary to remove the arms, which were amputated with a penknife.' The result was, that the right arm was found properly connected with the shoulder, but the left, being 'loose and disunited from the scapula, proved that dislocation had taken place' 'In order to examine the head and hair, the body was raised up and supported with a shovel.' 'We found the hair in a complete state of preservation. It was a dark auburn colour, and, according to the custom of the times, was very long, from five to six inches. It was drawn up, and tied round at the top of the head with black thread or silk. On taking hold of the top-knot, it soon gave way, and came off like a wig.' 'He was five feet nine inches in height, apparently of great muscular strength, of a vigorous and robust frame, forehead broad and high, the skull altogether well formed—such an one as the imagination would conceive capable of great exploits.'

The body was duly re-interred, and shortly afterwards a full description of the examination, from which the foregoing has been abridged, appeared in the *Gentleman's Magazine*, when, to the discomposure of the party concerned, it was confidently asserted that the disinterred body was not John Hampden's, but that of a lady who died *durante partu*, and that the bones, mistaken for a hand, were those of her infant. Inconsistent as this assertion may appear with the whiskered body examined, it is evident Lord Nugent did not consider it wholly irrelevant; for in a letter on the subject to Mr Murray, he says: 'I certainly did see, in 1828, while the pavement of the chancel of Hampden church was undergoing repair, a skeleton, which I have many reasons for believing was not John Hampden's, but that of some gentleman or *lady* who probably died a quiet death in bed, certainly with no wound in the wrist.' Thus, after the rude violation of the Hampden sepulchre, and the mutilation of a human body, it still remained a mystery whether that body was a gentleman's or a lady's; and the problem, if any, respecting the cause of Hampden's death, was as far from solution as ever.* Lord Nugent, in his *Life of Hampden*, makes no allusion to this opening of the grave, but adopts

* Since the foregoing account was written, the subject of Hampden's death, and the exhumation of his body, has been elaborately discussed in the *Times*, and other newspapers, and letters have appeared from the Rev. G. W. Brooks, and others who were present at the exhumation, but nothing has been elicited to affect materially the account here given. The general opinion, however, appears to be, that the body examined on July 21, 1828, was that of 'the patriot.' An interesting paper on the subject by Mr Robert Gibbs of Aylesbury, who, from private sources of information, is strongly inclined to this opinion, appeared in the *Aylesbury News* of January 24, 1863.

the statement given by Clarendon. 'In the first charge,' says he, 'Hampden received his death. He was struck in the shoulder with two carbine balls, which, breaking the bone, entered his body, and his arm hung powerless and shattered by his side.'

It is remarkable that 'the patriot's grave should have been left without any monument or inscription, when such pains were taken to give him honourable burial in the sepulchre of his fathers. He is, however, commemorated by a monument against the north wall of the chancel. This memorial consists of a large sarcophagus between two weeping boys—one holding a staff, with the cap of Liberty, the other with a scroll inscribed "MAGNA CHARTA." Above this, in an oval medallion, is a representation in basso-relievo, of the Chalgrove fight, with a village and church in the background, and Hampden, as the prominent figure, bending over his horse, as having just received his fatal wound. Above the medallion is a genealogical tree, bearing on its several branches the heraldic shields of the successive generations of the Hampdens and their alliances.

John Hampden, the last male heir of the family, died unmarried in 1754, and is described in his epitaph as the twenty-fourth hereditary lord of Hampden manor. The property, after passing through female descendants, was possessed by Lady Vere Cameron, who generally resided in Hampden House, which is a large handsome mansion, retaining, as Lord Nugent thought, 'traces of the different styles of architecture, from the early Norman to the Tudor, though deformed by the innovations of the eighteenth century.' It stands finely grouped among ancestral trees, on a branch of the Chiltern Hills, and commands a beautiful and extensive view over a richly wooded country, diversified by hill and dale, and lacking only water to make the scenery complete.

LARGE MEN.

'Some,' reads Malvolio, 'are born great, some achieve greatness, and some have greatness thrust upon them.' Among the latter class, we may place Mr Daniel Lambert, who died at Stamford on the 21st of July 1809, at the advanced weight of 739 pounds. In 1806, Lambert exhibited himself in London, and the following is a copy of one of his bills.

'*Exhibition.*—Mr Daniel Lambert, of Leicester, the heaviest man that ever lived; who, at the age of thirty-six years, weighs upwards of fifty stone (fourteen pounds to the stone), or eighty-seven stones four pounds, London weight, which is ninety-one pounds more than the great Mr Bright weighed. Mr Lambert will see company at his house, No. 53 Piccadilly, next Albany, nearly opposite St James's Church, from eleven to five o'clock. Tickets of Admission, One Shilling each.'

Lambert died suddenly. He went to bed well at night, but expired before nine o'clock of the following morning. A country newspaper of the day, aiming at fine writing, observes: 'Nature had endured all the trespass she could admit; the poor man's corpulency had constantly increased, until, at the time we have mentioned, the clogged machinery of life stood still, and this prodigy of mammon (*sic*) was numbered with the dead.' His coffin contained 112 superficial feet of elm, and was 6 feet 4 inches long, 4 feet 4 inches wide, and 2 feet 4 inches deep; and the immense substance of his legs necessitated it to be made in the form of a square case. It was built upon two axle-trees, and four clog-wheels, and upon these the remains of the great man were rolled into his grave in St Martin's Churchyard. A regular descent was made to the grave by cutting away the earth for some distance. The apartments which he occupied were on the ground-floor, as he had been long incapable of ascending a staircase. The window, and part of the wall of the room in which he died, had to be taken down, to make a passage for the coffin. A vast multitude followed the remains to the grave, the most perfect decorum was preserved, and not the slightest accident occurred.

The 'great Mr Bright,' mentioned in Lambert's exhibition-bill, was a grocer at Maldon, in Essex. He may partly be said to 'have been born great,'

PORTRAIT OF MR BRIGHT.

for he was of a family noted for the great size and great appetites of its members. Bright enjoyed good health, married at the age of twenty-two, and had five children. An amiable mind inhabited his overgrown body. He was a cheerful companion, a kind husband, a tender father, a good master, a friendly neighbour, and an honest man. 'So,' says his biographer, 'it cannot be surprising if he was universally loved and respected.'

Bright died in his thirtieth year, at the net weight of 616 pounds, or 44 stone, jockey weight, His neighbours considered that death was a happy release to him, 'and so much the more as he thought so himself, and wished to be released.

His coffin was 3 feet 6 inches broad at the shoulders, and more than 3 feet in depth. A way was cut through the wall and staircase of his house to let it down into the shop. It was drawn to the church on a low-wheeled carriage, by twelve men; and was let down into the grave by an engine, fixed up on the church for that purpose, amidst a vast concourse of spectators from distant parts of the country. After his death, a wager was laid that five men, each twenty-one years of age, could be buttoned in his waistcoat. It was decided at the Black Bull Inn, at Maldon, when not only five, as proposed, but seven men were enclosed in it, without breaking a stitch or straining a button.

A Mr Palmer, landlord of the Golden Lion Inn at Brompton, in Kent, was another great man in his way, though not fit to be compared with either Bright or Lambert; weighing but 25 stone, a matter of some 380 pounds less than the great Daniel. Palmer came to London to see Lambert; yet, though five men could be buttoned in his waistcoat, he looked like a pigmy beside the great Leicestershire man. It is said that the superior grossness of his more corpulent rival in greatness, so affected Palmer as to cause his death. However that may be, he certainly died three weeks after his journey to London. A part of the Golden Lion had to be taken down to allow egress for his coffin, which was drawn to the grave in a timber wagon, as no hearse could be procured either large enough to admit it, or sufficiently strong to bear its weight.

A sad episode in the history of crime is exhibited in the forgeries and subsequent execution of Ryland, a celebrated engraver, who exercised his profession in London during the latter part of the last century. Ryland had an apprentice named John Love, who, terrified by his master's shameful death, gave up the business he was learning, and returned to his native place in Dorsetshire. At that time being exceedingly meagre and emaciated, his friends, fearing he was falling into a consumption, applied to a physician, who recommended an abundance of nutritious food, as the best medicine under the circumstances of the case. Love thus acquired a relish for the pleasures of the table, which he was soon enabled to gratify to its fullest extent, by success in business as a bookseller at Weymouth: where he soon grew as remarkably heavy and corpulent as he had previously been light and lean. So, he may have been said to have achieved his own greatness, but he did not live long to enjoy it; suffocated by fat, he died in his fortieth year, at the weight of 364 pounds.

CURIOUS OLD DIVISIONS OF THE LIFE OF MAN.

Since the mythical days of Œdipus and the Sphinx, many curious attempts have been made to partition out the life of a man into distinct periods, and to assign to each its own peculiar duties or characteristics.

From a series of valuable and pleasing reflections upon youth and age, with the virtues and offices appropriate to each, to be found in Dante's prose work, called the *Convito* or *Banquet*, a philosophic commentary on certain of his own songs, Mr Lyell, the translator of Dante's *Lyrical Poems*, has drawn the following table:

TABLE OF DANTE'S FIVE AGES OF MAN, AND OF THE DUTY PARTICULARLY CALLED FOR IN EACH.

Years. From.	Years. To.	Period of life.	Peculiar Duty of each Period.
1	10	Childhood.	To acquire life.
10	25	Adolescence.	To confirm it.
25	35	Youth: summit of the arch of life.	To employ it well.
35	45		To attain its summit.
45			To perfect it.
45	70	Old age.	To direct it to its ultimate end; i. e., to God.
70	80	Extreme old age.	To end it in peace.

We find another such scheme, less instructive, but more amusing, in the pages of an old English poet. Many readers, to whom the name of Dante will be quite familiar, will be strangers to Thomas Tusser. He was born in Essex, about 1520, and wrote a curious book of jingling rhymes, called *Five Hundred Points of Good Husbandry;* intended chiefly to be useful to the poorer sort—farmers, housewives, plough-boys, and the like. Southey, in whose collection of *Early English Poets*, Tusser's work was reprinted, relates of Lord Molesworth, that having proposed (in 1723) that a school of husbandry should be set up in every county, he advised that 'Tusser's old book of husbandry should be taught to the boys, to read, to copy, and to get by heart.' Tusser's book, the most curious book, says Southey, in the English language, was once very popular. It catalogues all weather-signs, all farm and field work, all farmer's duties, peculiarities, and wise saws, under the several heads of the appropriate months; and winds up with a strange medley of curious household rhymes—of evil neighbours; of religious maxims and creeds; or concerning household physic—evidently meant to become popular among country labourers. Our table forms a part of this medley.

Man's age divided here ye have,
By 'prenticeships, from birth to grave.

7. The first seven years bring up as a child:
14. The next, to learning, for waxing too wild.
21. The next, keep under Sir Hobbard de Hoy:
28. The next, a man, no longer a boy.
35. The next, let Lusty lay wisely to wive:
42. The next, lay now, or else never, to thrive.
49. The next, make sure, for term of thy life:
56. The next, save somewhat for children and wife.
63. The next, be stayed; give over thy lust:
70. The next, think hourly whither thou must.
77. The next, get chair and crutches to stay;
84. The next, to heaven God send us the way.
Who loseth their youth, shall rue it in age:
Who hateth the truth, in sorrow shall rage.

Not satisfied with this, Tusser is pleased to add, for the sake of variety, another edition, from a somewhat different point of view:

Another division of the nature of man's age.

The Ape, the Lion, the Fox, the Ass,
Thus sets forth man as in a glass.

Ape. Like apes we be toying, till twenty-and-one;
Lion. Then hasty as lions, till forty be gone:
Fox. Then wily as foxes, till threescore-and-three;
Ass. Then after for asses accounted we be.

Certainly, this last takes a most humiliating view of man: and in that division of his book, which the writer calls *The Points of Huswifery*, we are favoured with one, not much more favourable, of woman.

THE DESCRIPTION OF A WOMAN'S AGE.

By six times fourteen years 'prenticeship, with a lesson to the same.

14. Two first seven years for a rod they do whine:
28. Two next as a pearl in the world they do shine.
42. Two next trim beauty beginneth to swerve:
56. Two next for matrons or drudges they serve.
70. Two next doth crave a staff for a stay:
84. Two next a bier to fetch them away.

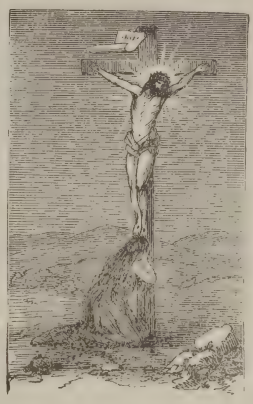
A lesson.

Then purchase some pelt
By fifty and three;
Or buckle thyself
A drudge for to be.

THE CITIZEN AND THE THIEVES.

The general apparel of a citizen of London—the friendly custom of borrowing and lending—and the danger and difficulty of travelling that prevailed at the period—are all humorously sketched in the following lines from a popular pamphlet, published in 1609:

'A citizen, for recreation's sake,
To see the country would a journey take
Some dozen miles, or very little more;
Taking his leave with friends two months before,
With drinking healths and shaking by the hand,
As he had travelled to some new-found land.
Well, taking horse, with very much ado,
London he leaveth for a day or two:
And as he rideth, meets upon the way
Such as (what haste soever) bid men stay.
"Sirrah," says one, "stand and your purse deliver,
I am a *taker*, thou must be a *giver*."



Unto a wood, hard by, they hale him in,
And rifle him unto his very skin.
"Maisters," quoth he, "pray hear me ere you go;
For you have robbed me more than you do know,
My horse, in truth, I borrowed of my brother;
The bridle and the saddle of another;
The jerkin and the bases, be a tailor's;
The scarf, I do assure you, is a sailor's;
The falling band is likewise none of mine,
Nor cuffs, as true as this good light doth shine.
The satin doublet, and raised velvet hose
Are our churchwarden's, all the parish knows.
The boots are John the grocer's at the Swan;
The spurs were lent me by a serving-man.
One of my rings—that with the great red stone—
In sooth, I borrowed of my gossip Joan:
Her husband knows not of it, gentle men!
Thus stands my case—I pray shew favour then."

"Why," quoth the thieves, "thou needst not greatly care,
Since in thy loss so many bear a share;
The world goes hard, and many good folks lack,
Look not, at this time, for a penny back.
Go, tell at London thou didst meet with four,
That, rifling thee, have robbed at least a score."'

JULY 22.

St Mary Magdalen. St Joseph of Palestine (Count Joseph), about 356. St Vandrille or Wandregisilus, abbot of Fontenelles, 666. St Meneve, abbot of Menat, 720. St Dabius or Davius, of Ireland, confessor.

MARY MAGDALEN.

HE beautiful story of Mary Magdalen—for such it is, though so obscurely related in Scripture—has always made her a popular saint among the Roman Catholics, and Italian painters and sculptors have found an inspiration in her display of the profound moral beauty of repentance. A medieval legend connected with her name represents her as ending her days in France. It is said that, after the crucifixion of Jesus, she, in company with the Virgin and Mary Salome, being much persecuted by the Jews, set sail on the Mediterranean in a leaky boat, and after a miraculous deliverance, landed in the south of Gaul. There, the party separated, the Magdalen retired to St Baume, to spend the remainder of her days in penitence and prayer; and in that retreat, in the odour of sanctity, she closed her earthly pilgrimage.

The rise of saintly histories forms a curious chapter in that of human belief. There has always been much less of positive deliberate deception in them than most persons would now be disposed to admit. Some appearances were presented—a supposition was hazarded about them—this, instantly translated by well-meaning credulity into a fact, set the story agoing. In an age when no one thought of sifting evidence, the tale took wing unchecked, and erelong it became invested with such sanctity, that challenge or doubt was out of the question. In some such way it probably was, that the remains of a dead body found by the monks of Vezelai under their high-altar, were accepted as those of Mary Magdalen. The news soon spread through France; the monks were delighted at the opportunity it afforded them of enriching their monastery, as the celebrity of the saint would certainly draw a great multitude of people; and they determined to encase these relics with a pomp which should dazzle the simple. The king of France, St Louis, who was always interested in anything relating to religion, determined to be present at the festival, and went to Vezelai accompanied by his whole court. The body was drawn from its coffin, and placed in a silver shrine; the legate took a part; and the king several bones, which he had enshrined, some with two of the thorns of Christ's crown, and a morsel of the cross in an arm of gold enriched with pearls and ninety precious stones; others in a reliquary, silver gilt, supported by an angel, and richly ornamented.

But Vezelai was not long in possession of this sacred deposit without Provence disputing it; their tradition was, that St Maximin, bishop of Aix, had buried it at La Baume in an alabaster tomb; and Charles, Prince of Salerno, the eldest son of the king of Sicily, commenced a search for the body, and had the happiness to find it. The legend relates that a delicious odour spread through the chapel, and that from the tongue there sprang a branch of fennel, which, divided into several bits, became as many relics. Near the body were two writings; one on a board covered with wax containing these words: 'Here rests Mary Magdalen:' the other on incorruptible wood, with these words: 'The seven hundredth year of the nativity of our Lord, on the sixteenth day of December, Odoin being the reigning king of France, at the time of the invasion of the Saracens, the body of Saint Mary Magdalen was transferred secretly in the night from her alabaster sepulchre into this of marble for fear of the infidels.' The young prince immediately assembled the nobility and clergy of Provence, raised the body in their presence, enshrined it, and placed the head in a reliquary of pure gold. Then Vezelai lost much of its credit, in spite of the pope, who declared himself on its side. La Baume carried the day, and the preaching friars who held the deposit, triumphed loudly over the monks who kept possession of the other. It gave birth to a long and acrimonious discussion: the latter party objected that dates were never used in France before the middle of the eighth century, under Pepin and Charlemagne. No trace could be found in history of this incursion of the Saracens; and who was Odoin? No king of that name ever reigned in France. So many absurdities discredited the Provençal tradition, yet La Sainte Baume was still frequented by a great concourse of people: now, nothing remains but a grotto celebrated for the fables to which it has given rise.

Born.—Anthony Ashley Cooper, first Earl of Shaftesbury, celebrated politician in the reign of Charles II., 1621, *Winborne, Dorsetshire.*

Died.—Sir John Graham, Scottish patriot, killed at the battle of Falkirk, 1298; Sir Henry Percy (Hotspur), killed at the battle of Shrewsbury, 1403; Charles VII., king of France, 1461, *Meun, in Berri;* Henry III., king of France, assassinated at Paris, 1589; Henry Carey, Lord Hunsdon, 1596, *London;* Gerbrant Vander Eeckhout, Dutch painter, 1674; Pope Clement X., 1676; Francis Lord Gardenstone, Scottish judge, miscellaneous writer, 1793; Marie François Xavier Bichat, eminent French anatomist, 1802, *Paris;* Dr George Shaw, naturalist, 1813, *London;* Joseph Piazzi, eminent astronomer, 1826, *Palermo.*

THE PERCY INSURRECTION—BATTLE OF SHREWSBURY—DEATH OF HOTSPUR.

Happy are the heroes who are immortalised by the poets of their country. The brave, headstrong, irascible Hotspur; the rousing of Prince Henry to noble deeds from the wild roystering companionship of Falstaff and his friends; the imaginative, superstitious Glendower—all stand as lifelike characters before the eye of hundreds of Englishmen, who would never have heard their names had it not been for the bard of Avon. The powerful Percies, who had been Henry IV.'s greatest friends in the day of distress, became discontented subjects after he ascended the throne. The Hotspur, of whom Henry had said:

> 'O that it could be proved
> That some night-tripping fairy had exchanged
> In cradle-clothes our children where they lay,
> And called mine Percy, his Plantagenet!
> Then would I have his Harry and he mine,'

took dire offence at the refusal of the king to permit him to pay the ransom of his brother-in-law, Sir Edmund Mortimer, who had been taken captive by Owen Glendower. Joining himself to his uncle, the Earl of Worcester, Scroop, archbishop of York, the Scottish Earl of Douglas, and the Welsh chieftain, he entered on the fatal insurrection which cost his life, and that of many thousands of brave men. The earl, his father, being dangerously ill, could not join the rendezvous; but Douglas crossed the border with a goodly array, and the Earl of Worcester collected a picked body of Cheshire archers, all making their way to the borders of Wales, where Glendower's army was to meet them. Henry IV.'s skilful generalship probably saved his crown; for hastening his army with all speed from Burton-upon-Trent, he contrived to get between the two rebel forces, and prevent their junction. Having reached Shrewsbury, and finding Hotspur's army close at hand, he determined to give battle on the following day. During the night, the insurgents sent in a long list of their grievances, in the shape of a defiance: 'For which causes,' said they, 'we do mortally defy thee, thy fautors, and accomplices, as common traitors and destroyers of the realm, and invaders, oppressors, and confounders of the very true and right heir to the crown of England and France; and we intend to prove it this day by force of arms, Almighty God blessing us.'

Early in the morning (July 22, 1403), the eager combatants drew up in battle-array; about 14,000 on each side, brothers in language and country, thus sadly opposed. The martial strains of the trumpets were sounded, the war-cry of 'St George for us!' which had led to many a victory, was answered by, 'Esperance, Percy!' and the bravest knights in Christendom, Hotspur and Douglas, led the charge. Had they been well supported, nothing could have resisted the shock. As it was, many noble knights were slain; the two leaders seeking the king everywhere in vain, he having put on plain clothes, and forcing Hotspur to say: 'The king hath many marching in his coats;' and Douglas to reply:

> 'Another king! they grow like Hydra's heads;
> I am the Douglas, fatal to all those
> That wear those colours on them.'

The Prince of Wales, though wounded in the face, fought with desperate courage, and for three hours the battle raged fearfully; but Hotspur, being shot through the head, fell mortally wounded, and the king's cry of 'Victory and St George!' put the assailants to flight. Douglas, falling from a hill, was so bruised that his pursuers took him; but he was soon after set at liberty. The Earl of Worcester, Sir Richard Vernon, and some others, were executed on the field, and the great but dearly-bought victory of Shrewsbury settled the usurper Henry firmly on the throne. The body of Hotspur, found among the dead, was by Henry's command taken from the grave, where Lord Furnival

had laid it, and placed between two millstones in the market-place of Shrewsbury, quartered, and hung upon the gates, after the barbarous fashion of the times. Otterbourne tells us that the courage of the brave Percy was much damped before the battle by an incident which marks the superstitious feeling of the times. When preparing for the field, he called for his favourite sword, and was informed that he had left it at the village of Berwick, where he had rested the previous night. Startled at the name of the place, he heaved a deep sigh, and exclaimed: 'Alas! then my death is near at hand, for a wizard once told me that I should not live long after I had seen Berwick, which I thought was the town in the north.—Yet will I not be cheaply won.'

When the king had put an end to the pursuit and slaughter, he returned thanks for his victory on the field of battle, and commanded the erection of the collegiate church of Battlefield, of which more than half is now in ruins.

RAT LEGENDS.

On the 22d day of July, in the year of our Lord 1376, according to old Verstegan, a terrible calamity befell the town of Hamel, in Brunswick:

'There came into the town of Hamel an old kind of companion, who, for the fantastical coat which he wore being wrought with sundry colours, was called the Pied Piper. This fellow, forsooth, offered the townsmen, for a certain sum of money, to rid the town of all the rats that were in it (for at that time the burghers were with that vermin greatly annoyed). The accord, in fine, being made, the Pied Piper, with a shrill pipe, went thorow all the streets, and forthwith the rats came all running out of the houses in great numbers after him; all which he led into the river of Weaser, and therein drowned them. This done, and no one rat more perceived to be left in the town, he afterward came to demand his reward according to his bargain; but being told that the bargain was not made with him in good earnest, to wit, with an opinion that he could be able to do such a feat, they cared not what they accorded unto, when they imagined it could never be deserved, and so never be demanded; but, nevertheless, seeing he had done such an unlikely thing indeed, they were content to give him a good reward; and so offered him far less than he looked for. He, therewith discontented, said he would have his full recompense according to his bargain; but they utterly denied to give it him. He threatened them with revenge; they bade him do his worst, whereupon he betakes him again to his pipe, and going thorow the streets as before, was followed by a number of boys out of one of the gates of the city, and coming to a little hill, there opened in the side thereof a wide hole, into the which himself and all the children did enter; and being entered, the hill did close up again, and became as before. A boy, that, being lame, came somewhat lagging behind the rest, seeing this that happened, returned presently back, and told what he had seen; forthwith began great lamentation among the parents for their children, and the men were sent out with all diligence, both by land and by water, to inquire if aught could be heard of them; but with all the inquiry they could possibly use, nothing more than is aforesaid could of them be understood. And this great wonder happened on the 22d day of July, in the year of our Lord 1376.'*

The rat seems altogether a mystical sort of creature; at least, very mystical things are current everywhere regarding it. It is one of the simplest of these, that there are districts where rats do not dwell and cannot be introduced. Not only are we told by the credulous Hector Boece, that there are no rats in Buchan (Aberdeenshire), but a later and more intelligent author, Sir Robert Gordon, makes the same statement regarding Sutherlandshire: 'If,' says he, 'they come thither in ships from other parts, they die presently, how soon they do smell the air of that country.' Sir Robert at the same time asserts, that the species abounds in the neighbouring province of Caithness. But this is not all. The reverend gentlemen who contributed to Sir John Sinclair's *Statistical Account of Scotland*, about 1794, the articles on Morven and Roseneath, the one in the north, the other in the south of Argyleshire, avouch that rats have been introduced into those parishes in vain. The author of the article on Roseneath seems to have been something of a wag, though quite in earnest on the point of fact. 'From a prevailing opinion,' says he, 'that the soil of this parish is hostile to that animal, some years ago, a West India planter actually carried out to Jamaica several casks of Roseneath earth, with a view to kill the rats that were destroying his sugar-canes. It is said this had not the desired effect; so we lost a valuable export. Had the experiment succeeded, this would have been a new and profitable trade for the proprietors; but perhaps by this time, the parish of Roseneath might have been no more!'

It was a prevalent notion in past ages, that you might extirpate rats by a persevering course of anathematising in rhyme. Reginald Scot says that the Irish thought they could rhyme any beast to death; but the notion was, in general, restricted to the rat. It is with reference to this belief, or practice, that Rosalind, in *As You Like It*, says: 'I never was so berhymed since Pythagoras's time, that I was an Irish rat, which I can hardly remember.'

Another prevalent notion regarding rats was, that they had a presentiment of coming evil, and always deserted in time a ship about to be wrecked, or a house about to be flooded or burned. So lately as 1854, it was seriously reported in a Scotch provincial newspaper that, the night before a town mill was burned, the rats belonging to the establishment were met migrating in a body to a neighbouring pease-field. The notion acquires importance as the basis of a new verb in the English language—to rat—much used in political party janglings.

Mr Bewick, the ingenious wood-engraver, has put on record a fact regarding rats nearly as mystical as any of the above. He alleges that 'the skins of such of them as have been devoured in their holes [for they are cannibals to a sad extent] have frequently been found curiously turned inside out, every part of them being completely inverted, even to the ends of the toes.'

It may be added as a more pleasing trait of these too much despised animals, that they are, nevertheless, of a social turn, and have their sports and

* *Restitution of Decayed Intelligence*, chap. iii. edit. 1673, p. 92.

pastimes by themselves. 'They play at hide-and-seek with each other, and have been known to hide themselves in the folds of linen, where they have remained quite still until their playmates have discovered them, in the same manner as kittens. Most readers will recollect the fable, where a young mouse suggests that the cat should have a bell fastened to his neck, so that his companions might be aware of her approach. This idea was scouted by one of their wise-heads, who asked, who was to tie the bell round the cat's neck? This experiment has actually been tried upon a rat. A bell was fastened round his neck, and he was replaced in his hole, with full expectation of his frightening the rest away; but it turned out that, instead of their continuing to be alarmed at his approach, he was heard for the space of a year to frolic and scamper with them.' *

The profession of the rat-catcher is an old and a universal one. In Italy, in the seventeenth

VISCHER'S RAT-CATCHER: SEVENTEENTH CENTURY.

century, as we learn from Annibal Caracci's illustrations of the Cries of Bologna, this kind of professional went about with a pole bearing a square flag, on which were representations of rats and mice. The Chinese rat-catcher carries, as the outward ensign of his craft, a cat in a bag. One of the many exquisite engravings of Cornelius Vischer (born at Haarlem, 1610), gives us the Dutch rat-catcher of that day with all his paraphernalia—a sketch so lifelike and so characteristic that its fidelity cannot be doubted. Our artist here gives what we are happy to consider a tolerable transcript of this humorous print. In the original, the following inscription is given in prose form:

> Fele fugas mures: magnis si furibus arces
> Exiguos fures, furor est; me respice, vilis
> Si modo nummus adest, mures felesque fugabo.

[i. e. 'By the cat you put rats to flight. If you drive away little thieves by great ones, it is utter folly. Look at me; provided only a little coin is forthcoming, I will put both rats and cats to flight.']

HOUSEHOLD SUPERSTITIONS.

If a fire does not burn well, and you want to 'draw it up,' you should set the poker across the hearth, with the fore part leaning across the top bar of the grate, and you will have a good fire—if you wait long enough; but you must not be unreasonable, and refuse to give time for the charm to work. For a charm it is, the poker and top bar combined, forming *a cross*, and so defeating the malice of the gnomes, who are jealous of our possession of their subterranean treasures; or else of the witches and demons, who preside over smoky chimneys. I had seen the thing done scores of times; and understanding that it was supposed to create a draught, like a poor weak rationalist as I was, I once thought to improve the matter by setting up the *shovel* instead of the poker; but I

* Smith's *Cries of London*, 4to, 1839, p. 33.

might as well have left it alone—the fire wasn't to be taken in, or the witches balked, by such a shallow contrivance, and I was left in the cold.

This poker-superstition is at least harmless, and we may admit that among those belonging to the household there are some which are positively beneficial—for example, those referring to the breakage of glass and crockery.

You have a valuable mirror, we will say. Do you know what is its greatest safeguard from the handles of housemaids' brooms, &c.? It is the belief, that if a looking-glass is broken, there will be a death in the family within the year. This fear is, of course, most operative in small households, where there are but few persons to divide the risk with the delinquent.

I once had a servant who was very much given to breaking glass and crockery. Plates and wine-glasses used to slip out of her hands, as if they had been soaped; even spoons (which it was hardly worth while to drop, for they would not break) came jingling to the ground in rapid succession.

'Let her buy something,' said the cook, 'and that will change the luck.' 'Decidedly,' said the mistress, 'it will be as well that she feel the inconvenience herself.' 'Oh, I didn't mean that, ma'am,' was the reply; 'I meant that it would change the luck.'

'Well, have you broken anything more?' I asked, a few days after this conversation. 'No, sir,' the girl answered, 'I hav'nt broken nothing since I bout the 'tater dish.' Unluckily, however, this was too good to last; the breaking recommenced, and we were obliged to part.

If you break two things, you will break a third.

A neighbour saw one of her servants take up a coarse earthenware basin, and deliberately throw it down upon the brick floor.

'What *did* you do that for?' asked the mistress. 'Because, ma'am, I 'd broke tew things,' answered the servant, 'so I thout the third 'd better be this here,' pointing to the remains of the least valuable piece of pottery in the establishment, which had been sacrificed to glut the vengeance of the offended Ceramic deities.

Suffolk. C. W. J.

JULY 23.

St Apollinaris, bishop of Ravenna, martyr, 1st century. St Liborius, bishop of Mans, confessor, about 397.

Born.—Godfrey Olearius, the younger, German divine, 1672, *Leipsic.*

Died.—St Bridget of Sweden, 1372; Sir Robert Sherley, English military adventurer in Persia, 1627; Richard Gibson, artist, 1690; Gilles Menage, grammarian and versifier, 1692, *Paris;* Vicomte Alexandre de Beauharnais, first husband of the Empress Josephine, guillotined, 1794; Jean Francois Vauvilliers, eminent French scholar, 1800, *St Petersburg;* Arthur Wolfe, Lord Kilwarden, murdered by the populace in Dublin, 1803; Mrs Elizabeth Hamilton, authoress of the *Cottagers of Glenburnie*, 1816, *Harrowgate.*

ST BRIDGET OF SWEDEN.

Birgir, widow of Ulpho, Prince of Nericia, died on the 23d of July 1372, and, a few years afterwards, was canonised by Pope Boniface IX., under the appellation of St Bridget of Sweden. Unlike most other saints, there seems to have been little more miraculous in her character and career, than the simple fact, that she was a pious woman, a scholar, and writer on religious subjects, at a period of general barbarism. She founded the monastic order of Bridgetines, peculiar of its kind, as it included both nuns and monks under the same roof. The regular establishment of a house of Bridgetines numbered sixty nuns, thirteen monks, four deacons, and eight lay-brothers; the lady-abbess controlling and superintending the whole. The mortified and religious life to which they had bound themselves, by the most solemn engagements, was supposed to render the mixed inmates of these convents superior to temptation, and free from the slightest suspicion of evil. Strange stories, nevertheless, have been told of these communities, and the greater part, if not all, of the convents of the order that now exist, are of one sex alone.

There is an ancient wood-cut, formerly in the possession of Earl Spencer, representing St Bridget of Sweden writing her works. A pilgrim's staff, hat, and scrip, raised behind her, alluded to her many pilgrimages. The letters S.P.Q.R., in the upper corner, denoted that she died at Rome. The lion of Sweden, and crown at her feet, shewed that she was a princess of that country, as well as her contempt for worldly dignities. A legend above her head consisted of a brief invocation in German: '*O, Brigita, bit Got fur uns!*'—O, Bridget, pray to God for us!

A striking illustration of the inherent vitality of extreme weakness, not unfrequently met with, both in the moral and physical world, is exhibited in the history of the first and only house of Bridgetines established in England. About 1420, Henry V., as a memorial of the battle of Agincourt, founded the Bridgetine House of Sion, on that pleasant bank of the Thames, now so well known by the palatial residence of the Duke of Northumberland. And there, with broad lands, fisheries, mill-sites, watercourses, and other valuable endowments, the establishment—the female part consisting principally of ladies of rank—flourished in peace and plenty till the dissolution of monasteries in 1539. Even then the inmates were not thrown helpless on the world; all were allowed pensions, more or less according to their stations, from Dame Agnes Jordan, the abbess, who received £200 per annum, for life, down to the humble lay-brother, whose yearly dole was £2, 13*s.* 4*d.* The community thus broken up, did not all separate. A few holding together, joined a convent of their order at Dermond, in Flanders; from whence they were brought back, and triumphantly reinstated in their original residence of Sion, by Queen Mary, in 1557. Of those who had remained in England at the dissolution, few were found, after a lapse of eighteen years, to join their old community. Some were dead; some, renouncing their ancient faith, or yielding to the dictates of nature, had married. As old Fuller quaintly phrases it, 'the elder nuns were in their graves, the younger in the arms of their husbands;' but with the addition of new members, the proper number was again made up. But scarcely had they been settled in their ancient abode, ere the accession of Elizabeth once more dissolved the establishment; and at this second dissolution, all the nuns, with the exception of the abbess, left England, to seek a place of rest and refuge at Dermond. The convent at Dermond being too poor to support so many, the Duchess of Parma gave the English nuns a monastery in

Zealand, to which they transferred the House of Sion; but the place being unendowed and unhealthy, poverty and sickness compelled them to abandon it, and they were fortunate enough to obtain a house and church near Antwerp. Here the fugitives thought they had at last found a shelter and a home, but they soon were undeceived. In a popular tumult, their house and furniture were destroyed, and only by a timely flight did they themselves escape insult and injury from the rudest of the populace. Their next establishment was at Mechlin, where they lived for seven years, till that city was taken by the Prince of Orange. In the misery and confusion consequent thereon, the nuns were accidentally discovered by some English officers in the service of the prince, who preserved and protected them; and learning that they might find a shelter at Rouen, the officers, though of the reformed faith, protected their countrywomen in all honour and safety to Antwerp, and provided them with a passage to France. Arriving at Rouen in 1589, the sisters of Sion, though sunk in poverty, had another brief rest, till that city was besieged by Henry IV. At its capture, their house was confiscated, but they were assisted to hire a ship to convey them to Lisbon. They arrived at Lisbon in 1594, and were well received; soon finding themselves comfortably situated, with a pension from the king of Spain, a church, monastery, and other endowments. With the exception of being burned out in 1651, and the demolition of their convent by the great earthquake in 1755, the nuns of Sion, continually recruited by accessions from the British Islands, lived at Lisbon, in peaceful and easy circumstances, till the revolutionary wars of 1809. In that year, ten of them fled for refuge to England; and receiving a small pension from government, managed to subsist, through various vicissitudes and changes of residence, till finally dispersed by death and other causes. But those who remained at Lisbon, after suffering great privations—their convent being made an hospital for the Duke of Wellington's army—recovered all their former privileges at the end of the war; and being joined by several English ladies, became a flourishing community. The last scene of this eventful history is not the least strange, nor can it be better or more concisely told, than in the following paragraph from a London newspaper, published in September 1861:

'Nuns per Lisbon Steamer.—The *Sultan*, on Saturday, brought over twelve nuns of the ancient convent of Sion House, who return to England, having purchased an establishment at Spetisbury, in Dorsetshire. The sisters bring with them the antique stone cross which formerly stood over the gateway of Sion House at Isleworth, also several ancient statues which adorned the original church, and a portrait of Henry V. of England, their founder, which is said to be a likeness, and to have been painted during the monarch's lifetime. This order of Bridgetines has been settled at Lisbon since the year 1595; but there being now more religious liberty in England than in Portugal, and more prospects here for the prosperity of the order, the sisterhood have determined to return to their native land. The Duke of Northumberland, to whose ancestors the ancient Sion House, with its lands, was granted by Henry VIII., has given the poor nuns a handsome donation to assist them in defraying the expenses of their journey and change of establishment.'

SIR ROBERT SHERLEY.

Among the remarkable travellers of the fifteenth and sixteenth centuries, not the least so was the youngest son of Sir Thomas Sherley, of Wistenston, in Sussex. A love of adventure seems to have inspired both himself and his elder brother, Sir Anthony, from an early age; for who in those days could fail to be roused when the discoveries of Columbus, Sir Walter Raleigh, and other adventurous seamen were the daily topic? As soon as Robert Sherley was of sufficient age he set off on his travels, and wishing to understand the politics of various European courts, he attached himself to their sovereigns, and, for five years, was employed by them in various missions. The Emperor Rodolf, of Germany, was so much satisfied by the talents he evinced on one of his embassies, that he created him a count of the empire. His brother Anthony had, during this time, been in Persia, and thither Robert followed him, and was introduced at the court. The king, acknowledging the abilities of the stranger who had arrived, made him a general of artillery, and for ten years he fought against the Turks with distinguished bravery; bringing the newest improvements in cannon and arms generally under the notice of the government; but, at the same time, getting into considerable trouble through the envy of the Persian nobles, who could not bear to see honours showered upon a stranger.

A life in the east cannot be passed without romance, and so it fell out that the valour and noble conduct of Sir Robert inflamed the hearts of many a fair Persian, but above all of Teresia, the daughter of Ismay Hawn, prince of the city of Hercassia Major, whose sister was one of the queens of Persia. Much difficulty and opposition did the true lovers meet with, but at length they were married. After this, Sir Robert seems to have left the army, and returned to his former life as ambassador to various countries; among the rest, to Rome, where he went in 1609, and was received with every mark of distinction, magnificent entertainments being given to him. He then came to England, bringing his wife with him, who must have been much astonished with the manners of a country which probably none of her countrywomen had ever seen before. They were, however, received with great favour by James I., and especially by Henry, Prince of Wales, a young man always ready to welcome enterprising countrymen. Here his wife presented him with a son on the 4th of November 1611, on which occasion the happy father wrote the following letter to the prince, requesting him to stand godfather:

'Most renownede Prince—The great hounors and favors it hath pleased your Highnes to use towards me, hathe emboudede me to wrighte thes fewe lyns, which shal be to beseeche your Highnes to Christen a sonn which God hath geven me. Your Highnes in this shal make your servant happy, whose whole loudginge is to doe your Highnes some segniolated servis worthy to be esteemed in your Prinsly breast. I have not the pen of Sissero [Cicero], yet want I not menes to sownde your Highnesse's worthy prayses into the ears of forran nattions and mighty princes;

and I assure myselfe your high-borne sperrit thirstes after Fame, the period of great princes' ambissiones. And further I will ever be your Highnes' most humbele and observaunt servant, ROBERT SHERLEY.'

This letter certainly does not give us a very high opinion of the ambassador's learning. He was said to be 'a famous general, but a wretched scholar; his patience was more philosophical than his intellect, having small acquaintance with the muses. Many cities he saw, many hills climbed over, and tasted many waters; yet Athens, Parnassus, Hippocrene, were strangers to him: his notion prompted him to other employments.' Yet in spite of this, the prince gave his godchild his own name, the queen taking the office of godmother; and when the father returned to Persia, he left his little boy under her care. Sherley was again in England in 1624, but with very sad results. A quarrel arose between him and the Persian ambassador, which caused the king to send them both back to Persia, to reconcile their differences. Whether the ambassador felt himself in the wrong, and durst not face his master, certain it is that he poisoned himself on the way; and Sir Robert being unable to gain a hearing and proper satisfaction from the court, died of a broken heart at the age of sixty-three. There is a portrait of him at Petworth, in his Persian dress; for it seems that he liked to appear in England in these foreign garments, as more graceful and picturesque than his national garb.

GILLES MENAGE.

Menage, in the earlier part of his life, was a lawyer, but though eminently successful as a pleader, he entered the church to acquire more leisure for his favourite pursuit of literature. A curious trial, on which he was engaged, affords a remarkable instance of justice overtaking a criminal, in what may be termed an unjust manner.

A country priest, of a notoriously violent and vicious character, had a dispute about money-matters with the tax-collector of the district; who soon afterwards disappearing, a strong suspicion arose that he had been murdered by the priest. About the same time, a man was executed for highway robbery, and his body gibbeted in chains by the roadside, as a warning to others. The relations of the highwayman came one night and took the body down, with the intention of burying it; but, being frightened by a passing patrol, they could do no more than sink it in a pond, not far from the priest's residence. Some fishermen, when drawing their nets, found the body, and the neighbours applying their previous suspicions to the then much disfigured body of the highwayman, alleged that it was that of the tax-collector. The priest was arrested, tried, and condemned, solemnly protesting against the injustice of his sentence, but, when the day of execution arrived, he admitted that he had perpetrated the crime for which he was about to suffer. Nevertheless, he said, I am unjustly condemned, for the tax-collector's body, with that of his dog, still lies buried in my garden, where I killed them both. On search being made, the bodies of the man and dog were found in the place described by the priest; and subsequent inquiries brought to light the secret of the body found in the pond.

RICHARD GIBSON.

On the 23d of July 1690, died Richard Gibson, aged seventy-five; and nineteen years afterwards, his widow died at the advanced age of eighty-nine. Nature thus, by length of years, compensated this compendious couple, as Evelyn terms them, for shortness of stature—the united heights of the two amounting to no more than seven feet. Gibson

RICHARD GIBSON.

was miniature-painter, in every sense of the phrase, as well as court-dwarf, to Charles I.; his wife, Ann Shepherd, was court-dwarf to Queen Henrietta Maria. Her majesty encouraged a marriage between these two clever but diminutive persons; the king giving away the bride, the queen presenting her with a diamond ring; while Waller, the court-poet, celebrated the nuptials in one of his prettiest poems.

'Design or chance make others wive,
But nature did this match contrive;
Eve might as well have Adam fled,
As she denied her little bed
To him, for whom Heaven seemed to frame
And measure out this little dame.'

The conclusion of the poem is very elegant.

'Ah Chloris! that kind nature, thus,
From all the world had severed us;
Creating for ourselves, us two,
As Love has me, for only you.'

The marriage was an eminently happy one. The little couple had nine children, five of whom lived to years of maturity, and full ordinary stature. Gibson had the honour of being drawing-master to Queen Mary and her sister Queen Anne. His works were much valued, and one of them was the innocent cause of a tragical event. This painting, representing the parable of the lost sheep, was

highly prized by Charles I., who gave it into the charge of Vandervort, the keeper of the royal pictures, with strict orders to take the greatest care of it. In obedience to these orders, the unfortunate man put the picture away so carefully, that he could not find it himself when the king asked for it a short time afterwards. Afraid or ashamed to say that he had mislaid it, Vandervort committed suicide by hanging. A few days after his death, the picture was found in the spot where he had placed it.

The courts of the Sultan and Czar are, we believe, the only European ones where dwarfs are still retained as fitting adjuncts to imperial state. The last court-dwarf in England was a German, named Coppernin, retained by the Princess of Wales, mother to George III.

CHRISTOBELLA, VISCOUNTESS SAY AND SELE.

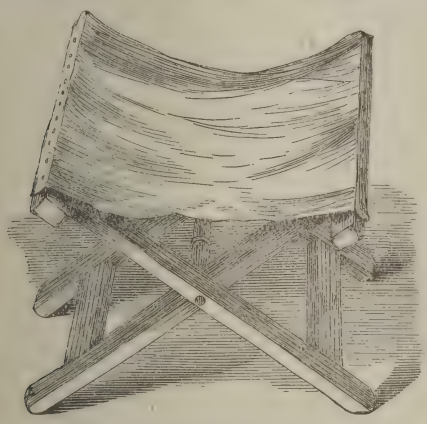
This lady, who died on 23d of July 1789, in the ninety-fifth year of her age, was remarkable for her vivacity and sprightliness, even to extreme old age. She was the eldest daughter and coheir of Sir Thomas Tyrrell, Bart. of Castlethorpe, Bucks. She was thrice married: first, to John Knapp, Esq., of Cumner, Berkshire; secondly, to John Pigott, Esq., of Doddershall House, in the parish of Quainton, Bucks; and lastly, to Richard Fiennes, Viscount Say and Sele. Mr Pigott, her second husband, left her, in dowry for life, his family estates, and Doddershall House became her ordinary place of residence. It is a fine old mansion, built in 1639, in the Elizabethan style, and contains some spacious rooms, with much curious and interesting carvings, and antique furniture. Here it was that, after the death of her third husband, when she was at least eighty-six years old, she used frequently to entertain large social parties, and her balls were the gayest and pleasantest in the county. She was the life of all her parties; she still loved the company of the young, and often seemed the sprightliest among them; she was still passionately devoted to dancing, and practised it with grace and elegance, even when many far her juniors, were sinking into the decrepitude of age. Gray, wishing to have a fling at Sir Christopher Hatton's late love of gaiety, sings:

> 'Full oft within these spacious walls,
> When he had fifty winters o'er him,
> My grave lord-keeper led the brawls,
> The seals and maces danced before him.'

But men of fifty were mere boys to Lady Say and Sele, when she gaily tripped it 'on the light fantastic toe,' in her own ball-room at Doddershall. It was truly delicious to see her ladyship at eighty-eight, and her youthful partner of sixty-five, merrily leading the country-dance, or bounding away in the cotillon, or gracefully figuring a fashionable minuet.

> 'And around, and around, and around they go,
> Heel to heel, and toe to toe,
> Prance and caper, curvet and wheel,
> Toe to toe, and heel to heel.
> 'Tis merry, 'tis merry, Sir Giles, I trow,
> To dance thus at sixty, as we do now.'

When her ladyship was about ninety, she used to say, that she 'had chosen her first husband for love, her second for riches, and her third for rank, and that she had now some thoughts of beginning again in the same order.' 'I have always hitherto,' she continued, 'been able to secure the best dancer in the neighbourhood for my partner, by sending him an annual present of a haunch or two of venison; but latterly, I begin to think he has shewn a preference for younger ladies; so, I suppose, I must increase my bribe, and send him a whole buck at a time, instead of a haunch.' Her exact age was not known, for she most carefully concealed it, and it is said, even caused the record of her baptism to be erased from the parish-register. She was buried in the church at Grendon-Underwood, the burial-place of the Pigott family, and the inscription on her monument describes her as ninety-four, but it was generally believed that she was above a hundred when she died.



There is a portrait of her at Doddershall, and Pope, who visited her in the time of her second husband, is said to have written some verses in her praise with a diamond on the pane of a window, which unfortunately has been destroyed. Addison, who also visited at Doddershall, is supposed to have taken it as his model for an old manor-house. It is only an act of justice to Lady Say and Sele to mention, that while she loved gay recreations, she was not unmindful of the wants of the poor. She was benevolent while living, and in her will, dated two years before her death, she bequeathed large sums of money for the endowment of some excellent charities for the poor of the several parishes with which she was connected.

'THE CASTING OF THE STOOLS.'

The 23d of July 1637 is the date of an event of a semi-ludicrous character, which may be considered as the opening of the civil war. By a series of adroit measures, James I. contrived to introduce bishops into the Scotch church. His son, Charles I., who was altogether a less dexterous, as well as a more arbitrary ruler, wished to complete the change by bringing in a book of canons and a liturgy. He was backed up by his great councillor Archbishop Laud, whose tendencies were to something like Romanising even the English church. Between them, a service-book, on the basis of the English one, but said to include a few Romish peculiarities besides, was prepared in 1636 for the Scotch church, which was thought to be too much under awe of the royal power to make any resistance. In reality, while a certain deference had been paid to the king's will in religious matters, there was a large amount of discontent in the minds of both clergy and people. The Scotch had all along, from the Reformation, had a strong predilection for evangelical doctrines and a simple and informal style of worship. Bishops ruling in the church-courts they had, with more or less unwillingness, submitted to; but an interference with their ordinary Sunday-worship in the churches was too much for their patience. The king was ill-informed on the subject, or he would never have committed himself to such a dangerous innovation.

On the day mentioned, being Sunday, the service-book was, by an imperious command from the king, to be read in every parish-church in Scotland. Before the day arrived, the symptoms of popular opposition appeared almost everywhere so ominous, that few of the clergy were prepared to obey the

order. In the principal church of Edinburgh, the chancel of the old cathedral of St Giles, which contained the seats of the judges, magistrates, and other authorities, the liturgy was formally introduced under the auspices of the bishop, dean, and other clergy. Here, if anywhere, it might have been expected that the royal will would have been implicitly carried out. And so it would, perhaps, if there had been only a congregation of official dignitaries. But the body of the church was, in reality, filled by a body of the common sort of people, including a large proportion of citizens' wives and their maid-servants—Christians of vast zeal, and comparatively safe by their sex and their obscurity. There were no pews in those days; each godly dame sat on her own chair or clasp-stool, brought to church on purpose. When the dean, Mr James Hannay, opened the service-book and began to read the prayers, this multitude was struck with a horror which defied all control. They raised their voices in discordant clamours and abusive language, denouncing the dean as of the progeny of the devil, and the bishop as a belly-god, calling out that it was rank popery they were bringing in. A strenuous female (Jenny Geddes) threw her stool at the dean's head, and whole

'JENNY GEDDES'S STOOL.'
From the Antiquarian Museum, Edinburgh.*

sackfuls of small clasp-Bibles followed. The bishop from the pulpit endeavoured to calm the people, but in vain. A similar 'ticket of remembrance' to that aimed at the dean was levelled at him, but fell short of its object. The magistrates from their gallery made efforts to quell the disturbance—all in vain; and they were obliged to clear out the multitude by main force, before the reading of the liturgy could be proceeded with.

After the formal dismissal of the congregation, the bishop was mobbed on the street, and narrowly escaped with his life. It became apparent to the authorities that they could not safely carry out the royal instructions, and they wrote to court in great anxiety, shewing in what difficulties they were placed. Had the king tacitly withdrawn the service-book, the episcopal arrangements might have held their ground. He pressed on; a formal opposition from the people of Scotland arose, and never rested till the whole policy of the last forty years had been undone. In short, the civil war, which ended in the destruction of the royal government twelve years after, might be said to have begun with the Casting of the Stools in St Giles's Kirk.

* Strange as it may appear, there is tolerably good evidence that the stool here depicted is identical with the one which was thrown at the dean.

LONDON MUG-HOUSES AND THE MUG-HOUSE RIOTS.

On the 23d of July 1716, a tavern in Salisbury Court, Fleet Street, was assailed by a great mob, evidently animated by a deadly purpose. The house was defended, and bloodshed took place before quiet was restored. This affair was a result of the recent change of dynasty. The tavern was one of a set in which the friends of the newly acceded Hanover family assembled, to express their sentiments and organise their measures. The mob was a Jacobite mob, to which such houses were a ground of offence. But we must trace the affair more in detail.

Amongst the various clubs which existed in London at the commencement of the eighteenth century, there was not one in greater favour than the Mug-house Club, which met in a great hall in Long Acre, every Wednesday and Saturday, during the winter. The house had got its name from the simple circumstance, that each member drank his ale (the only liquor used) out of a separate mug. There was a president, who is described in 1722 as 'a grave old gentleman in his own gray hairs, now full ninety years of age.' A harper sat occasionally playing at the bottom of the room. From time to time, a member would give a song. Healths were drunk, and jokes transmitted along the table. Miscellaneous as the company was—and it included barristers as well as trades-people—great harmony prevailed. In the early days of this fraternity there was no room for politics, or anything that could sour conversation.*

By and by, the death of Anne brought on the Hanover succession. The Tories had then so much the better of the other party, that they gained the mob on all public occasions to their side. It became necessary for King George's friends to do something in counteraction of this tendency. No better expedient occurred to them, than the establishing of mug-houses, like that of Long Acre, throughout the metropolis, wherein the friends of the Protestant succession might rally against the partizans of a popish pretender. First, they had one in St John's Lane, chiefly under the patronage of a Mr Blenman, a member of the Middle Temple, who took for his motto, 'Pro rege et lege;' then arose the Roebuck mug-house in Cheapside, the haunt of a fraternity of young men who had been organised for political action before the end of the late reign. According to a pamphlet on the subject, dated in 1717, 'The next mug-houses opened in the city were at Mrs Read's coffee-house in Salisbury Court, in Fleet Street, and at the Harp in Tower Street, and another at the Roebuck in Whitechapel. About the same time, several other mug-houses were erected in the suburbs, for the reception and entertainment of the like loyal societies; viz., one at the Ship, in Tavistock Street, Covent Garden, which is

* [Macky's] *Journey through England*, i. 271.

mostly frequented by loyal officers of the army; another at the Black Horse, in Queen Street, near Lincoln's-Inn-Fields, set up and carried on by gentlemen, servants to that noble patron of loyalty, to whom this vindication of it is inscribed [the Duke of Newcastle]; a third was set up at the Nag's Head, in James's Street, Covent Garden; a fourth at the Fleece, in Burleigh Street, near Exeter Exchange; a fifth at the Hand and Tench, near the Seven Dials; several in Spittlefields, by the French refugees; one in Southwark Park; and another in the Artillery Ground.' Another of the rather celebrated mug-houses was the Magpie, without Newgate, which still exists in the Magpie and Stump, in the Old Bailey. At all of these houses

A LONDON MUG-HOUSE.

it was customary in the forenoon to exhibit the whole of the mugs belonging to the establishment in a range over the door—the best sign and attraction for the loyal that could have been adopted, for the White Horse of Hanover itself was not more emblematic of the new dynasty than was—the Mug.

It was the especial age of clubs, and the frequenters of these mug-houses formed themselves into societies, or clubs, known generally as the Mug-house Clubs, and severally by some distinctive name or other, and each club had its president to rule its meetings and keep order. The president was treated with great ceremony and respect: he was conducted to his chair every evening at about seven o'clock, or between that and eight, by members carrying candles before and behind him, and accompanied with music. Having taken a seat, he appointed a vice-president, and drank the health of the company assembled, a compliment which the company returned. The evening was then passed in drinking successively loyal and other healths, and in singing songs. Soon after ten, they broke up, the president naming his successor for the next evening, and, before he left the chair, a collection was made for the musicians.

These clubs played a very active part in the violent political struggles of the time. The Jacobites had laboured with much zeal to secure the alliance of the street-mob, and they had used it with great effect, in connection with Dr Sacheverell, in overthrowing Queen Anne's Whig government, and paving the way for the return of the exiled family. Disappointment at the accession of George I. rendered the party of the Pretender more unscrupulous, the mob was excited to go to greater lengths, and the streets of London were occupied by an infuriated rabble, and presented nightly a scene of riot such as can hardly be imagined in our quiet times. It was under these circumstances that the mug-house clubs volunteered, in a very disorderly manner, to be the champions of order, and with this purpose it became a part of their evening's entertainment to march into the street and fight the Jacobite mob. This practice commenced in the autumn of 1715, when the club called the Loyal Society, which met at the Roebuck, in Cheapside, distinguished itself by its hostility to Jacobitism. On one occasion, at the period of which we are now speaking, the members of this society, or the Mug-house Club of the Roebuck, had burned the Pretender in effigy. Their first conflict with the mob recorded in the newspapers occurred on the 31st of October 1715. It was the birthday of the Prince of Wales, and was celebrated by illuminations and bonfires. There were a few Jacobite alehouses, chiefly situated on Holborn Hill [Sacheverell's parish], and in Ludgate Street; and it was probably the frequenters of the Jacobite public-house in the latter locality who stirred up the mob on this occasion to raise a riot on Ludgate Hill, put out the bonfire there, and break the windows which were illuminated. The Loyal Society men, receiving intelligence of what was going on, hurried to the spot, and, in the words of the newspaper report, 'soundly thrashed and dispersed' the rioters. The 4th of November was the anniversary of the birth of King William III., and the Jacobite mob made a large bonfire in the Old Jury, to burn an effigy of that monarch; but the mug-house men came upon them again, gave them 'due chastisement with oaken plants,' demolished their bonfire, and carried King William in triumph to the Roebuck. Next day was the commemoration of gunpowder treason, and the loyal mob had its pageant. A long procession was formed, having in front a figure of the infant Pretender, accompanied by two men bearing each a warming-pan, in allusion to the story about his birth, and followed by effigies, in gross caricature, of the pope, the Pretender, the Duke of Ormond, Lord Bolingbroke, and the Earl of Mar, with halters round their necks, and all of which were to be burned in a large bonfire made in Cheapside. The procession, starting from the Roebuck, went through Newgate Street, and up Holborn Hill, where they compelled the bells of St Andrew's Church, of which Sacheverell was incumbent, to ring; thence through Lincoln's-Inn-Fields and Covent Garden to the gate of St James's palace; returning by way of Pall-Mall and the Strand, and through St Paul's Churchyard. They had met with no interruption on their way, but on their return to Cheapside, they found that, during their absence, that quarter had been invaded by the Jacobite mob, who had carried away all the materials which had been collected for the bonfire. Thus the various anniversaries became, by such

demonstrations, the occasions for the greatest turbulence; and these riots became more alarming, in consequence of the efforts which were made to increase the force of the Jacobite mob.

On the 17th of November, of the year just mentioned, the Loyal Society met at the Roebuck, to celebrate the anniversary of the accession of Queen Elizabeth; and, while busy with their mugs, they received information that the Jacobites, or, as they commonly called them, the Jacks, were assembled in great force in St Martin's-le-Grand, and preparing to burn the effigies of King William and King George, along with the Duke of Marlborough. They were so near, in fact, that their party-shouts of High Church, Ormond, and King James, must have been audible at the Roebuck, which stood opposite Bow Church. The 'Jacks' were starting on their procession, when they were overtaken in Newgate Street by the mug-house men from the Roebuck, and a desperate encounter took place, in which the Jacobites were defeated, and many of them were seriously injured. Meanwhile the Roebuck itself had been the scene of a much more serious tumult. During the absence of

MUG-HOUSE RIOT.

the great mass of the members of the club, another body of Jacobites, much more numerous than those engaged in Newgate Street, suddenly assembled and attacked the Roebuck mug-house, broke its windows and those of the adjoining houses, and with terrible threats, attempted to force the door. One of the few members of the Loyal Society who remained at home, discharged a gun upon those of the assailants who were attacking the door, and killed one of their leaders. This, and the approach of the lord mayor and city officers, caused the mob to disperse; but the Roebuck was exposed to continued attacks during several following nights, after which the mobs remained tolerably quiet through the winter.

With the month of February 1716, these riots began to be renewed with greater violence than ever, and large preparations were made for an active mob-campaign in the spring. The mug-houses were refitted, and re-opened with ceremonious entertainments, and new songs were composed to encourage and animate the clubs. Collections of these mug-house songs were printed in little volumes, of which copies are still preserved, though they now come under the class of rare books. The Jacobite mob was again heard gathering in the

streets by its well-known signal of the beating of marrow-bones and cleavers, and both sides were well furnished with staves of oak, their usual arms, for the combat, although other weapons, and missiles of various descriptions, were in common use One of the mug-house songs gives the following account of the way in which these riots were carried on:

'Since the Tories could not fight,
And their master took his flight,
They labour to keep up their faction;
With a bough and a stick,
And a stone and a brick,
They equip their roaring crew for action.

Thus in battle-array,
At the close of the day,
After wisely debating their plot,
Upon windows and stall
They courageously fall,
And boast a great victory they've got.

But, alas! silly boys!
For all the mighty noise
Of their "High Church and Ormond for ever!"
A brave Whig, with one hand,
At George's command,
Can make their mightiest hero to quiver.'

One of the great anniversaries of the Whigs was the 8th of March, the day of the death of King William; and with this the more serious mug-house riots of the year 1716 appear to have commenced. A large Jacobite mob assembled to their old watch-word, and marched along Cheapside to attack the Roebuck; but they were soon driven away by a small party of the Loyal Society, who met there. The latter then marched in procession through Newgate Street, paid their respects to the Magpie as they passed, and went through the Old Bailey to Ludgate Hill. On their return, they found that the Jacobite mob had collected in great force in their rear, and a much more serious engagement took place in Newgate Street, in which the 'Jacks' were again beaten, and many persons sustained serious personal injury. Another great tumult, or rather series of tumults, occurred on the evening of the 23d of April, the anniversary of the birth of Queen Anne, during which there were great battles both in Cheapside and at the end of Giltspur Street, in the immediate neighbourhood of the two celebrated mug-houses, the Roebuck and the Magpie, which shews that the Jacobites had now become enterprising. Other great tumults took place on the 29th of May, the anniversary of the Restoration, and on the 10th of June, the Pretender's birthday. From this time the Roebuck is rarely mentioned, and the attacks of the mob appear to have been directed against other houses. On the 12th of July, the mug-house in Southwark, and, on the 20th, that in Salisbury Court (Read's Coffee-house), were fiercely assailed, but successfully defended. The latter was attacked by a much more numerous mob on the evening of the 23d of July, and after a resistance which lasted all night, the assailants forced their way in, and kept the Loyal Society imprisoned in the upper rooms of the house while they gutted the lower part, drank as much ale out of the cellar as they could, and let the rest run out. Read, in desperation, had shot their ringleader with a blunderbuss, in revenge for which they left the coffeehouse-keeper for dead; and they were at last with difficulty dispersed by the arrival of the military. The inquest on the dead man found a verdict of wilful murder against Read; but, when put upon his trial, he was acquitted, while several of the rioters, who had been taken, were hanged. This result appears to have damped the courage of the rioters, and to have alarmed all parties, and we hear no more of the mug-house riots. Their incompatibility with the preservation of public order was very generally felt, and they became the subject of great complaints. A few months later, a pamphlet appeared, under the title of *Down with the Mug, or Reasons for Suppressing the Mug-houses*, by an author who only gave his name as Sir H. M.; but who seems to have shewn so much of what was thought to be Jacobite spirit, that it provoked a reply, entitled *The Mug Vindicated.*

But the mug-houses, left to themselves, soon became very harmless.

BLOOMER COSTUME.

The originator of this style of dress was Mrs Amelia Bloomer, the editor of a temperance journal named *The Lily*, which was published at Seneca Falls, New York. A portrait of her, exemplifying her favourite costume, is given on the following page, from a photograph taken by Mr T. W. Brown, Auburn, New York. The dress was first brought practically before the notice of the world, at a ball held on the 23d of July 1851, at the cotton-manufacturing town of Lowell, Massachusetts. It was an attempt to substitute for the cumbrous, inconvenient, inelegant, and in many other respects objectionable dress which then and has since prevailed, one of a light, graceful, and convenient character. In no part of the world, perhaps, would such a reform have been attempted but in one where women had for some time been endeavouring to assert an individuality and independence heretofore unknown to the meeker sex. But, like many other reformers, Mrs Bloomer lived before her proper day. In the pleading which she made for the proposed change in her magazine, she defended it from the charge of being either immodest or inelegant. She there adverts to the picturesque dress of the Polish ladies, with high fur-trimmed boots, and short tunic skirt: and she asks: 'If delicacy requires that the skirt should be long, why do our ladies, a dozen times a day, commit the indelicacy of raising their dresses, which have already been sweeping the side-walks, to prevent their draggling in the mud of the streets? Surely a few spots of mud added to the refuse of the side-walks, on the hem of their garment, are not to be compared to the charge of indelicacy, to which the display they make might subject them!' It may here be mentioned, in illustration of this matter, that the streets of American cities are kept much less carefully cleaned than those of our British cities.

The authorities in the new fashion left the upper portion of the dress to be determined according to the individual taste of the wearer; but Mrs Bloomer described the essential portion as follows: 'We would have a skirt reaching down to nearly half-way between the knee and the ankle, and not made quite so full as is the present fashion. Underneath this skirt, trousers moderately full, in fair, mild weather, coming down to the ankle (not

instep), and there gathered in with an elastic band. The shoes or slippers to suit the occasion. For winter, or wet weather, the trousers also full, but coming down into a boot, which should rise some three or four inches at least above the ankle. This boot should be gracefully sloped at the upper edge, and trimmed with fur, or fancifully embroidered, according to the taste of the wearer. The material might be cloth, morocco, moose-skin, &c., and water-proof, if desirable.' The costume-reformer adduced many advantages which would follow the use of this kind of dress. There would be less soiling from the muddy state of the streets; it would be cheaper than an ordinary dress, as having a less quantity of material in it; it would be more durable, because the lower edge of the skirt would not be exposed to attrition upon the ground; it would be more convenient, owing to less frequent changes to suit the weather; it would require a less bulky wardrobe; it could more easily be made cooler in summer, and warmer in winter, than ladies' ordinary dresses; and it would be conducive to health, by the avoidance of damp skirts hanging about the feet and ankles in wet weather. Some of these arguments, it may be mentioned, were adduced by the editress herself, some by a Boston physician, who wrote in the *Lily*.

BLOOMER COSTUME.

The fashion did not fail to make itself apparent in various parts of the United States. The *Washington Telegraph*, the *Lycoming Gazette*, the *Hartford Times*, the *Rochester Daily Times*, the *Syracuse Journal*, and other newspapers, noticed the adoption of the costume at those places; and generally with much commendation, as having both elegance and convenience to recommend it, and not being open to any charge of indelicacy, except by a misuse of that word. In the autumn of the same year, an American lady lectured on the subject in London, dressed in black satin jacket, skirt, and trousers, and urged upon English ladies the adoption of the new costume; but this, and all similar attempts in England, failed to do more than raise a foolish merriment on the subject. Even in America the Bloomer Costume, as it was called, speedily became a thing of the past. The same fate overtook the monstrosity of cumbrous skirts, which afterwards in all countries became more and more monstrous, until men were beginning to ask what over-proportion of the geographical area the ladies meant to occupy. To revive a joke of John Wilkes—Mrs Bloomer took the sense of the ward on the subject; but Fashion took the *non*-sense, and carried it ten to one.

JULY 24.

St Christina, virgin and martyr, beginning of 4th century. St Lewine of Britain, virgin and martyr. St Declan, first bishop of Ardmore, Ireland, 5th century. St Lupus, bishop of Troyes, confessor, 478. Saints Wulfhad and Ruffin, martyrs, about 670. Saints Romanus and David, patrons of Muscovy, martyrs, 1010. St Kinga or Cunegundes of Poland, 1292. St Francis Solano, confessor, 16th century.

Born.—Roger Dodsworth, eminent antiquary, 1585, *Newton Grange, Yorkshire;* Rev. John Newton, evangelical divine, 1725, *London;* John Philpot Curran, distinguished Irish barrister, 1750.

Died.—Caliph Abubeker, first successor of Mohammed, 634, *Medina;* Don Carlos, son of Philip II. of Spain, died in prison, 1568; Alphonse des Vignoles, chronologist, 1744, *Berlin;* George Vertue, eminent engraver and antiquary, 1756, *London;* John Dyer, poet, author of *Grongar Hill*, 1758, *Coningsby, Lincolnshire;* Dr Nathaniel Lardner, author of *Credibility of the Gospel History*, 1768, *Hawkhurst, Kent;* Jane Austen, novelist, 1817, *Winchester;* Armand Carrel, French political writer, died in consequence of wounds in a duel, 1836.

DON CARLOS.

The uncertainty which hangs over the fate of many historical personages, is strikingly exemplified in the case of Don Carlos. That he died in prison at Madrid, on the 24th or 25th of July, is undoubted; but much discrepancy of opinion has prevailed as to whether this event arose from natural causes, or the death-stroke of the executioner, inflicted by the order of his own father, Philip II.

The popular account—and, it must also be added, that given by the majority of historians—is that the heir to the Spanish throne met his death by violent

means. A wayward and impulsive youth, but, at the same time, brave, generous, and true hearted, his character presents a most marked contrast to that of the cold-blooded and bigoted Philip, between whom and his son it was impossible that any sympathy could exist. The whole course of the youth's upbringing seems to have been in a great measure a warfare with his father; but the first deadly cause of variance, was the marriage of the latter with the Princess Elizabeth of France, who had already been destined as the bride of Don Carlos himself. This was the third time that Philip II. had entered the bonds of matrimony. His first wife, Mary of Portugal, died in childbed of Don Carlos; his second was Mary of England, of persecuting memory; and his third, the French princess. By thus selfishly appropriating the affianced bride of another, whose love for her appears to have been of no ordinary description, the overpowering passion of jealousy was added to the many feelings of aversion with which he regarded his son. Many interviews are reported to have taken place between the queen and Don Carlos, but their intercourse appears always to have been of the purest and most Platonic kind. Other causes were contributing, however, to hurry the young prince to his fate. Naturally free and outspoken, his sympathies were readily engaged both on behalf of his father's revolted subjects in the Low Countries, and the Protestant reformers in his own and other nations. Part of his latter predilections has been traced to his residence in the monastery of St Just with his grandfather, the abdicated Charles V., with whom he was a great favourite, and who, as is alleged, betrayed a leaning to the Lutheran doctrines in his latter days. In regard to his connection with the burghers of the Netherlands, it is not easy to form a definite conclusion; but it appears to be well ascertained, that he regarded the blood-thirsty character of the Duke of Alva with abhorrence, and was determined to free the Flemings from his tyrannical sway. A sympathising letter from Don Carlos to the celebrated Count Egmont is said to have been found among the latter's papers when he and Count Horn were arrested. There seems, also, little reason to doubt that the prince had revolved a plan for proceeding to the Netherlands, and assuming the principal command there in person. This design was communicated by him to his uncle, Don Juan, a natural son of Charles V., who thereupon imparted it to King Philip. The jealous monarch lost no time in causing Don Carlos to be arrested and committed to prison, himself, it is said, accompanying the officers on the occasion. Subsequently to this, there is a considerable diversity in the accounts given by historians. By one class of writers, it is stated that the prince chafed so under the confinement to which he was subjected, that he threw himself into a burning fever, which shortly brought about his death, but not until he had made his peace with his father and the church. The more generally received account is that Philip, anxious to get rid of a son who thwarted so sensibly his favourite schemes of domination, consulted on the subject the authorities of the Inquisition, who gladly gave their sanction to Carlos's death, having long regarded him with aversion for his heretical leanings. Such a deed on the part of a parent, was represented to Philip as a most meritorious act of self sacrifice, and a reference was made to the paternal abnegation recorded in Scripture of Abraham. The fanaticism and interest of the Spanish monarch thus combined to overcome any scruples of conscience and filial love still abiding in his breast, and he signed the warrant for the execution of his son, which forthwith took place. The mode in which this was effected is also differently represented: one statement being that he was strangled, and another, that his veins were opened in a bath, after the manner of the Roman philosopher Seneca. The real truth of the sad story must ever remain a mystery; but enough has transpired to invest with a deep and romantic interest the history of the gallant Don Carlos, who perished in the flower of youthful vigour, at the early age of twenty-three, and to cast a dark shade on the memory of the vindictive and unscrupulous Philip II.

The story of Don Carlos has formed the subject of at least two tragedies—by Campustron, who transferred the scene to Constantinople, and, in room of Philip II., substituted one of the Greek emperors; and by Schiller, whose noble drama is one of the most imperishable monuments of his genius.

JOHN PHILPOT CURRAN.

Oratory is the peculiar gift of the Emerald Isle, and, among the crowd of celebrated men whom she can proudly point to, the name of Curran stands pre-eminent, whether we look at him as a most able lawyer, a first-rate debater, and, in a society boasting of Erskine, Macintosh, and Sheridan, the gayest wit and most brilliant conversationalist of the day. From the village of Newmarket, in Cork, of a poor and low origin, he, at nine years of age, attracted the attention of the rector, the Rev. Mr Boyse, who sent him to Middleton School, and then to Dublin, where he was 'the wildest, wittiest, dreamiest student of old Trinity;' and, in the event of his being called before the fellows for wearing a dirty shirt, could only plead as an excuse, that he had but one. Poverty followed his steps for some years after this; instead of briefs to argue before the judge, he was amusing the idle crowd in the hall with his wit and eloquence. 'I had a family for whom I had no dinner,' he says, 'and a landlady for whom I had no rent. I had gone abroad in despondence, I came home almost in desperation. When I opened the door of my study, where Lavater could alone have found a library, the first object that presented itself was an immense folio of a brief, and twenty gold guineas wrapped up beside it.'

As with many other great lawyers, this was the turning-point; his skill in cross-examination was wonderful, judge and jury were alike amused, while the perjured witness trembled before his power, and the audience were entranced by his eloquence. His first great effort was in 1794, in defence of Archibald Rowan, who had signed an address in favour of Catholic emancipation. In spite of the splendid speech of his advocate, he was convicted; but the mob outside were determined to chair their favourite speaker. Curran implored them to desist, but a great brawny fellow roared out: 'Arrah, blood and turf! Pat, don't mind the little

cratur; here, pitch him up this minute upon my showlder!' and thus was he carried to his carriage, and then drawn home. After the miserable rebellion of 1798, it fell to Curran's part to defend almost all the prisoners; and, being reminded by Lord Carleton that he would lose his gown, he replied with scorn: 'Well, my lord, his majesty may take the silk, but he must leave the *stuff* behind!' Most distressing was the task to a man of his sense of justice; the government arrayed against him, and every court filled with the military, yet with swords pointed at him, he cried: 'Assassinate me, you may; intimidate me, you cannot!' Added to this, came domestic sorrow. His beautiful daughter fell in love with the unfortunate Emmet, who was executed in 1803, and she could not survive the shock, but drooped gradually and died; an event which Moore immortalised in his songs, 'O breathe not his name, let it sleep in the shade;' and, 'She is far from the land where her young hero sleeps.' The gloom which had always affected Curran's mind became more settled; he resigned the Mastership of the Rolls in 1813, and sought alleviation in travelling, but in vain, his death took place at Brompton, on the 14th of October 1817. The witticisms which are attributed to him are numberless. 'Curran,' said a judge to him, whose wig being a little awry, caused some laughter in court, 'do you see anything ridiculous in this wig?' 'Nothing but the head, my lord;' was the reply. One day, at dinner, he sat opposite to Toler, who was called the 'hanging judge.' 'Curran,' said Toler, 'is that hung-beef before you?' 'Do you *try* it, my lord, and then it's sure to be!' Lundy Foot, the celebrated tobacconist, asked Curran for a Latin motto for his coach. 'I have just hit on it,' said Curran, 'it is only two words, and it will explain your profession, your elevation, and contempt for the people's ridicule; and it has the advantage of being in two languages, Latin and English, just as the reader chooses. Put up, "Quid rides," upon your carriage.' The hatred he always felt for those who betrayed their country by voting for the Union, is shewn in the answer he gave to a lord who got his title for his support of the government measure. Meeting Curran near the Parliament House, in College Green, he said: 'Curran, what do they mean to do with this useless building? For my part, I hate the very sight of it.' 'I do not wonder at it, my lord,' said Curran contemptuously, 'I never yet heard of a *murderer* who was not afraid of a *ghost*.'

CAPTURE AND DEFENCE OF GIBRALTAR BY THE BRITISH.

In July 1704, a capture was made, the importance of which has never ceased to be felt: viz., that of Gibraltar by the British. No other rock or headland in Europe, perhaps, equals Gibraltar for commanding position and importance. Situated at the mouth of the Mediterranean, where that celebrated sea is little more than twenty miles wide, the rock has a dominating influence over the maritime traffic of those waters. Not that a cannon-ball could reach a ship at even half that distance; but still the owners of a fortified headland so placed, must necessarily possess great advantages in the event of any hostilities in that sea. The rock is almost an island, for it is connected with the mainland of Spain only by a low isthmus of sand; it is, in fact, a promontory about seven miles in circumference, and 1300 feet high. At present, a bit of neutral-ground on the sandy isthmus separates Spain from it, politically though not geographically; but in former times, it always belonged to the government, whatever it may have been, of the neighbouring region. The Moors crossed over from Africa, in the eighth century, dethroned the Christian king of Spain, and built a castle on the rock, the ruins of which may still be seen. The Moslems held their rule for 600 years. Gibraltar then changed hands three times during the fourteenth century. After 1492, the Moors never held it. The Christian kings of Spain made various additions to the fortifications during the sixteenth and seventeenth centuries; but still the defences bore no comparison with those which have become familiar to later generations. Early in the eighteenth century, there was a political contest among the European courts, which led England to support the pretensions of an Austrian prince, instead of those of a Bourbon, to the crown of Spain; and, as a part of the arrangement then made, a combined force proceeded to attack Gibraltar. The Prince of Hesse Darmstadt commanded the troops, and Sir George Rooke the fleet. It is evident either that the Spaniards did not regard the place as of sufficient importance to justify a strenuous defence, or that the defence was very ill-managed; for the attack, commenced on the 21st of July, terminated on the 24th by the surrender of the stronghold. From that day to this, Gibraltar has never for one moment been out of English hands. When it was lost, the Spaniards were mortified and alarmed at their discomfiture; and for the next nine years they made repeated attempts to recapture it, by force and stratagem. On one occasion they very nearly succeeded. A French and Spanish force having been collected on the isthmus, a goat-herd offered to shew them a path up the sloping sides of the rock, which he had reason to believe was unknown to the English. This offer being accepted, 500 troops ascended quietly one dark night, and took shelter in an indenture or hollow called by the Spaniards the *silleta*, or 'little chair.' At day-break, next morning, they ascended higher, took the signal-station, killed the guard, and anxiously looked round for the reinforcements which were to follow. These reinforcements, however, never came, and to this remissness was due the failure of the attack; for the English garrison, aroused by the surprise, sallied forth, and drove the invaders down the rock again. The *silleta* was quickly filled up, and the whole place made stronger than ever. When the Peace of Utrecht was signed in 1713, Gibraltar was confirmed to the English in the most thorough and complete way; for the tenth article of that celebrated treaty says:—'The Catholic king (i. e., of Spain) doth hereby, for himself, his heirs, and successors, yield to the crown of Great Britain the full and entire property of the town and castle of Gibraltar, together with the port, fortifications, and forts thereunto belonging; and he gives up the said property to be held and enjoyed absolutely, with all manner of right, for

ever, without any exception or impediment whatsoever.' Towards the close of the reign of George I., about 1726, there were great apprehensions that the government would yield to the haughty demands of the king of Spain, that Gibraltar should be given up; addresses to the king, deprecating such a step, were presented by lord mayors and mayors, in the names of the inhabitants of London, York, Exeter, Yarmouth, Winchester, Honiton, Dover, Southampton, Tiverton, Hertford, Malmesbury, Taunton, Marlborough, and other cities and towns. Owing to this or other causes, the king remained firm, and Gibraltar was not surrendered. In 1749, a singular attempt was

ROCK OF GIBRALTAR.

made in England to advocate such a surrender. A pamphlet appeared under the title, *Reasons for Giving up Gibraltar*, in which the writer said: 'I can demonstrate that the use of Gibraltar is only to support and enrich this or that particular man; that it is a great expense to the nation; that the nation is thereby singularly dishonoured, and our trade rather injured, than protected.' It appears that there was gross corruption at that time on the part of the governor and other officials; and that merchants, incensed at the profligate and vexatious management of the port, asserted that trade would be better if the place were in Spanish hands than English—differing so far from a few modern theorists, who have advocated the surrender of Gibraltar on grounds of moral right and fairness towards Spain. There must have been some other agitations, of a similar kind, at that period; for both Houses of parliament addressed George II., praying him not to cede Gibraltar. The 'Key to the Mediterranean,' as it has been well called, was besieged unavailingly by Spain in 1727, and by Spain and France in 1779—since which date no similar attempt has been made. The siege, which was commenced in 1779, and not terminated till 1783, was one of the greatest on record. The grand attack was on the 13th of September 1782. On the land-side were stupendous batteries, mounting 200 pieces of heavy ordnance, supported by a well-appointed army of 40,000 men, under the Duc de Crillon; on the sea-side were the combined fleets of France and Spain, numbering 47 sail of the line, besides numerous frigates and smaller vessels, and 10 battering-ships of formidable strength. General Elliott's garrison threw 5000 *red-hot* shot on that memorable day; and the attack was utterly defeated at all points.

THE FIRST ROAD-TRAMWAY.

On the 24th of July 1801, a joint-stock undertaking was completed, which marks an important era in the history of railways. It was the Surrey Iron Railway, from Wandsworth to Croydon, and thence southward in the direction of Merstham. We should regard it as a trifling affair if witnessed now: a train of donkeys or mules drawing small wagons of stone along a very narrow-gauge railway; but its significance is to be estimated in reference to the things of that day. At the coal-mines in the north of England, the fact had long been recognised, that wheels will roll over smooth iron more easily than over rough gravel or earth; and to take advantage of this circumstance, rails were laid down on the galleries, adits, and staiths. Certain improvements made in these arrangements in 1800 by Mr Benjamin Outram, led to the roads being termed *Outram roads;* and this, by an easy abbreviation, was changed to *tramroads*, a name that has lived ever since. Persons in various parts of England advocated the laying of tram-rails on common roads, or on roads purposely made from town to town; in order that upper-ground traffic might share the benefits already reaped by mining

operations. In 1800, Mr Thomas, of Denton, read a paper before the Literary and Philosophical Society of Newcastle-upon-Tyne, in which this view of the matter was ably advocated. In 1801, Dr James Anderson, of Edinburgh, in his *Recreations of Agriculture*, set forth, in very glowing terms, the anticipated value of horse-tramways.* 'Diminish carriage expenses by one farthing,' he said, 'and you widen the circle of intercourse; you form, as it were, a new creation, not only of stones and earth, trees and plants, but of men also, and, what is more, of industry, happiness, and joy.' In a less enthusiastic, and more practical strain, he proceeded to argue that the use of such tramways would lessen distances as measured by time, economise horse-power, lead to the improvement of agriculture, and lower the prices of commodities. The Surrey Iron Railway was not a very successful affair, commercially considered; but this was not due to any failure in the principle of construction adopted. In 1802, Mr Lovell Edgeworth, father of the eminent writer, Maria Edgeworth, proposed that passengers as well as minerals should be conveyed on such tramways: a suggestion, however, that was many years in advance of public opinion. When, however, it was found that one horse could draw a very heavy load of stone on the Surrey tramway, and that a smooth road was the only magic employed, engineers began to speculate on the vast advantages that must accrue from the use, on similar or better roads, of trains drawn by steam-power instead of horse-power. Hence the wonderful railway-system of our day. The Surrey iron-path has long been obliterated; it was bought up, and removed by the Brighton and Croydon Railway Companies.

FLEET MARRIAGES.

The *Weekly Journal* of June 29, 1723, says: 'From an inspection into the several registers for marriages kept at the several alehouses, brandy-shops, &c., within the Rules of the Fleet Prison, we find no less than thirty-two couples joined together from Monday to Thursday last without licenses, contrary to an express act of parliament against clandestine marriages, that lays a severe fine of £200 on the minister so offending, and £100 each on the persons so married in contradiction to the said statute. Several of the above-named brandy-men and victuallers keep clergymen in their houses at 20*s.* per week, hit or miss; but it is reported that one there will stoop to no such low conditions, but makes, at least, £500 per annum, of divinity-jobs after that manner.'

These marriages, rather unlicensed than clandestine, seem to have originated with the incumbents of Trinity Minories and St James's, Duke's Place, who claimed to be exempt from the jurisdiction of the bishop of London, and performed marriages without banns or license, till Elliot, rector of St James, was suspended in 1616, when the trade was taken up by clerical prisoners living within the Rules of the Fleet, and who, having neither cash, character, nor liberty to lose, became the ready instruments of vice, greed, extravagance, and libertinism. Mr Burn, who has exhausted the subject in his *History of Fleet Marriages*, enumerates eighty-nine Fleet parsons by name, of whom the most famous were John Gayman or Gainham, known as the 'Bishop of Hell'—a lusty, jolly man, vain of his learning; Edward Ashwell, a thorough rogue and vagabond; Walter Wyatt, whose certificate was rendered in the great case of Saye and Sele; Peter Symson; William Dan; D. Wigmore, convicted for selling spirituous liquors unlawfully; Starkey, who ran away to Scotland to escape examination in a trial for bigamy; and James Lando, one of the last of the tribe. The following are specimens of the style in which these matrimonial hucksters appealed for public patronage:

'G. R.—At the true chapel, at the old Red Hand and Mitre, three doors up Fleet Lane, and next door to the White Swan, marriages are performed by authority by the Rev. Mr Symson, educated at the university of Cambridge, and late chaplain to the Earl of Rothes.—*N.B.* Without imposition.'

'J. Lilley, at ye Hand and Pen, next door to the China-shop, Fleet Bridge, London, will be performed the solemnisation of marriages by a gentleman regularly bred at one of our universities, and lawfully ordained according to the institutions of the Church of England, and is ready to wait on any person in town or country.'

'Marriages with a license, certificate, and crown-stamp, at a guinea, at the New Chapel, next door to the China-shop, near Fleet Bridge, London, by a regular bred clergyman, and not by a Fleet parson, as is insinuated in the public papers; and that the town may be freed mistakes, no clergyman being a prisoner within the Rules of the Fleet, dare marry; and to obviate all doubts, the chapel is not on the verge of the Fleet, but kept by a gentleman who was lately chaplain on board one of his majesty's men-of-war,* and likewise has gloriously distinguished himself in defence of his king and country, and is above committing those little mean actions that some men impose on people, being determined to have everything conducted with the utmost decorum and regularity, such as shall always be supported on law and equity.'

Some carried on the business at their own lodgings, where the clocks were kept always at the canonical hour; but the majority were employed by the keepers of marriage-houses, who were generally tavern-keepers. The Swan, the Lamb, the Horse-shoe and Magpie, the Bishop-Blaise, the Two Sawyers, the Fighting-cocks, the Hand and Pen, were places of this description, as were the Bull and Garter and King's Head, kept by warders of the prison. The parson and landlord (who usually acted as clerk) divided the fee between them—unless the former received a weekly wage—after paying a shilling to the plyer or tout who brought in the customers. The marriages were entered in a pocket-book by the parson, and afterwards, on payment of a small fee, copied into the regular register of the house, unless the interested parties desired the affair to be kept secret.

The manners and customs prevalent in this

* Dr James Anderson, originally a Scotch farmer, by his periodical work, *The Bee*, published all through the years 1791, 2, and 3, might be considered as the first to exemplify a respectable cheap literature. His daughter was the wife of Mr Benjamin Outram, and these were the parents of the Bayard of India, Sir James Outram. Mrs Outram died recently at an advanced age.

* Lando, ex-chaplain to H.M.S. *Falkland*.

matrimonial mart are thus described by a correspondent of *The Grub Street Journal*, in 1735: 'These ministers of wickedness ply about Ludgate Hill, pulling and forcing people to some pedling alehouse or a brandy-shop to be married, even on a Sunday stopping them as they go to church, and almost tearing their clothes off their backs. To confirm the truth of these facts, I will give you a case or two which lately happened. Since midsummer last, a young lady of birth and fortune was deluded and forced from her friends, and by the assistance of a wry-necked, swearing parson, married to an atheistical wretch, whose life is a continued practice of all manner of vice and debauchery. And since the ruin of my relative, another lady of my acquaintance had like to have been trepanned in the following manner: This lady had appointed to meet a gentlewoman at the Old Play-house, in Drury Lane; but extraordinary business prevented her coming. Being alone when the play was done, she bade a boy call a coach for the city. One dressed like a gentleman helps her into it, and jumps in after her. "Madam," says he, "this coach was called for me, and since the

FLEET MARRIAGES.

weather is so bad, and there is no other, I beg leave to bear you company; I am going into the city, and will set you down wherever you please." The lady begged to be excused, but he bade the coachman drive on. Being come to Ludgate Hill, he told her his sister, who waited his coming but five doors up the court, would go with her in two minutes. He went, and returned with his pretended sister, who asked her to step in one minute, and she would wait upon her in the coach. The poor lady foolishly followed her into the house, when instantly the sister vanished, and a tawny fellow, in a black coat and a black wig, appeared. "Madam, you are come in good time, the doctor was just agoing!" "The doctor," says she, horribly frighted, fearing it was a madhouse, "what has the doctor to do with me?" "To marry you to that gentleman. The doctor has waited for you these three hours, and will be paid by you or that gentleman before you go!" "That gentleman," says she, recovering herself, "is worthy a better fortune than mine;" and begged hard to be gone. But Doctor Wryneck swore she should be married; or if she would not, he would still have his fee, and register the marriage for that night. The lady, finding she could not escape without money or a pledge, told them she liked the gentleman so well, she would certainly meet him to-morrow night, and gave them a ring as a pledge, "Which," says she, "was my mother's gift on her death-bed, enjoining that, if ever I married, it should be my wedding-ring;" by which cunning contrivance she was delivered from the black doctor and his tawny crew. Some time after this, I went with this lady and her brother in a coach to Ludgate Hill in the daytime, to see the manner of their picking up people to be married. As soon as our coach stopped near Fleet Bridge, up comes one of the myrmidons. "Madam," says he, "you want a parson?" "Who are you?" says I. "I am the clerk and register of the Fleet." "Shew me the chapel." At which comes a second, desiring me to go along with him. Says he: "That fellow will carry you to a pedling alehouse." Says a third: "Go with me, he will carry you to a brandy-shop." In the interim comes the doctor. "Madam," says he, "I'll do your job for you presently!" "Well, gentlemen," says I, "since you can't agree, and I

can't be married quietly, I'll put it off till another time;" and so drove away.' The truthfulness of this description is attested by Pennant: 'In walking along the street, in my youth, on the side next the prison, I have often been tempted by the question: "*Sir, will you be pleased to walk in and be married?*" Along this most lawless space was hung up the frequent sign of a male and female hand enjoined, with *Marriages performed within*, written beneath. A dirty fellow invited you in. The parson was seen walking before his shop; a squalid profligate figure, clad in a tattered plaid night-gown, with a fiery face, and ready to couple you for a dram of gin or a roll of tobacco.'—*Some Account of London*, 1793.

In 1719, Mrs Anne Leigh, an heiress, was decoyed from her friends in Buckinghamshire, married at the Fleet chapel against her consent, and barbarously ill-used by her abductors. In 1737, one Richard Leaver, being tried for bigamy, declared he knew nothing of the woman claiming to be his wife, except that one night he got drunk, and 'next morning found myself abed with a strange woman. "Who are you? how came you here?" says I. "Oh, my dear," says she, "we were married last night at the Fleet!"' These are but two of many instances in which waifs of the church and self-ordained clergymen, picking up a livelihood in the purlieus of the Fleet, aided and abetted nefarious schemers. For a consideration, they not only provided bride or bridegroom, but antedated marriages, and even gave certificates where no marriage took place. In 1821, the government purchased the registers of several of the marriage-houses, and deposited them with the Registrar of the Consistory Court of London; and in these registers we have proofs, under the hands of themselves and their clerks, of the malpractices of the Fleet parsons, as the following extracts will shew:

'5 Nov. 1742, was married Benjamin Richards, of the parish of St Martin's-in-the-Fields, Br. and Judith Lance, Do. sp. at the Bull and Garter, and gave [a guinea] for an antedate to March ye 11th in the same year, which Lilley comply'd with, and put 'em in his book accordingly, there being a vacancy in the book suitable to the time.'

'June 10, 1729.—John Nelson, of ye parish of St George, Hanover, batchelor and gardener, and Mary Barnes of ye same, sp. married. Cer. dated 5 November 1727, to please their parents.'

'Mr Comyngs gave me half-a-guinea to find a bridegroom, and defray all expenses. Parson, 2*s.* 6*d.* Husband do., and 5. 6 myself.' [We find one man married four times under different names, receiving five shillings on each occasion 'for his trouble.']

'1742, May 24.—A soldier brought a barber to the Cock, who, I think, said his name was James, barber by trade, was in part married to Elizabeth: they said they were married enough.'

'A coachman came, and was half-married, and would give but 3*s.* 6*d.*, and went off.'

'Edward —— and Elizabeth —— were married, and would not let me know their names.'

'The woman ran across Ludgate Hill in her shift.' [Under the popular delusion that, by so doing, her husband would not be answerable for her debts.]

'April 20, 1742, came a man and woman to the Bull and Garter, the man pretended he would marry ye woman, by w'ch pretence he got money to pay for marrying and to buy a ring, but left the woman by herself, and never returned; upon which J. Lilley takes the woman from the Bull and Garter to his own house, and gave her a certifycate, as if she had been married to the man.'

'1 Oct. 1747.—John Ferren, gent. ser. of St Andrew's, Holborn, Br and Deborah Nolan, do. sp. The supposed J. F. was discovered, after the ceremonies were over, to be in person a woman.'

'To be kept a secret, the lady having a jointure during the time she continued a widow.'

Sometimes the parsons met with rough treatment, and were glad to get off by sacrificing their fees. One happy couple stole the clergyman's clothes-brush, and another ran away with the certificate, leaving a pint of wine unpaid for. The following memorandums speak for themselves:

'Had a noise for four hours about the money.'

'Married at a barber's shop one Kerrils, for half-a-guinea, after which it was extorted out of my pocket, and for fear of my life, delivered.'

'The said Harronson swore most bitterly, and was pleased to say that he was fully determined to kill the minister, etc., that married him. *N. B.*—He came from Gravesend, and was sober!'

Upon one occasion the parson, thinking his clients were not what they professed to be, ventured to press some inquiries. He tells the result in a *Nota Bene:* 'I took upon me to ask what ye gentleman's name was, his age, and likewise the lady's name and age. Answer was made me, G—d— me, if I did not immediately marry them, he would use me ill; in short, apprehending it to be a conspiracy, I found myself obliged to marry them *in terrorem*.' However, the frightened rascal took his revenge, for he adds in a second *N.B.*, 'some material part was omitted!' Dare's *Register* contains the following: 'Oct. 2, 1743.—John Figg, of St John the Evangelist, gent., a widower, and Rebecca Wordwand, of ditto, spinster. *At ye same time gave her ye sacrament.*' This, however, is the only instance recorded of such blasphemous audacity.

The hymeneal market was not supported only by needy fortune-hunters and conscienceless profligates, ladies troubled with duns, and spinsters wanting husbands for reputation's sake. All classes flocked to the Fleet to marry in haste. Its registers contain the names of men of all professions, from the barber to the officer in the Guards, from the pauper to the peer of the realm. Among the aristocratic patrons of its unlicensed chapels we find Edward, Lord Abergavenny; the Hon. John Bourke, afterwards Viscount Mayo; Sir Marmaduke Gresham; Anthony Henley, Esq., brother of Lord Chancellor Northington; Lord Banff; Lord Montagu, afterwards Duke of Manchester; Viscount Sligo; the Marquis of Annandale; William Shipp, Esq., father of the first Lord Mulgrave; and Henry Fox, afterwards Lord Holland, of whose marriage Walpole thus writes to Sir Horace Mann: 'The town has been in a great bustle about a private match; but which, by the ingenuity of the ministry, has been made politics. Mr Fox fell in love with Lady Caroline Lenox (eldest daughter of the Duke of Richmond), asked her, was refused, and stole her. His father was a footman, her great-grandfather, a king—*hinc illæ lachrymæ!* All the blood-royal have been up in arms.' A few foreigners figure in the Fleet records, the most notable entry in which

an alien is concerned being this: '10 Aug. 1742.—Don Dominian Bonaventura, Baron of Spiterii, Abbott of St Mary, in Præto Nobary, chaplain of hon. to the king of the Two Sicilies, and knt. of the order of St Salvator, St James, and Martha Alexander, ditto, Br. and sp.' Magistrates and parochial authorities helped to swell the gains of the Fleet parsons; the former settling certain cases by sending the accused to the altar instead of the gallows, and the latter getting rid of a female pauper, by giving a gratuity to some poor wretch belonging to another parish to take her for better for worse.

From time to time, the legislature attempted to check these marriages; but the infliction of pains and penalties were of no avail so long as the law recognised such unions. At length Chancellor Hardwicke took the matter in hand, and in 1753 a bill was introduced, making the solemnisation of matrimony in any other but a church or chapel, and without banns or license, felony punishable by transportation, and declaring all such marriages null and void. Great was the excitement created; handbills for and against the measure were thrown broadcast into the streets. The bill was strenuously opposed by the opposition, led by Henry Fox and the Duke of Bedford, but eventually passed by a large majority, and became the law of the land from Lady-Day 1754, and so the scandalous matrimonial-market of the Fleet came to an end.*

MINT, SAVOY, AND MAY-FAIR MARRIAGES.

The Fleet chapels had competitors in the Mint, May-Fair, and the Savoy. In 1715, an Irishman, named Briand, was fined £2000 for marrying an orphan about thirteen years of age, whom he decoyed into the Mint. The following curious certificate was produced at his trial: 'Feb. 16, 1715, These are therefore, whom it may concern, that Isaac Briand and Watson Anne Astone were joined together in the holy state of matrimony (*Nemine contradicente*) the day and year above written, according to the rites and ceremonies of the church of Great Britain. Witness my hand, Jos. Smith, Cler.' In 1730, a chapel was built in May Fair, into which the Rev. Alexander Keith was inducted. He advertised in the public papers, and carried on a flourishing trade till 1742, when he was prosecuted by Dr Trebeck, and excommunicated. In return, he excommunicated the doctor, the bishop of London, and the judge of the Ecclesiastical Court. The following year, he was committed to the Fleet Prison; but he had a house opposite his old chapel fitted up, and carried on the business through the agency of curates. At this chapel, Lady Mary Wortley Montagu's worthless son was married; and here the impatient Duke of Hamilton was wedded with a ring from a bed-curtain, to the youngest of the beautiful Gunnings, at half-past twelve at night. When the marriage act was mooted, Keith swore that he would revenge himself upon the bishops, by taking some acres of land for a burying-ground, and underburying them all. He published a pamphlet against the measure, in which he states it was a common thing to marry from 200 to 300 sailors when the fleet came in, and consoles himself with the reflection, that if the alteration in the law should prove beneficial to the country, he will have the satisfaction of having been the cause of it, the compilers of the act having done it 'with the pure design' of suppressing his chapel. No less than sixty-one couples were united at Keith's chapel the day before the act came into operation. He himself died in prison in 1758. The Savoy Chapel did not come into vogue till after the passing of the marriage bill. On the 2d January 1754, the *Public Advertiser* contained this advertisement: 'By Authority.—Marriages performed with the utmost privacy, decency, and regularity at the Ancient Royal Chapel of St John the Baptist, in the Savoy, where regular and authentic registers have been kept from the time of the Reformation (being two hundred years and upwards) to this day. The expense not more than one guinea, the five-shilling stamp included. There are five private ways by land to this chapel, and two by water.' The proprietor of this chapel was the Rev. John Wilkinson (father of Tate Wilkinson, of theatrical fame), who fancying (as the Savoy was extra-parochial) that he was privileged to issue licenses upon his own authority, took no notice of the new law. In 1755, he married no less than 1190 couples. The authorities began at last to bestir themselves, and Wilkinson thought it prudent to conceal himself. He engaged a curate, named Grierson, to perform the ceremony, the licenses being still issued by himself, by which arrangement he thought to hold his assistant harmless. Among those united by the latter, were two members of the Drury Lane company. Garrick, obtaining the certificate, made such use of it that Grierson was arrested, tried, convicted, and sentenced to fourteen years' transportation, by which sentence 1400 marriages were declared void. In 1756, Wilkinson, making sure of acquittal, surrendered himself, and received the same sentence as Grierson, but died on board the convict-ship as she lay in Plymouth harbour, whither she had been driven by stress of weather.

* 'It is well you are married! How would my Lady Ailesbury have liked to be asked in a parish church for three Sundays running? I really believe she would have worn her weeds for ever rather than have passed through so impudent a ceremony! What do *you* think? But you will want to know the interpretation of this preamble. Why, there is a new bill, which, under the notion of preventing clandestine marriages, has made such a general rummage and reform in the office of matrimony, that every Strephon and Chloe will have as many impediments and formalities to undergo as a treaty of peace. Lord Bath invented the bill, but had drawn it so ill, that the chancellor was forced to draw a new one, and then grew so fond of his own creature, that he has crammed it down the throats of both Houses, though they gave many a gulp before they could swallow it.'—*Horace Walpole to Mr Conway, 22d May* 1753.

JULY 25.

St James the Great, the Apostle. St Christopher, martyr, 3d century. St Cucufas, martyr in Spain, 304. Saints Thea and Valentina, virgins, and St Paul, martyrs, 308. St Nissen, abbot of Mountgarret, Ireland.

ST JAMES THE GREAT.

The 25th of July is dedicated to St James the Great, the patron saint of Spain. According to legendary lore, James preached the gospel in Spain,

and afterwards returning to Palestine, was made the first bishop of Jerusalem. He suffered martyrdom by order of Herod Agrippa, in the year 44 A.D., shortly before the day of the Passover. Some Spanish converts, however, who had followed him to Jerusalem, rescued his holy relics, and conveyed them to Spain, where they were miraculously discovered in the eighth century. The Spaniards hold St James in the highest veneration, and if their history was to be believed, with good reason. At the battle of Clavijo, fought in the year 841 between Ramiro, king of Leon, and the Moors, when the day was going hard against the Christians, St James appeared in the field, in his own proper person, armed with a sword of dazzling splendour, and mounted on a white horse, having housings charged with scallop shells, the saint's peculiar heraldic cognizance; he slew sixty thousand of the Moorish infidels, gaining the day for Spain and Christianity. The great Spanish order of knighthood, Santiago de Espada—St James of the Sword—was founded in commemoration of the miraculous event; giving our historian Gibbon occasion to observe that, 'a stupendous metamorphosis was performed in the ninth century, when from a peaceful fisherman of the Lake of Gennesareth, the apostle James was transformed into a valorous knight, who charged at the head of Spanish chivalry in battles against the Moors. The gravest historians have celebrated his exploits; the miraculous shrine of Compostella displayed his power; and the sword of a military order, assisted by the terrors of the inquisition, was sufficient to remove every objection of profane criticism.'

The city of Compostella, in Galicia, became the chief seat of the order of St James, from the legend of his body having been discovered there. The peculiar badge of the order is a blood-stained sword in the form of a cross, charged, as heralds term it, with a white scallop shell; the motto is *Rubet ensis sanguine Arabum*—Red is the sword with the blood of the Moors. The banner of the order, preserved in the royal armory at Madrid, is said to be the very standard which was used by Ferdinand and Isabella at the conquest of Granada. But, as it bears the imperial, double-headed eagle of the Emperor Charles V., we may accept the story, like many other Spanish ones, with some reservation. On this banner, St James is represented as he appeared at the battle of Clavijo; and the accompanying engraving is a correct copy of the marvellous apparition. But it was not at Clavijo alone that St James has appeared and fought for Spain; he has been seen fighting, at subsequent times, in Flanders, Italy, India, and America. And, indeed, his powerful aid and

ST JAMES THE GREAT.

influence has been felt even when his actual presence was not visible. St James's Day has ever been considered auspicious to the arms of Spain. Grotius happily terms it, a day the Spaniards believed fortunate, and through their belief made it so. Charles V. conquered Tunis on that day; but on the following anniversary, when he invaded Provence, he was not by any means so successful.

The shrine of St James, at Compostella, was a great resort of pilgrims, from all parts of Christendom, during the medieval period; and the distinguishing badge of pilgrims to this shrine, was a scallop shell worn on the cloak or hat. In the old ballad of the *Friar of Orders Gray*, the lady describes her lover as clad, like herself, in 'a pilgrim's weedes:'

> 'And how should I know your true love
> From many another one?
> Oh, by his scallop shell and hat,
> And by his sandal shoon.'

The adoption of the shell by the pilgrims to the shrine of St James, is accounted for in a legend, which relates, that when the relics of the saint

were being miraculously conveyed from Jerusalem to Spain, in a ship built of marble, the horse of a Portuguese knight, alarmed, we may presume, at so extraordinary a barge, plunged into the sea with its rider. The knight was rescued, and taken on board of the ship, when his clothes were found to be covered with scallop shells. Erasmus, however, in his *Pilgrimages*, has given us a more feasible account. One of his interlocutors meets a pilgrim, and says: 'What country has sent you safely back to us, covered with shells, laden with tin and leaden images, and adorned with straw necklaces, while your arms display a row of serpents' eggs?'

'I have been to St James of Compostella,' replies the pilgrim.

'What answer did St James give to your professions?'

'None; but he was seen to smile, and nod his head, when I offered my presents; and he held out to me this imbricated shell.'

'Why that shell rather than any other kind?'

'Because the adjacent sea abounds in them.'

Curiously enough, a scallop shell is borne at the present day by pilgrims in Japan; and in all probability its origin, as a pilgrim's badge, both in Europe and the East, was derived from its use as a primitive cup, dish, or spoon. And this idea is corroborated by the crest of Dishington, an old English family, being a scallop shell—a punning allusion to the name and the ancient use of the shell as a dish. And we may add, as a proof of the once ancient popularity of pilgrimages to Compostella, that seventeen English peers and eight baronets carry scallop shells in their arms as heraldic charges.

OYSTER-SHELL DAY.

There is some folk lore connected with St James's Day. They say in Herefordshire:

'Till St James's Day is past and gone,
There may be hops or they may be none;'

implying the noted uncertainty of that local crop. Another proverb more general is—'Whoever eats oysters on St James's Day, will never want money.' In point of fact, it is customary in London to begin eating oysters on St James's Day, when they are necessarily somewhat dearer than afterwards; so we may presume that the saying is only meant as a jocular encouragement to a little piece of extravagance and self-indulgence. In this connection of oysters with St James's Day, we trace the ancient association of the apostle with pilgrims' shells. There is a custom in London which makes this relation more evident. In the course of the few days following upon the introduction of oysters for the season, the children of the humbler class employ themselves diligently in collecting the shells which have been cast out from taverns and fish-shops, and of these they make piles in various rude forms. By the time that old St James's Day (the 5th of August) has come about, they have these little fabrics in nice order, with a candle stuck in the top, to be lighted at night. As you thread your way through some of the denser parts of the metropolis, you are apt to find a cone of shells, with its votive light, in the nook of some retired court, with a group of youngsters around it, some of whom will be sure to assail the stranger with a whining claim—*Mind the grotto!* by which is meant a demand for a penny wherewith professedly to keep up the candle. It cannot be doubted that we have here, at the distance of upwards of three hundred years from the Reformation, a relic of the habits of our Catholic ancestors.

The Legend of St Christopher.

This is a very early and obscure saint. He is generally represented as a native of Lycia, who suffered martyrdom under Decius, in the third century. Butler conceives that he took the name of Christopher (q. d. *Christum fero*), to express his ardent love for the Redeemer, as implying that he carried that sacred image constantly in his breast. When a taking religious idea was once fairly set agoing in the middle ages, it grew under favour of the popular imagination, always tending more and more to a tangible form. In time, a legend obtained currency, being obviously a mere fiction suggested by the saint's name. It was said that his original occupation was to carry people across a stream, on the banks of which he lived. As such, it was obviously necessary he should be a strong man; *ergo*, he was represented as a man of gigantic stature and strength. One evening, a child presented himself to be conveyed over the stream. At first his weight was what might be expected from his infant years; but presently it began to increase, and so went on till the ferryman was like to sink under his burden. The child then said: 'Wonder not, my friend, I am Jesus, and you have the weight of the sins of the whole world on your back!'

When this legend had become thoroughly established, the stalwart figure of Christopher wading the stream, with the infant Jesus on his shoulder.

became a favourite object for painting and carving in churches. St Christopher was in time regarded as a kind of symbol of the Christian church. A tutelage over fishing came to be one of his minor attributes, and it was believed that where his image was, the plague could not enter. The saint has come to have an interesting place in the history of typography, in consequence of a wood-engraving of his figure, supposed to be of date about 1423, being the earliest known example of that art. Besides the figure of the saint, there is a mill-scene on one side of the river, and a hermit holding out a lantern for the saint's guidance on the other, all remarkably well drawn for the age. Underneath is an inscription, assuring the reader that on the day he sees this picture, he could die no evil death :

'Christofori faciem die quacunque tueris,
Illa nempe die morte malâ non morieris.'

None of the many carved figures of St Christopher approached in magnitude one which was placed in the church of Notre Dame at Paris. It was erected by a knight of the name of Antoine des Essars, who was arrested with his brother for some malversation ; the latter was beheaded, but the former dreamed that the saint broke his prison-bars and carried him off in his arms. The dream was verified, for in a few days he was declared innocent. He in consequence erected this wooden giant, which, after being an object of popular wonder for many generations, was removed in 1785.

LEGEND OF ST CHRISTOPHER.

Erasmus, in his *Colloquy of the Shipwreck*, describing a company threatened with that calamity, says : 'Did no one think of Christopher? I heard one, and could not help smiling, who, with a shout, lest he should not be heard, promised to Christopher who dwells in the great Church at Paris, and is a mountain rather than a statue, a wax image as great as himself. He had repeated this more than once, bellowing as loud as he could, when the man who happened to be next to him, touched him with his finger, and hinted : "You could not pay that, even if you set all your goods to auction." Then the other, in a voice now low enough, that Christopher might not hear him, whispered : "Be still, you fool! Do you fancy I am speaking in earnest? If I once touch the shore, I shall not give him a tallow candle!"

Born.—Rev. William Burkitt, author of *Expository Notes on the New Testament*, 1650, *Hitcham, Northamptonshire ;* Mrs Elizabeth Hamilton, authoress of the *Cottagers of Glenburnie*, 1758, *Belfast.*

Died.—Constantius Chlorus, Roman emperor, 306, *York* (*Eboracum*) ; Nicephorus I., Greek emperor, killed in Bulgaria, 811 ; Thomas à Kempis, reputed author of the *Imitation of Christ*, 1471, *Mount St Agnes, near Zwoll ;* Philip Beroaldus (the elder), eminent classic commentator, 1505, *Bologna ;* Ferdinand I., emperor of Germany, 1564, *Vienna ;* Robert Fleming, author of *The Fulfilling of the Scripture*, 1694, *Rotterdam ;* Baron Friederich von der Trenck, author of the *Memoirs*, guillotined at Paris, 1794 ; William Romaine, eminent divine, 1795, *London ;* Charles Dibdin, celebrated author of sea-songs, 1814, *Camden Town, London ;* William Sharp, engraver, 1824, *Chiswick ;* William Savage (*Dictionary of the Art of Printing*), 1844, *Kennington ;* James Kenney, dramatic writer, 1849, *London.*

CHARLES DIBDIN.

Southampton has had the peculiar honour of giving to England two most prolific and popular versifiers—Isaac Watts and Charles Dibdin were born there. Unlike in character and calling, they were curiously akin in activity and versatility, and specially in the readiness and ease with which they wrote rhymes, which now and then broke into genuine poetry.

Dibdin was the eighteenth child of a Southampton silversmith ; and his mother was nearly fifty years of age at his birth, in 1745. His parents designed him for the church, and sent him to Winchester, but his love for music was an overpowering passion ; and, to be near the theatres, he ran off to London, and, while a boy of sixteen, managed to bring out at Covent Garden *The Shepherd's Artifice*, an opera in two acts, written and composed by himself. A few years afterwards he made his appearance as an actor with fair success. In 1778, he was appointed musical director of Covent Garden theatre at a salary of £10 a week. As a playwright, a composer of operas, a theatrical manager, and a builder of theatres, he spent his years with chequered fortune. In 1796, he opened the Sans Souci in Leicester Street, Leicester Square ; and in an entertainment, entitled *The Whim of the Moment*, he occupied the stage for nearly ten years as sole performer, author, and composer. For the Sans Souci, he wrote about a thousand songs. The naval war with France was meanwhile at its height, Nelson was in his full career of glory, and the nation was wild with delight and pride in the exploits of its seamen. Dibdin became the bard of

the British navy. He sang his multitudinous songs in Leicester Fields with a patriotic fervour truly contagious; his notes were caught up and repeated over sea and land; and, it is said, did more to recruit the navy than all the press-gangs. To Dibdin the beau-ideal of the English sailor—a being of reckless courage, generosity, and simple-heartedness—is largely attributable.

In 1805, he sold Sans Souci, and opened a music-shop in the Strand, which landed him in bankruptcy. The government gave him a pension of £200, which was withdrawn in a fit of parsimony, and then restored. He was attacked with paralysis at the end of 1813, and died in 1814 at his house in Camden Town, in those days a rural suburb of London.

The great mass of Dibdin's songs are now forgotten, but a choice few the world will not willingly let die. Some of his operas still keep the stage, and are always heard with pleasure; for no musician has ever excelled him in sweetness of melody and just adaptation of sound to sense. He wrote about a dozen novels, a *History of the Stage*, and an account of his professional life. One of his sons, Thomas Dibdin, pursued a similar life to his father, producing a host of theatrical pieces, but with less success. He died in indigence in 1841. Dr Dibdin, the celebrated bibliographer, was a nephew of Charles Dibdin; and it was on the death of Thomas, the doctor's father, that Charles wrote the fine ballad of *Poor Tom Bowling*.

WILLIAM SHARP, THE ENGRAVER.

This celebrated engraver-in-line was born on the 29th of January 1749, at Haydon Yard, in the Minories, where his father carried on the business of a gunmaker. Apprenticed to *a bright engraver*, his first essay was made upon a pewter-pot, and one of his earliest essays was a small plate of an old lion which had been in the Tower menagerie for thirty years. He next began to engrave pictures from the old masters, and some plates from designs by Stothard; but he greatly excelled in copying the original feeling of Sir Joshua Reynolds; his portrait of John Hunter, the surgeon, is one of the finest prints in the world.

Sharp, though he attained the highest excellence in his profession, was in politics and religious belief a visionary and an enthusiast. He was several times arrested and examined before the privy-council, on suspicion of treasonable practices; and on one occasion, after he had been plagued with many irrelevant questions, he pulled out of his pocket a prospectus for subscribing to his portrait of General Kosciusko, after West, which he was then engraving; and handing it to Mr Pitt and Mr Dundas, he requested them to put their names down as subscribers, which set the council laughing, and he was soon liberated.

He shewed less shrewdness in other matters. No imposture was too great for his belief, and no evidence sufficiently strong to disabuse his mind. The doctrines of Mesmer, the rhapsodies of the notorious Richard Brothers, and the gross delusion of Joanna Southcott, in turn found in him a warm disciple; and in the last case an easy dupe. For Jacob Bryan, an irregular Quaker, but a fervid fanatic, Sharp professed a fraternal regard; so he set him up in business as a copper-plate printer; and one morning, Sharp found Jacob on the floor, between his two printing-presses, groaning for the sins of the people. Sharp believed the millennium to be at hand, and that he and Brothers were to march with their squadrons for the New Jerusalem, in which, by anticipation, Sharp effected purchases of estates! Upon a friend remonstrating with him, that none of his preparations for the journey provided for the marine passage, Sharp replied, 'Oh, you'll see, there will be an earthquake; and a miraculous transportation will take place.' Nor can Sharp's faith or sincerity on this point be distrusted; for he actually engraved *two* plates of the portrait of the prophet Brothers, fully believing that one plate would not print the great number of impressions that would be wanted when the advent should arrive; and he added to each this inscription: 'Fully believing this to be the man appointed by God, I engrave his likeness.—W. SHARP.' The wags of the day generally chose to put the comma-pause after the word 'appointed.' Sharp's belief in Joanna Southcott's delusion was equally absurd; when the surgeons were proceeding to an anatomical investigation of the causes of her dissolution, Sharp maintained that she was not dead, but in a trance! And, subsequently, when he was sitting to Mr Haydon for his portrait, he predicted that Joanna would reappear in the month of July 1822. 'But, suppose she should not?' said Haydon. 'I tell you she will,' retorted Sharp; 'but if she should not, nothing should shake my faith in her divine mission.' And those who were near Sharp's person during his last illness, state that in this belief he died. He lies interred near Dr Loutherbourg and Hogarth, in Chiswick churchyard.

JULY 26.

St Anne, mother of the Blessed Virgin. St Germanus, bishop of Auxerre, confessor, 448.

Born.—Henry VII., king of England, 1456, *Pembroke, South Wales.*

Died.—King Roderick of Spain, killed in battle with the Moors, 711; Ladislaus I., king of Poland, 1102; Pope Paul II., 1471; Jacopo Bonfadio, historian and poet, executed at Genoa, 1560; Armand de Gontaut-Biron, Marshal of France, killed at siege of Epernai, 1592; Charles Emmanuel the Great, Duke of Savoy, 1630; John Wilmot, Earl of Rochester, noted debauchee and poet, 1680, *Woodstock, Oxfordshire;* Thomas Osborne, Duke of Leeds, statesman, 1712; Dr John Freind, eminent scholar, 1728; John Emery, comic actor, 1822; Baron Gourgaud, distinguished general under Napoleon, 1852, *Paris.*

LEGEND OF DON RODERICK.

One of the most romantic episodes of medieval history, is the conquest of Spain by the Moors or Saracens, in the beginning of the eighth century. There is perhaps no nation whose early chronicles are more shrouded in the robe of chivalrous legend and fiction, or invested with a brighter halo of poetic luxuriance. The story of the fate of Don Roderick, the last of its Gothic kings, forms one of the most curious of these semi-mythical narrations, and has in recent times been made by Sir

Walter Scott the groundwork of one of his poems. It has also been told with singular attractiveness by Washington Irving, in his *Legends of the Conquest of Spain.*

Witiza, the predecessor of Don Roderick on the Spanish throne, had alienated the hearts of his subjects by his shameful debaucheries and misgovernment; and an insurrection having taken place, the latter, who had previously signalised himself greatly by his military achievements, was put in possession of the crown. His conduct in this exalted position was at first all that could be desired; but the deteriorating influences of prosperity and a life of ease gradually corrupted his disposition, and he became almost as noted as Witiza for his voluptuous and irregular life. One of the most noted victims of his lawless passions was Florinda, who had been placed at Don Roderick's court as one of the attendants on his queen. Her father, Count Julian, held the post of military governor of Ceuta, in the Spanish dominions in Barbary; but having been high in favour under the administration of Witiza, he had never cherished much affection for the government of his successor. The intelligence of this outrage on his daughter roused in him the most strenuous determination of vengeance, for obtaining which the conjuncture of affairs presented ready facilities. The religion of Mohammed, which had been promulgated less than a century previous, had now established itself over the greater part of Western Asia and North Africa. In its career of conquest, it had already penetrated to the western shores of the Mediterranean, and made encroachments on the African territories of Spain. Here, however, it had sustained some severe checks from the valour of Count Julian, and its further progress in this direction might have been stayed. But the irreparable insults offered to his family overcame all feelings of loyalty or patriotism in the breast of Julian, and he opened a correspondence with Muza, the Moorish general, for the betrayal of his country to the Saracens. Muza readily listened to his proposals, and a preliminary expedition was organised, under the celebrated Taric, who, by the direction of Julian, made a predatory descent on the Spanish coast, and returned to his master, Muza, with such glowing accounts of the wealth and fertility of the country, that its conquest was forthwith resolved on.

Don Roderick was, in the meantime, consuming his days in inglorious ease in the ancient city of Toledo. Not long after the disaster of the hapless Florinda, he had received a singular warning of the calamities which were about to overtake himself and kingdom. While seated on his throne one day, in the audience-chamber, two venerable old men, with long white beards, presented themselves before him. Their mission, they said, was to request from the king the performance of a behest which had been complied with by all his predecessors. As the guardians of the enchanted tower, which had been founded by the great hero Hercules, in the course of his western peregrinations, they besought Don Roderick to repair thither and affix an additional lock on the portal, as had been done by all former Spanish kings. A terrible mystery, on which the fate of the monarchy depended, was concealed in the building, which the founder had, after constructing it with immense strength and magic art, secured by a massive iron door and a lock of steel. He had further left injunctions that each succeeding king should add another lock to the portal, and refrain religiously from violating its mysteries. Various Spanish sovereigns had, from time to time, ventured to force an entrance into the building, but they had either perished on the threshold, or been so appalled by the fearful sights and sounds which were encountered, that they had rapidly retreated and reclosed the ponderous barrier. No one had yet succeeded in penetrating to the inmost recesses of the sanctuary, the secrets of which had thus remained inviolate since the days of Hercules. Having delivered their message, the venerable guardians of the tower made an obeisance and withdrew.

The curiosity of Don Roderick was greatly excited by what he had just heard, and he declared his determination to see the interior of this marvellous tower. The archbishop of Toledo vainly endeavoured to make him desist from his purpose, assuring him that the violation of a mystery which had been so carefully respected by his predecessors, would only draw down destruction on his head. But the evil star of Don Roderick was in the ascendant, and he marched on blindly to his fate.

The following morning, a gay cavalcade of courtiers, with the king at its head, rode out at one of the gates of Toledo, and took the road to the mountains. They soon reached the mysterious tower, which was situated on a lofty rock, and supported by four magnificent bronze lions. The walls were constructed of marbles of various colours, so disposed as to represent the famous battles and heroic deeds of antiquity. The door was strongly secured by locks and bars, and before it stood the two aged men who had visited the court on the previous day. The king alighted with his train, and requested the old men to open the gate. They remained for a moment astonished, and then falling down on their knees, besought him that he would refrain from so rash an attempt. He was, however, inexorable, and a pair of huge keys having been produced from their girdles, the locks, one after another, were opened, but with such difficulty that a great part of the day was spent before the task was completed. When every barrier was removed, an endeavour was made to open the gate; but it remained immovable, notwithstanding all the efforts of the king's attendants. Don Roderick himself then went forward and placed his hand on it, when it at once moved, as obedient to his touch, and swung open with a dismal groan. A damp cold wind rushed forth, and some of the eager young courtiers pressed into the tower, but quickly returned as if overcome by some magic influence. The king then led the way and entered a hall, on one side of which was an open door. Beside that door stood on a pedestal a gigantic figure whirling furiously a mace, which he, however, dropped to his side on the approach of Don Roderick, allowing him and his train to pass. They then entered a vast and magnificent chamber, the walls of which were composed of the rarest and most brilliant gems, and surmounted by a splendid dome. There were no windows in the hall; but a light, dazzling beyond description, proceeded from the walls, rendering the place as bright as day. Beneath the

centre of the dome stood a table bearing the inscription, that Hercules, the Theban hero, had founded this tower in the year of the world three thousand and six. On a golden casket on the table, richly adorned with precious stones, was another inscription, to the effect that herein was contained the mystery of the tower, but warning the intruder from proceeding further. The king had now, however, gone too far to recede, and he opened the casket, which only contained a piece of linen interposed between two plates of copper. It had painted on it figures of men and horses, which, as Don Roderick gazed on it, seemed to enlarge and become animated. A misty panoramic vision of an engagement gradually displayed itself, in which Christians and Moslems seemed to be struggling in deadly conflict, while to complete the scene, the cries of the combatants, the clash of arms, and the roar of battle, were all distinctly audible. The Christians were seen to retreat, broken and discomfited, before the Saracens; and among the numerous figures, Don Roderick could descry his own war-steed, Orelia, galloping frantically about without a rider. Astounded and terrified, the king and his attendants rushed out of the tower, at the entrance of which they found the two aged guardians stricken dead, as if by a thunderbolt. A fearful blackness now spread over the landscape, turning rapidly to a terrible tempest, in the midst of which the royal party reached Toledo. The next day the king returned to the tower, resolved to replace the barriers which confined its dreadful secrets. On coming within sight of it, an eagle was descried soaring aloft, bearing a lighted brand, with which he swooped down upon the tower. The structure at once burst into a flame, and was speedily reduced to ashes, around which congregated a vast array of birds, who caught them up and scattered them over the country. Wherever these ashes fell, they were converted into drops of blood, and the places so stained became the scenes of slaughter and desolation in the ensuing conflicts with the Moors.

The remainder of the legend of Don Roderick is soon told. The warning received from the vision in the tower seems to have been gradually effaced from his mind, when one day he received the unexpected intelligence of the Moorish general, Taric, having effected a landing in Andalusia with a numerous and well-appointed army. To repel the invaders he despatched, in the first place, his kinsman Ataulpho, a gallant young nobleman, who at the head of an armed force encountered the enemy, near the rock of Calpe, the modern Gibraltar, but was discomfited and slain. The victorious Saracens now advanced into Andalusia, and encamped by the river Guadalete, in the plain of Xeres. Thither the king himself marched with the flower of the Spanish chivalry. A great battle ensued, in which the Christians fought with the most determined bravery, but were at length routed and dispersed by the superior generalship of Taric, aided by a Spanish force under the command of the recreant Julian. In the heat of battle Don Roderick was suddenly lost sight of; he was never heard of more, but it was conjectured that, having been slain near the Guadalete, his body had been washed away by the stream. The belief was long current in Spain that he had escaped from the battle, and would return one day to vindicate his own and his country's rights against the invading foe. This fond dream, however, was never to be realised; and it has happened to Don Roderick, as to some other men, that the courage shewn by him in the last struggle has redeemed his name from much of the reproach previously resting on it, whilst the remarkable change of dynasty which the battle of the Guadalete inaugurated, has invested the fate of the last Gothic king of Spain with a romantic and abiding interest.

EARL OF ROCHESTER.

Among all the gay courtiers who crowded round Charles II., none was more celebrated for his conviviality and wit than the Earl of Rochester. He early displayed remarkable talent, and was much distinguished at Oxford: had he lived in better times, he would probably have graced his high birth; but, after making the grand tour, as it was called, he came to court at the early age of eighteen, there quickly to become the leader of every excess. As his companions found that his wit was greater at the close of a long debauch than at the beginning, it was their amusement to make him drink deeply, and he himself confessed that for five years he was never sober. During this time he was writing satires and squibs upon all around him, and, as may be supposed, making himself many enemies. In one instance he handed the king a paper which Charles opened in the expectation of finding a droll description of some ladies, but it proved to be a witticism on the monarch himself. On another occasion, he scribbled on Charles's bedroom door the well-known mock epitaph:

> 'Here lies our sovereign lord the king,
> Whose word no man relies on;
> Who never says a foolish thing,
> Nor ever does a wise one.'

He joined Charles in many of his wild pranks in the streets of London. At one time he disappeared from the court. Just then stories were circulated about a wonderful physician, necromancer, or Italian mountebank, who was practising on Tower Hill; those who consulted him were startled when they found him disclosing secrets which they hoped were known to none but their most intimate friends; the life of the court seemed laid bare by his wonderful powers; and nothing was talked of for some time, until the shrewder minds felt sure that only Rochester's talent could carry on such a game, and so it proved. At other times, he was inimitable as a porter or a beggar; indeed, he could personate any character to perfection.

That he had a spirit for better things, had he been wisely directed, is evident from his volunteering to join the Earl of Sandwich when he went to sea in 1665; during the engagement that followed, it was necessary that a dispatch should be carried from one ship to another in the very heat of the fight, and in an open boat. Rochester went on this mission, at the imminent risk of his life; yet the rufflers of the court used to taunt him with cowardice in avoiding the duels which his satires brought upon him. Sir C. Scrope thus wrote of him:

> 'Thou canst hurt no man's fame with thy ill word,
> Thy pen is full as harmless as thy sword.'

His constitution was not strong enough to bear his excesses, and early broke up; then, convinced of his past folly, he sent for Dr Burnet, made confession of his reckless life and negation of all religion, and entreated to have his doubts about Christianity dispelled. Burnet has left a touching account of the unfortunate nobleman's last days; he desired that all his wicked writings should be destroyed, and longed to undo the evil he had done by making his deep repentance known to all the world. He died at the early age of thirty-three.

JULY 27.

Saints Maximian, Malchus, Martinian, Dionysius, John Serapion, and Constantine, martyrs, commonly called 'The Seven Sleepers,' 250. St Pantaleon, martyr, 303. St Congall, abbot of Iabhnallivin, Ireland. St Luican, confessor, of Ireland.

Legend of the Seven Sleepers.

The festival of the Seven Sleepers, commemorated on the 27th of July, was introduced into the Christian church at a very early period. The legend on which it is founded, relates that the Emperor Decius, having set up a statue in the city of Ephesus, commanded all the inhabitants to worship it. Seven young men, disobeying this mandate, and being unambitious of the honour of martyrdom, fled to Mount Cœlius, where they concealed themselves in a cavern (anno 250). Decius, enraged, caused all the various caverns on the mount to be closed up, and nothing was heard of the fugitives till the year 479, when a person, digging foundations for a stable, broke into the cavern, and discovered them. Disturbed by the unwonted noise, the young men, who had been asleep all the time, awakened; feeling very hungry, and thinking they had slept but one night, they despatched one of their number into Ephesus to learn the news, and purchase some provisions. The antiquity of the coin proffered by the messenger at a baker's shop attracted suspicion, and the notice of the authorities. After an investigation, the whole affair was declared to be a miracle, and in its commemoration the festival was instituted.

This legend, which is merely an adaptation of a more ancient one, has found a place in the Koran. According to the Mohammedan account, the sleepers were accompanied by a dog, named Kratim. This animal, after its long sleep, becoming a great prophet and philosopher, has been admitted into the Mussulman's paradise, where it sits beside the ass of Balaam. The other eight animals that enjoy this high privilege, are the ant of Solomon, the whale of Jonah, the ram of Isaac, the calf of Abraham, the camel of Saleh, the cuckoo of Belkis, the ox of Moses, and the mare of Mohammed.

Alban Butler gives a rational cast to the legend of the Seven Sleepers. He conceives that the young men were put to death, by being walled up in a cave, and that only their relics were discovered in 479. These relics he states to be preserved in a large stone coffin, in the church of St Victor, at Marseilles. He further cites from Spon's *Travels*, that the cave of the Seven Sleepers continued in modern times to be the object of devout pilgrimages.

Born.—Isaac Maddox, bishop of Worcester (*Vindication of Government, &c., of Church of England*), 1697, *London;* Thomas Campbell, poet (*Pleasures of Hope*), 1777, *Glasgow;* George Biddell Airy, astronomer-royal of England, 1801, *Alnwick.*

DR DALTON.

At one of the early meetings of the British Association for the Advancement of Science, it drew out into prominence, and directed great reverence to, an old man from Manchester, who had been, up to that time, but little known to his fellow-citizens. For a long course of years, he had been an obscure teacher of mathematics—he was a Quaker—he was an unobtrusive and, to all outward appearance, an insignificant person. It was now learned, for the first time, by many of the Manchester people, that this quiet little old man enjoyed high esteem in the scientific world, as the originator of a theory of the utmost importance in chemistry, and was indeed one of the great men of his age, living there, as it were, in a disguise framed of his own superabundant modesty.

John Dalton, the son of a Cumberland yeoman, was born at Eaglesfield, near Cockermouth, on the 5th of September 1766. At the age of thirteen, he began to earn his living by teaching, and at twenty-seven he went to Manchester as a lecturer on mathematics. Until pensioned by government in 1833, he gave lessons at eighteenpence an hour in mathematics. He declined several offers to provide him with a competency, so that he might give his undivided attention to chemistry; asserting 'that teaching was a kind of recreation, and that if richer, he would not probably spend more time in investigation than he was accustomed to do.' He was of course frugal and provident. The apparatus of his laboratory was of the simplest, and indeed rudest kind; scarcely superior to that of Wollaston, who, on a foreign chemist expressing an anxious desire to see his laboratory, produced a small tray containing some glass tubes, a blow-pipe, two or three watch-glasses, a slip of platina, and a few test-tubes. Dalton was a bachelor, altogether of most quiet and regular habits. Twice each Sunday he took his seat in the Friends' meeting-house, and for forty years he ate his Sunday-dinner at one friend's table. The afternoon of every Thursday he spent in a bowling-green, assigning as a reason that he liked to take his Saturday in the middle of the week. He was fond of exercise in the open air, and made an annual excursion among the mountains of Cumberland and Westmoreland. He did not read many books, and was singularly indifferent to all that was written concerning himself. His words were few and truthful. A student who had missed one lecture of a course, applied to him for a certificate of full attendance. He declined to give it, and then relenting, said: 'If thou wilt come to-morrow, I will go over the

lecture thou hast missed.' Dalton enjoyed robust health; he was middle-sized, and of a figure more sturdy than elegant. His head and face bore a striking resemblance to the portraits of Sir Isaac Newton. Like Newton, he referred his success, not to genius, but to patience and industry. 'These, in my opinion, make one man succeed better than another.'

It is in connection with the *Atomic Theory* that the name of Dalton promises to go down to posterity. The constitution of matter with respect to divisibility, has been debated from very ancient times. Some hold that its divisibility is infinite, and others, that its reduction is only possible to the extent of atoms (from the Greek Ατομος, that which cannot be cut or divided). Newton expressed the latter opinion in these words: 'All things considered, it seems probable that God, in the beginning, formed matter in solid, massy, hard, impenetrable, movable particles, of such sizes, figures, and with such other properties, and in such proportion to space, as most conduced to the end for which he formed them; and that these primitive particles, being solids, are incomparably harder than any porous bodies compounded of them; even so very hard as never to wear or break to pieces, no ordinary power being able to divide what God made one in the first creation.'

At this point Dalton took up the question. He began by assuming that matter, although it may in essence be infinitely divisible, is in fact only finitely divided, so that each element consists of particles or molecules of a definite and unchangeable weight, size, and shape. He had observed that in certain chemical compounds the elements united in a constant proportion; for example, water, when decomposed, yields one part by weight of hydrogen, and eight parts by weight of oxygen; and it would be useless to try to combine eleven parts of oxygen with one part of hydrogen; water would be formed, but three parts of oxygen would be left free as overplus. What is the reason for the maintenance of this combining proportion? asked Dalton. In his answer, we have the atomic theory, or rather hypothesis.

Taking for granted the existence of atoms, he went on to conceive that in the several elements they vary in weight; atoms of gold from atoms of silver, atoms of iodine from atoms of chlorine; but, on the other hand, that all atoms of the same element are of uniform weight; thus, that any atom of iron is equal to any other atom of iron the world over. We have observed that water is compounded of eight parts by weight of oxygen to one part by weight of hydrogen, and an explanation of the combination is offered in the supposition, that each atom of oxygen is eight times as heavy as one of hydrogen. Further, it is presumed, that in the union of oxygen with hydrogen, the atoms of each are not interfused, but lie side by side, complete in their individuality. If, therefore, the weight of an atom of hydrogen be 1, and an atom of oxygen be 8, it is impossible that their smallest combining proportion, by weight, can be other than 1 and 8. The smallest quantity of water, in this view, must then consist of one atom of hydrogen and one atom of oxygen, bound together in that mystic tie which we term chemical affinity.

The example we have chosen from the constitution of water is a simple illustration of the constant proportion which exists throughout chemical compounds with infinite, complex, and multiple variations. It was in 1803 that the great cosmic idea entered Dalton's mind. In 1804, he explained it in conversation to Dr Thomas Thomson of Glasgow, who, in 1807, gave a short sketch of the hypothesis in the third edition of his *System of Chemistry*. The asserted law of combination in constant proportions was quickly tested in a multitude of experiments, and the facts clustered to its confirmation. It was discovered that there was as little chance or haphazard in the concourse of atoms as in the motions of planets. The hypothesis gave a prodigious impulse to the science of chemistry; it shot light through all its realms, and reduced a chaos of observations to purpose and system. Before Dalton's happy conception there was not a single analysis which could be trusted as correct, or a single gas whose specific gravity was known with accuracy. In the arts, his service was beyond value. He gave the manufacturing chemist a rule whereby he could preclude waste, teaching him how to effect combinations without the loss of an ounce of material. Even supposing that in the future Dalton's notion of the coacervation of infinitesimal atoms should prove erroneous, his merit will remain untouched; for that properly consists in the discovery and promulgation of the law of constant proportion in chemical unions, where before law was unknown, or at anyrate only dimly surmised. The theory of atoms was merely an attempt to reveal the mystery of the law, which will abide, whatever may be the fate of the theory.

Dalton was almost insensible to differences in colours. Whereas most persons see seven colours in the rainbow, he saw only two—yellow and blue; or at most, three—yellow, blue, and purple He saw no difference between red and green, so that he thought 'the face of a laurel-leaf a good match to a stick of red sealing-wax; and the back of the leaf to the lighter red of wafers.' When, at Oxford, Dr Whewell asked him what he would compare his scarlet doctor's gown to, he pointed to the leaves of the trees around them. When a young man, 31st October 1794, he read a paper before the Manchester Literary and Philosophical Society, entitled *Extraordinary Facts Relating to the Vision of Colours*, drawing attention to his own deficiency, which thenceforth became known under the name of Daltonism. Colour-blindness is by no means an uncommon affection. Dalton was acquainted with nearly twenty people in his own case. Dugald Stewart, the metaphysician, was one of them: he could not distinguish the crimson fruit of the Siberian crab from the leaves of the tree on which it grew otherwise than by the difference in form. Dalton tried to account for his peculiarity by supposing that it arose from the vitreous humour of his eyes having a blue tint instead of being colourless like water, as in the majority of mankind. After his death, in obedience to his instructions, his eyes were dissected; but no peculiarity could be detected. The true explanation of colour-blindness is, we apprehend, a phrenological one—namely, that in persons insensible to colours there is a deficiency or mal-organisation in that portion of the brain which receives impressions of colour; just as there are some similarly deficient in the sense of tune, and who cannot distinguish between one piece of music and another. In one

thus insensible to melody, we do not assume any defect in his ears, but a deficiency in that part of his brain assigned to the organ of tune.

THOMAS CAMPBELL.

The author of *The Pleasures of Hope* died at Boulogne, June 15, 1844, at the age of sixty-seven, and was interred in Poets' Corner, Westminster Abbey. He had held for forty-five years a place in the first rank of living poets. He was born at Glasgow, of West Highland parentage; but the most remarkable circumstance connected with his entrance into the world was the fact that his father,

THOMAS CAMPBELL.

at the time of his birth, numbered as many years as he himself was destined to attain. The poet was a man of small stature, of handsome face and figure, animated in conversation, liberal in his political and religious ideas, fond of old friends, could sing a droll song and tell a pleasant story at table, had a very good power of formal public address, and was altogether an amiable and respectable man through life.

Of his pleasant table-anecdotes we remember one regarding himself. He tarried at a London bookstall one day, and after some conversation with the bookseller, purchased a book, which he requested to be sent home. The bookseller, who had previously appeared interested in his conversation, no sooner saw his name on the card he handed, than he seemed to become additionally excited, and finally he blundered out: 'May I inquire, sir?—but—are you, sir—are you the *great* Mr Campbell?' The poet had the caution to ask who it was he considered as the *great* Mr Campbell, but not without a tolerably safe conclusion in his own mind that the author of the *Pleasures of Hope* was the man in question. The answer was: 'Oh! Mr Campbell, the missionary and author of *Travels in South Africa*, to be sure!'

For a few years previous to 1824, a Danish litterateur, named Feldborg, resided in Britain—chiefly in Scotland, where he brought out a book of considerable merit, entitled *Denmark Delineated*. He was good-natured, clever, and entertaining, and much a favourite with Wilson, Lockhart, and other illuminati of the north. It appears that he had also made the acquaintance of Campbell, who, on giving him a copy of his poems containing the ode on the *Battle of the Baltic*, thought proper to address him in the following lines (heretofore, as we believe, inedited):

'Think me not, Danish stranger, a hard-hearted pagan,
If you find, mid'st my war-songs, one called "Copenhagen,"
For I thought when your state join'd the Emperor Paul,
We 'd a right to play with you the devil and all;
But the next time our fleet went your city to batter,
That attack, I allow, was a scandalous matter,
And I gave it my curse—and I wrote on 't a satire.
To bepraise such an action of sin, shame, and sorrow,
I 'll be —— if I would be the laureate to-morrow.
There is not (take my word) a true Englishman glories
In that deed—'twas a deed of our merciless Tories,
Whom we hate though they rule us, and I can assure ye,
They had swung for 't if England had sat as their jury.
But a truce to remembrances blackened with pain,
Here 's a health to yourself, and your country, dear Dane.
As our nations are kindred in language and kind,
May the ties of our blood be the ties of our mind,
And perdition on him who our peace would unbind!

May we struggle not who shall in fight be the foremost,
But the boldest in sense—in humanity warmest;
May you leave us with something like love for our nation;
Though we 're still curs'd by Castlereagh's administration,
But whatever you think, or wherever you ramble,
Think there 's one who has loved you in England'

—Tom Campbell.

London, 30 Foley Place,
Great Portland Street,
July 11, 1822.

At a public dinner, in those days when England and France were at mortal enmity, Campbell proposed the health of Napoleon Bonaparte, Emperor of the French. The company was astounded, and on the poet being asked why he could give such a toast, he replied: 'Because he once shot a bookseller!' Campbell sadly forgot, on this occasion, the handsome and even generous treatment he had experienced from the first booksellers with whom he had any important transaction.

His poem, *The Pleasures of Hope*, was written before he had attained his twenty-second year, and while earning his living as a tutor in Edinburgh. In long walks about Arthur's Seat, he conned over its lines until they satisfied his fastidious ear. When the poem was finished, the question arose, how to get it printed without expense or risk of loss? The title had nothing to commend it in the way of originality. Akenside's *Pleasures of Imagination* had long been published, and Rogers's *Pleasures of Memory* had been familiar to the world for six

years. He had some acquaintance with the firm of Mundell & Son, for whom he had abridged Bryan Edwards's *West Indies* for £20, and to them he offered his manuscript. Pleased with the poem, yet with slight expectation of pecuniary advantage, they agreed to publish it on condition that Campbell should assign to them the copyright, in return for which they would give him two hundred copies of his book in quires—that is, unbound. Judged by the event, this may seem to have been a niggard bargain; but a better it would be very difficult to make with a manuscript poem, of whatever merit, by an unknown author, though the salesman should trot from east to west of London, and try Edinburgh and Dublin to boot. *The Pleasures of Hope* made its appearance in May 1799. A few copies spread from hand to hand, and were read in Edinburgh with delight and astonishment. Quickly the news flashed through the world of letters, that a poet had appeared whose prime, should it realise the promise of his youth, would register his name among the immortals. Edition after edition of the poem was bought up, and Mundell & Son shared the profits of their speculation with the author, giving him £25 on every thousand printed, or a royalty of sixpence a copy. Further, in 1802, they allowed him to print, in quarto, for his own benefit, a seventh edition, containing *The Battle of Hohenlinden*, *Ye Mariners of England*, *The Exile of Erin*, and *Lochiel's Warning*. By this venture, it is said, he cleared £600. Mundell & Son only ceased to pay their voluntary tribute after a quarrel with the poet. It is estimated that from *The Pleasures of Hope* he derived at least £900, which, as the poem contains 1100 lines, is at the rate of 15*s.* a line—not poor pay, certainly. Campbell wrote little and at long intervals, and nothing in marked excess of his early efforts. His powers appear to have been paralysed with a dread that he should produce anything beneath the standard of his youth. But the fame of *The Pleasures of Hope* was a source of easy income to him through life. For his name as editor of books and magazines, publishers paid him large sums; and in 1806, before he was thirty, the Fox ministry endowed him with a pension of £200 a year. Poetry, if it was a hard mistress to Burns, was a most bountiful one to Campbell.

Reverting to Campbell's feeling about booksellers, it is to be admitted that he shared it with many authors. For what cause we know not, it is an opinion commonly entertained that a publisher is unjust if he on any occasion profits more than the author. If he buys a doubtful manuscript on speculation, and its publication proves remunerative, the author goes about proclaiming that he has been outwitted or defrauded. If, on the other hand, the publication had proved a dead loss, it would never enter the author's head to refund the cash he had received, or to divide the deficit with the publisher. It must be obvious, that such conduct is childish in the extreme. In no trade, except literature, would such an outcry be heard with the least tolerance. No commercial men, except publishers, are ever found sharing the gains of a speculation with those from whom they made their purchase. If Mundell & Son had bought a piece of land from Campbell, and in their hands its rental had multiplied however prodigiously, they would never have dreamed of sharing the increase with Campbell, nor would Campbell have ventured to expect a dividend. It is eminently unreasonable that publishers should incur odium for conducting their business on ordinary commercial principles. Happy is that author by whom a publisher is able to make a successful speculation! If *The Pleasures of Hope* had not been remunerative, Campbell would never have received great sums for editing magazines, nor a pension of £200 a year from government whilst quite a young man.

STORY OF JANE M'REA.

On the 27th of July 1777, an incident occurred on the Hudson River, which temporarily threw a sad discredit on the British arms, then engaged in the hopeless attempt to preserve America to the British crown. An American army under Schuyler, was posted on the Hudson, with a rear-guard occupying Fort Edward on that river. The British army of General Burgoyne was in possession of the chain of lakes extending towards Canada. At this crisis, there resided with a widow close to Fort Edwards, a young lady of New York, named Jane M'Rea, who had a lover named Jones, a native loyalist, serving under Burgoyne. Her brother wished her to come to him in a safer part of the country; but it is supposed that she lingered at her friend Mrs M'Neil's house at Fort Edward, in a dreamy hope of meeting her loyalist lover. She was a lovely girl of twenty, extremely intelligent, and of charming manners.

The British army had a number of red Indians in its employment, to assist in harassing the unfortunate colonists. They were strictly enjoined only to make captures, and not to commit murder; but it was impossible, by an injunction, to control such wild natures. The fact is, that they shed blood in many instances, and so left an indelible disgrace on the British name in that country. On the day above stated, a party of them assailed Mrs M'Neil's house, and bore off herself and her guest Miss M'Rea, as prisoners, designing apparently to carry them both to the British camp. They were, however, pursued by some American soldiery, who fired upon them. Mrs M'Neil was brought into camp, but of Jane M'Rea only the scalp, with her long flowing hair, was forthcoming. The poor girl had been shot by her own countrymen, and the Indians, seeing her dead, had brought away the bloody trophy, which they are accustomed to tear from the bodies of their enemies.

This tale of woe made a deep impression on the minds of the American people. It was universally believed, that the Indians had murdered Miss M'Rea, notwithstanding the palpably contradictory fact, that they had preserved the elder lady. The love affair added romance to the tragic story. It was held as a terrible example of the wickedness of employing the Indians in a civilised warfare. Poor Jones withdrew in extreme grief to Canada, where he lived to grow old, but was always sad, and never married. Jane lies buried in the small village cemetery, near Fort Edward, beside the grave of her friend Mrs M'Neil.*

* This account of the tragedy of Jane M'Rea, is chiefly taken from a book of remarkable merit and interest, Lossing's *Field-book of the Revolution*, i. 98.

LEGENDARY ACCOUNT OF GERBERT, MAGICIAN AND POPE.

It was a peculiar feature of the middle ages, that, amid the general mass of ignorance, individuals arose possessed of such enormous mental powers, and so far in advance of their age, that, while the real effects of their great understanding were lost, their names became enveloped in a mist of superstitious wonder which gave them the repute of supernatural giants. A very remarkable example was furnished by the latter part of the tenth century, a period in the history of Western Europe which was not remarkable for its intellectual development. It was France which then produced a youth named Gerbert, of whom the old chroniclers tell us that the highest science then known seemed to be beneath his notice, while his mechanical inventions were the world's wonder. From the account which William of Malmesbury gives of his organ worked by hot water, we might be led to believe that he was not unacquainted with the power of steam. We cannot be surprised if such a man became the subject of innumerable legends, even in his own time, and the historian just quoted, who lived in the middle of the twelfth century, has collected some of them, which are not only curious in themselves, but place in an interesting light the manner in which science was then generally regarded.

According to these legends, Gerbert made his *début* in the world as a monk of Fleury; but, dissatisfied with the unintellectual life which he led there, he fled from his monastery by night, and went to Spain, to study, among other things, the occult sciences at Toledo. This place was the great seat of learning among the Arabs of Spain; and, among the Christians of the middle ages, Arabian science was equivalent with magic and sorcery. Gerbert, according to the legend, lodged at Toledo with a Saracenic 'philosopher,' whose friendship he gained by his liberality (for he seems to have been possessed of wealth) and by the prospect of advancement in the world, and whose fair daughter became attached to the young student by more tender feelings. The philosopher instructed Gerbert in all hidden knowledge, and communicated to him freely all his books, with the exception of one volume, containing 'the knowledge of his whole art,' which nothing could induce him to impart to his pupil, while the latter became more eager to obtain what was so strictly forbidden. At length, with the assistance of the young lady, Gerbert treacherously plied the Saracen with wine, and, while he was asleep in his bed, took the book from under his pillow, where it was concealed, and fled. The Saracen awoke, perceived his loss, and having discovered, by his knowledge of the stars, the robber and the road he had taken, pursued him without delay. Gerbert also had become acquainted with the stars, and through them he was made aware of the nearness of his pursuer, and of the danger which threatened him, and he adopted an ingenious stratagem. Coming to a wooden bridge, he took shelter under it, and suspended himself to the woodwork, so as to touch neither earth nor water. Then the Saracen, whose knowledge of Gerbert's movements reached only to those two elements, found himself suddenly at fault, and returned home to make further experiments in his art. He soon obtained the further knowledge he required, and again went in pursuit of Gerbert, who meanwhile had arrived on the sea-coast, and there, by means apparently of his stolen book, called up the Evil One, to whom he sold himself, on the condition that the latter should protect him from the Saracen, and convey him safely over the sea to France.

William of Malmesbury here interrupts his narrative to state his reasons for believing that Gerbert had really entered into a league with the devil; and then goes on to state that, on his arrival in France, he opened a school at Orleans, where he was respected by all the great scholars of the age, and had among his pupils the sons of Hugh Capet and the Emperor Otho, and other remarkable persons. When Robert, the son of the former, became king of France (A.D. 997), he made his old instructor, Gerbert, archbishop of Rheims. His other pupil, Otho, who had succeeded his father, Otho, as Emperor of Germany, afterwards raised Gerbert to the archbishopric of Ravenna, and, through that emperor's influence, he was subsequently (in 999) elected pope. 'Thus,' says William of Malmesbury, 'he followed up his fortune so successfully, with the aid of the devil, that he left nothing unexecuted which he had once conceived.'

The same old historian gives another story of Gerbert's shrewdness. There stood in the Campus Martius at Rome, a statue, having the forefinger of the right hand extended, and inscribed on the head the words, 'Strike here!' Many had believed that by obeying this injunction, they would discover a treasure, and the statue had thus been much mutilated by ignorant people; but Gerbert saw at once its meaning. Marking where the shadow of the finger fell at noonday, when the sun was on the meridian, he placed a mark on the spot, and returning thither at night, accompanied only by a trusty servant carrying a lantern, he caused the earth to open by his accustomed arts, and a spacious entrance was displayed. Advancing, they saw before them a vast palace, with walls of gold, golden roofs—in fact, everything of gold; golden soldiers playing with golden dice; a king of the same metal at table with his queen; delicacies set before them, and servants waiting; vessels of great weight and value, the sculpture of which surpassed nature herself. In the innermost part of the mansion, a carbuncle of the first quality, though small in appearance, dispelled the darkness of night. In the opposite corner stood a boy, with a bow bent, and the arrow drawn to the head. When, however, the visitors attempted to touch any of these objects, all the figures appeared to rush forward to repel their presumption. Gerbert took warning, and controlled his desires; but his man, possessing less self-control, attempted to purloin a knife from the table, and instantly the figures all started up with loud clamour, the boy let fly his arrow at the carbuncle, and in a moment all was darkness. Gerbert compelled his servant to restore the knife, and then, with the aid of the lantern, succeeded in making their escape. It is hardly necessary to add that the entrance, then closed up, has never since been found.

This, as well as the next story, has been repeated in different forms, and in relation to different

persons. Before Gerbert's great advancement in the world, he cast the head of a statue, which, by means of astrology, he endowed with the property that, if questioned, it would return an answer, and, moreover, would speak nothing but the truth. The first question put by Gerbert was: 'Shall I be pope?' to which the head replied, 'Yes!' He then asked when he should die, and was told that he would not die until he had sung mass in Jerusalem. Gerbert believed he had thus, in his own hands, the power of prolonging his life indefinitely, simply by not going to Jerusalem. He became pope in due time; but he was ignorant of the fact that there was a church in Rome which was popularly called Jerusalem. One day, while in the height of his prosperity, he performed mass in that church, and was at the same time suddenly seized with sickness. On inquiry, he learned the name of the church, and then, remembering the prophecy, he perceived it was fulfilled, and prepared for his death, which soon followed.

The same story is told in a more romantic form by another early writer, Walter Mapes. Mapes's version introduces a fairy-like being, named Meridiana, as greatly affecting the destiny of Gerbert. It also states that Gerbert, when pope, 'out of fear or reverence,' always avoided partaking of the Eucharist, using sleight-of-hand to keep up appearances before the people. It concludes as follows: Gerbert, when assured he was soon to die, called together, in a great meeting, the cardinals, the clergy, and the populace, and there publicly made a full confession of his life. He afterwards made an order that, in future, when the pope in person consecrated the bread and wine, instead of taking it himself with his back turned to the congregation, he should turn round and do it in the view of everybody. The few days which remained to him he passed in sincere penitence, and he made at last a very religious death. He was buried in the church of St John Lateran, and it was said that his marble tomb in that church sweated, or exuded water before the death of people of note; the water becoming a perfect stream when it prognosticated the death of the pope, and at other times varying in quantity according to the rank of the individual whose death was thus announced.

Most of our readers will remember how this story of the equivocation of dying in Jerusalem was, at a much later period, transferred to our King Henry IV.

JULY 28.

Saints Nazarius and Celsus, martyrs, about 68. St Victor, pope and martyr, 201. St Innocent I., pope and confessor, 417. St Sampson, bishop and confessor, about 564.

Born.—Jacopo Sannazaro, Italian poet, 1458, *Naples;* Joseph I., Emperor of Germany, 1678, *Vienna.*

Died.—Theodosius the Younger, Roman emperor, 450, *Constantinople;* Pope Innocent VIII., 1492; Thomas Cromwell, Earl of Essex, beheaded on Tower Hill, 1540; John Speed, historical writer, 1629, *Cripplegate, London;* Richard Corbet, bishop of Norwich, humorous poet, 1635; Abraham Cowley, metaphysical poet, 1667, *Chertsey, Surrey;* Conyers Middleton, philosophical and historical author, 1750, *Hildersham;* George Bubb Dodington, intriguing politician, 1762; Maximilien Isidore Robespierre, terrorist autocrat, guillotined at Paris, 1794; Giuseppe Sarti, musical composer, 1802, *Berlin;* Sultan Selim III., assassinated at Constantinople, 1808; Andoche Junot, Duc d'Abrantes, Bonapartist general, 1813, *Montpelier;* Marshal Mortier, Bonapartist general, killed at Paris by Fieschi's 'infernal machine,' 1835; John George Lambton, Earl of Durham, Liberal statesman, 1840, *Cowes, Isle of Wight;* Joseph Bonaparte, ex-king of Spain, 1844, *Florence;* John Walter, proprietor and conductor of *The Times* newspaper, 1847, *London;* Charles Albert, ex-king of Sardinia, 1849, *Oporto;* Mortimer Collins, poet and novelist, contributor to *Punch*, and author of *Sweet Anne Page*, &c., 1876.

JACOPO SANNAZARO.

Among the highest sums ever paid for poetical composition, must be included the 6000 golden crowns, given by the citizens of Venice to Sannazaro, for his six eulogistic lines on their city, thus translated by John Evelyn, the amiable author of *Sylva.*

'Neptune saw Venice on the Adria stand
Firm as a rock, and all the sea command,
"Think 'st thou, O Jove!" said he, "Rome's walls excel?
Or that proud cliff, whence false Tarpeia fell?
Grant Tyber best, view both; and you will say,
That men did those, gods these foundations lay."'

Howel's lines on the 'stupendous site and structure' of London Bridge, are evidently imitations of Sannazaro's on Venice:

'When Neptune from his billows London spied,
Brought proudly thither by a high spring-tide,
As through a floating wood, he steered along,
And dancing castles clustered in a throng;
When he beheld a mighty bridge give law
Unto his surges, and their fury awe,
When such a shelf of cataracts did roar,
As if the Thames with Nile had changed her shore;
When he such massy walls, such towers did eye,
Such posts, such irons upon his back to lie;
When such vast arches he observed, that might
Nineteen Rialtos make, for depth and height;
When the cerulean god these things surveyed,
He shook his trident, and astonished said:
"Let the whole earth now all her wonders count,
This bridge of wonders is the paramount!"'

THOMAS CROMWELL, EARL OF ESSEX.

English history boasts of two great men who bore the name of Cromwell, each of whom was the instrument of a great revolution, not only political, but which affected the whole frame of society. The first of these men, Thomas Cromwell, is said to have been the son of a blacksmith at Putney, who, having saved money, became, according to some, a brewer; or, according to others, a fuller. His son Thomas received a tolerable school education, after which he spent some years on the continent, and made himself master of several foreign languages. His original occupation appears to have been of a mercantile character, but he turned soldier, served in Italy under the Constable Bourbon, and was present in 1527 at his death and the sack of Rome. He afterwards resumed his original calling of a merchant, and, returning to England, embraced the profession of the law. He soon attracted the attention of Cardinal Wolsey,

who made him his solicitor, and employed him as his chief agent in the dissolution of the monasteries, which the pope had abandoned to the powerful minister for the foundation of colleges. On Wolsey's fall, Cromwell accompanied him in his retirement to Esher; but he was soon tired of inactivity, and he went back to court, determined to push his own fortunes. As far as is known, he never deserted his old master, but spoke eloquently in his defence in the House of Commons, of which he was a member, and where his talents for business were highly commended. Cromwell now made his way into the royal favour, which he secured by his bold and able counsels in the king's final breach with Rome, and he soon became the principal and confidential minister of the crown. To Cromwell, indeed, more than to anybody else, we owe the dissolution of the monasteries, and the establishment of the Reformation in England; and these great measures were carried through entirely by his great abilities, courage, and perseverance. Of course the whole hatred of the Catholic party was directed against him; but he was strong in the king's favour, and was raised rapidly to wealth and honours. The estates of the dissolved monasteries contributed towards the former; and, besides holding some of the highest and most lucrative offices of state, he was raised to the peerage in 1536 under the title of Baron Cromwell of Okeham, and three years afterwards he was created Earl of Essex, having been invested with the order of the Garter, and advanced to the office of lord-high chamberlain of England. This great man eventually experienced the fate of most of Henry's confidential ministers, who were overloaded with favours so long as they pleased him, but the first loss of confidence was but a step to the scaffold. He was actively instrumental in promoting the marriage with Anne of Cleves, and the king, disappointed in his wife, wreaked his vengeance upon his minister. Archbishop Cranmer pled for him in vain, and Cromwell was committed to the Tower on the 10th of June 1540, attainted, after the mere shadow of a trial, of high treason, and beheaded on the 28th of July.

A nephew of Cromwell, Sir Robert Williams, obtained court-favour through his means, and assumed his name. He received a grant from the crown of the lands of the dissolved monasteries in Huntingdonshire, and established his family at Hinchinbroke, in that county. He was the great-grandfather of Oliver Cromwell, the Protector.

RICHARD CORBET.

Richard Corbet, successively bishop of Oxford and Norwich, was one of the most eminent English poets of his day. Born in the reign of Elizabeth, his wit and eloquence recommended him to the favour of James, and his advancement in the church was commensurate with his abilities. Benevolent, generous, and spirited in his public character—amiable and affectionate in private life—he deservedly enjoyed the patronage of the great, the applause and estimation of the good. The following lines, found written on the fly-leaf of a volume of Corbet's poems, convey an excellent idea of his general character

'If flowing wit, if verses writ with ease,
If learning void of pedantry can please;
If much good-humour joined to solid sense,
And mirth accompanied with innocence,
Can give a poet a just right to fame,
Then Corbet may immortal honour claim;
For he these virtues had, and in his lines
Poetic and heroic spirit shines;
Though bright, yet solid, pleasant but not rude,
With wit and wisdom equally imbued.
Be silent, Muse, thy praises are too faint,
Thou want'st a power, the prodigy to paint,
At once a poet, prelate, and a saint.'

ROBESPIERRE.

The 10th Thermidor was the revolutionary name for the day (the 28th July 1794) which brought the termination of the celebrated Reign of Terror. While pressing dangers from foreign invaders and internal enemies surrounded the Revolution, the extreme party, headed by Robespierre, Barrere, St Just, &c., had full sway, and were able to dictate numberless atrocities, under pretence of consulting the public safety. But when the Revolution became comparatively safe, a reaction set in, and a majority in the Convention arrayed themselves against the Terrorists. A struggle of two days between the two parties produced the arrest of Robespierre, Couthon, St Just, Lebas, and a younger brother of Robespierre; and finally, in the afternoon of the 28th, these men, with some others, their accomplices, mounted the scaffold to which they had, during eighteen months, consigned so many better men. Robespierre died at the age of thirty-five.

It is undoubted that many of the most frightful outrages on humanity have been perpetrated, not in wanton malignity, or from pleasure in inflicting pain, but in the blind fervour of religious and patriotic feeling. We do not charge St Paul with cruelty when, as Saul, he went about 'breathing threatenings and slaughter,' and 'making havoc of the church.' St Dominic, who led on the massacre of the Albigenses, is said to have been a kindly man, but for a heretic he had no more heart than a stone. Indeed, the catalogue of persecutors contains some of the noblest names in history.

Had Robespierre himself not been sent as deputy from Arras to Paris, he probably would have lived a useful citizen, respected for his probity, benevolence, and intelligence. When an enterprising spirit in Arras set up a Franklin lightning-conductor, there arose a popular outcry against his impiety. 'What! shall we rend the very lightnings from the hand of God?' exclaimed the terrified people. Robespierre defended Science against Superstition, and won a verdict for the innovator. He was appointed a judge in the Criminal Court of Arras, but he actually resigned his office rather than sentence a murderer to death. In Paris, he dwelt with Madame Duplay, who idolised her lodger. His evenings he occasionally spent in conversation with her and her daughter; sometimes he read them a play from Racine, and sometimes took them to the theatre, to see some favourite tragedy. Once he proposed to leave the house, saying: 'I compromise your family, and my enemies will construe your children's attachment to me into a crime.' 'No, no,' replied Duplay, 'we will die together, or the people will triumph.' Similar testimonies of esteem come from others who knew Robespierre privately; yet we cannot suppose he ever com-

manded any deeper feeling in any human breast than respect. He had no geniality; his virtues were all severe; he was a Puritan and Precisian, and perhaps the most perfect type of the fanatic to be found in biography. As Mr G. H. Lewes, in his *Life and Correspondence of Robespierre*, observes: 'All that is great and estimable in fanaticism—its sincerity, its singleness of purpose, its exalted aims, its vigorous consistency, its disdain of worldly temptations—all may be found in Robespierre; and those who only contemplate that aspect of the man will venerate him. But there is another aspect of fanaticism, presenting narrow-mindedness, want of feeling, of consideration, and of sympathy; unscrupulousness of means, pedantic wilfulness, and relentless ferocity; and whoso contemplates this aspect also, will look on Robespierre with strangely mingled feelings of admiration and abhorrence.'

It was the intense unity and energy of his character that carried Robespierre so quickly to power. His mind was small but single; not any of its force was wasted. When he first spoke in the Assembly, he was laughed at; but, said Mirabeau, with the prescience of genius: 'That man will do somewhat; he believes every word he says.' It is to be remembered that he ran the career by which he is infamous in the short space of five years; he arrived in Paris as deputy from Arras in 1789, and was guillotined in 1794.

Robespierre's person was in striking correspondence with his mind. He was little, lean, and

ROBESPIERRE.

feeble. His face was sharp; his forehead good, but narrow, and largely developed in the perceptive organs; his mouth was large, and the lips thin and compressed; his nose was straight and small, and very wide at the nostrils. His voice was hoarse in the lower, and discordant in the higher, tones, and when in a rage, it seemed to change into a howl. He was bilious, and his complexion livid, and thus Carlyle, in his *French Revolution*, always marks him out as 'the sea-green.'

His wants were few and his habits simple. For money he had as little desire as necessity; and at his death his worth in cash was no more than £8. Thus as easily as justly did he win his title of 'The Incorruptible.' He drank nothing but water; his only excess was in oranges; these he ate summer and winter with strange voracity, and never did his features relax into such pleasantness as when his mouth was engrossed in one. His lodgings with Duplay were very humble; his bed-room and study were one apartment. There might be seen a bedstead, covered with blue damask and white flowers, a table, and four straw-bottomed chairs. The walls were studded with busts and portraits of himself; and two or three deal-shelves contained the few books he cared to read, and his manuscripts carefully written, and with many erasures. On the table there usually lay a volume of Racine or Rousseau, open at the place he was reading. He went to bed early, rising in the night to write. His recreation was a solitary walk in the Champs Elysées, or about the environs of Paris, with his great dog Brount, who nightly kept guard on the mat at his master's door. A striking picture might be made of the lean, anxious, bilious, precise tribune, playing with his colossal mastiff.

Considering the extent of his infamy, there are singularly few anecdotes preserved of Robespierre. Mr Lewes describes, in the words of a certain M. Legrand, who was living in Paris in 1849, an interview with Robespierre, at which you are puzzled whether to laugh or shudder. 'M. Legrand,' writes Mr Lewes, 'boasts of his acquaintance with Robespierre, whom he regards as the best abused man of his acquaintance. To him Robespierre was a very agreeable man in society. He only thinks of him in that light. The Reign of Terror is a sort of nightmare—he no longer thinks of it. There is one story he always tells, and I regret that I must spoil it in the telling, wherein so much of the effect depends upon the gesture and the quiet senile tone of voice; but such as it is, it will, I think, amuse the reader.' M. Legrand speaks—'I recollect one time being at Lebas . . . . where he went very often . . . . I heard a noise upon the stairs. "Stop," cried I. I thought it was that *farceur* (jester) Robespierre . . . . for he was very merry . . . . in society [This epithet of *farceur* is very piquant]. In fact, it was he. He came into the parlour . . . . I go up to him, and say: "Citizen, you know . . . . or you ought to know . . . . that M. Legrand, my kinsman—alas! he is condemned, and to-morrow morning . . . . [Here a very significant gesture imitative of the guillotine completes the sentence] . . . . A man, citizen, whose innocence is certain! for whom I can answer as for myself! . . . . And the life of an innocent man, citizen, it is of some account!" Then he answers me: "Let us see, let us see, what is your business?" . . . . (for he was very agreeable in society—M. de Robespierre). I tell him the tale; then he asks me, "At what hour does your friend die?" . . . . (for he was very agreeable in society—M. de Robespierre). "Citizen," I reply, "at nine o'clock precisely!"—"At nine o'clock! that is unfortunate! for you know I work late; and as I go to bed late, I rise late. I am much afraid I shall not be up in time to save your friend . . . . but we shall see, we shall see!" . . . . (for he was very agreeable in society—M. de Robespierre). [After a short pause the old gentleman continues.] It appeared . . . . that M. de Robespierre had worked *very hard* that night; for my poor friend! [Here again he makes the guillotine gesture]. It is all the same! I am sure that if he had not worked so late, he would have saved my poor friend; for he was very agreeable in society—M. de Robespierre.'

MARSHAL MORTIER :
FIESCHI'S INFERNAL MACHINE.

It was on the 28th July 1835, that this infernal machine was discharged, with intent to destroy the French king, Louis Philippe, as he rode along the lines of the National Guard, on the Boulevard du Temple, accompanied by his three sons and suite. The machine consisted of twenty-five barrels, charged with various species of missiles, which were fired simultaneously by a train of gunpowder. The king and his sons escaped ; but Marshal Mortier, Duc de Treviso, was shot dead, and many other persons were dangerously wounded. Such were the circumstances under which one of Napoleon's marshals, after escaping the perils of the battle-field, perished in a time of peace, in the streets of the capital, while in the service, suite, and favour of a king of the Orleans branch of the Bourbons ! It is as an introduction to some little known facts of his earlier life, that we have thus briefly stated the circumstances of his death.

Biography, like history, is at times written after a strange fashion. Like the fabled shield, gold on one side and silver on the other, not only the colouring but the facts of a life seem to depend on the stand-point of the writer. Before us lies a little publication of the year 1813, professing to give *An interesting Account of Buonaparte and his Family; with the Original Name, Pedigree, and present Title of the Marshals and Generals who fought his Battles in Spain, Portugal, Russia, Germany, &c.; chiefly extracted from the Literary Panorama, with Additions to the present Time, by the Editor.* Some idea may be formed of the character of this *brochure*, from the fact that it charges most of the family of Napoleon, and many of his marshals and generals, with the foulest crimes ; as murder, incest, adultery, forgery, wholesale robberies, &c. In an introductory note, its editor says : 'Nor perhaps will it be believed that Brissot, who dethroned Louis XVI., had been employed in a printing-office in London, at the rate of 30*s.* per week, as corrector of the press !' We have not elsewhere seen this statement, and of course cannot pronounce it either true or false. But if true, it is noteworthy that Brissot was not the only one of those bespattered with abuse by 'the editor' aforesaid, who passed some time in England. This is what he writes on the subject of our sketch :

'Marshal Mortier, Duke of Treviso, was clerk to a merchant at Dunkirk, Mr James Bell, now of Angel Court, Throgmorton Street, London, who took him to Alicante, at £25 per annum. There he learned the Spanish language, and behaved remarkably well. He then left his situation at the beginning of the French revolution, and went back to France, where he was made a sergeant in the National Guard. He committed great depredations in Hanover. The Duchess of Treviso is an inn-keeper's daughter.'

Looking at most of the other portraits in this wretched picture-gallery, it seems clear that the limner had not been able to find any of his darker hues with which to smear the character of Mortier. But, leaving this statement with the expression of a doubt as to its veracity in two or three important features, we turn to a much more pleasing sketch from another English pen.

In that amusing book, entitled *Music and Friends*, by the late Mr Gardiner, of Leicester, the author gives the following account of a visit he made to Paris in July 1802 : 'One of my first objects in Paris was to be present at the *fête* on the 14th of July, the anniversary of the revolution, and for this purpose my friend, Mr Cape, procured me a letter of introduction to General Mortier from Mr Sylvester, of Manchester, with whom Mortier had served his clerkship as a merchant. On my arrival I found the general was commander of the city, residing at the Etat Major, what we should call the Horse Guards of Paris. . . . I had received a note from General Mortier, afterwards Duke of Treviso, to dine with him, and bring my friend. This was very agreeable to me, as Mr Fichet spoke the language like a native. My friend was overjoyed at the thoughts of this visit, and was in a hundred perplexities how he should dress for the occasion. The first article laid out was an embroidered shirt that cost twelve guineas, with loads of rings, chains, and trinkets. When attired, I confess we did not look as if we belonged to the same species. Having driven to the Etat Major, we were received by a file of soldiers at the gate, who presented arms. We were ushered into the drawing-room, and introduced to the general, to Madame Mortier, another lady, and the general officers, Menou, Soult, and Lefevre. The coats of these warriors were covered with gold upon the arms from the shoulder to the wrist ; you could scarcely see the scarlet cloth for oak-leaves and acorns wrought in gold. When we had sat down to dinner, I noticed two vacant places at table, which were soon filled up by the sergeant and corporal upon guard, who had just received us at the door. This was one of the outward signs of liberty and equality ; they behaved well, and retired just before the dessert was brought in. We had an elegant dinner ; some things surprised me—the eating of ripe melon to boiled beef, and drinking sixteen sorts of wine at dinner. A fine embroidered *garçon* was incessantly bawling in my ear some new sort he had upon his tray. I satisfied him by tasting all, and it was well I did so, for you get no wine afterwards. My friend was the admiration of the ladies, and had the whole of their conversation—a sort of small-talk in which he greatly excelled. For my part, I was compelled to be silent, not having that enviable fluency ; and my taciturnity excited the attention of Menou, who asked me "What the English thought of the French ?" Mortier, who spoke our language perfectly, was kind enough to be my interpreter, and I replied : "We thought them a fine gallant nation, great in science and in arms." This produced a smile of satisfaction, and was probably the first sentiment of the kind they had heard from an Englishman. "We have the same opinion of you," replied the Egyptian general ; "you are as great upon sea as we are upon land. What folly is this fighting ! Could we but agree, the world might be at peace ; England and France could govern Europe. What do you think of the Consul ?" continued he. "Why, we think him rather an ambitious gentleman ; we have a notion that he will not long be satisfied with being Prime Consul, but will declare himself sole Consul ;

and, if you wish for my private opinion, I think shortly he will make himself king!" The general turned round with a supercilious smile, and addressing himself to the company, said the credulity of the English was a proverb all over Europe.'

From this narrative, it appears that Mr Gardiner had not been introduced to Mortier before July 1802, and that it is only on hearsay that he states that the marshal had been a clerk in the establishment of a Manchester merchant, named Sylvester. This is an error, which the present writer is enabled to correct. In the year 1786, an academy was established in Manchester, entitled the Manchester Academy, chiefly in connection with the Presbyterian or Unitarian denomination of dissenters. Its principal was the Rev. Thomas Barnes, D.D., then the senior minister of the Manchester Presbyterian Chapel, Cross Street. Its tutor for the Belles-Lettres, &c., was Mr Lewis Loyd, then a dissenting minister, who preached at Dob Lane Chapel, Failsworth, about three miles from Manchester. He subsequently married Miss Jones, the daughter of a Manchester banker, and became a partner in the since well-known firm of Jones, Loyd, & Co., of London and Manchester. His son, Samuel Jones Loyd, was, a few years ago, elevated to the peerage by the title of Lord Overstone. When it is added that the mathematical tutor at the Manchester Academy, at the same period, was Dr Dalton, afterwards so celebrated for his chemical discoveries, and especially for what has been termed the law of definite proportions, or the atomic theory—enough has been said to shew that this provincial academical institution of the last century was worthy of its high reputation.

Some years ago, the writer had several conversations on the subject of this academy, its principal, its tutors, and *alumni*, with a venerable survivor of the latter body, the late John Moore, Esq., F.L.S., in whose words is the following too brief account of the subject of this notice: 'Another student of the Manchester Academy, whose military talents advanced him to high rank in the service of his country, was the celebrated Marshal Mortier. He was the son of a merchant at Lyons, who, being desirous that his son should acquire an insight into the English methods of manufacturing and of doing business, sent him over to Manchester, and he was placed in the academy, but some time before I entered it. It has been erroneously stated that Mortier was a clerk in the house of Messrs Sylvester & Co., and Colonel Sylvester (of the volunteers) has been mentioned in connection with him. But it was the colonel's brother with whom Mortier was intimate, and there was no commercial connection whatever—nothing but personal friendship between them. It is supposed, however, that Mortier was, for a short time, in more than one Manchester house; not, however, as a clerk, but as a young gentleman seeking to obtain information as to their modes of doing business. Mortier did not remain long in Manchester, but returned to France when the war broke out. He joined the army, where his military talents led to his rapid rise, now a matter of history. It is to his honour that, learning, after he had risen to a high military rank and position, that his old friend James Sylvester was in embarrassed circumstances, he wrote to him; intimating that he could never forget his friendship while in Manchester, and (it is believed) sent him some very substantial present, to enable him to improve his fortunes.'

From another friend in Manchester, the writer derived the following interesting anecdote of Mortier: 'I knew a young man named Wild, in the volunteers—a very modest, shy lad; but he afterwards joined the army, rose by merit, and became lieutenant. He was with the British army in Spain, where he was appointed adjutant of the 29th Regiment, and was in that slaughtering affair —I think Salamanca—where Colonel White was shot; Wild being wounded at the same time. Colonel White became delirious from the effects of the wound, and as he was being carried to the rear, he began singing. The Duke of Wellington, passing at the time, stopped, and when he saw poor White's condition, tears came into the eyes of the man who has been called "The Iron Duke." Subsequently, Wild being at an outpost, was taken prisoner with some of his men, by the French troops, and they were marched up the country. The officers were very civil to Wild, and, as it was their custom to march at the head of their men, in order to avoid the dust, they invited him to join them. After some days' march they reached headquarters, and on reporting themselves, received the honour of an invitation to dine with Marshal Mortier, then commanding a garrison town. The invitation contained the words: "Bring your English prisoner with you." Poor Wild was in no plight to dine with a marshal of France; but his captors were most considerately kind. One lent him a shirt; another some other article of attire; and by their courteous aid he found himself at length presentable. The dinner was *recherché*, everything *en grand regle;* and at length, after coffee, the guests rose to retire. The marshal requested them to leave their prisoner with him; and when the French officers had withdrawn, Wild was astonished to hear himself addressed in plain English: "Well, and where do you come from?" His reply was, "From beyond Rochdale, in Lancashire." "Well; and how's Dick Crompton?" In this familiar style Mortier chatted with his astonished guest, naming Smithy-door and other well-remembered localities, and appearing much amused to learn that his old acquaintance, Dick Crompton, was then town-major of Lisbon. After a pleasant conversation on Lancashire men and places, Wild was reconducted to his quarters, and remained some time in prison. He succeeded, with the aid of a kindly girl, in effecting his escape, and long rambled about the country, under great risks, till at length, by the aid of friendly contrabandistas, he made his way back to the headquarters of the British army. After attaining a captaincy he was placed on half-pay; returned to Manchester; took the White Lion Inn, Long Millgate; and subsequently went to keep what were then called Tinker's Gardens (afterwards Vauxhall Gardens), Collyhurst. He married a very beautiful girl, who did not assist him in the inn; all went wrong; and poor Wild was taken as a debtor to Lancaster Castle. Hearing a bell ring in the evening, he asked what it was, and was told it was the time for the prisoners to be locked up. He fell down, and expired on the spot. Dick

Crompton became Captain Crompton, and on my telling him about Mortier asking after him, he said, "Oh, I knew Mortier very well in Manchester."'

JOHN WALTER, OF 'THE TIMES.'

The perfection of literary success involves the conjunction of the man of letters with the man of business. Next to the author is the publisher, who carries the author's wares to market, and suggests to him what ought to be produced, and indicates what can be sold. A publisher is often a mere seller of books irrespective of their contents, but it must be obvious that for the due fulfilment of his functions, a taste for and delight in literature are essential. It was through a happy union of business tact with literary taste that the House of Murray was crowned with honour and fortune; and the same truth we find illustrated with equal brilliancy in the story of the House of Walter.

As there have been three John Murrays, there have been three John Walters—father, son, and grandson. John Walter, the father, was born in 1739, and was known as the 'logographic printer.' He held a patent for Logography, or the art of printing with entire words, and their roots and terminations, in addition to the use of types for single letters; and persevered with his scheme through much opposition and many difficulties. In joke it used to be said that his orders to the typefounder ran in this fashion: 'Send me a hundredweight of type made up in separate pounds, of *heat, cold, wet, dry, murder, fire, dreadful, robbery, atrocious outrage, fearful calamity, alarming explosion, honourable gentleman, loud cheers, gracious majesty, interesting female*,' and so on. He brought out, in 1785, *The Daily Universal Register*, the title of which he changed on the 1st of January 1788, to (world-famous name!) *The Times*. The heading of the early numbers was as follows: *The Times, or Daily Universal Register, printed Logographically*. Its price was 3*d*. For many years the *Times* existed in quiet equality with its daily brethren; now and then falling into trouble from actions at law through incautious writing. In 1790, Mr Walter was fined £200 for a couple of libels on the Prince of Wales, and the Dukes of York and Clarence, but was released from Newgate at the end of sixteen months by the intercession of the Prince of Wales. John Walter I. died in 1812.

It was under John Walter II., born in 1784, that the *Times* rose to the place of the first newspaper in the world. Whilst yet a youth, in 1803, he became joint-proprietor and sole manager of the *Times*, and very soon his hand became manifest in the vigour and independence of its politics, and the freshness of its news. Free speech, however, had its penalties. The *Times* denounced the malpractices of Lord Melville, and the government revenged itself by withdrawing from the Walters the office of printers to the Customs, which had been held by the family for eighteen years. During the war between Napoleon and Austria in 1805, the desire for news was intense. To thwart the *Times*, the packets for Walter were stopped at the outports, whilst those for the ministerial journals were hurried to London. Complaint was made, and the reply was given that the editor might receive his foreign papers as a *favour;* meaning thereby that if the government was gracious to the *Times*, the *Times* should be gracious to the government; but Walter would accept no favours on such terms. Thrown on his own resources, he contrived, by means of superior activity and stratagem, to surpass the ministry in early intelligence of events. The capitulation of Flushing, in August 1809, was announced by the *Times* two days before the news had arrived through any other channel. In the editorship of the paper he spared neither pains nor expense. The best writers were employed; and wherever a correspondent or a reporter displayed marked ability, he was carefully looked after, and his faculty utilised. Correspondents were posted in every great city in the world, and well-qualified reporters were despatched to every scene of public interest. The debates in parliament, law proceedings, public meetings, and commercial affairs were all reported with a fulness and accuracy which filled readers with wonder. What a visionary could scarcely dare to ask, the *Times* gave. To other journals, imitation alone was left. They might be more consistent politicians, but in the staple of a newspaper, to be nearly as good as the *Times* was their highest praise.

The public were not slow to appreciate such service, and to reward the *Times* with a yearly increase of circulation. Next to Mr Walter's desire to occupy its columns worthily, was his anxiety to print it off so rapidly as to be able to meet any demand. The hand-press was of course inadequate. As early as 1804, he assisted Thomas Martyn, an ingenious compositor, in devising a new machine, and only gave up when he had exhausted his available funds. Shortly after, Frederick Koenig, a German, came to England with some novel ideas about printing, which met the approval of two or three enterprising London tradesmen; and after several years of patient and expensive experiment, Koenig and his patrons were gratified by success. Mr Walter gave an order for two of Koenig's machines, to be worked by a steam-engine. The *Times*' pressmen were enraged at the innovation, and Mr Walter had actually to set up the new apparatus in adjoining premises, to be safe from their violence. On the 29th November 1814, a memorable day, the *Times* was printed for the first time by steam-power. The number impressed per hour was 1100. Improvement on improvement followed on Koenig's invention, until at this day 15,000 sheets of the *Times* are printed off in a single hour!

Mr Walter acquired a noble fortune through his enterprise, and purchased a fine estate in Berkshire, for which county he was returned as member of parliament in 1832; he resigned his seat in 1837, in consequence of a difference with his constituents on the question of the new Poor Law. He died on the 28th July 1847, at his house in Printing House Square, Blackfriars, the scene of his labours and triumphs.

Mr Walter was succeeded by his son, John Walter III., born 1818. He sat in the House of Commons, as member for Nottingham, from 1847 till 1859; when he was elected for Berks. Under his care the *Times* has continued to flourish.

JULY 29.

St Martha, virgin, sister of Mary and Lazarus. Saints Simplicius and Faustinus, brothers, and their sister Beatrice, martyrs, 303. St Olaus, king of Sweden, martyr. St Olaus or Olave, king of Norway, martyr, 1030. St William, bishop of St Brieuc, in Brittany, confessor, about 1234.

Born.—Albert I., emperor of Germany, 1248.

Died.—Philip I., king of France, 1108, *Melun;* Sebastian, king of Portugal, killed near Tangiers, 1578; Thomas Stukely, adventurer, 1578; Pope Urban VIII., 1644; Andrew Marvell, poet and politician, 1678, *London;* Benjamin Robins, celebrated mathematician and experimenter on projectiles, 1751, *Madras;* Augustus William Ernesti, editor of Livy, 1801, *Leipsic;* Anna Selina Storace, favourite singer, 1814, *London;* William Wilberforce, philanthropist, 1833, *London;* Dr Thomas Dick, author of various scientific works, 1857, *Broughty Ferry, Forfarshire.*

DISAPPEARANCE OF DON SEBASTIAN OF PORTUGAL.

The students of modern European history, and the readers of Anna Maria Porter's novels, are well aware of the romantic circumstances under which Don Sebastian, king of Portugal, disappeared from the face of the earth in 1578. This enthusiastic young king—he was only two-and-twenty—chose to conduct the best military strength of his country into Marocco, in order to put down a usurping sovereign of that country; an expedition utterly extravagant and foolish, against which all his best friends counselled him in vain. He fought a desperate battle with the Moors at Alcazar, performed prodigies of valour, and was nevertheless so thoroughly defeated, that it is said scarcely fifty of his army escaped alive. A body, said to be his, was rendered up by the Moors, and interred at Belem; but the fact of his death, nevertheless, remained doubtful. His countrymen, who admired and loved him, considered him as having mysteriously disappeared, and an idea took possession of them that he would by and by reappear and resume his throne. Strange to say, this notion continued in vigour after the expiration of the time within which the natural life of Sebastian must have been circumscribed; indeed, it became a kind of religious belief, which passed on from one generation of Portuguese to another, and has even survived to very recent times. In the *Times*, December 1825, it is stated as 'a singular species of infatuation, that many persons residing in Brazil, as well as Portugal, still believe in the coming of Sebastian. Some of these old visionaries will go out, wrapped in their large cloaks, on a windy night, to watch the movements of the heavens; and frequently if an exhalation is seen flitting in the air, resembling a fallen star, they will cry out, "There he comes!" Sales of horses and other things are sometimes effected, payable at the coming of King Sebastian. It was this fact that induced Junot, when asked what he would be able to do with the Portuguese, to answer: "What can I do with a people who were still waiting for the coming of the Messiah and King Sebastian?"'

THOMAS STUKELY.

The romantic career of this extraordinary adventurer has furnished materials for the novelist, dramatist, and poet. He was of a good family in the west of England; and a relative, probably brother, of the Sir Lewis Stukely, sheriff of Devonshire, who arrested Sir Walter Raleigh. His father is said to have been a wealthy clothier or manufacturer of woollen cloths. This being the most lucrative trade of the period, requiring large capital to carry it on, the clothiers were considered as gentlemen, and allowed the privilege of wearing coat-armour. Stukely's place of birth is doubtful. The long popular ballad on him commences thus:

'In the west of England,
Born there was, I understand,
A famous gallant in his days,
By birth a worthy clothier's son;
Deeds of wonder hath he done,
To purchase him a long and lasting praise.'

But in the drama ascribed to George Peele, entitled *The Battle of Alcazar*, he is represented saying:

'Thus Stukely, slain with many a deadly stab,
Dies in these desert fields of Africa.
Hark, friends! and, with the story of my life,
Let me beguile the torment of my death.
In England's London, lordings, was I born,
On that brave bridge, the bar that thwarts the Thames.'

Other accounts say that Stukely was a natural son of Henry VIII.; and again, it is stated that he was the son of an English knight, by an Irish mother of the regal race of Mac Murrough, and he certainly had family connections with the principal nobility of Ireland. It is certain, also, that he was bred a merchant, and acquired an immense fortune by marrying the daughter of an Alderman Curtis. This lady, whose fortune supplied Stukely's inordinate extravagance, represented to him one day that he 'ought to make more of her.' 'I will,' he replied, 'make as much of thee, believe me, as it is possible for any man to do;' and he kept his word, in one sense at least, for having dissipated all her fortune, he stripped her of even her wearing apparel before he finally left her.

Sir Walter Scott says, that this 'distinguished gallant' ruffled it at the court of Queen Elizabeth with Raleigh, and the best of the time. And it would seem that his inordinate pride, vanity, and ambition were considered an amusement, rather than an insult to the court. His first, but abortive enterprise, was to found a kingdom for himself in Florida; and he presumed to tell Elizabeth, that he would rather be the independent sovereign of a molehill, than the highest subject of the greatest monarch in Christendom. At another time, he said, in hearing of the queen, that he was determined to be a prince before he died. 'I hope,' ironically observed Elizabeth, 'that you will let us hear from you, when you are settled in your principality.' 'I will write unto your majesty,' Stukely replied. 'And how will you address me?' she asked. 'Oh! in the style of a prince,' the adventurer with great coolness replied. To our dear sister!'

Stukely, having squandered the greater part of his wealth, went to Ireland in 1563, with the apparent intention of settling in that kingdom.

He soon obtained considerable influence over Shane O'Neill, the most powerful of the native chieftains, and was employed by the government to negotiate with him. When Shane defeated the Hebridean Scots at Ballycastle, Stukely was with the Irish chief, and there is every probability that it was by his generalship the victory was gained. Stukely applied for high office in Ireland, but only obtained the seneschalship of Wexford. During his Irish career, he never completely gave up his character of merchant; he still retained ships, which, under the guise of peaceful traders, committed infamous piracies. These depredations being at last traced to Stukely, he sailed to Spain, and assuming to be a person of great consequence, was well received at the Spanish court.

'There did Tom Stukely glitter all in gold,
Mounted upon his jennet, white as snow,
Shining as Phœbus in King Philip's court;
There, like a lord, famous Don Stukely lived.'

From Spain, Stukely went to Rome, where he was also well received; and at the great naval battle of Lepanto, gained by Don John of Austria over the Turks, he commanded one of the papal ships. And as Taylor, the Water-poet, in his *Church's Deliverance*, tells us:

'Rome's malice and Spain's practice still concur
To vex and trouble blest Elizabeth;
With Stukely they combine to raise new stirs;
And Ireland-bragging Stukely promiseth
To give unto the pope's brave bastard son,
James Boncompagno, an ambitious boy;
And Stukely from the pope a prize hath won,
A holy peacock's tail (a proper toy):
But Stukely was in Mauritania slain,
In that great battle at Alcazar fought.'

Gregory XIII., having created Stukely Baron Ross, Viscount Murrough, Earl of Wexford, Marquis of Leinster, and Duke of Ireland, supplied him with a small army of 800 men, with which our adventurer sailed from Ostia, with the intention of conquering Ireland, and annexing it to the pope's dominions. Calling at Lisbon on his way, he found Sebastian, king of Portugal, on the point of sailing with a large force for the invasion of Marocco. Being invited to join this expedition, the chivalrous spirit of Stukely at once assented—the rest is a matter of history. Though Stukely was a traitor and a pirate, his dashing, gallant, fearless career has caused him to be remembered, when many a better man has sunk into oblivion. The ballad, entitled *The Life and Death of the Famous Lord Stukely*, was commonly sold by pedlers in the writer's boyhood; it thus describes Stukely's last and fatal battle-field:

'Upon this day of honour,
Each man did shew his banner,
Morocco and the king of Barbary,
Portugal and all his train,
Bravely glittering on the plain,
And gave the onset there most valiantly.

Bloody was the slaughter,
Or rather wilful murder,
Where sixscore thousand fighting-men were slain.
Three kings within this battle died,
With forty dukes and earls beside,
The like will never more be fought again.'

Besides Peele's drama, already mentioned, there was another play published in 1605, entitled *The Famous History of the Life and Death of Captain Thomas Stukely:* and our hero is thus noticed in Heywood's drama of *If you know not Me, you know Nobody:*

'That renowned battle,
Swift Fame desires to carry round the world,
The battle of Alcazar; wherein two kings,
Besides this king of Barbary, was slain,
King of Morocco, and of Portugal,
With Stukely, that renowned Englishman,
That had a spirit equal to a king,
Made fellow with these kings in warlike strife,
Honoured his country, and concluded life.'

THE GOOD WILBERFORCE.

An appellation which was never more worthily bestowed. The century can boast of greater politicians and abler men; but none ingrafted himself so peculiarly in the affections of the masses—who were ever ready to trust his measures, because of the certainty they felt that he acted from the highest principles. His flow of words, so classic and pure in their arrangement, added to a remarkably sweet voice—so beautiful, that he was called 'the Nightingale of the House of Commons'—made him a very persuasive orator. Not less than forty members were influenced by his speech on Lord Melville's prosecution.

He was born in the High Street, Hull, where his ancestors had long carried on a successful trade, and educated at Rochlington, and then at St John's College, Cambridge, where his life-long friendship with William Pitt and Dr Milner commenced. In their company, he travelled on the continent, at which time the religious convictions he afterwards professed were fully formed, as expressed in the work he published—*A Practical View of Christianity.* Only a few weeks after attaining his majority, he was elected member for his native town, and for forty-five years he was never without a seat in the House, exercising there the greatest influence of any one not in office: supporting Catholic emancipation and parliamentary reform; the abolishing of lotteries and of climbing-boys; and last, not least, the great object of his life—the abolition of the slave trade. It was through the persuasion of the venerable Clarkson that he first turned his attention to this subject; and at a dinner given by Bennet Langton, he consented to join the society which had been established for the purpose of carrying out the scheme. He brought the matter before parliament in a most eloquent speech in May 1789, declaring that 38,000 negroes were annually imported to our West Indian colonies. Year after year was the unpopular bill brought forward by its unwearied advocate, and with ever-lessening majorities. Out of the House, Granville, Sharp, Clarkson, Macaulay, Stephen, and many others were working with all their strength. The Irish members joined the cause; but seventeen years passed, and it was not until the death of Pitt that, on the motion of Mr Fox, the immediate abolition of the slave trade was carried by a majority of 114 to 15. How enviable must have been the feelings at that moment of him who had devoted his whole energies to so sacred and humane a cause!

Four times he had been elected member for the

county of York; but in the year 1807, he encountered a most powerful competition from the two great families of Fitzwilliam and Lascelles. Such a period of excitement has seldom been seen in electioneering annals. Party-spirit was at its highest; Mr Pitt had, some little time before his death, offended the cloth-manufacturers of the West Riding; they were, in those days, hand-loom weavers, each possessing his own little freehold, and to a man they declared for the Whig interest. For fifteen days the poll was carried on at York, whither the voters had to be conveyed in wagons and coaches as best they might from the more distant places; and thousands walked many miles to vote, making the election expenses most serious for the members. A large collection was made for Mr Wilberforce, and from the first his seat was sure. Eleven thousand votes placed him at the head of the poll, whilst the other two each numbered 10,000, the largest number of votes ever given at an election; but Lord Milton secured the triumph to the Whigs. Many were squeezed to death in the polling-booths. Riots were daily expected in Leeds, the streets were filled with the mob, and the appearance of a man with the Tory colours made the mayor order out the military. This was the last time Mr Wilberforce stood for Yorkshire; at the next two elections, he chose the borough of Bramber, and he accepted the Chiltern Hundreds in 1825.

WILBERFORCE.

In 1797, he married the eldest daughter of Isaac Spooner, Esq., of Elmdon House, and found in his domestic life a happy relaxation from political fatigues. His fondness for children made him their playful and joyous companion; whilst his conversation was so pleasing and varied, that he was as much at home with deep-thinking senators as with the gravest divines, and never forgot to give the truest consolation to the poor, the sufferer, or the mourner. Though he married a lady of large fortune, his latter days were impoverished by the immense expenses of his Yorkshire elections and unfortunate speculations; whilst the loss of his younger daughter, to whom he was fondly attached, inflicted upon him a wound which he never recovered during the few months he survived her.

He had directed his funeral to be conducted in the quietest manner; but the most eminent statesmen entreated his family to allow a public ceremony in Westminster Abbey, where he rests close to his old friends, Pitt, Canning, and Fox. The large meeting which was held in York the same year, for paying a suitable tribute to the memory of one who had represented the county for thirty years, resulted in the establishment of a School for the Blind.

AQUA TUFANIA.

On the 29th of July 1717, Addison, as secretary of state, addressed a letter to the Commissioners of Customs in England, requiring them to take measures for checking the introduction of a poisoned liqueur of which the British envoys at Naples and Genoa had sent home accounts. It appears from the communications of these gentlemen, that this liqueur, called *Aqua Tufania*, from the Greek woman who invented it, was introduced in large quantities into Italy, and also in part distilled there, and was extensively used as a poison. It was stated that six hundred persons had been destroyed by it at Naples, and there had been many punished capitally for selling and administering it. The culprits engaged in the making and sale of the liquor pretended a religious and conscientious object—they desired to keep the world in ease and quiet, by furnishing husbands with the means of getting quit of troublesome wives, fathers of unruly sons, a man of his enemy, and so forth. The Inquisitors of State, not entering at all into these views, used the strictest measures to put down the Aqua Tufania, but apparently with only partial success.

Such cases as that of the Marchioness Brinvilliers—which are far from being rare—we may remember that of Catherine Wilson in 1862—shew that when an apparently secret and safe means of murder by poison can be obtained, there is that in human nature that will put it to use. It would almost appear that, after one or two successes, a sort of fascination or mania takes possession of the

experimenter; and victims are at length struck down, from hardly any motive beyond that of gratifying a morbid feeling. Indulgence in a wickedness so great, and at the same time so cowardly, certainly presents human nature in one of its least amiable aspects.

RISE IN THE PRICE OF RUE AND WORMWOOD.

On the 29th of July 1760, a rumour arose in London—no one could afterwards tell how—to the effect that the plague had broken out in St Thomas's Hospital! Commerce, notoriously, has no bowels; and Adam Smith justifies it for its visceral deficiency. Next morning, the price of rue and wormwood, in Covent Garden Market, had risen forty per cent.! The authorities saw the necessity of an instant contradiction to the rumour. They put an advertisement in the public journals: 'Whereas the town has been alarmed with a false and wicked report that the *plague* is broke out in St Thomas's Hospital: we, the underwritten (in pursuance of an order of the grand committee of the governors, held this day), do hereby certify that the said report is absolutely without foundation; and that there are no other diseases amongst the patients than what are usual in this and all other hospitals.

'(Signed.) THOMAS MILNER, M. AKENSIDE, ALEXANDER RUSSELL, JOHN HADLEY, *physicians* to St Thomas's Hospital; T. BAKER, BENJAMIN COWELL, THOMAS SMITH, *surgeons* to the said hospital; GEORGE WHITFIELD, *apothecary* to the said hospital.'

It may be remarked, that the M. Akenside here named is much better remembered by the world as a poet (*Pleasures of Imagination*) than as a physician.

St Thomas's Hospital—a magnificent establishment, with lecture-theatres, a dissecting-room, and other accommodations for medical teaching—is now, alas! no more, having been taken down in 1862, in consequence of its purchase by the Croydon, Brighton, and South-Eastern Railway Companies. By these corporations a mere angle of the hospital property was required for the railway line proposed to be extended to Charing Cross; and the governors obtained the insertion of a clause in the act, empowering them to insist on the purchase of the entire hospital by the companies, if they so pleased. It was a reasonable exaction, for the noise of the passing trains could not have failed to be hurtful to the patients. The companies bowed to the claim, but were startled when the sum of £750,000 was demanded for the hospital. On the matter being submitted, the sum of £296,000 was awarded, being considerably less, as is understood, than what might have been obtained on a reasonable private negotiation with the company. The hospital thus lost a site in which it was eminently useful, and for a compensation which may prove hardly sufficient to replace it in some one probably less advantageous. The association of the institution with rue and wormwood a century before seems to have been ominous.

LEGEND OF THE GREEN LADY OF THORPE HALL.

Hard by the neat old town of Louth, in Lincolnshire, which lies nestling at the foot of the famous 'Wolds,' and is noted for possessing one of the most beautiful parish churches in the kingdom, stands Thorpe Hall, an old mansion, charmingly situated amidst most delightful scenery, and connected with which is an old legend but comparatively little known.

It appears that the elder branch of the ancient family of Bolles, or Bolle, settled at this Thorpe Hall, and at Haugh, a small village near the town of Alford, also in Lincolnshire, many members of it lying buried in both Louth and Haugh churches. The earliest mention of any monumental inscription respecting this family, in either of these churches, is of Richard Bolle, of Haugh, who married, 1stly, a daughter of Sir William Skypwith, of Ormesby, Knight, Lincolnshire; 2dly, a daughter of —— Risbye, Esq., of Yorkshire; and 3dly, a daughter of —— Hutton, Esq., of Cambridgeshire. He served the office of sheriff of the county of Lincoln, in 4th Edward VI. and 11th Elizabeth. He had by his first wife a son, Charles, and four daughters; and by his second wife, two sons. Charles Bolle, Esq., his eldest son, had four wives; he died in the lifetime of his father, in 1590, and was buried in Haugh church, where, on the outside of the chancel, is a mural monument of marble, surrounded with the arms of Bolle, and those of his four wives, with a somewhat lengthy inscription in Latin.

His only son and heir, Sir John Bolle, of Thorpe Hall, Knight, lived in the reigns of Elizabeth and James, and was celebrated as well for the gallantry with which he signalised himself as an officer in the army, in the memorable expedition against Cadiz, in 1596, as for his activity, bravery, and good conduct in Ireland. He commanded at the taking of the castles of Donolong and Lifford, during the administration of the Earl of Essex, by whom he was appointed governor of Kinsale. Queen Elizabeth conferred upon him the honour of knighthood after his return from Cadiz; and it is in connection with this gallant knight, and his exploits at this place, that the legend of *The Green Lady* has its origin.

Tradition assures us that, amongst the prisoners taken at Cadiz, it fell to the lot of Sir John Bolle to take charge of a lady of extraordinary beauty, and of distinguished family and great wealth. This lady the noble knight treated with the care and tenderness which was the right of her sex, by endeavouring to soften and alleviate the heavy weary hours of her captivity. This generous care naturally evoked feelings of gratitude, and these ultimately warmed into love. This resulted in her throwing at the feet of the warrior her riches and her person, and such was her ardent passion, that, when released, she entreated him to permit her to accompany him to England as his page. But the gallant knight had a wife at home, and neither the charms of the beautiful Spaniard, nor the powerful influence of her gold, could prevail. Like a true knight, therefore, he returned whither duty and honour alike called him, and the beautiful and inconsolable lady retired to a nunnery, there to spend the remainder of her days in sorrow and seclusion.

On Sir John Bolle's departure from Cadiz, the devoted Spaniard sent, as presents to his wife, a profusion of jewels and other valuables, amongst which was her portrait, taken as she was, *dressed in green;* a beautiful tapestry-bed, wrought in gold by

her own hands; and several casks full of plate, money, and other treasure. Some of these articles, it is said, were, at the commencement of the present century, still in possession of the family; but the portrait was unfortunately lost, or disposed of in some way, half a century before. The picture being thus in *green*, led to her being called, in the neighbourhood of Thorpe Hall, *The Green Lady*. Tradition further records the superstitious belief, that the old hall was haunted by her, and that she used nightly to take her seat in a particular tree near the mansion. It was also said that, during the life of his son, Sir Charles Bolle, a knife and fork were always laid for her at table, if she chose to make her appearance!

The compiler of this account, who was then resident in Louth, well remembers the belief in many superstitious minds, some thirty-five years ago, that *The Green Lady* was occasionally to be seen walking about the grounds at midnight!

But to continue with our story. It seems that the attachment of the beautiful Spaniard to Sir John was such, that it became the subject of a ballad, which was subsequently published in *Percy's Reliques of Ancient English Poetry*, and which was called—

THE SPANISH LADYE'S LOVE FOR AN ENGLISHMAN.

'Will you hear a Spanish lady,
How she wooed an English man?
Garments gay as rich as may be,
Decked with jewels, she had on.
Of a comely countenance and grace was she,
And by birth and parentage of high degree.

As his prisoner there he kept her,
In his hands her life did lye;
Cupid's bands did tye them faster
By the liking of an eye.
In his courteous company was all her joy,
To favour him in anything she was not coy.

But at last there came commandment
For to set the ladies free,
With their jewels still adornèd,
None to do them injury.
Then said this lady mild: "Full woe is me,
O! let me still sustain this kind captivity!

Gallant captain, shew some pity
To a lady in distresse;
Leave me not within this city,
For to dye in heavinesse:
Thou hast set this present day my body free,
But my heart in prison still remains with thee."

"How shouldst thou, fair lady, love me,
Whom thou know'st thy country's foe?
Thy fair wordes make me suspect thee:
Serpents lie where flowers grow."
"All the harme I wishe to thee, most courteous knight,
God grant the same upon my head may fully light.

Blessed be the time and season
That you came on Spanish ground;
If you may our foes be termed,
Gentle foes we have you found:
With our city, you have won our hearts each one,
Then to your country bear away, that is your own."

"Rest you still, most gallant lady;
Rest you still, and weep no more;
Of fair lovers there are plenty,
Spain doth yield you wonderous store."
"Spaniards fraught with jealousy we oft do find,
But Englishmen throughout the world are counted kind.

Leave me not unto a Spaniard,
Thou alone enjoy'st my heart;
I am lovely, young, and tender,
Love is likewise my desert.
Still to serve thee day and night my mind is prest;
The wife of every Englishman is counted blest."

"It would be a shame, fair lady,
For to bear a woman hence;
English soldiers never carry
Any such without offence."
"I'll quickly change myself, if it be so,
And like a page will follow thee, where'er thou go."

"I have neither gold nor silver
To maintain thee in this case,
And to travel is great charges
As you know in every place."
"My chains and jewels every one shall be thy own,
And eke ten thousand pounds in gold that lies unknown."

"On the seas are many dangers,
Many storms do there arise,
Which will be to ladies dreadful,
And force tears from watery eyes."
"Well in troth I shall endure extremity,
For I could find in heart to lose my life for thee."

"Courteous ladye, leave this fancy,
Here comes all that breeds the strife;
I in England have already
A sweet woman to my wife!
I will not falsify my vow for gold nor gain,
Nor yet for all the fairest dames that live in Spain."

"O how happy is that woman
That enjoys so true a friend!
Many happy days God send her;
Of my suit I make an end:
On my knees I pardon crave for my offence,
Which did from love and true affection first commence.

Commend me to thy lovely lady,
Bear to her this chain of gold;
And these bracelets for a token;
Grieving that I was so bold:
All my jewels in like sort bear them with thee;
For they are fitting for thy wife, but not for me.

I will spend my days in prayer,
Love and all his laws defye;
In a nunnery will I shroud me
Far from any companye:
But ere my prayers have an end, be sure of this,
To pray for thee and for thy love I will not miss.

Thus farewell, most gallant captain!
Farewell, too, my heart's content!
Count not Spanish ladies wanton,
Though to thee my love was bent:
Joy and true prosperity goe still with thee!"
"The like fall ever to thy share, most fair ladye!"'

Shenstone had also an elegant poem on the same

subject, entitled *Love and Honour*, concluding with the lines :—

'And to the cloister's pensive scene
Elvira shaped her solitary way.'

Sir John died in 1606, in the forty-sixth year of his age, and was interred in the chancel of Haugh church, where a monument was erected to him, with a Latin inscription, bespeaking his accomplishments as a scholar and a soldier. His portrait,

SIR JOHN BOLLE.

taken in 1596, when thirty-six years of age, having on the 'chain of gold' spoken of in the poem, and a curious thumb-ring, set in massive gold, with the arms of the family, bearing sixteen quarterings, elegantly engraven and emblazoned, came into the possession of the Birch family, descendants of the Bolles. Captain T. Birch, of the 1st Life Guards, lived at Thorpe Hall about 1808.

JULY 30.

Saints Abdon and Sennen, martyrs, 250. St Julitta, martyr, about 303.

Born.—Angelo Poliziano, poet and classic commentator, 1454, *Montepulciano, Tuscany;* Samuel Rogers, poet (*Pleasures of Memory*), 1763, *Stoke Newington, London.*

Died.—Pope Benedict I., 577; Ladislaus I., king of Hungary, 1095; Robert, Earl of Kingston, 1643; Maria Theresa, queen of Louis XIV., 1683; William Penn, coloniser of Pennsylvania, 1718, *Ruscombe, Berkshire;* John Sebastian Bach, eminent composer, 1750, *Leipsic;* Thomas Gray, poet, 1771; Prince Charles Lucien Bonaparte, naturalist, 1857, *Paris;* Sir C. Hastings, founder of British Medical Association, 1866.

THE GOOD EARL OF KINGSTON.

Robert Pierrepoint, Earl of Kingston, surnamed the Good, being not less celebrated for his great wealth than the benevolent use he made of it, was killed on the 30th of July 1643, under circumstances which either confirmed a rash asseveration, or gave rise to a curious story. As the wealth, abilities, influence, and popular reputation of the earl would render him a most powerful and valuable auxiliary, to whichever party he might join at the breaking out of the great civil war, each side was equally anxious to secure his adherence. He remained neutral so long that it was considered his mind was undecided as to which cause he would eventually support. At last, seeing that war was inevitable, he joined the king, bringing with him the valuable aid of 2000 men, and £24,000 in money. Vigorously opposing the Parliamentarians in the field, he was surprised and taken prisoner by Lord Willoughby of Parham, at Gainsborough. A prize of so great value was not to be lightly guarded, at such an uncertain time. To make him perfectly secure, Willoughby placed the earl in a pinnace, to be conveyed to the stronghold of Hull. On the vessel's passage thither, the royalist Sir Charles Cavendish ordered it to be fired upon by a cannon, and the unlucky ball killed the Earl of Kingston and his servant. The vessel being brought-to, and Cavendish learning that his rash procedure had destroyed his friend and the most valuable man of his party, he, in a paroxysm of rage and blind revenge, ordered all the crew of the pinnace to be put to death. Such is the account of this untoward affair given in history; but Mrs Lucy Hutchinson, in her memoir of her husband, gives us the popular account, perfectly in keeping with the beliefs and opinions of the period. It would from this appear that the last parliamentary agent sent to the Earl of Kingston, to induce him to join their party, was a Captain Lomax, to whom the earl expressed his solemn determination not to join either side. And to quote the words of Mrs Hutchinson: 'he made a serious imprecation on himself: "When," said he, "I take arms with the king against the parliament, or with the parliament against the king, let a cannon bullet divide me between them;" which God was pleased to bring to pass a few months after; for he going into Gainsborough, and there taking up arms for the king, was surprised by my Lord Willoughby, and, after a handsome defence of himself, yielded, and was put prisoner into a pinnace, and sent down the river to Hull, when my Lord Newcastle's army, marching along the shore, shot at the pinnace, and, being in danger, the Earl of Kingston went up upon the deck to shew himself, and to prevail of them to forbare shooting; but as soon as he appeared, a cannon bullet flew from the king's army, and divided him in the middle, being then in the parliament's pinnace, who thus perished according to his own unhappy imprecation.'

WILLIAM PENN.

William Penn was born on Tower Hill, London, 14th October 1644. His father was Sir William Penn, an admiral who had fought with distinction

the fleets of Holland and Spain. His mother was a Dutchwoman, the daughter of a rich Rotterdam merchant. Penn received an excellent education, and whilst at Oxford he was tempted to go and hear one Thomas Loe, a Quaker, preach. Quakerism, in our time the meekest of faiths, was in those days regarded by churchmen and dissenters alike, as an active spirit of evil deserving no mercy or forbearance: there was contamination and disgrace in everything connected with it. Loe's ministry so affected Penn, that he began to think of becoming a Quaker himself. His father heard of the impending metamorphosis with horror, and sent him off to France, to avert the change. The policy was successful. Penn soon forgot the Quaker in the gaiety of Paris, and returned, to his father's delight, a fine gentleman, with all the airs and accomplishments of a courtier. The terrors of the plague of London in 1665, however, revived the youth's pious tendencies, and again his father tried change of scene, and sent him to Ireland. There he distinguished himself in subduing an insurrection; and it is a curious fact, that the only authentic portrait of the great apostle of peace existing, represents him at this period a young man armed and accoutred as a soldier. It so happened, that the Quakers were growing numerous in the larger Irish cities, and one day Penn strolled into their meeting in Cork. To his surprise, Thomas Loe, from Oxford, arose and spoke from the text, 'There is a faith that overcomes the world, and there is a faith that is overcome by the world.' From that meeting is dated Penn's thorough conversion to Quakerism. His father heard of his relapse with dismay, and ordered him back to London. They had a long and painful discussion, but the young man was immovable; neither the hope of honour nor the prospect of degradation had any effect on his resolution; and the admiral, after exhausting his whole armory of persuasion, ended by turning his son out of doors.

This conduct threw Penn completely over to the Quakers. He began to preach at their meetings, to write numerous pamphlets in defence of their doctrines, to hold public debates with their adversaries, and to make propagandist tours over England and the continent, sometimes alone, and sometimes in company with George Fox, Robert Barclay, and others. Of persecution and imprisonment he had his share. A tract, *The Sandy Foundation Shaken*, in which he set forth Unitarian opinions, so excited the bishop of London, that he had him committed to the Tower, where he lay for nearly nine months. King Charles sent Stillingfleet to talk him out of his errors; but, said Penn, 'The Tower is to me the worst argument in the world.' During this confinement he wrote, *No Cross, no Crown*, the most popular of his works. 'Tell my father, who I know will ask thee,' said he one day to his servant, 'that my prison shall be my grave before I will budge a jot: for I owe my conscience to no mortal man.' Actuated by a spirit as patient as it was resolute, Penn and his brethren fairly wore out the malice of their persecutors, so that in sheer despair intolerance abandoned Quakerism to its own devices.

Happily, the admiral had the good sense to reconcile himself to his son. It is said that, in spite of his irritation, he came to admire the steady front William shewed to an adverse and mocking world. The admiral's disappointment was indeed severe. He stood high in favour with Charles II. and the Duke of York, and had his son co-operated with him, there was no telling what eminence they might not have attained. 'Son William,' said the veteran, only a day or two before his death, 'I am weary of the world: I would not live my days over again, if I could command them with a wish; for the snares of life are greater than the fears of death.' Almost the last words he uttered were, 'Son William, if you and your friends keep to your plain way of preaching, and also keep to your plain way of living, you will make an end of priests to the end of the world.'

Penn, by his learning and logic, did more than any man, excepting Barclay, author of the *Apology*, to shape Quaker sentiment into formal theology; but the service by which the world will remember him, was his settlement of Pennsylvania. His father had bequeathed him a claim on the government of £16,000 for arrears of pay and cash advanced to the navy. Penn very well knew that such a sum was irrecoverable from Charles II.; he had long dreamed of founding a colony where peace and righteousness might dwell together; and he decided to compound his debt for a tract of country in North America. The block of land he selected lay to the north of the Catholic province of Maryland, owned by Lord Baltimore; its length was nearly 300 miles, its width about 160, and its area little less than the whole of England. Objections were raised; but Charles was only too glad to get rid of a debt on such easy terms. At the council, where the charter was granted, Penn stood in the royal presence, it is said, with his hat on. The king thereupon took off his; at which Penn observed, 'Friend Charles, why dost thou not keep on thy hat?' to which his majesty replied, laughing: 'It is the custom of this place for only one person to remain covered at a time.' The name which Penn had fixed on for his province was New Wales; but Secretary Blathwayte, a Welshman, objected to have the Quaker-country called after his land. He then proposed Sylvania, and to this the king added Penn, in honour of the admiral.

The fine country thus secured became the resort of large numbers of Quakers, who, to their desire for the free profession of their faith, united a spirit of enterprise; and very quickly Pennsylvania rose to high importance among the American plantations. Its political constitution was drawn up by Penn, aided by Algernon Sidney, on extreme democratic principles. Perfect toleration to all sects was accorded. 'Whoever is right,' Penn used to say, 'the persecutor must be wrong.' The world thought him a visionary; but his resolution to treat the Indians as friends, and not as vermin to be extirpated, seemed that of a madman. So far as he could prevent, no instrument of war was allowed to appear in Pennsylvania. He met the Indians, spoke kindly to them, promised to pay a fair price for whatever land he and his friends might occupy, and assured them of his good-will. If offences should unhappily arise, a jury of six Indians and six Englishmen should decide upon them. The Indians met Penn in his own spirit. No oaths, no seals, no official mummeries were used; the treaty was ratified on both sides with a yea, yea—the only one, says Voltaire,

'that the world has known, never sworn to, and never broken.' A strong evidence of Penn's sagacity is the fact, that not one drop of Quaker blood was ever shed by an Indian; and forty years elapsed from the date of the treaty, ere a red man was slain by a white in Pennsylvania. The murder was an atrocious one, but the Indians themselves prayed that the murderer's life might be spared. It was spared; but he died in a very short time, and they then said, the Great Spirit had avenged their brother.

It will be thought that Penn made a capital bargain, in the purchase of Pennsylvania for £16,000; but in his lifetime, he drew little but trouble from his investment. The settlers withheld his dues, disobeyed his orders, and invaded his rights; and he was kept in constant disquiet by intrigues for the nullification of his charter. Distracted by these cares, he left his English property to the care of a steward, who plundered him mercilessly; and his later years were saddened with severe pecuniary distress. He was twice married, and in both cases to admirable women. His eldest son, a promising youth, he lost just as he verged on manhood; and a second son, by riotous living, brought himself to an early grave, trying Penn's fatherly heart with many sorrows. Multiplied afflictions did not, however, sour his noble nature, nor weaken his settled faith in truth and goodness.

Penn's intimacy with James II. exposed him, in his own day, to much suspicion, which yet survives. It ought to be remembered, that Admiral Penn and James were friends; that the admiral, at death, consigned his son William to his guardianship; and that between James and his ward there sprung up feelings apparently amounting to affection. While James was king, Penn sometimes visited him daily, and persuaded him to acts of clemency, otherwise unattainable. Penn scorned as a Quaker, James hated as a Catholic, could sympathise as brothers in adversity. Penn, by nature, was kindly, and abounding in that charity which thinketh no evil; and taking the worst view of James's character, it is in nowise surprising that Penn should have been the victim of his duplicity. It is well known that rogues could do little mischief, if it were not so easy to make good men their tools.

There was very little of that asceticism about Penn which is thought to belong to—at least early—Quakerism. The furniture of his houses was equal in ornament and comfort to that of any gentleman of his time. His table abounded in every real luxury. He was fond of fine horses, and had a passion for boating. The ladies of his household dressed like gentlewomen—wore caps and buckles, silk gowns and golden ornaments. Penn had no less than four wigs in America, all purchased the same year, at a cost of nearly £20. To innocent dances and country fairs he not only made no objection, but patronised them with his own and his family's presence.

William Penn, after a lingering illness of three or four years, in which his mind suffered, but not painfully, died at Ruscombe on the 30th July 1718, and was buried at the secluded village of Jordans, in Buckinghamshire. No stone marks the spot, although many a pilgrim visits the grave.

GRAY AND HIS ELEGY.

Sprung of a harsh and unamiable father, but favoured with a mother of opposite character—rising from a youth spent in comparatively humble circumstances—Thomas Gray became, in his mature years, a devoted college-student, a poet, a man of refined taste, and an exemplifier of all the virtues. There is not a more irreproachable character in English literature. The portraits of the bard give us the idea of a very good-looking man. He was unfitted, however, for success in society, by an insuperable taciturnity. The only reproach ever intimated against him by his college-associates, was that of fastidiousness. We may fairly suspect the truth on this point to be, that he shrunk from the coarse and boisterous enjoyments in which the greater number of them indulged.

He had a weakness, in the form of a nervous dread of fire. His chamber in St Peter's College, Cambridge, being in a second-floor, he thought it very likely that, in case of a conflagration, his exit by the stairs might be cut off. He therefore caused an iron bar to be fixed by arms projecting from the outside of his window, designing by a rope tied

GRAY'S WINDOW, ST PETER'S COLLEGE, CAMBRIDGE.

thereto to descend to the ground, in the event of a fire occurring. This excessive caution, as it appeared to his brother-collegiates, raised a spirit of practical joking in them; and one evening, not long after the fire-escape had been fixed up, a party of them came from a merry-making, and thundered at the door of Gray, with loud cries of 'Fire! fire! fire!' The nervous poet started from bed, flew to his window, and descended by his rope into the vacant ground below, where of

course he was saluted with bursts of laughter by his friends. Gray's delicate nature was so much shocked by this rough affair, that he deserted Peter's College, and took up his residence in Pembroke. The window with the iron apparatus is still shewn, and is faithfully represented on the preceding page.

Among popular English poems, there is none more deservedly distinguished than Gray's *Elegy*. It appeals to a feeling which is all but universal—a tendency to moralise when alone in a churchyard; and thus it is enabled to take hold of the most common-place minds.

There are several curious circumstances connected with its publication worth recording. For some time after it was written, Gray shewed it round among his friends, but said nothing about publishing it. After a time, he became bolder, and even allowed copies of it to circulate in manuscript, until, at last, through the carelessness of Horace Walpole—or it may have been from a friendly wish of his to see it universally admired, as he felt it would be—a copy fell into the hands of the editor of *The Magazine of Magazines*, who immediately sent the poet word that he meant to print it. Gray had now no alternative but to print it himself; and accordingly wrote at once to Horace Walpole, with special directions to that end. 'I have but one *bad* way left,' he writes, 'to *escape* the honour they would *inflict* upon me: and therefore am *obliged* to desire you would *make* Dodsley print it immediately (which may be done in less than a week's time) from your copy, but without my name.' It seems, he would have us think it a great infliction to be admired by the public. However, Walpole did as he was bid, and had it printed in all haste; adding an *advertisement*, at Gray's request, in which he informs the reader that the publication is entirely due to an unavoidable accident. But Dodsley, after all, was too late. It first saw the light in *The Magazine of Magazines*, February 1751. Some imaginary literary wag is made to rise in a convivial assembly, and thus announce it: 'Gentlemen, give me leave to soothe my own melancholy, and amuse you in a most noble manner, with a full copy of verses by the very ingenious Mr Gray, of Peterhouse, Cambridge. They are stanzas written in a country churchyard.' Then follow the verses. A few days afterwards, Dodsley's edition appeared, in quarto, anonymously, price sixpence, entitled *An Elegy wrote in a Country Churchyard*, and the title-page duly adorned with cross-bones, skulls, and hour-glasses.

There are several copies of the original manuscript of the *Elegy* in existence; one of them is at Pembroke College, Cambridge; another in the British Museum; another, which has been frequently resold, is written on four sides of a doubled half-sheet of yellow foolscap, in a neat legible hand, with a crow-quill. Gray bequeathed it to Mr Mason, who wrote his life; Mr Mason left it to his curate, Mr Bright; and Mr Bright's son sold the lot in 1845, when the *Elegy* fell to Mr Penn, of Stoke Pogeis, for £100. In 1854, it was purchased for £131 by Mr Wrightson; it was again sold in 1875.

A photographed *Facsimile of the Original Autograph Manuscript of Gray's Elegy*, was published in 1862, by Messrs Sampson Low and Son. Curious and interesting differences exist between the first draft and the printed copy: numerous alterations were afterwards made, and as many as six verses, which appear in the manuscript, were omitted.

Perhaps the most interesting of all the emendations was that made in verse 15 of the printed poem; in which *Hampden*, *Milton*, and *Cromwell* were severally substituted for *Cato*, *Tully*, and *Cæsar:* it is said that this judicious change was suggested by Mason.

Verse 19, as the poem now stands, is—

'Far from the madding crowd's ignoble strife
Their sober wishes never learned to stray;
Along the cool sequestered vale of life
They kept the noiseless tenor of their way.'

Verse 24 is—

'For thee, who, mindful of th' unhonour'd dead,
Dost in these lines their artless tale relate;
If chance, by lonely contemplation led,
Some kindred spirit shall inquire thy fate.'

Verse 24 originally stood thus—

'If chance, that e'er some pensive spirit more,
By sympathetic musings here delay'd,
With vain, tho' kind inquiry shall explore
Thy once-loved haunt, this long deserted shade.'

And before verse 19 came these four verses—

'The thoughtless World to majesty may bow,
Exalt the brave, and idolise success;
But more to Innocence their safety owe
Than Power and Genius e'er conspired to bless.

And thou who, mindful of the unhonoured Dead,
Dost in these notes their artless tale relate,
By night and lonely contemplation led
To linger in the lonely walks of Fate,

Hark how the sacred calm that reigns around
Bids every fierce tumultuous passion cease;
In still small accents whisp'ring from the ground
A grateful earnest of eternal peace.

No more with Reason and thyself at strife,
Give anxious cares and endless wishes room;
But through the cool, sequester'd vale of life
Pursue the silent tenor of thy doom.'

The change which Gray made is tolerably clear. The four verses were struck out and replaced by verse 19, and the second of the four substituted for the old 24th, with some necessary changes.

After verse 25 followed, originally—

'Him have we seen the greenwood side along,
While o'er the heath we hied, our labours done,
Oft as the woodlark piped her farewell song,
With wistful eyes pursue the setting sun.'

And after verse 29, now the last, once followed—

'There scatter'd oft the earliest of ye year,
By hands unseen are frequent vi'lets found;
The robin loves to build and warble there,
And little footsteps lightly print the ground.'

In the summer of 1759, Gray lodged at Mr Jauncey's, in Southampton Row, Bloomsbury, to be near the British Museum, of which he was a diligent explorer. He told his friend Mason that in this 'peaceful settlement' he had an uninterrupted view of Hampstead, Highgate, and the Bedford Gardens! a space now covered with miles of uninterrupted brick and mortar. The contrast which the Reading Room, with its hundreds of constant readers, now presents with the corresponding establishment in Gray's time, is not less remarkable.

The company that then assembled to study and pursue research, was composed of 'a man that writes for Lord Royston, a man that writes for Dr Burton of York, a third that writes for the emperor of Germany or Dr Pocock; Dr Stukely, who writes for himself, the very worst person he could write for; and I, who only read to know if there is anything worth writing.' Gray further mentions a comfortable fact. 'The keepers have broken off all intercourse with one another, and only lower a silent defiance as they pass by.'

The admirable mother of Gray—who had set up a millinery shop to support her children, when deserted by her unworthy husband—was buried in the churchyard of Stoke Pogeis, near Eton, with an epitaph by the poet containing this most touching passage: 'The careful tender mother of many children, one of whom alone had the misfortune to survive her.' It seems to be generally concluded that he conceived himself as musing in this burial-ground when he composed the *Elegy*. He himself was interred there beside the worshipped grave of his mother.

In one of the final verses of the *Elegy* there is a clause not unworthy of comment, as a historical expression of the intellectual condition of the English peasantry in the eighteenth century. 'Approach and read—*for thou canst read*,' says the hoary-headed swain to the stranger. It is here assumed that, as a rule, an English peasant was unable to read. A Scottish poet would not have had occasion to make the same assumption regarding his humble countrymen—thanks to the Scottish parish schools, instituted at the Revolution.

SALE OF THE OLD GATES OF LONDON.

A sale of three of the City gates, on the 30th of July 1760, marked, in a singular way, a dividing-point between the old and the modern history of London. The English metropolis, like most large and important cities in the middle ages, was bounded by a wall and a ditch; and in this wall were openings or gates for the passage of foot and vehicle traffic. Beginning from the east, this fortified boundary commenced with the famous Tower of London, itself a vast assemblage of gates and fortified posts. Advancing thence nearly northward, the wall extended to *Ældgate* or *Aldgate*, which defended the approach by the great highway from Essex. This was probably the oldest of all the City gates. In 1215, during the civil war between King John and the barons, the citizens aided the latter in entering London by Aldgate; and soon afterwards, the gate, being very ruinous and dilapidated, was replaced by one strongly built of stone. This new one (a double gate with portcullis) remained till the time of Queen Elizabeth, when it was replaced by another more ornamental than warlike. This was one of the three gates finally removed in 1760. The wall extended nearly north-west from Aldgate to *Bishopsgate*, which guarded the great road from Cambridge. This gate was not among the oldest of the series, but is supposed to have been built about the reign of Henry II. At first there were no means of exit from the City between Aldgate and Aldersgate; and this extra gate was opened rather to furnish additional accommodation, than for any defensive purpose. The gate was in a ruinous state from the time of Edward VI. to that of James I., when it was replaced by a new one; and this latter was finally removed early in the last century. The wall stretched westward from Bishopsgate to *Moorgate;* of which Stow says: 'I find that Thomas Falconer, mayor about the year 1415, the third of Henry V., caused the wall of the city to be broken near unto Coleman Street, and there builded a postern, now called Moorgate, upon the moor-side, where was never gate before. This gate he made for ease of the citizens that way to pass upon causeys [causeways] into the fields for their recreation; for the same field was at that time a marsh.' Indeed, all the country immediately outside the city, from Bishopsgate to Aldersgate, was very fenny and marshy, giving rise to the names Moorfields and Finsbury (Fensbury). Moorgate was rebuilt in 1472, and pulled down about the middle of the last century, the stones being used to repair the piers of London Bridge. The next gate was *Cripplegate*, a postern or minor gate like Moorgate, but much more ancient; it was many times rebuilt, and was, like the other gates, used as a prison. The name, Stow says, 'so called of cripples begging there.' This was one of the three gates finally pulled down in 1760. The City wall extended thence to *Ælders-gate* or *Aldersgate*, one of the oldest of the series, and also one of the largest. The ancient structure, crumbling with age, was replaced by a new and very ornamental one in the time of James I.; and this latter gave way to the street improvers early in the last century. The next gate was *Newgate*. In the Anglo-Norman times, there were only three City gates—Aldgate, Aldersgate, and Ludgate; and no person could leave the city westward at any point between the two last-named gates. To remedy this inconvenience, Newgate was built about the time of Henry I., the designation 'new' being, of course, only comparative. After being rebuilt and repaired several times, Newgate and its prison were burned down by Lord George Gordon's mob in 1780; the prison was replaced by a much larger and stronger one, but the gate was not rebuilt. The City wall extended from Newgate to *Ludgate*, which was the oldest of the series except Aldgate and Aldersgate, and the one with which the greatest number of historical events was connected. After many rebuildings and repairings, Ludgate was one of the three which were pulled down in 1760.

It must not be supposed that *Dowgate*, *Billingsgate*, and *St John's Gate* were necessarily City gates; the first and second were landing-places on the river-side, the third was the gate belonging to the Hospital of St John of Jerusalem. As to the *Bars*—such as *Temple Bar*, *Holborn Bar*, and *Smithfield Bar*—they were subsidiary or exterior barriers, bearing some such relation to 'the City without the walls,' as the gates bore to 'the City within the walls,' but smaller, and of inferior strength.

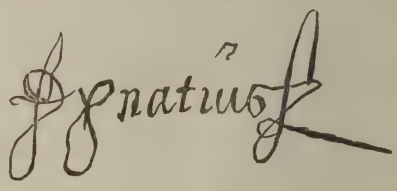
The announcement in the public journals, concerning the destruction of three of the gates on the 30th of July 1760, was simply to the effect that Mr Blagden, a carpenter of Coleman Street, gave £91 for the old materials of *Cripplegate*, £148 for *Ludgate*, and £177, 10*s*. for *Aldgate;* undertaking to have all the rubbish removed by the end of September. Thus ended our old City gates, except *Newgate*, which the rioters put an end to twenty years later.

JULY 31.

St Helen of Skofde, in Sweden, martyr, about 1160. St John Columbini, confessor, founder of the order of the Jesuati, 1367. St Ignatius of Loyola, founder of the Society of Jesus, 1556.

Born.—Princess Augusta of Brunswick, 1737.

Died.—Ignatius Loyola, founder of the Jesuits, 1556, *Rome;* Charles de Gontaut, Duc de Biron, favourite commander of Henri IV., beheaded in the Bastile, 1602; Martin Harpertzoon Van Tromp, Dutch admiral, killed in an engagement near Texel, 1653; John V., king of Portugal, 1750; Denis Diderot, French encyclopædist, 1784, *Paris;* William T. Lowndes, bibliographer, 1843.



IGNATIUS LOYOLA.

Ignatius Loyola, 'a Spanish soldier and hidalgo with hot Biscayan blood,' was, in 1521, assisting in the defence of Pampeluna against the French, when a cannon-ball fractured his right leg and a splinter injured his left. He was carried to the neighbouring castle of Loyola, and in the weary months during which he lay stretched upon his couch, he tried to while away the time in reading the *Lives of the Saints.* He was only thirty; he had a strong and vehement will; he had led a wild and vicious life; and had burned for military glory. As it was evident that for him henceforward the part of the soldier was barred, the question arose, Why might he not be a saint, and rival St Francis and St Dominic? He decided to try. He tore himself from his kindred and friends, and made a pilgrimage to the Holy Land. In the church of the Virgin at Mount Serrat, he hung up his arms, and vowed constant obedience to God and the church. Dressed as a beggar, and in the practice of the severest austerities, he reached Jerusalem on the 4th of September 1523. On his return to Spain, at the age of thirty-three, he resumed his education, which had been neglected from childhood, and laboriously from the rudiments of grammar worked his way through a full university course, making no secret of his ignorance. The rigour of his life, and the rebukes he administered to lax ecclesiastics, not unfrequently brought him into trouble as a Pharisaic meddler.

He went to Paris in 1528, and at the university he made the acquaintance of Xavier, Faber, Lainez, Bobadilla, and Rodriguez, five students whom he inspired with his own devout fervour. In an underground chapel of the church of Montmartre, on the 15th of August 1534, the six enthusiasts took the solemn vows of celibacy, poverty, and the devotion of their lives to the care of Christians, and the conversion of infidels. Such was the beginning of the famous Society of Jesus.

The plan of the new order was laid before Pope Paul III., who raised several objections to it; but, on the engagement that Jesuits should in all matters yield implicit obedience to the holy see, he granted them a constitution in a bull, dated the 27th of September 1540. Loyola was elected president, and was established at Rome as director of the movements of the society. Very opportunely did the Jesuits come to the service of the popedom. Unhampered by the routine of other ecclesiastical orders, they undertook services for which they alone were fit; and, as sharp-shooters and skirmishers, became the most annoying and dangerous antagonists of Protestantism. To a certain freedom of action the Jesuit united the advantages of perfect discipline; obedience was his primary duty. He used his faculties, but their action was controlled by a central authority; every command had to be wrought out with all his skill and energy, without questioning, and at all hazards. It was the aim of the society to discover and develop the peculiar genius of all its members, and then to apply them to the aggrandisement of the church. Soon the presence of the new order, and the fame of its missionaries, spread throughout the world, and successive popes gladly increased the numbers and enlarged the privileges of the society. Loyola brought more ardour than intellect to the institution of Jesuitism. The perfection of its mechanism, which Cardinal Richelieu pronounced a masterpiece of policy, was due to James Lainez, who succeeded Loyola as president.

Worn out with labours and privations, Loyola died on the 31st of July 1556, aged sixty-five. He was canonised as a saint in 1622, and his festival is celebrated on the 31st of July.

An original autograph of the founder of the order of Jesus is subjoined—taken from his signature to a document, dated 1554, preserved in the public library of the city of Treves, on the Moselle.

TWO LOVERS KILLED BY LIGHTNING.

It was on the 31st of July 1718, that the affecting incident occurred to which Pope, Gay, and Thomson severally adverted—the instantaneous killing of two rustic lovers by a lightning-stroke. At Stanton-Harcourt, about nine miles west of Oxford, are the remains of a very old mansion, belonging to the family of the Harcourts, consisting chiefly of a domestic chapel in a tower, and two or three rooms over it. Pope spent two summers in this old building, with the hearty assent of the Harcourts, who had been lords of the manor for more than seven hundred years. One room, in which he finished the Fifth Book of his *Iliad*, obtained, on that account, the name of 'Pope's Study.' Gay often visited him there; and it is in one of Gay's letters that the catastrophe, which occurred in a neighbouring field, is thus narrated: 'John Hewit was a well-set man of about twenty-five. Sarah Drew might be called comely rather than beautiful, and was about the same age. They had passed through the various labours of the year together with the greatest satisfaction. Their love was the talk of the whole neighbourhood, for scandal never affirmed that they had other views than the lawful possession of each other in marriage. It was that very morning that they had obtained the consent of her parents; and it was but till the next week that they had to wait to be happy. Perhaps in the interval of their work they were talking of

their wedding-clothes, and John was suiting several sorts of poppies and wild-flowers to her complexion, to choose her a hat for the wedding-day. While they were thus busied (it was between two and three o'clock in the afternoon), the clouds grew black, and such a storm of lightning and thunder ensued, that all the labourers made the best of their way to what shelter the trees and hedges afforded. Sarah was frighted, and fell down in a swoon on a heap of barley; John, who never separated from her, having raked together two or three heaps, the better to secure her from the storm. Immediately after was heard so loud a crash as if the heavens had split asunder. Every one was now solicitous for the safety of his neighbour, and they called to one another throughout the field. No answer being returned to those who called to our lovers, they stepped to the place where they lay. They perceived the barley all in a smoke, and then spied the faithful pair; John, with one arm about Sarah's neck, and the other held over her, as if to screen her from the lightning. They were struck dead, and stiffened in this tender posture. Sarah's left eye was injured, and there appeared a black spot on her breast. Her lover was all over black; but not the least sign of life was found in either. Attended by their melancholy companions, they were conveyed to the town, and next day were interred in Stanton-Harcourt churchyard.'

Pope, whether or not he was at Stanton-Harcourt at the time, soon afterwards wrote an epitaph on the hapless young couple:

ON TWO LOVERS STRUCK DEAD BY LIGHTNING.

'When eastern lovers feed the funeral fire,
On the same pile the faithful pair expire:
Here pitying heav'n, that virtue mutual found,
And blasted both, that it might neither wound.
Hearts so sincere th' Almighty saw well pleased,
Sent his own lightning, and the victims seized.'

'Lord Harcourt,' says Mr Robert Carruthers, in his edition of Pope, 'on whose estate the unfortunate pair lived, was apprehensive that the country-people would not understand the above, and Pope wrote the subjoined:

'NEAR THIS PLACE LIE THE BODIES
OF JOHN HEWIT AND SARAH DREW,
AN INDUSTRIOUS YOUNG MAN
AND VIRTUOUS YOUNG MAIDEN OF THIS PARISH;
WHO, BEING AT HARVEST-WORK
(WITH SEVERAL OTHERS),
WERE IN ONE INSTANT KILLED BY LIGHTNING,
THE LAST DAY OF JULY 1718.

Think not, by rigorous judgment seized,
A pair so faithful could expire;
Victims so pure Heav'n saw well pleas'd,
And snatch'd them in eternal fire.

Live well, and fear no sudden fate;
When God calls victims to the grave,
Alike 'tis justice soon or late,
Mercy alike to kill or save,

Virtue unmov'd can hear the call,
And face the flash that melts the ball.'

This second epitaph was engraved on a stone in the parish church of Stanton-Harcourt.

Thomson appears to have had this incident in his view when he wrote the *Seasons*, about nine years afterwards. The fifty lines (in 'Summer') beginning

'Young Celadon
And his Amelia were a matchless pair,'

relate an episode of the same character as the sad story of John Hewit and Sarah Drew, with the exception that the poet kills the maiden but not the lover.

TESTIMONIALS TWO HUNDRED AND SIXTY YEARS AGO.

The following present made to the new recorder of Nottingham, 1603 A. D., by order of the Hall, affords a curious instance of the taste and habit of the times, in respect to what are now dignified by the name of *Testimonials*. 'It is agreed that the *town* shall, on Wednesday next, present the recorder, Sir Henry Pierrepont, with a sugar-loaf, 9*s.*; lemons, 1*s.* 8*d.*; white wine, one gallon, 2*s.* 8*d.*; claret, one gallon, 2*s.* 8*d.*; muskadyne, one pottle, 2*s.* 8*d.*; sack, one pottle, 2*s.*; total 20*s.* 8*d.*'

Another testimonial was presented by the same town, in the year following, the object of public admiration and bounty in this instance being no less a personage than the Earl of Shrewsbury. Of course the present, intended to convey to his lordship the sense entertained by the burgesses of his high worth and character, must be of a more weighty description than that bestowed on the recorder. Accordingly, it was ordered that 'a veal, a mutton, a lamb, a dozen of chickens, two dozen of rabbits, two dozen of pigeons, and four capons, should be presented to his lordship.'

Ours is a day beyond all others for the presentation of Testimonials, but we have never yet heard of a celebrity of the nineteenth century being invited to a public meeting to receive from his friends a testimonial of their esteem, and then having laid at his feet sundry bottles of wine, with sugar and lemons to flavour it; or a good fat calf, a wedder-sheep, and a lamb of a year old, with dozens of chickens and rabbits to garnish the same, as appears to have been the favourite course with our 'good-living' ancestors.

PARTRIDGE, THE ALMANAC-MAKER.

Partridge, the almanac-maker, of whom mention is made in the article on 'Written and Printed Almanacs' (page 9, vol. i.), has been so fortunate as to be embalmed in one of the most pleasing poems in the English language—Pope's *Rape of the Lock*. With a consummation of surprising power and appropriate character, the poet, after the robbery of Belinda's 'wavy curl' has been effected, proceeds to place the stolen object among the constellations. The poem says:

'This the beau-monde shall from the Mall survey,
And hail with music its propitious ray;
This the blest lover shall for Venus take,
And send up prayers from Rosamunda's lake;
This PARTRIDGE soon shall view in cloudless skies,
When next he looks through Galileo's eyes;
And hence the egregious wizard shall foredoom,
The fate of Louis and the fall of Rome.'

It is strange how sometimes the most worthless of men, as regards posterity, are handed down to fame for the very qualities which it might be hoped would be left in oblivion. What sacrifices would many a sage or poet have made, to be connected with all time through Pope and the charming Belinda! Yet here, in this case, we find the almanac-making shoemaker enjoying a companionship and a celebrity for qualities which, morally, have no virtue or endurance in them, but quite the reverse.

The eighth was August, being rich arrayed
In garment all of gold, down to the ground:
Yet rode he not, but led a lovely maid
Forth by the lily hand, the which was crowned
With ears of corn, and full her hand was found.
That was the righteous Virgin, which of old
Lived here on earth, and plenty made abound;
But after wrong was loved, and justice sold,
She left th' unrighteous world, and was to heaven extolled.

SPENSER.

(DESCRIPTIVE.)

AUGUST comes, and though the harvest-fields are nearly ripe and ready for the sickle, cheering the heart of man with the prospect of plenty that surrounds him, yet there are signs on every hand that summer is on the wane, and that the time is fast approaching when she will take her departure. We catch faint glances of autumn peeping stealthily through openings where the leaves have already fallen, and among berries where summer hung out her blossoms; and sometimes hear his rustling footstep among the dry seed-vessels, which have usurped the place of her flowers. Though the convolvulus still throws its straggling bells about the hedges, the sweet May-buds are dead and gone, and in their place the green haws hang crudely upon the branches. The winds come not a-Maying amongst them now. Nearly all the field-flowers are gone; the beautiful feathered grasses that waved like gorgeous plumes in the breeze and sunshine are cut down and carried away, and in their place there is only a

green flowerless after-math. Many of the birds that sung in the green chambers which she hung for them with her richest arras, have left her and gone over the sea. What few singers remain are silent, and preparing for their departure; and when she hears the robin, his song comforts her not, for she knows that he will chant a sweeter lay to autumn, when she lies buried beneath the fallen leaves. Musing at times over her approaching end, upon the hillsides, they are touched by her beauty, and crimson up with the flowers of the heather, and long leagues of wild moorland catch the reflected blush, which goes reddening up like sunshine along the mountain slopes. The blue harebell peeps out in wonder to see such a land of beauty, and seems to shake its fragile bells with delight. In waste-places, the tall golden-rod, the scarlet poppy, and the large ox-eyed daisy muster, as if for a procession, and there wave their mingled banners of gold, crimson, and silver, as summer passes by, while the little eyebright, nestling among the grass, looks up and shews its white petals, streaked with green and gold.

But, far as summer has advanced, several of her beautiful flowers and curious plants may still be found in perfection in the water-courses, and beside the streams—pleasanter places to ramble along than the dusty and all but flowerless waysides in August. There we find the wild-mint, with its lilac-coloured blossoms, standing like a nymph knee-deep in water, and making all the air around fragrant. And all along the margin by where it grows, there is a flush of green, fresh as April; and perhaps we find a few of the grand water-flags still in flower, for they often bloom late, and seem like gold and purple banners hanging out over some ancient keep, whose colours are mirrored in the moat below. There also the beautiful arrow-head, with its snow-white flowers and arrow-pointed leaves, may be found, looking like ivy growing about the water. Many a rare plant, too little known, flourishes beside and in our sedge-fringed meres and bright meadow streams, where the overhanging trees throw cooling shadows over their grassy margins, and the burning noon of summer never penetrates. Such pleasant places are always cool, for there the grass never withers, nor are the paths ever wholly dry; and when we come upon them unaware, after having quitted the heat and glare of the brown dusty highway, it seems like travelling into another country, whose season is spring. And there the water-plantain spreads its branches, and throws out its pretty broad leaves and rose-tinted flowers, which spread up to the very border of the brook, and run in among the pink-flowers of the knot-grass, which every ripple sets in motion. Further on, the purple loosestrife shews its gorgeous spikes of flowers, seeming like a border woven by the moist fingers of the Naiads, to curtain their crystal baths; while the water-violets appear as if growing to the roofs of their caves, the foliage clinging to the vaulted-silver, and only the dark-blue flowers shewing their heads above the water. There, too, is the bog-pimpernel, almost as pretty as its scarlet sister, which may still be found in bloom by the wayside, though its flowers are not so large. Beautiful it looks, a very flower in arms, nursed by the yielding moss, on which it leans, as if its slender stem and prettily-formed leaves were too delicate to rest on common earth, so had a soft pillow provided for its exquisite flowers to repose upon. Nor does it change, when properly dried, if transferred to the herbarium, but there looks as fresh and beautiful as it did while growing—the very fairy of flowers. Nor will the splendid silver-weed be overlooked, with its prettily-notched leaves, which underneath have a rich silvery appearance; while the golden-coloured flowers, which spread out every way, are soft as velvet to the feel. Then the water has its grass like the field, and is sometimes covered with great meadows of green, among which are seen flowers as beautiful as grow on the inland pastures. The common duck-weed covers miles of water with its little oval-shaped leaves, and will from one tiny root soon send out buds enough to cover a large pool, for every shoot it sends forth becomes flower and seed while forming part of the original stem, and these are reproduced by myriads, and would soon cover even the broad Atlantic, were the water favourable to its growth, for only the land could prevent it from multiplying further. Row a boat through this green land-looking-like meadow, and almost by the time you have reached the opposite shore—though you have sundered millions of leaves, and made a glassy course wide enough for a carriage to pass through the water, not a trace will be left, where all was bright and clear as a broad silver mirror, but all again be covered with green, as with a smooth carpet. Beside its velvet-meadows, the water has its tall forests and spreading underwood, and stateliest amongst its trees are the flower-bearing rushes, one of which is the very Lady of the Lake, crowned with a red tiara of blossoms. The sword-leaved bur-weed, and many another aquatic plant, are like bramble, fern, and shrub, the underwood of the tall sedge, which the nodding bulrushes overtop. Nor is forest or field frequented with more beautiful birds or insects than those found among our water-plants.

Then we have the beautiful white water-lily, which seems to bring an old world before us, for it belongs to the same species which the Egyptians held sacred, and the Indians worshipped. To them it must have seemed strange, in the dim twilight of early years, when nature was so little understood, to see a flower disappear at night, leaving on the surface no trace of where it bloomed—to reappear again in all its beauty, as it still does, on the following morning. And lovely it looks, floating double lily and shadow, with its rounded leaves, looking like green resting-places for this Queen of the Waters to sit upon, while dipping at pleasure her ivory sandals in the yielding silver; or, when rocked by a gentle breeze we have fancied they looked like a moving fairy-fleet on the water, with low green hulls, and white sails, slowly making for the shore. The curious little bladder-wort is another plant that immerses itself until the time for flowering arrives, when it empties all its water-cells, fills them with air, and rises to the surface. It may now be seen almost everywhere among water-plants. In a few more weeks it will disappear, eject the air, fill its little bladders once more with water, and, sinking down, ripen its seed in its watery bed, where it will lie until another summer warns and wakens it to life, when it will once more empty its water-barrels, fill them with air, and rising to the light and

sunshine, again beautify the surface with its flowers. Sometimes water-insects open the valves of these tiny bladders, and get inside; but they cannot get out again until the cells are once more unlocked to receive air. Many another rare and curious plant may be found by the water-side in August, where sometimes the meadow-sweet still throws out a few late heads of creamy-coloured bloom, that scent the air with a fragrance delicious as May throws out, when all her hawthorns are in blossom, for though June is a season

> 'Half-pranked with spring, with summer half-embrowned,'

August is a month richly flushed with the last touches of summer, toned down here and there with the faint grays of autumn, before the latter has taken up his palette of kindled colours.

Still, we cannot look around, and miss so many favourite flowers, which met our eye on every side a few weeks ago, without noticing many other changes. The sun sinks earlier in the evening; mists rise here and there and dim the clear blue of twilight; we see wider rents through the foliage of the trees and hedges, and, above all, we miss the voices of those sweet singers, whose pretty throats seemed never at rest, but from morning to night shook their speckled feathers with swellings of music. Yet how almost imperceptibly the days draw in, like the hands of a large clock, that appear motionless, yet move on with true measured footsteps to the march beaten by Time. So do the days come out and go in, and move through the land of light and darkness, to the shelving steep, down which undated centuries have shot and been forgotten. Soon those pleasant meadows that are still so green, and where the bleating of white flocks, and the lowing of brindled herds, are yet heard, will be silent, the hedges naked, and not even the hum of an insect sound in the air. Where the nearly ripe harvest, when the breeze blows, now murmurs like the sea in its sleep, and where the merry voices of sun-tanned reapers will soon be heard, the trampled stubble only will be seen, and brown bare patches of miry earth, where the straw has blackened and rotted, shew like the coverings of newly-made graves. Even now unseen hands are tearing down the tapestry of flowers which summer had hung up to shelter her orchestra of birds in the hedges. What few flowers the woodbine again throws out—children of its old age—have none of the bloom and beauty about them like those born in the lusty sunshine of early summer. For even she is getting gray, and the white down of thistles, dandelion, groundsel, and many other hoary seeds streak her sun-browned hair. There are blotches of russet upon the ferns that before only unfolded great fans of green, and in the sunset the fields of lavender seem all on fire, as if the purple heads of the flowers had been kindled by the golden blaze which fires the western sky. Fainter, and further between each note, the shrill chithering of the grasshopper may still be heard; and as we endeavour to obtain a sight of him, the voice fades away beyond the beautiful cluster of red-coloured pheasant's-eye, which country maidens still call rose-a-ruby, believing that if they have not a sweetheart before it goes out of flower, they will have to wait for another year until it blooms again. The dwarf convolvulus twines around the corn, and the bear-bine coils about the hedges, the former winding round in the direction of the sun, and the latter twining in a contrary direction. Sometimes, where the little pink convolvulus has bound several stems of corn together, and formed such a tasteful wreath as a young lady would be proud to wear on her bonnet, the nest of the pretty harvest-mouse may be found. This is the smallest quadruped known to exist—the very humming-bird of mammalia—for when full-grown it will scarcely weigh down a worn farthing, while the tiny nest, often containing as many as eight or nine young ones, may be shut up easily within the palm of the hand, though so compactly made, that if rolled along the floor like a ball, not a single fibre of which it is formed will be displaced. How the little mother manages to suckle so large a family within a much less compass than a common cricket-ball, is still a puzzle to our greatest naturalists. It is well worth hiding yourself for half an hour among the standing-corn, just for the pleasure of seeing it run up stalks of wheat to its nest, which it does much easier than we could climb a wide and easy staircase, for its weight does not even shake a grain out of the ripened ears that surmount its pretty chamber. It may be kept in a little cage, like a white mouse, and fed upon corn; water it laps like a dog; and it will turn a wheel as well as any squirrel. Often it amuses itself by coiling its tail around anything it can get at, and hanging with its mite of a body downward, will swing to and fro for many minutes together. One, while thus swinging, would time its motions to the ticking of the clock that stood in the apartment, and fall asleep while suspended.

There are now thousands of lady-birds about, affording endless amusement to children; only a few years ago, they invaded our southern coast in such clouds, that the piers had to be swept, and millions of them perished in the sea; many vessels crossing over from France had their decks covered with them. That pretty blue butterfly, which looks like a winged harebell, is now seen everywhere; and as it balances itself beside some late cluster of purple sweet-peas, it is difficult to tell which is the insect and which the flower, until it springs up and darts off with a jerk along its zigzag way. On some of the trees we now see a new crop of leaves quite as fresh and beautiful as ever made green the boughs in vernal May, and a pleasant appearance they have beside the early-changing foliage that soonest falls, looking in some places as if spring, summer, and autumn had combined their varied foliage together. And never does the country look more beautiful than now, if the eye can at once take in a wide range of scenery from some steep hillside. Patches of green, where the cattle are feeding on the second crop of grass, are all one emerald—looking in the distance as if April had come again, and tinted them with the softest flush of spring; and if you are near enough, you may still hear the milkmaid's carol morning and night, for that green eddish causes the cows to yield as much milk as they did when feeding knee-deep amid the flowers of May. Then great fields of ripe corn rush in like floods of sunshine between these green spaces, widening and yellowing out on every hand, shewing here and there a thin dark band, which would hardly arrest the eye, were it not beaded with trees that shoot up from amid these low hedgerows.

And in the remote distance, where the same dark lines run between the cornfields, they look like streaks of grass on a yellow clay land in spring—a fallow, sun-lighted land, where beside these thin lines no green thing grows. The roofs of the little cottages are all that is seen to float amid this golden ocean of corn, which appears to have washed over wall, window, and door, and left but the sloping thatch on the face of that great yellow sea of waving and rolling ears. That old roadside alehouse, which we thought so picturesque while eating our bread and cheese in the sunny porch an hour ago, is, excepting the roof and the tall sign-post, lost in the long perspective of sweeping acres of cornfields; and the winding road we passed, which leads to it, seems to have been filled up by the long eary ranks that, from here, appear to have closed since we came by. We no longer hear the creaking of the old sign, though the gust that just now swept by and sent a white wave over the corn, must have made the old Green Dragon sigh again as it swung before the door. Soon that great bay-window, which looks so pleasantly over the long range of corn-lands, will be filled with thirsty reapers in the evening, and well-to-do farmers in the daytime, as they ride down to see how the work of harvest progresses, while great bottles and wooden flagons will be passing all day long, out full, and in empty, at that old porch, until all the corn is garnered. Children, who come with their parents, because they have no other home, until harvest is over, will be hanging about that great long trough before the door, filling bottles with water for the reapers, and throwing it over one another, and wetting the hay that stands ever ready in those movable racks for any mounted horseman who chooses to give his nag a bite as well as a sup, when he pulls up at that well-known halting-place. Right proud is mine host of his great kitchen, with its clean sanded floor, and white long settles, that will seat a score or more of customers. You may see your face in the brass copper and block-tin cooking utensils that hang around, for often during the hay and corn harvest, the great farmers call and dine or lunch there, whose homes lie a long way from those open miles of cornfields. It would make a hungry man's mouth water to see what juicy hams and fine streaky flitches ever hang up on the oaken beams which span the ceiling of that vast kitchen. As to poultry—finer chickens were never eaten than those we saw picking about the horse-trough, nor do plumper ducks swim than those we sent quacking into the green pond—covered with duck-weed—when our ragged terrier barked at them as we left the porch.

In some places, if it has been what the country-people call a forward summer, harvest has already commenced, though it is more general about the beginning of next month, which heralds in autumn. And now the fruit is ripe on the great orchard-trees, the plums are ready to drop through very mellowness, and there is a rich redness on the sunny-side of the pears, and on many of the apples. What strangely-shaped trees are still standing in many of our old English orchards, some of them so aged, that all record of when they were first planted was lost a century or two ago! Apple-trees so old that their arms have to be supported on crutches, as the decayed trunk would not bear the branches when they are weighed down with fruit, for some of these codlins are as big as a baby's head. Many of these hoary trees are covered with misletoe, or wrapped about with great flakes of silver moss, causing them in the distance to look like bearded Druids, while some of the trunks are bent and humped with knots, and stoop until they are almost double under the weight of fruit and years. And when does pear ever taste so sweet or plum so rich and mellow, as those which have fallen through very ripeness, and are picked up from the clean green after-math under the orchard-trees, as soon as they have fallen?—few that are gathered can ever be compared with these. A hot day in August, a parching thirst, and a dozen golden-drop plums, picked up fresh from the cool grass, is a thing to be remembered, and talked about after, like Justice Shallow's pippins, in Shakspeare. They must not be shaken down by the wind, but slip off the boughs through sheer ripeness, and leave the stalks behind, so rich are they then that they would even melt in the crevice of an iceberg. But we have now reached the borders of a fruitful land, where the corn is ready for the sickle, and the wild fruits hang free for all; for though the time of summer's departure has arrived, she has left plenty behind for all, forgetting neither beast nor bird in her bounty. And now the voices of the labourers who are coming up to the great gathering, may be heard through the length and breadth of the land, for the harvest-cry has sounded.

(HISTORICAL.)

In the old Roman calendar, August bore the name of *Sextilis*, as the sixth month of the series, and consisted but of twenty-nine days. Julius Cæsar, in reforming the calendar of his nation, extended it to thirty days. When, not long after, Augustus conferred on it his own name, he took a day from February, and added it to August, which has consequently ever since consisted of thirty-one days. This great ruler was born in September, and it might have been expected that he would take that month under his patronage; but a number of lucky things had happened to him in August, which, moreover, stood next to the month of his illustrious predecessor, Julius; so he preferred Sextilis as the month which should be honoured by bearing his name, and August it has ever since been among all nations deriving their civilisation from the Romans.

CHARACTERISTICS OF AUGUST.

In height of mean temperature, August comes only second, and scarcely second, to July; it has been stated, for London, as 61° 6′. The sun, which enters the constellation Virgo on the 23d, is, on the 1st of the month, above the horizon at London for 15 hours 22 minutes; on the last, for 13 hours 34 minutes: at Edinburgh, for 16 hours 40 minutes, and 14 hours 20 minutes, on these days respectively.

First of August.

St Peter ad Vincula, or St Peter's Chains. The Seven Machabees, brothers, and their mother, martyrs. Saints Faith, Hope, and Charity, virgins and martyrs, 2d century. St Pellegrini or Peregrinus, hermit, 643. St Ethelwold, bishop of Winchester, confessor, 984.

Lammas.

This was one of the four great pagan festivals of Britain, the others being on 1st November, 1st February, and 1st May. The festival of the *Gule of August*,* as it was called, probably celebrated the realisation of the first-fruits of the earth, and more particularly that of the grain-harvest. When Christianity was introduced, the day continued to be observed as a festival on these grounds, and, from a loaf being the usual offering at church, the service, and consequently the day, came to be called *Hlaf-mass*, subsequently shortened into Lammas, just as *hlaf-dig* (bread-dispenser), applicable to the mistress of a house, came to be softened into the familiar and extensively used term, lady. This we would call the rational definition of the word Lammas. There is another, but in our opinion utterly inadmissible derivation, pointing to the custom of bringing a lamb on this day, as an offering to the cathedral church of York. Without doubt, this custom, which was purely local, would take its rise with reference to the term Lammas, after the true original signification of that word had been forgotten.

'It was once customary in England, in contravention of the proverb, that a cat in mittens catches no mice, to give money to servants on Lammas-day, to buy gloves; hence the term *Glove-Silver*. It is mentioned among the ancient customs of the abbey of St Edmund's, in which the clerk of the cellarer had 2*d.*; the cellarer's squire, 11*d.*; the granger, 11*d.*; and the cowherd a penny. Anciently, too, it was customary for every family to give annually to the pope on this day one penny, which was thence called *Denarius Sancti Petri*, or Peter's Penny.'—*Hampson's Medii Ævi Kalendarium.*

What appears as a relic of the ancient pagan festival of the Gule of August, was practised in Lothian till about the middle of the eighteenth century. From the unenclosed state of the country, the tending of cattle then employed a great number of hands, and the cow-boys, being more than half idle, were much disposed to unite in seeking and creating amusement. In each little district, a group of them built, against Lammas-day, a tower of stones and sods in some conspicuous place. On Lammas-morning, they assembled here, bearing flags, and blowing cow-horns—breakfasted together on bread and cheese, or other provisions—then set out on a march or procession, which usually ended in a foot-race for some trifling prize. The most remarkable feature of these rustic fêtes was a practice of each party trying, before or on the day, to demolish the sod fortalice of some other party near by. This, of course, led to great fights and brawls, in which blood was occasionally spilt. But, on the whole, the Lammas Festival of Lothian was a pleasant affair, characteristic of an age which, with less to gain, had perhaps rather more to enjoy than the present.*

* *Gwyl*, Brit. a festival.

Born.—Tiberius Claudius Drusus, Roman emperor, uncle and successor of Caligula, B.C. 11, *Lyons;* Edward Kelley, alchemist and necromancer, 1555.

Died.—Marcus Ulpius Trajanus Crinitus (Trajan), Roman emperor, 117, *Selinus, in Cilicia;* Louis VI., surnamed Le Gros, king of France, 1137; Stephen Marcel, insurrectionary leader, slain at Paris, 1358; Cosmo de' Medici, the elder, grandfather of Lorenzo the Magnificent, 1464, *Florence;* Lorenzo Valla, distinguished Latin scholar, 1457 or 1465, *Rome;* Jacques Clement, monk, 1589; Anne, queen of England, 1714; Jacques Boileau, theologian, brother of the satirist, 1716, *Paris;* Admiral Sir John Leake, great naval commander, 1720, *Greenwich;* Richard Savage, poet and friend of Johnson, 1743, *Bristol;* Dr Shebbeare, notorious political writer, 1788; Mrs Elizabeth Inchbald, actress and dramatist, 1821; Rev. Robert Morrison, D.D., first Protestant missionary to China, 1834, *Canton;* Harriet Lee, novelist, 1851, *Clifton;* Bayle St John, miscellaneous writer, 1859, *London.*

COSMO DE' MEDICI.

The Florentine family of the Medici, which made itself in various ways so notable in the fifteenth, sixteenth, and seventeenth centuries, may be said to have been founded by Cosmo, who died in 1464. This gentleman, for he was of no higher rank, by commerce acquired wealth comparable to that of kings, which enabled him to be the friend of the poor, to enrich his friends, to ornament his native city with superb edifices, and to call to Florence the Greek savans chased out of Constantinople. His counsels were, during thirty years, the laws of the republic, and his benefactions its sole intrigues. Florence, by common consent, inscribed his tomb with the noble legend: 'THE FATHER OF HIS COUNTRY.'

MRS INCHBALD.

Biography does not perhaps afford a finer example of industry, prudence, self-denial, and beneficence, than the story of Mrs Inchbald. Starting in life with the merest rudiments of education, she managed to make a living in literature; her personal expenditure she governed with a severity which Franklin's 'Poor Richard' might have applauded; her charity she dispensed with a lavish generosity; her path lay through scenes proverbial for their dangers, yet she preserved a spotless name; and the world's copious flattery of her

* A minute account of the Lammas Festival was written by Dr James Anderson, and published in the *Transactions of the Antiquarian Society of Scotland*, vol. i. p. 194.

beauty and abilities—an intoxication which but few of the strongest heads can wholly withstand—left the even tenor of her conduct unaffected. It was not that she was a block of indifference; she was a woman of warm affections and delicate sensibilities; but a lively common-sense, cultivated by much experience in the hard school of adversity, ruled supreme in her mind, and when success and honour fell to her lot, she stood proof to all their wiles.

Elizabeth Inchbald was the daughter of Simpson, a Suffolk farmer, and was born at Standingfield, near Bury St Edmunds, on the 15th of October 1753. She very early took a fancy for the stage, and when about eighteen, she eloped from her mother's care, and made her way to London in search of an engagement as an actress. After sundry perilous adventures among the theatres, she married, in 1772, Mr Inchbald, a second-rate actor, twice her own age. With him she strolled for seven years from city to city of the three kingdoms, sometimes in the enjoyment of plenty, and sometimes in such poverty that they were glad to make a dinner by the roadside out of a turnip-field. In 1779, Mr Inchbald died suddenly at Leeds, leaving his young widow with funds in hand to the amount of £350. She started for London, and was engaged at Covent Garden for 26*s.* 8*d.* a week, and subsequently by Colman at the Haymarket for 30*s.* Whilst acting for Colman in 1784, she took it into her head to write a farce, *The Mogul Tale*, which not only pleased the town, but drew from Colman the grateful assurance that, as a dramatist, she might earn as much money as she wanted. Thus encouraged, she went on writing play after play to the number of about a score, and for some of which she received large sums. *Every One has His Fault* brought her £700, and *To Marry or Not to Marry*, £600. She was a favourite performer, but she owed her popularity more to her piquant beauty than to her histrionic powers. She had, moreover, an impediment in her speech, which only with great difficulty she could conceal. Having therefore discovered an easier means of livelihood, she retired from the stage in 1789. She next tried her hand as a novelist, and in 1791, published *A Simple Story*, and in 1796, *Nature and Art*, which carried her fame into regions where her dramas were unknown. Respected by all, and loved by those who intimately knew her, she died in Kensington on the 1st of August 1821, leaving a little fortune in the funds which had been yielding her £260 a year.

Mrs Inchbald's relations were poor, and some unfortunate, and she ministered to their necessities with a liberality which, measured by her income, was really extraordinary. To a widowed sister, Mrs Hunt, she allowed a pension of £100 a year. To meet such sacrifices, she pinched herself to a degree that would have done credit to a saint of the Catholic church, to which church, by birth and conviction, she belonged. On the death of Mrs Hunt, she wrote to a friend: 'Many a time this winter, when I cried with cold, I said to myself—but, thank God, my sister has not to stir from her room: she has her fire lighted every morning; all her provisions bought, and brought to her ready cooked: she would be less able to bear what I bear; and how much more should I have to suffer but for this reflection! It almost made me warm when I thought that *she* suffered no cold.' To save money for the use of others, she lived in cheap lodgings, migrating from one neighbourhood to another, in the hope of discomforts as amusing as pitiful. With a milliner in the Strand she stayed some years, and she thus depicts the accommodation she enjoyed: 'My present apartment is so small, that I am all over black and blue with thumping my body and limbs against my furniture on every side; but, then, I have not far to *walk* to reach anything I want, for I can kindle my fire as I lie in bed, and put on my cap as I dine, for the looking-glass is obliged to stand on the same table with my dinner. To be sure, if there was a fire in the night, I must inevitably be burned, for I am at the top of the house, and so removed from the front part of it, that I cannot hear the least sound of anything from the street; *but, then*, I have a great deal of fresh air, more daylight than most people in London, and the enchanting view of the Thames and the Surrey Hills.' She was accustomed to wait on herself and clean out her room, as the following passage from one of her letters will prove: 'I have been very ill indeed, and looked worse than I was; but since the weather has permitted me to leave off making my fire, scouring the grate, sifting the cinders, and all the *et cetera* of going up and down three pair of long stairs with water and dirt, I feel quite another creature.' And again: 'Last Thursday morning, I finished scouring my bed-chamber, while a coach with a coronet and two footmen waited at the door to take me an airing.'

Money, so precious to her, she was able to decline when its purchase was at the cost of good taste. She had written her *Memoirs*, and twice was offered £1000 for the manuscript; but it seemed to her that its publication would cause suffering and irritation, and she took counsel with her spiritual adviser. Her diary thus records her heroic decision:

'*Query.* What I should wish *done* at the instant of death?

Dr Pointer. Do it *now.*

Four volumes destroyed.'

Mrs Inchbald was rather tall, and of a striking figure. She was fair, slightly freckled, and her hair of a sandy-auburn hue. Her face was lovely, and full of spirit and sweetness. 'Her dress,' records one of her admirers, 'was always becoming, and very seldom worth so much as *eightpence*.' She had many suitors, young, rich, and noble, but none among them did she care to accept. She fell in love with her physician, Dr Warren, but he was a married man; and whilst, like a true woman, she suppressed her feelings, she sometimes yielded so far as to pace Sackville Street at night, for the pleasure of seeing the light in his window.

With all her prudence she was frank in speech, and loved gaiety and frolic. Here is what Leigh Hunt calls 'a delicious memorandum' from her diary: 'On Sunday, dined, drank tea, and supped with Mrs Whitfield. At dark, she, and I, and her son William walked out; and *I rapped at doors in New Street and King Street, and ran away.*' This was in 1788, when she was five-and-thirty. 'But,' says Leigh Hunt, 'such people never grow old. Imagine what the tenants would have thought, could anybody have told them that the runaway-knocks were given by one of the most respectable of women—a lady midway between thirty and forty, and authoress of the *Simple Story!*'

GREAT FIRES A CAUSE OF RAIN: ESPY'S THEORY.

There is extant a letter, dated the 1st of August 1636, from the Earl of Pembroke and Montgomery to the high-sheriff of Staffordshire, stating that the king was about to pass through that county, and having heard there was an opinion in it that the burning of fern brought down rain, he desired that such practice should be forborne for the time, 'that the country and himself may enjoy fair weather as long as he remains in those parts.'

In Scotland, it is customary in spring to burn large tracts of heather, in order that herbage may grow in its place; and there also it is a common remark that the *moor-burn*, as it is called, generally brings rain.

The idea looks very like a piece of mere folk-lore, devoid of a foundation in truth; but it is very remarkable that, in our own age, a scientific American announced a theory involving this amongst other conclusions, that extensive fires on the surface of the earth were apt to produce rainy weather. He was a simple-hearted man, named James P. Espy, who for many years before his death in 1860 had occupied a post under the American government at Washington. It is undoubted that he made an immense collection of facts in support of his views, and though most of his scientific friends thought he was too ready to adopt conclusions, and too little disposed to review and test them, yet it must be admitted that his 'law of storms,' as he called it, was entitled to some measure of consideration. It may be thus briefly stated:

When a body passes from a solid to a fluid state, it absorbs a large amount of caloric. In passing from a liquid to a solid state, this *caloric of fluidity* is given out. In the same manner liquids passing into vapour absorb, and vapours condensed to liquids give out the *caloric of elasticity*. The former is 140°, the latter no less than 1030°. The evaporation of water cools the earth, by its absorption of this caloric of elasticity. The condensation of vapour into clouds sets free this latent caloric, which rarefies the surrounding atmosphere, and produces an upward current of air.

When the atmosphere is well charged with vapour, an ascending current, however produced, causes condensation, by exposing the vapour to cold. This condensation, setting free latent caloric, produces a further upward movement and condensation. The air rushes in on every side to fill the partial vacuum. This air takes the upward movement, with the accompanying phenomena of condensation and the attendant rarefaction, until the clouds so formed are precipitated in rain; or where the movement is more powerful, in hail, sometimes accompanied by water-spouts and tornadoes.

All storms, Mr Espy held, have these characteristics. There is a central upward movement, with condensation of vapour, forming clouds. The wind blows from every side toward the centre. When the movement is very powerful, in level countries and hot climates, it has the character of a tornado, in the track of which he always found trees fallen in every direction, but always toward the centre. The water-spout forms the centre of the tornado at sea.

The formation of hail has long puzzled men of science. Why should drops of water, falling from a cloud, be frozen while passing through a still warmer atmosphere, and even in hot climates? Mr Espy's upward current solves the difficulty. The rain-drops are first carried up into the region of congelation, and being thrown outward, fall to the earth. So great masses of water, carried up in water-spouts, fall in a frozen state, in lumps which have sometimes measured fifteen inches in circumference. In the same manner Mr Espy accounts for the occasional raining of frogs, fishes, sand, seeds, and stranger substances; but he does not account for such matters being kept in the clouds for several days, and carried over hundreds of miles' distance from the place where they were carried up in tornado or water-spout. They may have been carried up by the force of aërial currents, but it does not appear that they could be kept up for any length of time by such currents. Thousands of tons of water are swept into the clouds by water-spouts, but what power prevents it from pouring down again in torrents?

Still the theory of Mr Espy is very ingenious, and has the merit of affording a reasonable explanation to many, if not all, phenomena. The committee of the French Academy called his attention to the connection of electricity with meteoric phenomena, but he does not appear to have pursued that branch of investigation. It is our opinion that a certain electrical condition of bodies in the atmosphere gives them a repulsion to the earth, and that gravitation has no effect upon such bodies, until there is a change in their electrical condition. The earth is a magnet which may either attract or repel bodies, as they are positive or negative to it. Only in this, or in some such way, can we account for solid bodies, often of considerable density, being sustained for days in the atmosphere. It may be admitted, in conformity with Mr Espy's theory, that such bodies may have been carried upward in a tornado, and it may be that the atmospheric movements may develop their electrical condition. It was to these matters, doubtless, that the French Academy wished to direct his attention.

Mr Espy was very anxious that the American government should make appropriations to test the utility of a practical application of his theory. He always asserted that, in a certain condition of the atmosphere, as of a high dew-point in a season of drouth, it was practicable to make it rain by artificial means. *Nothing was necessary but to make an immense fire.* This would produce an upward current, vapour would condense, the upward movement would thereby be increased, currents of air would flow in, with more condensation, until clouds and rain would spread over a great surface of country, so that for a few thousands of dollars a rain would fall worth millions. Mr Espy had observed that the burning of forests and prairies in America is often followed by rain. He believed that the frequent showers in London and other large cities have a similar origin. Rains have even been supposed to be caused by great battles. There is little doubt that they are caused by volcanic eruptions. An eruption in Iceland has been followed by rains over all Europe. In 1815, during an eruption of a volcano in one of the East India Islands, of a population of 12,000, all but 26 were killed by a series of terrific tornadoes.

In this case there were phenomena strongly corroborative of Mr Espy's theory. Large trees, torn up by the tornadoes, appear to have been carried upward by an ascending current formed first by the heat of the volcano, and then by the rush of winds from every quarter, for these trees, after being carried up to a vast height, were thrown outward and descended, scorched by the volcanic fires.

INSTITUTION OF THE ORDER OF ST MICHAEL.

AUGUST 1, 1469.

There had been an order of the Star in France, but it had fallen into oblivion. When Louis XI. resolved that it was necessary there should be an order of knighthood in his kingdom, he reflected that it was easier to create a new, than to revive the lustre of an old one. As to a name for his proposed fraternity, there was no being of reality held in greater esteem in that age than the archangel Michael. It was believed that this celestial personage had fought visibly for the French at Orleans. The superstitious king worshipped him probably more vehemently than he did his God. Accordingly, he chose for his new order the name of St Michael. The knights, thirty-six in number, all men of name and of birth, could only be degraded for three crimes—heresy, treason, and cowardice.

THOMAS DOGGET AND THE WATERMEN'S ROWING-MATCH.

Annually, on the 1st of August, there takes place one of the great rowing-matches, or races, on the Thames. The competitors are six young watermen, whose apprenticeship ends in the same year—the prize, a waterman's coat and silver badge. The distance rowed extends from the Old Swan at London Bridge, to the White Swan at Chelsea, against an adverse tide; so none but men of great strength, skill, and endurance need attempt the arduous struggle. The prize, though not of much intrinsic value, may be termed the Red Ribbon of the river, being an important step towards the grand *Cordon Bleu*—the championship of the Thames.

The founder of this annual contest was one Thomas Dogget, a native of Dublin, and a very popular actor in the early part of the eighteenth century. He is described as 'a little, lively, spract man, who danced the *Cheshire Rounds* full as well as the famous Captain George, but with more nature and nimbleness.' Tony Aston, in the rarest of theatrical pamphlets, tells us that he travelled with Dogget when the latter was manager of a strolling-company, and he gives a very different idea of a stroller's life, as it was then, from that generally entertained. Each member of the company wore a brocaded waistcoat, kept his own horse, on which he rode from town to town, and was everywhere respected as a gentleman—seemingly better off than even those in the old ballad quoted by Hamlet, when he says: 'Then came each actor on his ass.'

Colley Cibber describes Dogget as the most original and the strictest observer of nature of all his contemporaries. He borrowed from none, though he was imitated by many. In dressing a character to the greatest exactness, he was remarkably skilful; the least article of whatever habit he wore, seemed in some degree to speak and mark the different humour he represented. He could be extremely ridiculous without stepping into the least impropriety, and knew exactly when and where to stop the current of his jokes. He could, with great exactness, paint his face to resemble any age from manhood to extreme senility, which caused Sir Godfrey Kneller to say that Dogget excelled him in his own art; for he could only copy nature from the originals before him, while the actor could vary them at pleasure, and yet always preserve a true resemblance.

Dogget was an ardent politician, and an enthusiastic advocate of the Hanoverian succession. It was in honour of this event that he gave a waterman's coat and badge to be rowed for on the first anniversary of the accession of the First George to the British throne. And at his death he bequeathed a sum of money, the interest of which was to be appropriated annually, for ever, to the purchase of a like coat and badge, to be rowed for on the 1st of August, in honour of the day. And with the minute attention to matters of dress which distinguished him as an actor, and in accordance with his political principles, he directed that the coat should be of an orange colour, and the badge should represent the white horse of Hanover.

Almost as we write, on the 12th of February 1863, the Prince of Wales visits the worshipful company of Fishmongers, in their own magnificent hall at London Bridge. And a newspaper paragraph, describing the festival, says, 'With singular appropriateness and good taste, eighteen watermen, who had at various periods, since the year 1824, been winners of Dogget's coat and badge, arrayed in the garb which testifies to their prowess, and of which the Fishmongers' Company are trustees, were substituted for the usual military guard of honour in the vestibule.'

A more stalwart set of fellows, in more quaintly antique costume, could scarcely be found in any country, to serve as an honorary guard on 'the expectancy and rose of the fair state.'

LONDON BRIDGE—NEW AND OLD.

On the day when William IV. and Queen Adelaide opened New London Bridge (August 1, 1831), the vitality of the old bridge may be said to have ceased; a bridge which had had more commerce under and over it perhaps than any other in the world. Eight centuries at least had elapsed since the commencement of that bridge-traffic. There were three or four bridges of wood successively built at this spot before 1176 A. D., in which year the stone structure was commenced; and this was the veritable 'Old London Bridge,' which served the citizens for more than six hundred and fifty years. A curious fabric it was, containing an immense quantity of stone arches of various shapes and sizes, piers so bulky as to render the navigation between them very dangerous, and (until 1754) a row of buildings a-top. The bridge suffered by fire in 1212, again in 1666, and again in 1683. So many were the evils which accumulated upon, around, and under it, that a new bridge was resolved upon in 1823—against strong opposition on the part of the corporation. John Rennie furnished the plans, and his son, Sir John, carried them out. The foundation-stone was laid in 1825 by the Duke of York and

the lord mayor; and the bridge took six years in building. The cost, with the approaches at both ends, was not less than two millions sterling, and was defrayed by a particular application of the coal-tax. The ceremonial attending the opening, on the 1st of August 1831, comprised the usual routine of flags, music, procession, addresses, speeches, &c. The old bridge finally disappeared towards the end of 1832; and then began in earnest the career of that noble structure, the new bridge, which is now crossed every day by a number of persons equal to the whole population of some of our largest manufacturing towns.

Strictly, the Old London Bridge, for a water-way of 900 feet, had eighteen solid stone piers, varying from 25 to 34 feet in thickness; thus confining the flow of the river within less than half its natural channel. That this arose simply from bad engineering, is very probable; but it admitted of huge blocks of building being placed on the bridge, with only a few inter-spaces, from one end to the other. These formed houses of four stories in height, spanning across the passage-way for traffic, most of which was, of course, as dark as a railway-tunnel. Nestling about the basement-floors of these buildings were shops, some of which, as we learn from old title-pages, were devoted to the business of bookselling and publishing. It is obvious that the inhabitants of these dwellings must have been sadly pent up and confined; it would be, above all, a miserable field for infant life; yet nothing can be more certain than that they were packed with people as full as they could hold. About the centre, on a pier larger than the rest, was reared a chapel, of Gothic architecture of the twelfth century, 60 feet by 20, and of two floors, dedicated to St Thomas of Canterbury, and styled St Peter's of the Bridge; a strange site, one would think, for an edifice of that sacred character, and yet we are assured that to rear religious houses upon bridges was by no means an uncommon practice in medieval times.

In the earlier days of London Bridge, the gate at the end towards the city was that on which the heads of executed traitors were exhibited; but in the reign of Elizabeth, this grisly show was transferred to the gate at the Southwark end, which consequently became recognised as the TRAITORS' GATE. A representation of this gate, with the row of heads above it, is here given, mainly as it appears in Vischer's View of London (seventeenth century).

TRAITORS' GATE, OLD LONDON BRIDGE.

There was one clear space upon the bridge, of such extent that it was deemed a proper place for joustings or tournaments; and here, on St George's Day 1390, was performed a tilting of extraordinary character. John de Wells, the English ambassador in Scotland, having boasted of the prowess of his countrymen at the Scottish court, a famous knight of that country, David Lindsay, Earl of Crawford, offered to put all questions on that point to trial by a combat on London Bridge. He was enabled by a royal safe-conduct to travel to London with a retinue of twenty-nine persons. The ground was duly prepared, and a great concourse of spectators took possession of the adjacent houses. To follow the narrative of Hector Bœce: 'The signal being given, tearing their barbed horses with their spurs, they rushed hastily together, with a mighty force, and with square-ground spears, to the conflict. Neither party was moved by the vehement impulse and breaking of the spears; so that the common people affected to cry out that David was bound to the saddle of his horse, contrary to the law of arms, because he sat unmoved amidst the splintering of the lances on his helmet and visage. When Earl David heard this, he presently leaped off his charger, and then as quickly vaulted again upon his back without any assistance; and, taking a second hasty course, the spears were a second time shivered by the shock, through their burning desire to conquer. And now a third time were these valorous enemies stretched out and running together; but then the English knight was cast down breathless to the earth, with great sounds of mourning from his countrymen that he was killed. Earl David, when victory appeared, hastened to leap suddenly to the ground; for he

had fought without anger, and but for glory, that he might shew himself to be the strongest of the champions, and casting himself upon Lord Wells, tenderly embraced him until he revived, and the surgeon came to attend him. Nor, after this, did he omit one day to visit him in the gentlest manner during his sickness, even like the most courteous companion. He remained in England three months, by the king's desire, and there was not one person of nobility who was not well affected towards him.'

EMANCIPATION OF BRITISH SLAVES.

The 1st of August 1834 was the day on which the slaves in the British colonies were assigned, not to their actual freedom, but to a so-called 'apprenticeship' which was to precede and prepare for freedom. Lord (then Mr) Brougham brought forward a measure to this great end in 1830; and Mr Fowell Buxton another in 1832; but no act was passed till 1833. It provided that on the 1st of August in the following year, all slaves should become 'apprenticed labourers' to their masters, in two classes; that in 1838 and 1840, respectively, these two classes should receive their actual freedom; that twenty millions sterling should ultimately be paid to the masters, who would then lose the services of their slaves; and that this sum would be distributed rateably, according to the market-price of slaves in each colony, during the eight years 1823—1830. Many subsequent statutes modified the minor details, but left the main principle untouched. It was found, on a careful analysis, that on the 1st of August 1834 (all negroes born after that date, were born free), there were 770,280 slaves in the colonies affected by the Emancipation Act.

A remarkable address was issued on this occasion by the Marquis of Sligo, governor of Jamaica: remarkable in relation to the paternal tone in which the negroes were addressed, as children to whom freedom was an unknown privilege, and who might possibly like a lazy life better than an industrious one, when enforced labour should cease:

'My Friends!—Our good king, who was himself in Jamaica long time ago, still thinks and talks a great deal of this island. He has sent me out here to take care of you, and to protect your rights; but he has also ordered me to see justice done to your owners, and to punish those who do wrong. Take my advice, for I am your friend, be sober, honest, and work well when you become apprentices; for should you behave ill, and refuse to work because you are no longer slaves, you will assuredly render yourselves liable to punishment. The people of England are your friends and fellow-subjects; they have shewn themselves such by passing a bill to make you all free. Your masters are also your friends; they have proved their kind feeling towards you all, by passing in the House of Assembly the same bill. The way to prove that you are deserving of all this goodness, is by labouring diligently during your apprenticeship. You will, on the 1st of August next, no longer be slaves; from that day you will be apprenticed to your former owners, for a few years, in order to fit you all for freedom. It will therefore depend entirely upon your own conduct, whether your apprenticeship shall be short or long; for should you run away, you will be brought back by the Maroons and the police, and have to remain in apprenticeship longer than those who behave well. You will only be required to work four days and a half in each week; the remaining day and a half in each week will be your own time, and you may employ it for your own benefit. Bear in mind, that every one is obliged to work: some work with their hands, some with their heads; but no one can live and be considered respectable without some employment. Your lot is to work with your hands. I pray you, therefore, do your part faithfully; for if you neglect your duty, you will be brought before the magistrates whom the king has sent out to watch you; and they must act fairly, and do justice to all, by punishing those who are badly disposed. Do not listen to the advice of bad people; for should any of you refuse to do what the law requires of you, you will bitterly repent it; for when at the end of the appointed time, all your fellow-labourers are released from apprenticeship, you will find yourselves condemned to hard labour in the workhouse for a lengthened period, as a punishment for your disobedience. If you follow my advice, and conduct yourselves well, nothing can prevent your being your own masters, and to labour only for yourselves, your wives and children, at the end of four or six years, according to your respective classes. I have not time to go about to all the properties in this island, and tell you this myself. I have ordered this letter of advice to be printed, and to be read to you all, that you may not be deceived, and bring yourselves into trouble by bad advice or mistaken motives. I trust you will be obedient and diligent subjects to our good king, so that he may never have reason to be sorry for all the good he has done for you.'

AUGUST 2.

St Stephen, pope and martyr, 257; St Etheldritha or Alfrida, virgin, about 834.

Born.—Pope Leo XII., 1760; Cardinal Nicholas Wiseman, 1802; J. J. Gurney, philanthropist, 1788.

Died.—Archidamus III., king of Sparta, son of Agesilaus, B.C. 338, *Lucania, in Italy;* Quintilius Varus, Roman governor in Germany, A.D. 10; William II. (Rufus) of England, killed in the New Forest, Hampshire, 1100; Henry III., king of France, stabbed the previous day by Jacques Clément, 1589, *St Cloud;* Etienne Bonnot de Condillac, abbé, author of *Traité des Sensations, Cours d'Etudes,* &c., 1780, *Flux, near Beaugenci;* Thomas Gainsborough, great landscape painter, 1788; Mehemet Ali, pacha of Egypt, 1849; Lord Herbert of Lea, British statesman, 1861, *Wilton House, Salisbury.*

DEATH OF WILLIAM RUFUS.

Few Englishmen of the nineteenth century can realise a correct idea of the miseries endured by their forefathers, from the game-laws, under despotic princes. Constant encroachments upon private property, cruel punishments—such as tearing out the offender's eyes, or mutilating his limbs—inflicted

for the infraction of forest law; extravagant payments in the shape of heavy tolls levied by the rangers on all merchandise passing within the purlieus of a royal chase; frequent and arbitrary changes of boundary, in order to bring offences within the forest jurisdiction, were only a portion of the evils submitted to by the victims of feudal tyranny. No dogs, however valuable or dear to their owners—except mastiffs for household defence—were allowed to exist within miles of the outskirts, and even the poor watch-dog, by a 'Court of Regard' held for that special purpose every three years, was crippled by the amputation of three claws of the forefeet close to the skin—an operation, in woodland parlance, termed expeditation, intended to render impossible the chasing or otherwise incommoding the deer in their coverts.

Of all our monarchs of Norman race, none more rigorously enforced these tyrannous game-laws than William Rufus; none so remorselessly punished his English subjects for their infraction. Even the Conqueror himself, who introduced them, was more indulgent. No man of Saxon descent dared to approach the royal preserves, except at the peril of his life. The old forest rhyme:

'Dog draw—stable stand,
Back berand—bloody hand,' *

provided for every possible contingency; and the trespasser was hung up to the nearest convenient tree with his own bowstring.

The poor Saxons, thus worried, adopted the impotent revenge of nicknaming Rufus 'Wood-keeper,' and 'Herdsmen of wild beasts.' Their minds, too, were possessed with a rude and not unnatural superstition, that the devil in various shapes, and under the most appalling circumstances, appeared to their persecutors when chasing the deer in these newly-formed hunting-grounds. Chance had made the English forests—the New Forest especially—fatal to no less than three descendants of their Norman invader, and the popular belief in these demon visitations received additional confirmation from each recurring catastrophe; Richard, the Conqueror's eldest son, hunting there, was gored to death by a stag; the son of Duke Robert, and nephew of Rufus, lost his life by being dashed against a tree by his unruly horse; and we shall now shew how Rufus himself died by a hunting casualty in the same place.

Near Chormingham, and close to the turnpike-road leading from Lymington to Salisbury, there is a lovely secluded dell, into which the western sun alone shines brightly, for heavy masses of foliage encircle it on every other side. It is, indeed, a popular saying of the neighbourhood: that in ancient days a squirrel might be hunted for the distance of six miles, without coming to the ground; and a traveller journey through a long July day without seeing the sun. Long avenues open away on all sides into the deep recesses of those dark woods; and, altogether, it forms just the spot where the hunter following his chase after the ancient Norman fashion of woodcraft, would secrete himself to await the passing game—a fashion which Shakspeare has thus graphically described:

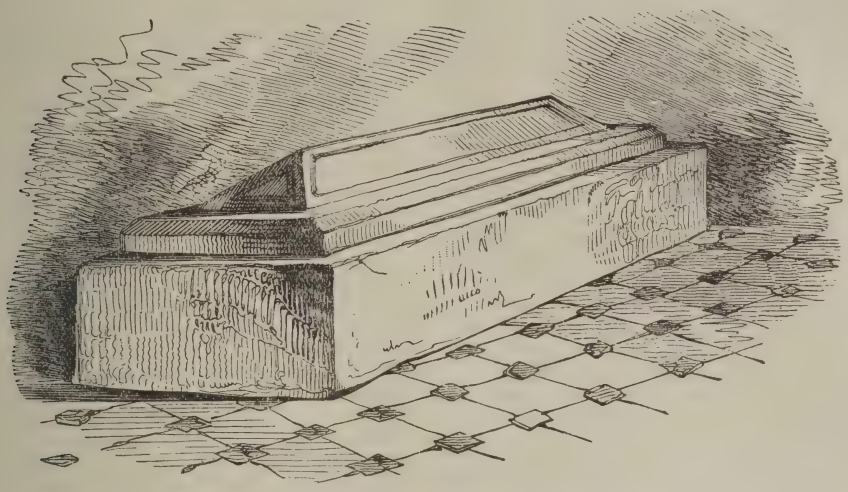
'*Enter* SKINKLO *and* HUMPHREY, *with cross-bows in their hands.*

Skinklo. Under this thick grown brake we'll hide ourselves,
For through this laund anon the deer will come;
And in this covert we will take our stand,
Culling the principal of all the deer.

Humphrey. I'll stay above the hill, so both may shoot.

Skinklo. That cannot be—the noise of thy cross-bow
Will scare the herd, and so my shot is lost.
Here stand we both and shoot we at the best.'

His friends had dispersed to various coverts, and there remained alone with Rufus, Sir Walter Tyrrel, a French knight, whose unrivalled adroitness in archery raised him high in the Norman Nimrod's favour. That morning, a workman had brought to the palace six cross-bow quarrels * of superior manufacture, and keenly pointed, as an offering to his prince. They pleased him well, and after presenting to the fellow a suitable guerdon, he handed three of the arrows to Tyrrel—saying, jocosely, 'Bon archer, bonnes flèches.'



The Red King and his accomplished attendant now separated, each stationing himself, still on horseback, in some leafy covert, but nearly opposite; their cross-bows bent, and with an arrow upon the nut. The deep mellow cry of a stag-hound, mingled with the shouts of attendant foresters, comes freshening on the breeze. There is a crash amongst the underwood, and out bounds 'a stag of ten,' that after listening and gazing about him, as deer are wont to do, commenced feeding behind the stem of a tall oak. Rufus drew the trigger of his weapon, but, owing to the string breaking, his arrow fell short. Enraged at this, and fearful the animal would escape, he exclaimed, 'Tirez donc, Walter! tirez donc! si même c'etoit le diable'—Shoot, Walter! shoot! even were it the devil. His behest was too well obeyed; for the arrow glancing off from the tree at an angle, flew towards the spot where Rufus was concealed. A good arrow, and moreover a royal gift, is always worth the trouble of searching for, and the archer went to look for his. The king's horse, grazing at large, first attracted attention; then the hounds cowering over their prostrate master; the fallen cross-bow; and, last of all, the king himself prone upon his face, still struggling with the arrow, which he had broken off short in the wound. Terrified at the accident, the unintentional homicide spurred his horse to the shore, embarked for France, and joined the Crusade then just setting for the East.

About sun-down, one Purkiss, a charcoal-burner, driving homewards with his cart, discovered a gentleman lying weltering in blood, with an arrow driven deep into his breast. The peasant knew him not, but conjecturing him to be one of the royal train, he lifted the body into his vehicle, and proceeded towards Winchester Palace, the blood all the way oozing out between the boards, and leaving its traces upon the road. There is a tradition, that for this service he had some rods of land, to the amount of an acre or two, given to

* That is:—1. Holding a dog in leash. 2. Standing concealed with bow ready drawn. 3. Detected carrying off a dead deer. 4. The hands stained with blood. Any one of these circumstances was deemed conclusive evidence of guilt.

* Cross-bow arrows, so called.

him; and it is very remarkable that a lineal descendant of this charcoal-burner, bearing the same name, does now live in the hut, and in possession of the land, and is himself a charcoal-man; that all the family, from the first, have been of the same calling, and never richer or poorer, the one than the other; always possessed of a horse and cart, but never of a team; the little patrimony of land given to their celebrated ancestor having descended undiminished from father to son. This

TOMB OF WILLIAM RUFUS, WINCHESTER CATHEDRAL.

family, therefore, is rightly esteemed the most ancient in the county of Hants. A Purkiss of the last century, kept suspended in his hovel the identical axletree made of yew, which had belonged to the aforesaid cart; but which, in a fit of anger, on its accidentally falling on his foot, he reduced to a bag of charcoal, much to the chagrin of the late Duke of Gloucester, who, when appointed ranger of New Forest, was desirous of purchasing it. As to the famous Rufus Oak, after being reduced to a stump by the mutilations of relic-seekers, it was privately burned by one William House from mere wantonness. The circumstance was unknown until after his death, otherwise his safety would have been endangered, so highly did the foresters prize the tree, on account of the profits accruing from a host of sight-seekers. Some fragments of the root were preserved, one of which is still extant, inscribed—'Decr 16th, 1751; part of the oak under which King Rufus died, Aug. 2d, 1100; given me by Lord de la War, C. Lyttleton, Nov. 30th, 1768; given by C. Lyttleton, bishop of Carlisle, to Hen. Baker.' In the year 1745, Lord de la War being head-ranger of New Forest, erected a triangular pillar, bearing suitable inscriptions, on the site of this historical tree, in one of which he states that he had seen the oak growing there. But his lordship's erection has proved a far more evanescent memorial than the oak, it having also been chipped and defaced by relic-hunters; so that it is now as silent on all points of history as the quondom tree.

MEHEMET ALI.

Oriental history presents us with numerous instances of men, who have ascended to the highest stations from the humblest grades of society. The throne itself has been attained by individuals, whose antecedents did not differ greatly from those of the *Arabian Nights* hero, Aladdin. And just as strange and sudden as was their elevation, has often been their downfall.

The life of Mehemet Ali, viceroy of Egypt, affords a striking illustration of the first of these remarks, though his success in establishing himself and descendants as hereditary rulers of the country, furnishes an exception to the general slipperiness of the tenure of power in the East. He was of Turkish origin, being a native of the town of Cavalla, in Roumelia, the ancient Macedonia, where he was born about the year 1769. He adopted the trade of a tobacconist, but after carrying it on for a time, abandoned it to enter the army. By his bravery and military skill, he soon received promotion, and on the death of his commander, was appointed his successor, and afterwards married his widow. During the French invasion of Egypt, he was sent thither as the second in command of a contingent of 300 furnished by the town of Cavalla, and greatly distinguished himself in the various engagements with the troops of Bonaparte. For several years after the evacuation of the country by the French, Egypt was distracted by contending factions, Mehemet Ali uniting himself to that of the Mamelukes. At last, in an outbreak at Cairo in 1806, the viceroy, Khoorshid Pasha, was deposed by the populace, who insisted on Mehemet Ali taking the vacant post. This tumultuary election was ratified by a firman from the sultan, who probably saw that the only means of preserving the tranquillity of the country, was by placing Mehemet at the head of affairs. It was wholly disregarded, however, by the old allies of the latter, the Mameluke Beys, and with them, for several years, Mehemet was engaged in a perpetual struggle for supremacy. What he might perhaps have found some difficulty in accomplishing by open hostilities, he determined

to effect by treachery. During an interval of tranquillity between the contending parties, the Mamelukes were invited to attend the ceremony of the investiture of Toussoon, Mehemet Ali's son, with the command of the army. About 470 of them, with their chief Ibrahim Bey, responded to the summons, and entered the citadel of Cairo. At the conclusion of the ceremony, they mounted their horses and were proceeding to depart, when a murderous fire of musketry was opened upon them by the viceroy's soldiers, stationed on various commanding positions. The unfortunate Mameluke guests were shot down to a man, for literally only one effected his escape, and that was by the extraordinary feat of leaping his horse over the ramparts. The gallant steed was killed by the fall, but his rider managed, though, it is said, with a broken ankle, to escape to a place of safety. The whole affair leaves an indelible blot on the memory of Mehemet Ali. After this act of treachery, he proceeded to consolidate his power, and gradually became undisputed master of Egypt and its dependencies, though still with nominal recognition of the supremacy of the Sublime Porte.

So powerful a vassal might well excite the apprehensions of his superior. In 1831, on the pretext of vindicating a claim against Abdallah Pasha, governor of Acre, he despatched a strong army into Syria, under the command of his son, Ibrahim Pasha, who, in the course of a few months, effected a complete subjugation of the country. The sultan thereupon declared Mehemet Ali a rebel, and sent troops against him into Syria, but the result was only further discomfiture. The powers of Europe then interfered, and through their mediation a treaty of peace was signed, by which Syria was made over to Mehemet Ali, to be held as a fief of the Sublime Porte. After a few years, hostilities were resumed with the sultan, who sought to expel the viceroy from Syria, a project in which he had the countenance of the four European powers—Great Britain, Austria, Russia, and Prussia. Against so formidable a combination Mehemet Ali had no chance, and accordingly, after sustaining a signal defeat near Beyrout, and the blockade of Alexandria by an English squadron, he found himself compelled to come to terms and evacuate Syria in favour of Turkey, the latter power recognising formally the hereditary right to the pashalic of Egypt as vested in him and his family. This agreement was concluded in 1841, eight years before the death of Mehemet Ali, and was the last public event of importance in his life. That Syria was a gainer by the change of masters, is very doubtful. The vigorous administration of the Egyptian potentate was succeeded by the effete imbecility of the Turkish sway, which in recent years found itself unable to avert the atrocious massacres of Damascus and the Lebanon.

As an Oriental and a Mohammedan, Mehemet Ali displays himself wonderfully in advance of the views and tendencies generally characteristic of his race and sect. Instead of superciliously ignoring the superior progress and attainments of European nations, he made it his sedulous study to cope with and derive instruction from them, in all matters of commercial and social improvement. Through the liberal-minded policy carried into practice by him, Egypt, after the slumber and decay of ages, has again taken her place as a flourishing and well-ordered state, and regained in some measure the *prestige* which she enjoyed in ancient times. Trade with foreign countries has been encouraged and extended, financial and military affairs placed on an organised and improved footing, the cultivation of cotton and mulberries introduced and fostered, and various important public works, such as canals and railways, successfully executed. With the view of initiating his subjects in the arts of European civilisation, young men of intelligence were sent by him to Britain and other countries, and maintained there at his expense, for the purpose of studying the arts and sciences. A perfect toleration in religious matters was observed by him, and under his government Christians were frequently raised to the highest offices of state, and admitted to his intimate friendship.

In personal appearance Mehemet Ali was of short stature, with features so intelligent and agreeable as greatly to prepossess strangers in his favour. He enjoyed till the year before his death an iron constitution, but was so enfeebled by a severe illness which attacked him then, that the duties of government had to be resigned by him to his son Ibrahim Pasha, who survived the transfer little more than two months. In disposition Mehemet Ali is said to have been frank and open, though the treacherous massacre of the Mamelukes militates strongly against his character in this respect. His magnanimity, as well as commercial discernment, was conspicuous in his permission of the transit of the Indian mails through Egypt, whilst he himself was at war with Britain. The undoubted abilities and sagacity which he displayed, were almost entirely the results of the exertions of an unaided vigorous mind, as even the elementary acquirement of reading was only attained by him at the age of forty-five. In the earlier years of his government, Mehemet employed an old lady of his seraglio to read any writing of importance that came to him, and it was only when left without that confidential secretary by her death, that he had himself instructed in a knowledge of writing.

DEATH OF JOHN PALMER, THE ACTOR.

Once now and then the stage has witnessed the death of some of its best ornaments in a very affecting way. This was especially so in the case of Mr John Palmer, who, during the latter half of the last century, rose to high distinction as an actor, identifying himself with a greater variety of characters than any who had preceded him, except David Garrick. Palmer had a wife and eight children, and indulged in a style of living that kept him always on the verge of poverty. The death of his wife affected him deeply; and when, shortly afterwards, the death of a favourite son occurred, his system received a shock from which he never fully recovered. He was about that time, in 1798, performing at Liverpool. On the 2d of August, it fell to his duty to perform the character of the Stranger, in Kotzebue's morbid play of the same name. He went through the first and second acts with his usual success; but during the third he became very much depressed in spirits. Among the incidents in the fourth act, Baron Steinfort obtains an interview with the Stranger, discovers that he is an old and valued friend, and entreats him to relate the history of his career—especially in relation to his (the Stranger's) moody exclusion from

the world. Just as the children began to be spoken of, the man overcame the actor; poor Palmer trembled with agitation, his voice faltered; he fell down on the stage, breathed a convulsive sigh, and died. He had just before had to utter the words:

'Oh, God! oh, God!
There is another and a better world!'

The audience, supposing that the intensity of his feeling had led him to *acting* a swoon, applauded the scene, though it was a painful one; but when the real truth was announced, a mournful dismay seized upon all. The above two lines were afterwards engraved on Palmer's tombstone, in Walton churchyard, near Liverpool.

ANCIENT WRITING-MATERIALS.

Sculptured records on stone are the earliest memorials of history we possess. When portable manuscripts became desirable, the skins of animals, the leaves or membraneous tissues of plants, even fragments of stone and tile, were all pressed into the service of the scribe. Notwithstanding the abundant and universal use of paper, some of these ancient utilities still serve modern necessities. Vellum is universally used for important legal documents, and many bibliomaniacs put themselves and the printer to trouble and expense over vellum-printed copies of a favourite book. There is a peculiarly sacred tree grown in China, the leaves of which are used to portray sacred subjects and pious inscriptions upon; other eastern nations still make use of fibrous plants upon which to write, and sometimes to engrave, with a sharp finely-pointed implement, the words they desire to record. The ancient Egyptians wrote upon linen, or wood, with a brush or reed pen, but chiefly and commonly used the delicate membrane obtained by unrolling the fibrous stem of the papyrus; a water-plant once abundant, but now almost extinct in the Nile. Fragile as this material may at first thought appear, it is very enduring; European museums furnish abundant specimens of manuscripts executed in these delicate films three thousand years ago, that appear less changed than many do that were written with ordinary modern ink in the last century. It was usual with these early scribes to make use of fragments of stone and tile, upon which to write memorandums of small importance, or to cast up accounts; to use them, indeed, as we use 'scribbling-paper.' The abundance of potsherds usually thrown in the streets of eastern towns, afforded a ready material for this purpose; and the mounds of antique fragments of tiles, &c., in the island of Elephantine, on the Nile, opposite Assouan (the extreme limit of ancient Egypt), has furnished more than a hundred specimens to our British museums, consisting chiefly of accountants' memoranda.

The use of papyrus as a writing-material, descended to the Greeks and Romans. The thin concentric coats of this useful rush were carefully dried and pasted cross-ways over each other, to give firmness to the whole; the surface was then burnished smooth with a polishing-stone, and written upon with a reed cut to a point similar to the modern pen. The ink was made from lamp-black or the cuttle-fish, like the Indian ink of our own era. Indeed, it is curious to reflect on the little change that occurs in articles of simple utility in the course of ages, and how slightly the terms have altered by which we distinguish them; thus the *papyrus*-reed gives the name to *paper*, and the roll or *volumen* of manuscript is the origin of the term *volume* applied to a book. These rolls were packed away on the library shelves, and to one end was attached a label, telling of its contents. When the excavations at Pompeii were first conducted, many of these charred rolls were thought to be half-burned sticks, and disregarded; now, by very careful processes they are gradually unrolled, and have furnished us with very valuable additions to classic literature. Boxes of these rolls were carried from place to place as wanted, and representations of them, packed for the use of the student, are seen in the wall-paintings of Pompeii; they were cylindrical, with a cover (like a modern hat-box), and were slung by a strap across the shoulders.

The Romans greatly advanced the convenience of the scribe, by the more general adoption of tablets of wood, metal, and ivory. These square tablets exactly resembled the slates now used in schools; having a raised frame, and a sunk centre for writing upon; which centre was coated with wax, and upon this an iron pen or stylus inscribed the writing; which was preserved from obliteration by the raised edge or frame when the tables were shut together. Hinges, or a string, could readily unite any quantity of these tablets, and form a very near approach to a modern volume. In excavating for the foundation of the Royal Exchange, in London, some of these tablets of the Roman era were found, and are now to be seen in the library at Guildhall.

The semi-barbaric nations that flourished after the fall of Rome, could do no better than follow the fashions set by the older masters of the world. A curious drawing in a fine manuscript, once the property of Charlemagne, and now preserved in the public library of the ancient city of Treves, on the Moselle, furnishes the annexed representation of a *tabula* held by a handle in the left hand of a scribe, exactly resembling the old horn-book of our village schools; the surface is covered with wax, partly inscribed by the metal style held in the right hand. These *styli* sometimes were surmounted by a knob, but frequently were beaten out into a broad, flat eraser, to press down the waxen surface for a new inscription. The style in our cut combines both.

Useful as these tablets might be, their clumsiness was sufficiently apparent; books composed of vellum leaves superseded them soon after the Carlovingian era. The finest medieval manuscripts we possess, we owe to the unwearied assiduity of the clergy, whose 'learned leisure' was insured by monastic seclusion. Books that demanded a life-long labour to complete, were patiently worked upon, and often decorated with initial letters and ornament of the most gorgeous and elaborate kind. Enriched often by drawings, which give us living

pictures of past manners, they are the most valuable relics of our ancestry, justly prized as the gems of our national libraries.

Attached to all large monasteries was a *scriptorium*, or apartment expressly devoted to the use of such persons as worked upon these coveted volumes. The scribes of the middle ages frequently carried their writing-materials appended to their girdles, consisting of an ink-pot, and a case for pens; the latter, usually formed of *cuirboulli* (leather softened by hot water, then impressed with ornament, and hardened by baking), which was strong as horn, of which latter material the ink-pot was generally formed. Hence the old term, 'ink-horn phrases,' for learned affectations in discourse. The incised brass to the memory of a notary of the time of Edward IV., in the church of St Mary Key, at Ipswich, furnishes us with the excellent representation here given of a penner and ink-horn, slung across the man's girdle; they are held together by cords, which slip freely through loops at the side of each implement, the knob and tassel at each end preventing them from falling.

When book-learning was rare, and the greatest and wisest sovereigns, such as Charlemagne and our William I., could do no more than make a mark as an autograph that now would shame a common peasant, the possession of knowledge gave an important position to a man, and granted him many immunities; hence was derived 'the benefit of clergy' as a plea against the punishment of crime; and the scraps of Latin a criminal was sometimes taught to repeat, was termed his 'neck-verse,' as it saved him from hanging. The printing-press put all these notions aside, and a very general spread of knowledge broke down the exclusiveness of monastic life altogether. Books multiplied abundantly, and produced active thinking. The laborious process of producing them by hand-writing had gone for ever, and we take leave of this subject with a representation of the working-table of a scribe, contemporary with the invention of printing. The pages upon which he is at work lie upon the sloping desk; on the flat table above he has stuck his penknife; the pens lie on the standish in front of him. Bottles for ink of both colours are seen, and an hour-glass to give him due note of time. A pair of scissors, and a case for a glass to assist his eyes, are on the right side. This interesting group is copied from a picture in the gallery of the Museo Borbonico, at Naples.

WRITING-MATERIALS.

AUGUST 3.

St Nicodemus. St Gamaliel. The Invention of St Stephen, or the Discovery of his Relics, 415. St Walthen or Waltheof, confessor, and abbot of Melrose, 1160.

Born.—John Henley (Orator Henley), preacher satirised by Pope, 1692, *Melton Mowbray;* Charles, Earl Stanhope, reforming statesman, and ingenious in mechanics, 1753; Frederick William III. of Prussia, 1770.

Died.—James II. of Scotland, killed before Roxburgh, 1460; Stephen Dolet, eminent scholar and typographer, burned at Lyon, 1546; Jeremy Taylor, bishop of Down and Connor, celebrated author of *Holy Living* and other works, 1667, *Lisburn, Ireland;* John Matthias Gesner, distinguished classical scholar and editor, 1761, *Göttingen;* Archbishop Thomas Secker, learned prelate, *Lambeth Palace;* Sir Richard Arkwright, celebrated inventor or applier of the roller machine for spinning cotton, 1792, *Crumford, Derbyshire;* Christopher Anstey, author of *The New Bath Guide*, 1805, *Chippenham;* Michael Adanson, French naturalist, 1806, *Paris;* Eugene Sue, eminent French novelist, 1857, *Annecy, Savoy;* Father Ventura, Catholic controversial writer, 1861, *Versailles.*

CHARLES, EARL STANHOPE.

This nobleman merits a passing notice here as the inventor of the printing-press which bears his name. It is rather a remarkable circumstance in connection with the typographical art, that from the period of its first introduction up to the latter half of the eighteenth century, no alteration took place in the form or mode of working the press. The same clumsy wooden machine which it was in the hands of Faust and Gutenberg it continued to be in those of Baskerville and Bensley. The improvements devised by Lord Stanhope have been followed by the wonderful achievements of the printing-machine, but the value of his ingenious invention is still recognised.

Besides the printing-press, the earl's engineering turn led him to the construction of various other mechanical implements, all displaying a considerable amount of practical genius. They include, among others, a machine for performing arithmetical operations, and a contrivance for the management of locks on canals. He also entered the literary arena, and published a reply to Burke's *Reflections on the French Revolution*, with other political treatises. As a statesman, Lord Stanhope is noted for the violence and extremeness of his democratic views, leading him, on one occasion, in a fit of republican enthusiasm, to lay aside his carriage, and cause the armorial-bearings to be erased from his plate and furniture. His eccentric character seems to have been inherited in another

form by his eldest daughter, the celebrated Lady Hester Stanhope, whose mother, the earl's first wife, was the eldest daughter of Pitt, the great Earl of Chatham.

STEPHEN DOLET.

The lives of the early printers are full of sorrows and vicissitudes; always men of high literary attainments, they had to wage the battle of learning against ignorance, of liberty against tradition, of the rights of law against the brutality of actual life, of the renaissance against routine. The stories of Fust, Shröeder, Etienne, and Aldus give confirmation to this statement, and that of Dolet is still more striking, as his was one of those ardent impetuous natures that are incapable of calculation and circumspection, and his life was full of trouble and sorrow, ending in the dreadful punishment of the stake.

Etienne Dolet, or according to the fashion of those days, Stephanus Doletus Aurelius, was born in the city of Orleans, on that day of the year on which he afterwards suffered death. He was said to be an illegitimate child of Francis I. He early shewed the germs of the great talent which was afterwards developed. At twelve years of age, he arrived in Paris for the sake of study, and there followed assiduously the lectures on Latin eloquence given by his compatriot Nicolas Bérauld, and especially devoted himself to the works of Cicero. From Paris he proceeded to Padua, where for three years he laboured night and day under the direction of Simon de Villeneuve, to gain a pure Latin style and the art of rhetoric. He was then inclined to return to France; but Du Bellay-Langey, one of the most learned, eloquent, and wise diplomatists of the day, offered him the post of secretary in his political mission to Venice; the opportunity was too good to refuse, his classical studies would not suffer, and as for society, the famous Rabelais was one of his companions, as surgeon to the ambassador. In 1530, he returned to France, and though devotedly attached to literary pursuits, he did not find that they would give him a position, so he determined to study law at Toulouse. This celebrated city had besides its university many societies which had been in existence for centuries, in which various nations—French, Spaniards, and Aquitanians—discussed any subject brought before them, and on which the government cast no favourable eye. The parliament of Toulouse seized upon the pretext of some disorders committed by the students to dissolve the associations, and Dolet, who had been elected orator of the French section, was cast into prison; the first of a long series of incarcerations which made one of his enemies remark, 'that the prison was his country.' Nor need it excite our wonder when he spoke thus of the city. 'This place,' said he, 'which arrogates to itself the monopoly of the true faith, and bears aloft the torch of Catholicism, is still in the lowest rudiments of the Christian faith, and altogether given up to the ridiculous superstitions of the Turks. How otherwise can we speak of the yearly ceremony of the feast of St George, which consists in galloping nine times round the church tower? or of the cross which on certain days is plunged into the Garonne, with vows and prayers addressed to it to be preserved from inundations? What are we to say in summer of the statues of the saints, bits of dried wood which children carry through the street to bring down rain after a long drought? Yet this city, so shamefully ignorant of true religion, dares to impose on all its own way of thinking, and treats as heretics those free spirits who will not submit.' After a few days, he was released, to the great discontent of some narrow minds, who published atrocious libels against him, and even hired assassins to kill him, at the same time parading a pig, mounted on a car, through the streets, bearing a label, on which was written in large letters the name—Dolet. Amidst such animosity the place was no longer tenable, and he took refuge in Lyon, where he published his two harangues against Toulouse; but they issued from a private press, and were prefaced 'without the permission of the author.' This was all he wanted, a little vengeance, and then he returned to Paris, and his early love, Cicero, which he regretted having abandoned for such wretched rivals as the Pandects. At the age of twenty-five, he solicited permission to print the first volume of his *Commentaries on the Latin Language*, a work of immense erudition, but it was with the greatest difficulty that he obtained leave: many were of opinion that printing was an invention of the devil, and they feared the rapid extension of knowledge. His friend, Sebastian Gryphius, brought it out, with all the splendour that suited a book of those times, and with the strict correction that marked so conscientious a printer; but from this time Dolet would have his own presses, and the second volume, which appeared soon after, was of his own printing.

He had at this time taken a wife, and in 1539 his little son Claude was born, yet nothing could make him prudent; he was heaping up fagots for his funeral-pyre. He dared to attack the voluptuous character of the monks, and then published *The Holy Scripture in the Vulgar Tongue*. Such a man became too dangerous; he was accused of eating meat in Lent, and given up to the Inquisition. On the 2d of October 1542, the vicar-general pronounced the sentence of 'heretic, schismatic, scandalous defender of errors and heresies' upon him, and for fifteen months he lay in the dungeons of the holy church, from which the bishop of Tulle released him, taking care to revenge himself on thirteen of his books, which were burned. Once more free, but not for long; in nine months, two packets addressed to him were seized at the gates of Paris, containing prohibited books from the press of Geneva; he was arrested, but after three days contrived to escape into Piedmont; yet the longing to see his wife, his dear books and manuscripts, and to print some articles he had written in his exile, brought him back to Lyon, where he was immediately arrested and condemned, for a false translation of a line from Plato, to be tortured, put to the question, hung and burned, with his books, in the Place Maubert. In his prison he composed a noble canticle, in which he declares his firm adherence to the doctrines he had believed for years; but his enemies say that he recanted on the scaffold, and begged those present to read his books with much circumspection. Of the likelihood of this final concession, the reader may judge for himself.

RICHARD ARKWRIGHT.

It is not uncommon to hear Arkwright's merits as an inventor questioned. It is said that at the est he merely completed other men's conceptions and reduced them to practice. To trace such assertions to their roots in fact or fancy is no easy matter. Unquestionably Arkwright held converse with many mechanicians, and what he owed to them, and what to himself, it would be impossible for us to determine. Probably Arkwright himself would have been unable to disentangle precisely the hints of others from his own ideas. That he was a man of amazing ingenuity, energy, and originality there can be no doubt; these qualities were written out large in his prosperous career; and the claims he made as an inventor are certainly consistent with the known power and range of his faculties. Nor, even accepting the lowest estimate of Arkwright's genius, need we esteem it a slight

RICHARD ARKWRIGHT.

service to mankind, that he perfected the contrivances of amateurs, and shaped them to use, transforming mechanical dreams into operative realities. Those alone who have introduced some new engine or process to the world, can duly appreciate Arkwright's merit on that score.

Richard Arkwright was born in Preston on the 23d of December 1732, the youngest of thirteen children. His parents were poor, and little Dick was bred up a barber. When a young man, he opened shop in Bolton, where, as Carlyle observes, 'in stropping of razors, in shaving of dirty beards, and the contradictions and confusions attendant thereon, the man had notions in that rough head of his! Spindles, shuttles, wheels, and contrivances plying ideally within the same.' In 1760, he gave up the shop and commenced travelling about the country, buying fine heads of hair from women willing to sell, which, when clipped, he prepared for the wig-makers. By this traffic, and a recipe for hair-dye, he managed to accumulate a little money.

There was much talk in Lancashire, in those days, about improvements in spinning and weaving. Employment was abundant, and wages were high. Traders in linen and cotton cloths were anxious to have them produced more rapidly and cheaply, whilst, on the other hand, the makers were jealous of improvements, lest their craft should be endangered, and their gains diminished. The trader's desire for cheapness, and the worker's interest in dearness, were the stimulus and the terror of inventors. Hargreaves, the Blackburn carpenter, who contrived the spinning-jenny, by means of which twenty or thirty threads could be produced with the labour formerly requisite for one, was persecuted and ruined by the populace for his pains.

The yarn spun by the jenny of poor Hargreaves could only be used for *weft*, being destitute of the firmness required in the long threads, or *warp*. It was at this point Arkwright came in. One day, while watching some workmen elongating a red-hot bar of iron between rollers, the idea suddenly suggested itself, that cotton might be treated in a similar manner. As he was no mechanic, he applied to Kay, a Warrington clockmaker, to help him, and with the aid of Kay's fingers he constructed a machine, in which, by means of a double set of rollers, one moving three times as fast as the other, cotton was spun into a firm fine thread, as fit for *warp* as though it had been linen. Whilst prosecuting his experiments, he gave out that he was in pursuit of perpetual motion; a ruse, Dr Ure imagines, to avert popular animosity from his true design. His first machine was completed at Preston in 1768; and so close had he cut into his funds, that he was unable to vote as a burgess of Preston at a contested election, until the party who sought his support had given him a decent suit of clothes. To be safe from Lancashire rioters, Arkwright removed to Nottingham, where he had the happy fortune to find a partner in Jedediah Strutt, the patentee and improver of the ribbed-stocking frame. Strutt was able to indicate several useful alterations in Arkwright's spinning-frame, for which a patent was secured in 1769. In the same year, they opened a mill at Nottingham, which they worked by horses. Horse-power, however, was found too costly, and Arkwright thereon advised that they should move to Cromford, in Derbyshire, and use the river to turn their mill. The suggestion was acted on; a factory was there built and opened in 1771, and through many discouragements it grew into a great success. Cromford has been justly styled 'the nursing-place of the factory power and opulence of Great Britain.'

Manufacturers, at the outset, refused to buy the water-twist, as the Cromford yarn was called. To meet this difficulty, the partners wove it into cloth; but here a new attempt was made to checkmate them. There was a duty of 6*d.* a yard levied on calicoes imported from India, and the Excise was set on to claim 6*d.* on every yard of the Cromford cloth; for it was alleged to be the same kind of fabric as the Hindu, and therefore liable to pay the same duty. Parliament, however, had the grace to pass an act, in which it was obligingly conceded, that the making of calicoes was 'not only a lawful but a laudable manufacture,' and fixed the duty at '3*d.* per square yard on cotton printed, painted, or stained with colours;' thus placing the Cromford company on a level with other manufacturers. Arkwright's patent was repeatedly infringed, and

great sums were expended for its defence in Chancery, with varying results. Yet, spite of all, large profits were realised, and Arkwright became the dictator of the cotton-market. Factories on the Cromford model were set up in other places. Mobs occasionally tore them down, sometimes with the connivance of the authorities; but where money is to be made, the enterprise of Englishmen is not to be defeated.

Arkwright died in his sixtieth year in 1792, leaving behind him a fortune of about half a million sterling. He was succeeded by his son Richard, who inherited a full share of his father's tact. He died in 1843, at the age of eighty-eight, with the reputation of the richest commoner in England. On the proving of his will, his property was sworn to exceed one million, that being merely a nominal sum, because the scale of stamp-duties goes no higher. The probate bore a stamp of £15,750.

Asthma plagued Arkwright nearly all his life, but nothing seemed to arrest his energy and devotion to work. He was a very early riser, a severe economist of time, and one who seemed to consider nothing impossible. His administrative skill was extraordinary, and would have done credit to a statesman; his plans of factory management were entirely his own; and the experience of a century has done little to improve them. He had passed his fiftieth birthday when, to retrieve the deficiency of his early education, he devoted an hour in the morning to grammar, and an hour in the evening to writing and spelling. King George knighted him in 1786, when, as high-sheriff of Derbyshire, he presented an address to his majesty, congratulating him on his escape from the knife of Margaret Nicolson.

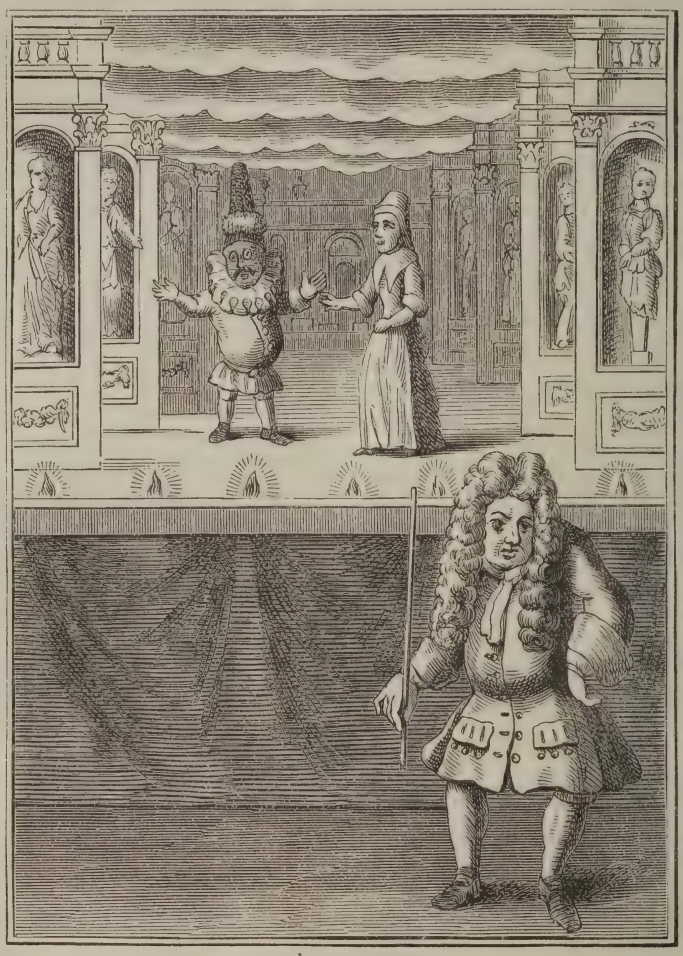
POWEL'S PUPPET-SHOW.

Jointed dolls have amused the world for ages. Originally intended to gratify children, they ended in being a diversion for adults; and puppet-shows attracted a due amount of attention in the middle ages, arriving at such a perfection in the sixteenth century, that their performances rivalled in attraction that of living actors. Readers of Cervantes's immortal work will remember the zest with which the puppet-show is described, and the reality with which Don Quixote invests the performance; and the student of our early dramatic literature will be equally familiar with the amusing close of Ben Jonson's play, *Bartholomew Fair*, which takes place at the performance of a drama on the adventures of Hero and Leander, acted by puppets in one of the booths there.

The great French novelist, Le Sage, produced dramas for the Theatre de la Foire; and on this being silenced in 1721, he and his fellow-labourer, Francisque, procured puppets instead of living actors, and devoted their talents to the production of puppet-plays. These became exceedingly popular in England in the early part of the last century, but none more so than those under the conduct of Robert Powel, whose performances were not restricted to London, but were given in 'the season' at Bath, &c., and at Oxford on great public occasions. He has a certain immortality from the fact of being mentioned in the pages of the *Tatler* and the *Spectator*.

The first notice of Powel's performances occurs in No. 16 of the *Tatler* (published May 15, 1709), describing the rivalry between his show and 'the play of *Alexander the Great* to be acted by the company of strollers.' To insure due attention to the wooden actors, we are told 'the puppet-drummer, Adam and Eve, and several others who lived before the flood, passed through the streets on horseback, to invite us all to the pastime, and the representation of such things as we all knew to be true; and Mr Mayor was so wise as to prefer these innocent people, the puppets, who, he said, were to represent Christians, before the wicked players, who were to shew Alexander, a heathen philosopher.' At ten in the morning, all the fashionables of Bath honoured the show, which seems to have been constructed on the principles of the old religious Mysteries and Moralities, with all their absurdities mixed with modern incongruities. Thus, 'when we came to Noah's Flood in the show, Punch and his wife were introduced dancing in the ark. An honest plain friend of Florimel's, but a critic withal, rose up in the midst of the representation, and made very many good exceptions to the drama itself, and told us it was against all morality, as well as the rules of the stage, that Punch should be in jest in the deluge, or indeed that he should appear at all. This was certainly a just remark, and I thought to second him, but he was hissed by Prudentia's party; upon which, really, we, who were his friends, hissed him too. Old Mrs Petulant desired both her daughters to mind the moral: then whispered Mrs Mayoress: "This is very proper for young people to see." Punch, at the end of the play, made Madam Prudentia a compliment, and was very civil to the whole company, making bows till his buttons touched the ground.'

The delight with which the appearance of Punch was greeted at all times, proper or improper, has been humorously noted in Swift's *Dialogue between Mad Mullinix and Timothy:*



> 'Observe, the audience is in pain,
> While Punch is hid behind the scene;
> But when they hear his rusty voice,
> With what impatience they rejoice!
> And then they value not two straws,
> How Solomon decides the cause;
> Which the true mother—which, pretender.'

This obtrusive minister of fun appears to have been brought forward whenever the interest of the scene flagged. He entered and seated himself in the queen of Sheba's lap, when 'Solomon in all his glory' was exhibited to gaping spectators. He fights the Duke of Lorraine, 'sells the king of Spain' a bargain—

> 'St George himself he plays the wag on,
> And mounts astride upon the dragon.'

The engraving on next page, copied from the frontispiece to *A Second Tale of a Tub, or the History of Robert Powel the Puppet-Showman*, 1715, represents Punch and his wife on the stage. It will be noted that Punch partakes more fully of his Italian character than in more modern impersonations; and his wife (then called Joan) is but a simple elderly woman, without the grotesque characteristics of the Judy of the present day. The stage is furnished with a set-scene, wings, and sky-borders; the performance takes place by lamplight; and Powel, wand in

hand, takes his place, like the Chorus of a Greek play, to illustrate the performance. He appears to have been humpbacked, and otherwise slightly deformed. It must be stated that this book is, in reality, a severe satire on the ministry of Robert Harley, Earl of Oxford, under the name of Powel; and was written by Thomas Burnet, son of the famous bishop. In his dedication, he alludes to the great popularity of Powel's show; and asks 'what man, woman, or child that lives within the verge of Covent Garden, or what beau or belle, visitant at Bath, knows not Mr Powel? Have England, Scotland, France, and Ireland; have not even the Orcades—the utmost limits of Cæsar's conquests—been filled with the fame of Mr Powel's mechanical achievements? The Dutch, the most expert nation in the world for puppet-shows, must now confess themselves to be shamefully outdone. It would be trifling after this to recount to you how Mr Powel has melted a whole audience into pity and tears, when he has made the poor starved children in the wood miserably depart in peace, and a robin bury them. It would be tedious to enumerate how often he has made Punch the diversion of all the spectators, by putting into his mouth many bulls and flat contradictions, to the dear joy of all true Teagues. Or to what end should I attempt to describe how heroically he makes King Bladud perform the part of a British prince?' So great a favourite was he in Bath, that 'he was mightily frequented by all sorts of quality, and Punch, with his gang, soon broke the strollers, and enjoyed the city of Bath to themselves. Money coming in apace, Mr Powel bought him several new scenes, for the diversion of his audience, and the better acting of several incomparable dramas of his own composing; such as, *Whittington and his Cat, The Children in the Wood, Dr Faustus, Friar Bacon and Friar Bungay, Robin Hood and Little John Mother Shipton, Mother Goose*, together with the pleasant and comical humours of Valentini, Nicolini, and the tuneful warbling-pig of Italian race.'

POWEL'S PUPPET-SHOW.

Powel set up his puppet-show in London, under the Piazza at Covent Garden. It was humorously announced by Steele, that Powel would gratify the town with the performance of his drama on the story of *Chaste Susannah*, which would be graced by 'the addition of two new elders.' In the *Spectator* (No. 14), a letter was introduced, purporting to come from the sexton of the parish of St Paul's, Covent Garden, complaining that when he tolls to prayers, 'I find my congregation take the warning of my bell, morning and evening, to go to a puppet-show, set forth by one Powel under the Piazzas. By this means I have not only lost my two best customers, whom I used to place, for sixpence apiece, over-against Mrs Rachel Eyebright, but Mrs Rachel herself has gone thither also. There now appear among us none but a few ordinary people, who come to church only to say their prayers, so that I have no work worth speaking of but on Sundays. I have placed my son at the Piazzas, to acquaint the ladies that the bell rings for church, and that it stands on the other side of the garden; but they only laugh at the child!'

The literary celebrity that has thus invested Powel's show, has not been shared by his rivals. The *Tatler*, however, announces, in the account of the downfall of May-fair, that 'Mrs Saraband, so famous for her ingenious puppet-show, has set up a shop in the Exchange, where she sells her little troop

under the name of jointed babies.' Penkethman, the comedian, was also proprietor of a puppet-show, and regularly attended the great fairs; where 'Crawley's Booth' was also fixed, and exhibited 'the Creation of the World, yet newly revived, with the addition of Noah's Flood,' where, according to his own advertisement, might be seen 'six angels ringing of bells, with Dives rising out of hell, and Lazarus seen in Abraham's bosom, besides several figures dancing jigs, sarabands, and country-dances (with Punch among them), to the admiration of the spectators!'

When the Scottish lords and others were executed for their share in the Rebellion of 1745, 'the beheading of puppets' made one of the exhibitions at May-fair, and was continued for some years. The last 'great' proprietor of puppets was Flockton, whose puppet-show was in high repute about 1790, and enabled him in time to retire on a handsome competence.

AUGUST 4.

St Luanus or Lugid, sometimes called Molua, abbot in Ireland, 622. St Dominic, confessor, and founder of the Friar Preachers, 1221.

ST DOMINIC.

The Romish church has been for nothing more remarkable than the many revivals of energy within her pale under the impulse of particular enthusiasts. One of these took place at the beginning of the thirteenth century, through the zeal of a Spanish gentleman, named Dominic de Guzman, born at Calaruega, in Old Castile, in the year 1170. Had Dominic chosen an ordinary course of life, he would have been a man of station and dignity in the eye of the world. But, being from his infant years of a religious frame of mind, he was content to resign all worldly honour, that he might devote himself wholly to the service of God. Protestants hardly do justice to such men. Think of their objects as we will, we must own that, in confining themselves to a diet of pulse and a bed of boards, in giving away everything they had to the poor, in chastising themselves out of every earthly indulgence, and giving nearly their whole time to religious exercises, they established such a claim to popular admiration, that the influence they acquired was not to be wondered at. As an example of the self-devotion of Dominic, he offered to go as a slave into Marocco, that so he might purchase the liberation of another person. The purpose of all his devotions was to secure the eternal welfare of others. It was the Waldensian 'heresy' that first put him into great activity. His success in restoring many of the Vaudois to the church seems to have suggested to him that he, and others associated with him, might greatly advance the interests of religion by a practice of going about preaching and praying continually, while at the same time visibly abstaining in their own persons from every sort of indulgence. In the course of a few years, he had thus established a new order of religious called the *Black* or *Preaching Friars*, or shortly, from his own name, the *Dominicans* (the term black referred to the hue of the cloak and hood which they wore). This order was sanctioned by Pope Innocent III. in 1215, and very soon it had its establishments in most European countries. There were in England, at the Reformation, forty-three monasteries of Blackfriars, and in Scotland fifteen. Dominic was unremitting in his exertions to extend, sustain, and animate his institution. He performed many journeys, always on foot, and on bare feet. He braved every sort of danger. He never shewed the slightest symptom of pride in his success: all with him was for the glory of God and the saving of men. The contemporary memoirs which describe his life are full of miracles attributed to him. He on several occasions restored to life persons believed to be dead. Often, in holy raptures at the altar, he appeared to the bystanders elevated into the air. It was his ardent desire to shed his blood for the cause he had espoused; but in this he was not gratified. The founder of the Dominicans calmly expired of a fever at Bologna, at the age of fifty-one. He was canonized by Gregory IX. in 1234.

Born.—Joseph Justus Scaliger, eminent critic, 1540, *Agen, France;* John Augustus Ernesti, classical editor, 1707, *Tennstadt, in Thuringia;* Percy Bysshe Shelley, poet, 1792, *Field Place, near Horsham, Sussex.*

Died.—Pope Martin III., 946; Henry I. of France, 1060, *Vitry en Brie;* Simon de Montfort, Earl of Leicester, killed at battle of Evesham, 1265; Wenceslaus III., king of Bohemia, stabbed at Olmutz, 1306; Jacques d'Armagnac, Duc de Nemours, beheaded by Louis XI., 1477; William Cecil, Lord Burleigh, 1598; George Abbot, archbishop of Canterbury, 1633, *Croydon;* William Cave, eminent scholar and divine (Lives of the Apostles), 1713, *Windsor;* William Fleetwood, bishop of Ely, 1723, *Tottenham;* John Bacon, sculptor, 1799; Viscount Adam Duncan, admiral and hero of Camperdown, 1804; John Banim, Irish novelist, 1842, *near Kilkenny.*

SIMON DE MONTFORT

Simon de Montfort, Earl of Leicester—the *Cromwell of the thirteenth century*—was a French noble possessed of English property and rank through his mother. We know little of the early years he spent in France; but, after establishing himself at the English court, he soon comes into notice. By the favour of the young king, Henry III., he was united to the monarch's widowed sister Eleanor, notwithstanding a difficulty arising from a vow of the lady's never to wed a second husband. This marriage involved De Montfort in many troubles, and lost him, for a time, the friendship of the king. After a temporary absence from England, he returned to raise the means of going on a pilgrimage to the Holy Land. Duly provided, he journeyed to Syria, where he greatly distinguished himself by his military talents and achievements, and became extremely popular with the Christians. He returned to England in 1241, and appeared to have recovered all the favour at court which he had formerly enjoyed. In 1242, he distinguished himself in the war against the French. But he had now become well known as a political reformer, and as a champion of popular liberties; and it is not improbable that his known principles had been partly the means of raising him enemies at court. His name stood second among the signatures to the bold remonstrance against papal extortion and

oppression in 1246, and in 1248 the king was driven by his remonstrances into a temporary fit of economy. Earl Simon had formed a design to return to the Holy Land, but King Henry, embarrassed at this time by the turbulence of his subjects in Gascony, persuaded him to remain and undertake the government of that country, where he soon reduced the rebels to submission. In consequence of King Henry's imprudence, the rebellion broke out with more fury than ever, and it not only required all the earl's military talents to suppress it a second time, but he was obliged to raise money on his own estates to carry on the war, in consequence of the miserable condition of the royal treasury. The rebel leaders now sought to injure in another way the governor with whom they could no longer contend openly, and they sent a deputation to England, to accuse him to the king of tyranny and extortion in his administration—charges which seem, if true at all, to have been excessively exaggerated. Yet the king listened to them eagerly, and when Earl Simon arrived at court to plead his own cause, a violent scene took place, which shewed that the king could lose his dignity as easily as the earl his temper, and they were only reconciled by the interference of Prince Richard and the Earls of Gloucester and Hereford. From this moment the king no longer disguised his hatred to Simon de Montfort. Nevertheless, the latter consented to resume the command in Gascony, where he found affairs in greater confusion than ever. He was proceeding to execute his difficult task with his usual ability, when the king sent directions to his subjects in Gascony not to obey him, and appointed his young son, Edward, to govern in his stead. When the earl became aware of this treacherous conduct, he left Gascony and repaired to Paris, where he was held in such esteem that the regency of France, in the absence of its king, was offered him. But he remained steady in his duties to his adopted country, declined this great honour, and soon afterwards, when Gascony was nearly lost by the misconduct of King Henry's officers, he voluntarily offered his services in restoring it, which were gladly accepted. When the province was by his means reduced to obedience and order, the earl, now reconciled with the king, returned to England, where King Henry's misgovernment had brought the kingdom to the eve of a civil war.

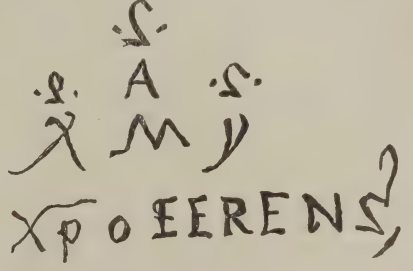
Such were the antecedents of the great baron who was now to assume a still more exalted character. The events of the Barons' War are given in every history of England, and can only be told very briefly here. At the parliament of Oxford in 1258, the barons of the popular party overpowered the court, and compelled the king to consent to statutes which took the government out of his hands and placed it in those of twenty-four persons, twelve of whom were to be chosen by each of the two parties. The first name on the baronial list was that of Simon de Montfort, whom the barons now looked upon as their leader. The insolent and oppressive foreigners, who, under Henry's favour, had eaten up the land, were now driven out of England, and the government was carried on with a degree of justice and vigour which was quite new.

The king, meanwhile, was behaving basely and treacherously, and he had taken steps to induce the pope not only to absolve him from all oaths he had taken, or might take, but to interfere in his favour in a more direct manner. The pope's brief arrived in 1261, when the king, whose friends had gained over some of the less patriotic of the barons, ventured to throw off the mask, and proclaimed all to be null and void which had been done since the parliament of Oxford. The result of all this, after two or three years of turbulence and confusion, was the great battle of Lewes, Wednesday, May 14, 1264, in which the barons, under the command of Simon de Montfort, obtained so sanguinary and decisive a victory, that the king, his son Edward (afterwards Edward I.), and the king's brother, Richard, King of the Romans, remained among the prisoners, and the royal cause was for the time utterly ruined. The principles now proclaimed by Earl Simon and the barons, involved principles of political freedom of the most exalted character; which we can only understand by supposing that they were founded partly on older Anglo-Saxon sentiments, and that they were moulded under the influence of men of learning who had studied not in vain the writers of the classic ages. A rather long Latin poem, written by one on the baronial side soon after the battle of Lewes, and intended, no doubt, to be recited among the clergy of that party, who were very numerous, in order to keep constantly before their minds the principles which the barons fought for, gives a complete exposition of the political doctrines of what we may call the constitutional party of the middle of the thirteenth century, and they are doctrines of which we need not be ashamed at the present day. This curious poem, which is printed in Mr Wright's *Political Songs* (published by the Camden Society), lays it down very clearly, that the king derives his power from the people; that he holds it for the public good; and that he is under control, and responsible for his actions. Even feudalism is totally ignored in it, and it was the *plebs plurima*, the mass of the people, for whom Earl Simon and his barons fought, it was *salutem communitatis*, the weal of the community, he sought, and the king's defeat was a just judgment upon him, because he was 'a transgressor of the laws.' 'For,' we are here told, 'every king is ruled by the laws.' The nobles are spoken of as placed between the people and the king as guardians of their liberties, to watch over the exercise of the royal power and prevent its abuse. 'If the king should adopt measures destructive to the kingdom, or should nourish the desire of setting his own power above the laws—if thus or otherwise the kingdom should be in danger—then the magnates of the kingdom are bound to look to it, 'that the land be purged of all errors.' The constraint to which a king is rightly subjected, is only a just power held over him to prevent his doing wrong, or choosing bad ministers—it is not making him a slave. 'He who should be in truth a king,' the poem says, 'he is truly free if he rule rightly himself and the people; let him know that all things are permitted him which are in governing convenient to the kingdom, but not such as are injurious to it. It is one thing to rule according to a king's duty, and another to destroy by resisting the law.' 'If,' it goes on to say, 'a king is less wise than he ought to be, what advantage will the kingdom gain by his reign? If he alone has the right to choose, he will be easily

deceived, since he is not capable of knowing who will be useful. Therefore, let the community of the kingdom advise; and let it be known what the generality thinks, to whom their own laws are best known. . . . . it concerns the community to see what sort of men ought justly to be chosen for the utility of the kingdom. . . . . It is a thing which concerns the whole community, to see that miserable wretches be not made the leaders of the royal dignity, but that they be good and chosen men, and the most approved that can be found.'

In accordance with these sentiments, a summons was issued, dated from Worcester, on the 14th of December 1264, calling a parliament to meet on the 20th of January following, addressed to the barons, both lay and ecclesiastic, and two representatives from each county. Ten days later, on the 24th of December, new writs were issued, calling upon each city and town in the kingdom 'to choose and send two discreet, loyal, and honest men,' to represent them in the same parliament. This second summons was dated from Woodstock, and is the first instance in which the commons, properly speaking, were ever called to sit in an English parliament. If there were nothing else for which we have reason to be grateful to Simon de Montfort, Earl of Leicester, we certainly have reason to be thankful to him for laying the foundation of the English House of Commons.

This great revolution was too advanced for an age in which feudalism, though in a weakened form, was established in our island, and physical force was distributed into too few hands to remain united. Success only made place for personal jealousies, and selfish motives led many of the barons to desert the popular cause, while others were quarrelling among themselves. A succession of intrigues followed, and new leagues were formed among the barons, until, on the 4th of August 1265, the decisive battle of Evesham was fought, in which Simon de Montfort was slain, and the barons sustained a ruinous defeat. The joy of the royalists was shewn in the indignities which they heaped upon the body of the great statesman, but his work remained, and none of the substantial advantages of the baronial war of the middle of the thirteenth century have ever been lost. The short period of the battles of Lewes and Evesham stands as a marked division between two periods of English constitutional history.



CHRISTOPHER COLUMBUS.

At the hour of eight, on the morning of Friday, 3d of August 1492, Columbus, with his little squadron of three ships, sailed from the port of Palos, in Spain, with the object of reaching India by a westerly course. The result of this voyage was, as is well known, the discovery of the continent now termed America; and thus the remarkable prediction of the old pagan philosopher and poet, Seneca, was almost literally fulfilled:

> 'Venient annis secula seris,
> Quibus Oceanus vincula rerum
> Laxet, et ingens pateat tellus,
> Tethysque novos detegat orbes;
> Nec sit terris ultima Thule.'

The life and voyages of Columbus, being matters of history, are without the pale of our limited sphere. It is not generally known, however, that a very obscure point in the history of his first voyage, has lately been most satisfactorily cleared up, Captain Becher, of the Royal Navy, aided by the practical skill of a thorough seaman, and the scientific acquirements of an accomplished hydrographer, having clearly proved that Watling's Island, one of the Bahamas, was the first land, in the New World, seen by Columbus, and not the Island of Guanahani, as had previously been generally supposed.

The precise meaning of the curious form of signature, adopted by the great navigator, is still a subject for doubtful speculation; that he himself considered it to be of weighty importance, is evident from the following injunction in his will: 'Don Diego, my son, or any other, who may inherit this estate, on coming into possession of the inheritance, shall sign with the signature which I now make use of; which is an S, with an X under it, and an M, with a Roman A over it, and over that an S, and a great Y, with an S over it, with its lines and points as is my custom, as may be seen by my signature, of which there are many, and it will be seen by the present one. He shall only write The Admiral, whatever titles the king may have conferred upon him. This is to be understood, as respects his signature; but not the enumeration of his titles, which he can make at full length if agreeable; only the signature is to be The Admiral'—*El Almirante.* The signature thus specified, is the following:

The Xpo, signifying Christo, is in Greek letters; and, indeed, it is not unusual at the present day, in Spain, to find a mixture of Greek and Roman letters and languages in signatures and inscriptions. This signature of Columbus exemplifies the peculiar character of the man, who, considering himself selected and set apart from all others, by the will of Providence, for the accomplishment of a great purpose—great in a temporal, greater still in a spiritual point of view—adopted a correspondent formality and solemnity in all his actions. Named after St Christopher, whose legendary history is comprised in his name *Christophorus*—the bearer of Christ—being said to have carried the infant Saviour on his shoulders over an arm of the sea—Columbus felt that he, too, was destined to carry over the sea the glad tidings of the gospel, to nations dwelling in the darkness of paganism.

Spotorno, commencing with the lower letters of the mysterious signature, and connecting them with those above, conjectures them to represent the words Xristus Sancta Maria Josephus. Captain Becher, however, has given a much simpler, and, in all probability, the correct solution of the enigma. It was from Queen Isabella that Columbus,

after many disappointments, first received the welcome intelligence, that he should be sent on his voyage, and that his son would be received into the royal service during his absence. Moved to tears of joy and gratitude at the prospect of realising the grand object of his life, and the advancement and protection offered to his son, the great man, as soon as his feelings allowed utterance, exclaimed: 'I shall ever be the servant of your majesty!' We may readily believe that Columbus would retain this sentiment of devoted service, and bequeath it as a sacred heir-loom to his successors; and assuming that the concealed words are Spanish, and the letters are to be read in their regular order, they, in all probability, signify:

SERVIDOR
SUS ALTEZAS SACRAS
JESUS MARIA ISABEL.

Or in English and in full:

THE SERVANT
OF THEIR SACRED HIGHNESSES
JESUS MARY AND ISABELLA,
CHRIST BEARING.
THE ADMIRAL.

SHELLEY.

It would be difficult to point out a career, as recent and familiar to us as that of Shelley, involved in so many obscurities. From some peculiar bias of temperament, or constitutional irregularity, his imagination stamped much more vivid impressions on his own mind than most men's imaginations are wont to do; so that it often happened to him that old fancies took the form of reminiscences, and he believed in a past which had never existed. His personal and familiar friends, Mr Hogg and Mr Peacock, both of whom have written down their kindly recollections, shew this very clearly. Mr Hogg uses strong language. 'He was,' he says, speaking of Shelley, 'altogether incapable of rendering an account of any transaction whatsoever, according to the strict and precise truth, and the bare naked realities of actual life; not through an addiction to falsehood, which he cordially detested, but because he was the creature—the unsuspecting and unresisting victim—of his irresistible imagination. Had he written to ten different individuals the history of some proceeding in which he was himself a party and an eye-witness, each of his ten reports would have varied from the rest in essential and important particulars.' Though this statement looks somewhat exaggerated, Mr Peacock, who quotes it, does not contradict it, and many of his anecdotes go to shew that it is, in the main, true; and the result is, that many stories, confidently reported—many tragic histories of nightly attempts to assassinate the poet, or mysterious visitants to his abode, or singular events in his ordinary life, resting only on his own testimony—will have to be quietly, though often, doubtless, reluctantly, passed over by a cautious biographer. Concerning Shelley, already much error has been corrected, and probably more remains to correct; even as many more particulars have still to be revealed. Strictly speaking, Shelley's life is still unwritten, and at present it will remain so, though the leading events are well known.

Percy Bysshe Shelley came of an aristocratic stock. At the time of his birth, the 4th of August 1792, his grandfather was a baronet, and before Shelley was many years old, his father succeeded to the title, as also did Shelley's son, Sir Percy, after the poet's death. At ten years old, he was sent to Zion House Academy, near Brentford, and in his fifteenth year he went to Eton. Being of a sensitive nature, he had to pass through many troubles, and his eccentricities brought him into more, before he had been at Oxford many terms. He and Mr Hogg, a college-friend, concocted a little pamphlet on religious subjects, and printed it for private circulation; and the master and fellows of University College saw good, in a fit of rigid orthodoxy, to expel both of them. Men who think little are often severely orthodox, but deep thinkers are mostly lenient towards the scruples of others.

Nevertheless, we must admit that Shelley went far enough to startle more than mediocrity. Even at Zion House Academy he was given to raising the devil, and throughout his life he remained, let us say, a philosopher. That earnestness and love of truth which made comedy repulsive to him, conspired, with independent and original thinking, to make him very fearless in expressing and maintaining his many eccentric opinions. Young thinkers are generally sanguine and self-important; they seem to fancy that the world never existed till they themselves set eyes on it, and deem themselves inspired apostles specially raised up to set truth on its feet again.

Shelley's circumstances, after his expulsion from Oxford, became straitened. His father, who was never kind to him, refused supplies, and he had to live on secret remittances from his kind-hearted sisters. They sent them to his lodging in London by the willing hand of a school-fellow, Harriet Westbrook, and the sympathy she shewed won the heart of the grateful youth. The two children, as we may call them, came to an understanding, and eloped to Scotland, and their marriage-ceremony was performed at Edinburgh in August 1811, Shelley being nineteen, and his wife not so old.

Matters went on pleasantly for a time, and Harriet Shelley made an affectionate wife; but she did not prove exactly the partner fully to correspond to her husband. Love cannot do all the household-work, but requires some handmaidens. There was still a void, as the future revealed, ungraciously enough. Shelley did not allow it to himself, and in 1814, the marriage-ceremony was performed again, according to the English form; but soon afterwards he met with Mary Wollstonecraft Godwin, and the strong current of his feelings changed. Mary Godwin was a woman of great intellectual energy and congenial tastes; and so, at once—let no man judge him!—he left his wife without her consent; he left her sister, whom he disliked intensely; and his children, whom he loved to carry in his arms, singing a strange lullaby of 'Ya'hmani, Ya'hmani, Ya'hmani, Ya'hmani;' and went abroad with the other lady. Harriet drowned herself in the Serpentine two years later, and Miss Godwin became Mrs Shelley.

Shelley's children by his first wife were taken from him, on the plea that their father held, and acted upon, opinions with respect to marriage 'injurious to the best interests of society.' It is

not correct, as usually stated, that this deprivation was made because of his heterodox religious opinions. His first wife's tragical end, as well as the loss of his little ones, affected Shelley with the most lively grief; although the same considerations, which will make many readers smile at the statement, sealed his lips.

Much of the rest of Shelley's short life was spent in Italy. His father had finally arranged to allow him a thousand a year, so that anxiety on that score was taken away. Surrounded with the grand features and exquisite beauties of prodigal nature, he fed the unceasing stream of his spiritual fancy, and filled the world with the luxurious music of strains, wild as Arion's; all the time drawing visibly nearer—so say some who knew him, though not all—to the evident catastrophe, premature death. Inevitable as early death was to his failing constitution, it came before the expected time; for a squall sank his boat in the bay of Spezzia, and the waves received him, together with his friend, Captain Williams. After long search, the bodies were found and burned—that of Captain Williams on August 15, 1822, and that of Shelley on the following day—according to the requirements of quarantine regulations. Byron, Leigh Hunt, and Trelawny performed the last obsequies, and Trelawny and Hunt have left us an account of them. His ashes were interred in the Protestant cemetery at Rome.

Shelley had three children by his second wife; William and Clara, who died before him, and the one who was afterwards Sir Percy. Mrs Shelley survived him many years, and lived to publish his *Memorials*. The poet's lines on his little boy are worthy of a place in this brief sketch:

TO WILLIAM SHELLEY.

(With what truth I may say—
Roma! Roma! Roma!
Non è piu come era prima!)

My lost William, thou in whom
Some bright spirit lived, and did
That decaying robe consume
Which its lustre faintly hid,
Here its ashes find a tomb,
But beneath this pyramid
Thou art not—if a thing divine
Like thee can die, thy funeral shrine
Is thy mother's grief and mine.

Where art thou, my gentle child?
Let me think thy spirit feeds,
With its life intense and mild,
The love of living leaves and weeds,
Among these tombs and ruins wild;
Let me think that through low seeds
Of the sweet flowers and sunny grass,
Into their hues and scents may pass
A portion'——

Let the reader decide why the verse is left unfinished.

A familiar acquaintance existed between Shelley and Byron. They made an excursion together round the Lake of Geneva, and afterwards saw a great deal of each other in Italy. Shelley believed implicitly in Byron's genius, yet their natures were not, in many respects, congenial. Byron was a problem to Shelley, and sometimes a source of amusement. We meet with a playful instance of his quiet sarcasm in a letter to Peacock, written in August 1821, which will also afford a curious illustration of their manner of life: 'Lord Byron gets up at two. I get up, quite contrary to my usual custom, but one must sleep or die, like Southey's sea-snake in *Kehama*, at twelve. After breakfast, we sit talking till six. From six till eight we gallop through the pine-forests which divide Ravenna from the sea; then come home and dine, and sit up gossiping till six in the morning. I do not think this will kill me in a week or fortnight, but I shall not try it longer. Lord B.'s establishment consists, besides servants, of ten horses, eight enormous dogs, three monkeys, five cats, an eagle, a crow, and a falcon; and all these, except the horses, walk about the house, which every now and then resounds with their unarbitrated quarrels, as if they were the masters of it. . . . . P.S.—After I have sealed my letter, I find that my enumeration of the animals in this Circean palace was defective, and that in a material point. I have just met on the grand staircase five peacocks, two guinea-hens, and an Egyptian crane. I wonder who all these animals were before they were changed into these shapes.'

A most brotherly and affectionate friendship existed between Shelley and Leigh Hunt. Leigh Hunt went to Italy at Shelley's instigation, to share in the preparation of a quarterly magazine—*The Liberal*—which Shelley, Byron, and Hunt were mainly to support: he lost his friend soon after his arrival. Leigh Hunt well knew—knew perhaps better than any one—the generous, kind, and noble, and loving nature so tragically taken from the earth.

Shelley was a genius in the highest sense of the word. His spiritual, impressible soul was little fitted to be penned up in a common-place world. Though he lived but a brief period, his pen was prolific, wild, and musical, beyond anything written since, if not before. His poems will maintain a place in the literature of his country, although, from their subtlety, and their philosophic tendency, many of them are tiresome to read, and will remain unread except by a few. His earliest effort, *Queen Mab*, was inspired by Southey's *Thalaba*, and contains much speculative matter. *The Revolt of Islam* is his longest poem: it met with virulent censure in its first form, and under its earlier title of *Laon and Cythna*. The *Cenci* was one of the few productions of his pen which were popular in his own time. A drama, harrowing in its details, taking for its subject the horrible story of Beatrice Cenci, it is less mystical than most of Shelley's writings, and possesses more human interest, though it cannot be considered in any sense fit for the stage. The *Adonais*, or lament for Keats, is a favourite with every one; and many of his smaller poems, such as *The Skylark*, *The Invitation*, and others, figure in every selection of English poetry. Had he lived longer, it is more than probable he would have acquired a firmer tone, and a more popular and enduring manner.

We may append, in conclusion, Shelley's own lines:

'Music, when soft voices die,
Vibrates on the memory—
Odours, when sweet violets sicken,
Live within the sense they quicken.

Rose leaves, when the rose is dead,
Are heaped for the beloved's bed;
And so thy thoughts, when thou art gone,
Love itself shall slumber on.'

It would not be right to omit Robert Browning's beautiful tribute to the memory of the poet:

Memorabilia.

'Ah, did you once see Shelley plain,
And did he stop and speak to you?
And did you speak to him again?
How strange it seems, and new!

But you were living before that,
And you are living after,
And the memory I started at—
My starting moves your laughter!

I crossed a moor with a name of its own,
And a use in the world, no doubt,
Yet a hand's-breadth of it shines alone
'Mid the blank miles round about—

For there I picked up on the heather,
And there I put inside my breast
A moulted feather, an eagle feather—
Well, I forget the rest.'

ARCHBISHOP ABBOT'S LAST HUNT.

On the 4th of August 1621, Mr John Chamberlain writing, as he was accustomed to do, to Sir Dudley Carleton, adverted to a strange accident which had just fallen out in the hands of the Archbishop of Canterbury (George Abbot). In those days, when hunting was the favourite and almost the only amusement of the English nobility, the gay train of huntsmen, falconers, verderers, and rangers seldom left the courtyard without ecclesiastics among them. The purity of 'the cloth' was not thought to be in the least stained by partaking in such sport. Even the Archbishop of Canterbury of the time above indicated—all Calvinist as he was—did not scruple to join in the pleasures of the chase. He was now on the borders of sixty, and his declining health made such recreation the more desirable. Paying a visit to Lord Zouch, at his seat of Bramshill, in Hampshire, the archbishop accompanied a hunting-party to the field, furnished with a cross-bow, the weapon then usually employed against deer.

A buck being started, his Grace discharged an arrow, which, instead of hitting the animal, struck the arm of Peter Hawkins, one of Lord Zouch's gamekeepers. An artery was divided, and the poor man bled to death in half an hour, to the inexpressible grief and distress of the archbishop, although the bystanders acquitted him of everything save awkwardness. His Grace made all the reparation in his power by settling an annuity on the widow and children of the deceased. He also thenceforth held a monthly fast on account of the sad event.

Casualty as the act obviously was, there were not wanting some who urged that the archbishop should be tried for it as a crime. King James knew too well the chances of the hunting-field to allow of any such course being taken. He remarked that he had once himself shot a keeper's horse under him; the queen, too, had on another occasion killed him one of the best braches (hounds) he ever possessed. It was a mere misfortune which might befall any man. In this light the accident was viewed by the inquest held on the body of Hawkins; nay, in their verdict, they found that the man's death came '*per infortunium sud propriâ culpâ*.'

It was, nevertheless, an accident not easily to be passed over in an archbishop. Many doubted if, with blood on his hands, he could henceforth exercise the functions of a prelate. To settle this point, a mixed commission was appointed by the king, and this court sat five months deliberating on the many subtleties connected with the question, at length pronouncing that the archbishop required both a royal pardon, and a re-instatement in his metropolitan authority. After all this was done, Laud and three other clergymen, elected to bishoprics, refused to accept consecration from Abbot, and the rite was accordingly performed by a congregation of prelates in the Bishop of London's chapel. There can be little doubt that dislike for the archbishop's puritanic leanings actuated these scrupulous divines fully as much as a horror for the blood of Hawkins.

Archbishop Abbot was of humble extraction, his father being a cloth-worker at Guildford, in Surrey. It is told that his mother, a short while before his birth, dreamed that if she could have a pike or jack to eat, the baby she was expecting would rise to greatness. Some time after, fetching water from the river, a jack came into her pail, which she immediately cooked and ate. Some persons of rank hearing of this, offered themselves as sponsors to the child; and a gentleman one day passing over Guildford Bridge, noticed George and his brother Robert playing, and struck with their appearance, offered to put them to school, and then sent them to the university. In 1599, George was installed Dean of Winchester; ten years after, advanced to the see of Lichfield, thence to London, and the year after to the Primacy.

He took a leading part in completing the Reformation; assisted materially in the translation of the Bible; counselled his king wisely in many difficult matters; opposing him fearlessly in his declaration of sports and pastimes on Sunday, and in the divorce which was granted to the Countess of Essex. He died on the 4th of August 1633, at the age of seventy-one, and was buried in the old church at Guildford: an altar tomb, with a canopy supported by six black marble pillars, under which is his full-length figure in his robes, marks the spot: at the west end is a curious representation of a sepulchre filled with skulls and bones, and a grating before it carved in the stone.

DISSOLUTION OF THE PRIORY, WALSINGHAM.

AUGUST 4, 1538.

'Give me my scallop-shell of quiet,
My staff of faith to walk upon,
My scrip of joy, immortal diet,
My bottle of salvation,
My gown of glory (hope's true gage),
And then I'll take my pilgrimage.'

Let us hope that these beautiful lines of Sir Walter

Raleigh were the sincere feelings of many a pious soul, on pilgrimage to the far-famed shrine of our Ladye at Walsingham; a little spot in Norfolk, lying a few miles distant from the sea, which was the rival of our Ladye of Loretto, or St James of Compostella, in the number of pilgrims who were yearly attracted to it; indeed, the town was created and subsisted solely upon these travellers, being nothing but a collection of inns and hostelries for their accommodation. Walsingham Chapel was founded in 1061, by the widow of Ricoldie de Faverches, and owed its reputation to the fact of its being an exact fac-simile of the Santa Casa, or home of the Virgin Mary, at Nazareth; which house was, three hundred years after, said to have been carried by angels to Loretto. The Crusaders and pilgrims to Palestine transferred their affections to the Norfolk shrine, after the Mohammedans had conquered Nazareth; believing that the Virgin had deserted her real home, and established herself in England, when the infidels desecrated the Holy Land. The splendid priory which soon arose beside the chapel was founded by Godfrey de Faverches, and granted to the order of St Augustine; and in 1420, a large and handsome church was built at the side of the low-roofed shrine of which Erasmus speaks in his famous *Colloquy upon Pilgrimages*. He says, 'The church is splendid and beautiful, but the Virgin dwells not in it; that veneration and respect is only granted to her Son. She has her church so contrived as to be on the right hand of her Son, but neither in that doth she live, the building not being finished.' The original shrine he describes as being 'built of wood, pilgrims are admitted through a narrow door at each side. There is but little or no light in it, but what proceeds from wax-tapers yielding a most pleasant and odoriferous smell; but if you look in, you will say it is the seat of the gods, so bright and shining as it is all over with jewels, gold, and silver.' That the treasures of the place, arising from gifts and benefactions, were very great, we have abundant evidence. Lord Burghersh, K.G., left in his will, in 1369, that a statue of himself on horseback should be made in silver, and offered to the Virgin; Henry VII. had the same kind of image made, above three feet high, of his own effigy, kneeling on a table, with 'a brode border, and in the same graven and written with large letters, blake enameled, theis words: "Sancte Thoma, intercede pro me."' The Plantagenet kings were great benefactors to it. Henry III., Edwards I. and II., were among those who made the Walsingham pilgrimage. Charles V., when he came secretly to gain Wolsey's ear, made this pilgrimage his ostensible reason. At no time was it more popular than just before its destruction: Henry VIII. walked there barefoot,* to present a costly necklace to the Virgin, and made it his favourite place of devotion, with Catharine of Aragon, perhaps partly induced by his minister Wolsey's great affection for the neighbourhood of his birth: yet the caprice, which is perhaps a truer word than principle, of this monarch induced him not long after to order this famous chapel to be desecrated. The dying tyrant is said to have felt this sin lie more heavily on his conscience than many others, and, after all, unable to throw off his early superstitions, he left his soul in charge of the Lady of Walsingham: his poor divorced Catharine did the same with much more sincerity, and ordered two hundred nobles to be given by a pilgrim in charity on his way there.

Erasmus gives us a very amusing account of the wonders of the place, and the miracle performed there. 'On the north side there is a gate, which has a very small wicket, so that any one wanting to enter is obliged first to subject his limbs to attack, and then must stoop his head. Our reverend guide related that once a knight, seated on his horse, escaped by this door from the hands of his enemy, who was at the time closely pressing upon him. The wretched man, thinking himself lost, by a sudden aspiration commended his safety to the Virgin who was so near; and, lo!—the unheard of occurrence!—on a sudden the man and horse were together within the precincts of the church, and the pursuer fruitlessly storming without.

"And did he make you swallow such a wonderful story?"

"Unquestionably. He pointed out a brass-plate nailed to the gate, representing the scene; the knight had a beard as long as a goat's, and his dress fitted tightly without a wrinkle."

'It would be wrong to doubt any longer.

'To the east of this is a chapel full of wonders. A joint of a man's finger is exhibited to us: I kiss it, and then ask: "Whose relics were these?" He says: "St Peter's." Then observing the size of the joint, which might have been that of a giant, I remarked: "Peter must have been a man of very large size." At this one of my companions burst into a laugh, which I certainly took ill, and pacified the attendant by offering him a few pence. Before the chapel was a shed, under which are two wells full to the brink; the water is wonderfully cold and efficacious in curing pains in the head. They affirm that the spring suddenly burst from the earth at the command of the most holy Virgin.' (These still exist, and are called the Wishing-wells, as it was believed that the Virgin granted to the pilgrims what they desired when drinking.) 'I asked how many years it might be since that little house was brought thither. He answered: "Some centuries." "But the walls," I remarked, "do not bear any signs of age." He did not dispute the matter. "But the wooden posts, the roof, and the thatch are new, how, then, do you prove that this was the cottage which was brought from a great distance?" He immediately shewed us a very old bear's skin fixed to the rafters, and almost ridiculed our dulness in not having observed so manifest a proof.' In a more satirical spirit Erasmus goes on to speak of the heavenly milk of the blessed Virgin, which had been brought from the Holy Land through many dangers, making the canon to look aghast at him as if possessed by fury and horrified at his blasphemous inquiries. He next saw 'the wonderful jewel at the feet of the Virgin, which the French named toad-stone, because it so imitates the figure of a toad as no art could do the like; and what makes the miracle greater, the stone is very small, the figure does not project, but shines as it enclosed in the jewel itself.'

Among other superstitions belonging to the place, was one that the Milky-way pointed directly to the home of the Virgin, in order to guide pilgrims on their road, hence it was called the Walsingham-

* From Barsham.

Way, which had its counterpart on earth in the broad road which led through Norfolk: at every town that it passed through a cross was erected, pointing out the path to the holy spot; some of these elegant structures still remain.

Let us now take a glance at the pilgrims themselves; a class of persons who played no unimportant part in the social life of the middle ages. An example of the corps was clad in a long coat of

AN ENGLISH PILGRIM.

russet hue, a sort of broad flapped hat, which was as often thrown back as worn on the head, with a long staff in his hand, and silver scallop-shells embroidered on his coat; an armorial bearing, supposed, in the first instance, to have been assumed, because these shells were used as drinking-cups and dishes in Palestine. Tin and leaden images were stuck all over his hat and dress, to mark what holy shrines he had visited; this is alluded to in a poem ascribed to Chaucer:

'Then as manere and custom is, signes there they bought,
For men of contré should knowe whome they had sought,
Eche man set his silver in such thing as they liked.
And in the meen while the millar had y-picked
His bosom full of signys of Caunterbury brochis.
They set their signys upon their hedes and some oppon their capp,
And sith to the dyner ward they gan for to stapp.'

The reader will remember the hat of Louis XI. of France, described in *Quentin Durward* as full of these leaden images of the Virgin. In addition to these, the rosary was always hung over the arm, that name being given in consequence of the legend which relates that the Virgin presented her chaplet of beads to St Dominic, and that it was scented with the sweet perfume of roses. It ought to contain one hundred and fifty beads, in which one Pater-noster comes after every ten Ave-Marias. It was often made of jet or wood, but those of Cordova were exquisitely worked in gold-filigree. A bottle slung at the back, and a pouch in front, completed the orthodox costume.

The abuses of these pilgrimages occupy many a page in the old writers; they led to lying, idleness, and mendicancy. A sermon of the year 1407 thus remarks upon them: 'Also I knowe well that when divers men and women will goe thus after their own willes and finding out on pilgrimage, they will ordaine with them before to have with them both men and women that can well sing wanton songs, and some other pilgrimes will have with them bagge-pipes; so that everie town that they come through, what with the noise of their singing and with the sound of their piping, and with the jangling of their Canturburie-bells, and with the barking out of dogges after them, that they make more noice then if the king came there away with all his clarions and many other minstrels. And if these men and women be a moneth out in their pilgrimage, many of them shall be a halfe yeare after great janglers, tale-tellers, and liers.' All which is borne out by mine Host of the Tabarde:

'Ye gon to Caunterbury; God you spede,
The blisful martir quyte you youre mede!
And wel I wot, as ye gon by the way
Ye schapen you to talken and to play,
For trewely comfort ne mirthe is non,
To ryden by the way dumb as a ston:
And therefore wold I maken you disport.'

It will be readily imagined how great was the distress when Henry despoiled this valuable shrine. The people of Norfolk rose in insurrection, as they gained so great a profit from the travellers who passed through the county, and who would now be prevented coming. 'Indeed,' says one, 'it would have made a heart of flint to have melted and wept, to have seen the breaking up of the house, and the sorrowful departure of the monks, every person bent himself to filch and spoil what he could.' The abbey became the property of Thomas Sydney, whose son married the sister of Sir Francis Walsingham, and died very wealthy. In the Bodleian library there is a poem, entitled a *Lament for Walsingham*, from which we take a short specimen.

'Bitter, bitter oh to behoulde,
The grasse to growe,
Where the walles of Walsingham
So stately did shewe.

Oules doe scrike where the sweetest himmes
Lately wear songe,
Toades and serpents hold their dennes
Where the palmers did throng.

Weepe, weepe, O Walsingham,
Whose dayes are nightes,
Blessings turned to blasphemies,
Holy deedes to despites.

Sinne is where our Lady sate,
Heaven turned is to helle,
Sathan sitte where our Lord did swaye,
Walsingham, O farewell!'

But few ruins remain of this once 'holy lande of blessed Walsingham.' A part of the east front of the priory church, with a circular window of

flowing tracery, and four windows of the refectory, are standing in the prettily laid-out grounds of the

GATEWAY OF WALSINGHAM PRIORY.

present owner of the estate, the Lee-Warners, by whom it was purchased in 1766.

HARROW SHOOTINGS AND HARROW SPEECHES.

The 4th of August is associated with a very old custom at Harrow School—now obsolete, and superseded by a celebration of another kind. The practice of *archery* was coeval with the establishment of this celebrated institution. Indeed, by the rules laid down by John Lyon, the founder of the school, the necessary implements for the proper exercise of this amusement were required to be furnished by the parents of every boy on his entering the school. 'You shall allow your child,' said the ordinances drawn up in 1592, 'at all times bow-shafts, bow-strings, and a bracer.' The *Butts* at Harrow was, in former days, a beautiful spot a little to the west of the London road, backed by a lofty insulated knoll, crowned with trees, and having rows of grassy seats, cut on the slopes, for spectators. In the early ages of the school, it was customary for the boys to contend for the prize of a silver arrow; the number of competitors being at first six, but afterwards increased to twelve. The competitors were attired in fancy-dresses, white, green, or red satin, decked with spangles; with green silk sashes and caps. In the *Harrow Calendar* it is stated that one of these dresses is still preserved in the school-library, where it has been for nearly a hundred years. Whoever shot within the three circles which surrounded the bull's-eye, was saluted with a concert of French-horns; and he who first shot twelve times nearest the mark, was proclaimed victor, and marched back in triumph from the Butts to the town, at the head of a procession of boys, carrying and waving the silver arrow. The entertainments of the day were concluded with a ball, given by the winner, in the school-room, to which all the neighbouring families were invited. The late master, the Rev. Dr Drury, spoke of an old print or drawing of the Butts on the day of celebration, in these terms: 'The village barber is seen walking off, like one of Homer's heroes, with an arrow in his eye, stooping forward, and evidently in great pain, with his hand applied to the wound. It is perfectly true that this Tom of Coventry was so punished; and I have somewhere a ludicrous account of it in Dr Parr's all but illegible holograph.' Scattered through the early volumes of the *Gentleman's Magazine* are many notices of the Harrow shootings, with the names of the successful competitors. The gossip of the school comprises a story that, in the last century, three brothers successively carried off three silver arrows, which their father stuck up in three corners of his drawing-room; it became a matter of family pride to fill up the fourth corner; and this was effected by the success of a fourth brother in 1766. Another anecdote was communicated to the Dean of Peterborough by the Hon. Archibald Macdonald. On one particular 4th of August, two boys, Merry and Love, were equal or nearly so, and both of them decidedly superior to the rest. Love, having shot his last arrow into the bull's eye, was greeted by his school-fellows with a shout, '*Omnia vincit Amor.*' 'Not so,' said Merry in an under voice, '*Nos non cedamus Amori;*' and carefully adjusting his shaft, shot it into the bull's eye, a full inch nearer to the centre than his exulting competitor. So he gained the day.

The Harrow Shootings were abolished in 1771. Dr Heath, the head-master at that time, was dissatisfied with the frequent exemptions from the regular business of the school, which those who practised as competitors for the prize claimed as a privilege not to be infringed upon. He also observed, as other masters had done before him, that the contest usually brought down a band of profligate and disorderly persons from the metropolis, to the demoralisation of the village. The Harrovians deeply regretted the ending of their old amusement; and, as a record of it, they still preserve the silver arrow made for 1772, but not used. The annual shootings were succeeded by annual speeches, which, under many modifications, have continued ever since.

AUGUST 5.

St Memmius or Menge, first bishop and apostle of Chalons-sur-Marne, end of 3d century. St Afra and her companions, martyrs, 304. St Oswald, king and martyr, 642. The Dedication of St Mary ad Nives, about 435.

THE ARM OF ST OSWALD.

Incredible sums were sometimes given by the monastic bodies, in the dark ages, for relics of saints. Amongst such valuables, the arm of St Oswald, preserved in Peterborough Cathedral, was in especial esteem, insomuch that King Stephen once came to see it; on which occasion, besides presenting his ring, he remitted a debt of forty marks to the abbey. 'The story told of the arm

is, that Oswald, who was king of Northumberland, and a very liberal benefactor to the poor, sitting at meat one day, a great number of beggars came to the gate for relief, upon which Oswald sent them meat from his own table, and there not being enough to serve them all, he caused one of his silver dishes to be cut in pieces, and distributed among the rest; "which Aidanus, a bishop who came out of Scotland to instruct and convert these northern parts of England, beholding, took the king by the right hand, saying: *Nunquam inveterascat haec manus!*" Poor Oswald, however, quarrelling with one of his neighbours, Pender, king of Murcia, and encountering his army at Oswestre, or as others say at Burne, was vanquished and slain, when some, remembering Bishop Aidanus's blessing, took care to preserve his arm, which was finally treasured up at Peterborough.'—Bliss's *Notes to Hearne's Diary.*

Born.—John, Lord Wrottesley, distinguished astronomer, and president of the Royal Society, 1798.

Died.—Xerxes I., king of Persia, murdered by Artabanus 465 B.C.; Louis III. of France, 882 A.D.; Sir Reginald Bray, architect, 1503; John, Earl of Gowrie, slain at Perth, 1600; Frederick, Lord North, statesman, 1792; Richard, Lord Howe, naval hero, 1799; Charles James Blomfield, bishop of London, 1857, *Fulham.*

THE GOWRIE CONSPIRACY.

It is little known that the 5th of August was once observed in England as a holiday, exactly in the same manner as the 5th of November, and for a cause of the same nature. On that day, in the year 1600, King James, then ruling Scotland alone, narrowly escaped death at the hands of two conspirators of his own people—the Earl of Gowrie, and his brother Alexander Ruthven. It was a strange confused affair, which the death of the two conspirators prevented from being thoroughly cleared up; and there have not been wanting individuals, both at the time and since, to doubt the reality of the alleged design against the king. It is, however, not difficult for an unprejudiced person to accept the conspiracy as real, and to comprehend even its scope and drift.

The king, on that August morning, was mounting his horse at Falkland, to go out a-hunting—his almost daily practice—when Alexander Ruthven, who was a youth barely twenty, came up and entered into private conversation with him. The young man told a wild-looking story, about a vagrant Highlander who knew of a secret treasure, and who might be conversed with at Gowrie House, in Perth. The king's curiosity and love of money were excited, and he agreed to go to Perth after the hunt. He then rode from the field in company with Ruthven, followed by some of his courtiers, to one of whom (the Duke of Lennox) he imparted the object in view. It appears that Lennox did not like the expedition, and he told the king so; but the king, nevertheless, proceeded, only asking the duke to have an eye upon Alexander Ruthven, to keep close, and be ready to give assistance, if needful.

The king and his followers, about a dozen in number, came to Gowrie House in time for the early dinner of that age, and, after the meal was concluded, he allowed himself to be conducted by Alexander Ruthven through a series of chambers, the doors of which the young man locked behind him, till they came to a small turret closet, connected

GOWRIE HOUSE.

with an upper room at the end of the house, where James found, instead of the man with 'the pose' he had expected, one completely armed, a servant of the earl. Ruthven now clapped his hat upon his head, and snatching a dagger from the armed man, said to the king: 'Sir, ye maun be my prisoner! Remember on my father's deid [death]!' alluding to the execution of his father for a similar treason to this, sixteen years before. The king remonstrated, shewing that he, as a minor at the time, was not concerned in his father's death, and had of his own accord restored the family to its rank and estates; and he asked meekly of the young man what he aimed at by his present proceedings. Ruthven said he would bring his brother to tell what they wanted: meanwhile the king must promise to stay quietly there till he returned. During his brief absence, the king induced the armed man to open one of the windows, looking to the neighbouring street; and while the man was

proceeding to open the other, which looked to the courtyard below, Ruthven rushed in, crying there was no remede, and attempted to bind the king's hands with a garter. A struggle ensued, in which the armed servant gave the king some useful help, and James was just able to get near the window, and call out 'Treason!' It appeared from the deposition of the servant, that he had been placed there by his master, without any attempt to prepare him for the part he was to play, or to ascertain if he could be depended upon. In point of fact, the sight of the king and of Alexander Ruthven's acts filled him with terror. He opened the door, and let in Sir John Ramsay, one of the royal attendants, who immediately relieved his struggling master by stabbing Ruthven, and thrusting him down the stair. As the conspirator descended, wounded and bleeding, he was met by two or three others of the king's attendants coming up upon the alarm, and by them was despatched, saying as he fell: 'Alas! I had not the wyte [blame] of it!'

Immediately after the king left the dining-room, an officer or friend of the Earl of Gowrie had raised a sudden report among the royal attendants, that their master was gone home—was by this time past the Mid Inch (an adjacent public green)—so that they all rushed forth to follow him. The porter, on being asked by some of them if the king had gone forth, denied it; but the earl called him liar, and insisted that his highness had departed. It was while they were hurrying to mount and follow, that the king was heard to cry 'Treason!' from the turret-window. The earl now drew his sword, and, summoning his retinue, about eighty in number, to follow him, he entered the house, and appeared in the room where his brother had just received his first wound. The four gentlemen of the royal train, having first thrust the king for his safety into the little closet, encountered the earl and the seven attendants who entered with him, and in brief space Gowrie was pierced through the heart by Ramsay, and his servants sent wounded and discomfited down stairs. Soon after, the Earl of Mar and other friends of the king, who had been trying for some time to force an entrance by the locked-up gallery, came in, and then James knelt down on the bloody floor, with his friends about him, and returned thanks to God for his deliverance.

It was a wild and hardly intelligible scene. Gowrie and his brother were accomplished young men, in good favour at court, and popular in Perth; they had the best prospects for their future life; it seemed unaccountable that, without giving any previous hint of such a design, they should have plunged suddenly into a murderous conspiracy against their sovereign, and yet been so ill provided with the means of carrying it out successfully. Yet the facts were clear and palpable, that the king had been enticed, first to their own town of Perth, and then into a remote part of their house, and there murderously assaulted. Evidence afterwards came out, to shew that they had been led to frame a plan for the seizure of the royal person, though whether for the sake of the influence they could thereby exercise in the government, or with some hazy design of taking vengeance for their father's death, cannot be ascertained. It also appeared that, at Padua University, whence they were only of late returned, they had studied necromancy, which they continued to practise in Scotland. It seems not unlikely that they were partly incited by some response, paltering with them in a double sense, which they conceived they had obtained to some ambitious question. Their attainder—nay, the attainder of the whole family—followed. The people generally rejoiced in the king's deliverance, and his popularity was manifestly increased by the dangers he had passed. Yet a few of the clergy professed to entertain doubts about the transaction; and one of eminence, named Robert Bruce, underwent a banishment of thirty years rather than give these up. His spirit has reappeared in a few modern writers, of the kind who habitually feel a preference for the side of a question which has least to say for itself. That a king, constitutionally devoid of physical courage, should have gone with only a hunting-horn hanging from his neck, and a handful of attendants in the guise of the chase, to attack the life of a powerful noble in his own house, and in the midst of armed retainers and an attached burgal populace; that he should have adventured solitarily into a retired part of his intended victim's house, to effect this object, while none of his courtiers knew where he was or what he was going to do; meets an easy faith with this party; while in the fact of Alexander Ruthven coming to conduct the king to Perth, in the glaring attempt of the earl, by false reports and lies, to send away the royal train from his house; in the fact that the two brothers and their retainers were armed, while the king was not; and in the clear evidence which the armed man of the turret-chamber gave in support of the king's statements; they can see no manner of force. Minds of this kind are governed by prejudices, and not by the love of truth, and it is vain to reason with them.

LONDON SHOEBLACKS.

Ten years before the cry of 'Clean your boots, sir!' became familiar to the ears of the present generation of Londoners, Mr Charles Knight described 'the last of the shoeblacks,' as a short, large-headed son of Africa, rendered melancholy by impending bankruptcy, who might be seen, about the year 1820, plying his calling in one of the many courts on the north side of Fleet Street, till driven into the workhouse by the desertion of his last customer. This unfortunate was probably the individual alluded to by a correspondent of Mr Hone as sitting under the covered entrance of Red Lion Court. He attributes the ruin of the fraternity to Messrs Day and Martin, and says he remembered the time when they were to be seen, as now, at the corner of every street. Their favourite pitches then were the steps of St Andrew's Church, Holborn, and the site of Finsbury Square, at that period a large open space of ground. Instead of the square box used by our scarlet-coated brigade, their predecessors employed a tripod, or three-legged stool, and carried their implements in a large tin kettle. Their stock in trade consisted of an earthen pot filled with blacking (compounded of ivory black, brown sugar, vinegar, and water), a knife, two or three brushes, a stick with a piece of rag at the end, and an old wig; the latter being used to whisk the dust or wipe the wet dirt from the shoes. The operation, in those days of shoes and

shoebuckles, was one requiring some dexterity to avoid soiling the stocking or buckle. Some liberal shoeblackers, as Johnson calls them, provided an old pair of shoes and yesterday's paper for the convenience and entertainment of their patrons while the foot grew 'black that was with dirt embrowned.'

The author of the *Art of Living in London* (1784) counsels his readers to

'Avoid the miser's narrow care,
Which robs the shoeblack of his early fare;
No—let some son of Fleet Street or the Strand,
Some sooty son, with implements at hand,
Who hourly watches with no other view,
Than to repolish the bespattered shoe;
Earn by his labour the offensive gains,
Nor grudge the trifle that rewards his pains.'

A writer in *The World* for the 31st January 1754, humorously exalts the shoeblack's calling above his own. He complains that 'once an author, always an author,' is the dictum of the world—'A man convicted of being a wit is disqualified for business during life; no city apprentice will trust him with his shoes, nor will the poor beau set a foot upon his stool, from an opinion that for want of skill in his calling his blacking must be bad, or for want of attention be applied to the stocking instead of the shoe. That almost every author would choose to set up in this business, if he had wherewithal to begin with, must appear very plainly to all candid observers, from the natural propensity which he discovers towards blackening.' Shoeblacks were also known as japanners. Pope says:

'The poor have the same itch;
They change their weekly barber, weekly news,
Prefer a new japanner to their shoes.'

Gay, not content with telling how

'The black youth at chosen stands rejoice,
And "clean your shoes" resounds from every voice,'

seeks to make the shoeblack of more importance, by giving him a goddess, though an unsavoury one, for a mother. According to the poet, this deity, shocked at finding her son grow up a beggar, entreated the gods to teach him some art:

'The gods her suit allowed,
And made him useful to the walking crowd.
To cleanse the miry feet, and o'er the shoe,
With nimble skill the glossy black renew.
Each power contributes to relieve the poor;
With the strong bristles of the mighty boar
Diana forms his brush; the god of day
A tripod gives, amid the crowded way
To raise the dirty foot and ease his toil;
Kind Neptune fills his vase with fetid oil,
Pressed from the enormous whale; the god of fire,
From whose dominions smoky clouds aspire,
Among these generous presents joins his part,
And aids with soot the new japanning art.'

—*Trivia.*

The art, however, was scarcely new in Gay's time, for Middleton, in his *Roaring Girl* (1611), speaks of shoes 'stinking of blacking;' and Kitely, in *Every Man in his Humour*, exclaims:

'Mock me all over,
From my flat cap unto my shining shoes.'

In 1851, some gentlemen connected with the Ragged Schools determined to revive the brotherhood of boot-cleaners for the convenience of foreign visitors to the Exhibition, and commenced the experiment by sending out five boys in the now well-known red uniform. The scheme succeeded beyond expectation; the boys were patronised by natives as well as aliens, and the Shoeblack Society and its brigade were regularly organised. During the Exhibition season, about twenty-five boys were kept constantly employed, and cleaned no less than 101,000 pair of boots. The receipts of the brigade during its first year amounted to £656. Since that time, thanks to a wise combination of discipline and liberality, the Shoeblack Society has gone on and prospered, and proved the parent of other societies. Every district in London now has its corps of shoeblacks in every variety of uniform, and while the number of boys has increased from tens to hundreds, their earnings have increased from hundreds to thousands. Numbers of London waifs and strays have been rescued from idleness and crime, and metropolitan pedestrians deprived of any excuse for being dirtily shod.

AUGUST 6.

The Transfiguration of our Lord. St Xystus or Sixtus II., pope and martyr, about 258. Saints Justus and Pastor, martyrs, 304.

Born.—Matthew Parker, archbishop of Canterbury, eminent divine, 1504, *Norwich;* Bulstrode Whitelock, eminent parliamentarian, 1605, *London;* Nicholas Malebranche, distinguished French philosopher (*Recherche de la Verité*), 1638, *Paris;* François-de-Salignac-de-Lamothe Fenelon, archbishop of Cambray, and author of *Telemaque*, 1651, *Château de Fenelon, Perigord;* Jean Baptiste Bessières, French general, 1768, *Preissac, near Cahors;* Dr William Hyde Wollaston, chemist, 1766.

Died.—St Dominic de Guzman, founder of the Dominicans, 1221, *Bologna;* Anne Shakspeare, widow of the dramatist, 1623, *Stratford-upon-Avon;* Ben Jonson, dramatist, 1637, *London;* Diego Rodriguez de Silva y Velasquez, celebrated Spanish painter, 1660, *Madrid;* James Petit Andrews, author of *History of Great Britain*, 1797, *London.* General Robert Cunningham, Baron Rossmore, eminent public character in Ireland, 1801.

SHAKSPEARE'S WIFE.

Obscure as are many of the points in Shakspeare's life, it is known that his wife's maiden name was Anne Hathaway, and that her father was a substantial yeoman at Shottery, near Stratford-on-Avon. Shakspeare was barely nineteen, and his bride about six-and-twenty, when they married. The marriage-bond has been brought to light, dated November 1582. Singularly little is known of their domestic life; and it is only by putting together a number of small indications that the various editors of Shakspeare's works have arrived at any definite conclusions concerning the family. One circumstance seems rather to tell against the supposition of strong affection on his side: Shakspeare drew out his whole will without once mentioning his wife, and then put in a few words interlined. The will points out what shall be bequeathed to his daughter Judith (Mrs Quiney), his daughter Susanna (Mrs Hall), his sister Joan Hart, her three sons, William, and Thomas, and Michael, and a consi-

derable number of friends and acquaintances at Stratford; but the sole mention of Anne Shakspeare is in the item: 'I give unto my wife my second-best bed, with the furniture.' Malone accepted this interlined bequest as a proof that Shakspeare had, in making his will, forgot his wife, and then only remembered her with what was equivalent to an insult. Mr Knight has, on the other hand, pointed out that Mrs Shakspeare would, by law, have a third part of her husband's means; so that there was presumably the less reason to remember her with special gifts of affection. She died on the 6th of August 1623, and was buried on the 8th, in Stratford church. Her gravestone is next to the stone with the doggrel inscription,* but nearer to the north wall, upon which Shakspeare's monument is placed. The stone has a brass plate, with the following inscription:

'Heere lyeth interred the body of Anne, wife of William Shakespeare, who dep.ted this Life the 6th day of Avgv. 1623, being of the age of 67 Yeares.

Vbera tu mater, tu lac vitamque dedisti;
Væ mihi! pro tanto munere saxa dabo.
Quam mallem amoveat lapidem bonus Angelus ore',
Exeat [ut] Christi corpus, imago tua;
Sed nil vota valent, venias cito, Christe, resurget,
Clausa licet tumulo, mater, et astra petet.'

Mr Knight considers this as a strong evidence of the love in which Shakspeare's wife was regarded by her daughter, with whom, he thinks it probable, she lived during her latter years.

BEN JONSON.

Ben Jonson occupies a prominent position on the British Parnassus; yet his works are little read, because there is something of roughness and boldness in his style, which repels that class of readers who read poetry for recreation, rather than critically. But hundreds, who find little pleasure in reading his verses, feel an interest in his personal history.

Jonson's poetical career was one of great activity. His was a prolific muse: his pen was seldom still. Much of his writing is lost, and yet his surviving works may be described as voluminous. All that labour which he expended in dramatic composition, in conjunction with brothers of the craft, many poems, some plays, and most of his prose, have passed into oblivion; yet there still remain to us upwards of twenty plays, about forty masques, a book of epigrams, many small poems, epistles, and translations, a book of *Discoveries*, as he calls a collection of prose scraps, and an unfinished Grammar of the English Language, written in English and Latin.

Much of Jonson's life is involved in obscurity; partly from the usual neglect of his age in recording contemporary history, but still more from the scandals and misrepresentations of those numerous maligners, which his fame or his bluntness raised up against him. For Ben spoke out his whole mind, whether others liked it or not; and probably, like his great namesake in later times, somewhat overpowered and oppressed the lesser wits.

Ben, or Benjamin Jonson, was born in Westminster, in 1574, a month after the death of his father, but his family was of Scotch extraction. They came of the *Johnstons* of Annandale, the name having been so far changed in its migration southwards. The dramatist's mother married again, and, whatever might have been his father's position in life, his step-father was a master-bricklayer. This second parent allowed him to obtain a good education; he went to Westminster school, and in due time proceeded to Cambridge. But before he had been long at the university, the necessary funds were found wanting, and Ben returned home with a heavy heart, to become a bricklayer. This employment, of which, in after-years, he was often derisively reminded, proved uncongenial. He 'could not endure,' he tells us, 'the occupation of a bricklayer:' so he tried the military profession, and joined the army in Flanders. Before long our valiant hero sickened of the sword, and returned home, 'bringing with him,' says Gifford, 'the reputation of a brave man, a smattering of Dutch, and an empty purse.'

At this critical juncture, being a good scholar, and passionately devoted to learning and literature, Jonson commenced writing for the stage. Before he had acquired any great literary notoriety, he attained to one less satisfactory, by getting into prison, for killing a man in a duel. While he remained in confinement, a priest drew him over to the Roman Catholic church, which he conscientiously persisted in for twelve years, in the meantime marrying a Roman Catholic wife. Gradually his fame became established, and for many years—after the death of Shakspeare—he retained undisputed possession of the highest poetic eminence. He grew into great favour with James I., and found constant employment in writing the court masques, and similar compositions for great occasions, which among the nobility and public bodies, in those days afforded occupation for the pens of poets. He also went to France for a short time in 1613, as tutor to the son of Sir Walter Raleigh, with whom, as with many other great ones, Ben lived on intimate and honourable terms.

About the time of Jonson's visit to France, the king, among other proofs of kindness, made him poet-laureate, with a life-pension of a hundred marks.

'Learned James,
Who favoured quiet and the arts of peace,
Which in his halcyon-days found large increase,
Friend to the humblest, if deserving, swain,
Who was himself a part of Phœbus' train,
Declared great Jonson worthiest to receive
The garland which the Muses' hands did weave;
And though his bounty did sustain his days,
Gave a most welcome pension to his praise.'

In 1618, the poet made a pedestrian tour into Scotland, mainly, it has been surmised, to visit his friend the poet Drummond. Taylor, the so-called Water-poet, had come to Scotland at the same time on a tour, designed to prove whether he could peregrinate beyond the Tweed without money; a question which he solved in the

* 'Good Frend for Jesus sake forbeare,
To digg the dust encloased heare:
Bleste be $\frac{e}{y}$ man $\frac{t}{y}$ spares thes stones,
And curst be he $\frac{t}{y}$ moves my bones.'

affirmative, as the well-known *Penniless Pilgrimage* avouches. He found his 'approved good friend,' Jonson, living with Mr John Stuart at Leith, and received from him a gold piece of the value of twenty-two shillings; a solid proof of the kind feelings of honest Ben towards his brethren of Parnassus. Jonson, on this occasion, spent some time with the Duke of Lennox in the west, and formed a design of writing a piscatorial play, with Loch Lomond as its scene. He passed the winter in Scotland, and in April was for three weeks the guest of Drummond at his romantic seat of Hawthornden, on the Esk. Here he drank freely—perhaps the bacchanalian habits of the north had somewhat corrupted him—indulged in the hearty egotism of a roysterer, and spoke disparagingly of many of his contemporaries, a little to the disgust of the modest Scottish poet, who took memoranda of his conversation, since published. On this subject there has been, in our day, a good deal of unnecessary discussion, to which it would be useless further to advert.

It is observable how little Jonson cared for worldly dignity. James had a wish to knight him, but he eluded the honour. He liked the love of men better. A jovial boon-companion, an affectionate

Ben: Jonson.

friend, he was ever as open-handed as he was open-hearted. When he had money, his friends shared it, or feasted on it. Towards the close of his life, when sickness overtook him, and his popularity somewhat declined, after the death of James, he fell into poverty. He was even reduced so far as to have to ask for assistance; but he did it in a manly way. There is nothing unworthy of a man in the following letter; how superior is it to the meanness of other scribblers in those days!

'My noblest Lord and best Patron—

I send no borrowing epistle to provoke your lordship, for I have neither fortune to repay, nor security to engage, that will be taken; but I make a most humble petition to your lordship's bounty, to succour my present necessities this good time of Easter, and it shall conclude all begging-requests hereafter on the behalf of your Truest Beadsman and most Humble Servant, B. J.

To the Earl of Newcastle.'

The Earl of Newcastle was now Jonson's chief patron. Hearing of the poet's distress, Charles I., who had gradually taken him into favour, sent him a hundred pounds. He also willingly renewed the pension bestowed by his father, increasing the one hundred marks to one hundred pounds, adding from his own stores a tierce of Canary (Ben's favourite wine).

Ben's sickness grew upon him, and he died on the 6th of August 1637, and was buried in Westminster Abbey on the 9th. The curious inscription, by which his grave was marked—

'O rare Ben Jonson!'—

and which formed the concluding words of the verses written and displayed in the celebrated club-room of Ben's clique, is said to have been a temporary memorandum, until such time as a fitting monument could be erected. The story says that one of Ben's friends gave a mason, who was on the spot, eighteenpence to cut it. The troubles of the civil wars prevented the execution of a more ambitious memorial. Some have spoken of the brief legend as if it were a thing profane in that sacred place of tombs; we must confess that we think otherwise. By whatever accident or freak it came to be placed there, we fancy that it contains a true vein of pathos, and feel it to exercise a thrilling influence over us each time we look at it and read it.

If Ben, by his freeness, as well as his greatness, made enemies, he secured to himself innumerable friends by the same means. No man possessed more loving friends than he among the great or among the unregarded; no man wrote more loving verses to those whom he loved. The club at the Mermaid was the meeting-place of all those brothers of song; there they held their jovial literary orgies, which have made the Mermaid a place and a name never to be forgotten.

'Souls of poets dead and gone,
What Elysium have ye known,
Happy field, or mossy cavern,
Choicer than the Mermaid Tavern?'

So Keats expresses the unanimous feeling of all who loved Ben. Shakspeare, Sir Walter Raleigh, the learned Selden, Dr Donne, Beaumont, Fletcher, Carew, Cotton, Herrick, and innumerable other worthies, waited religiously on the far-famed oracle; and the recollection of their meetings, and of Ben's oracular utterances, dwelt in their minds when all was over, like the remembrance of a lost Eden, as Herrick, in conclusion, shall bear witness:

AN ODE FOR BEN JONSON.

Ah, Ben!
Say how, or when
Shall we thy guests
Meet at those lyric feasts,
Made at the Sun,
The Dog, the Triple Tun?
Where we such clusters had,
As made us nobly wild, not mad;
And yet each verse of thine
Outdid the meat, outdid the frolic wine.

My Ben,
Or come agen,
Or send to us
Thy wit's great overplus:
But teach us yet
Wisely to husband it;
Lest we that talent spend:
And having once brought to an end
That precious stock; the store
Of such a wit: the world should have no more.

A CABINET OF GEMS, FROM BEN JONSON'S DISCOVERIES.

Very few books contain as much wisdom in as little space as Ben Jonson's book of *Discoveries*. And yet, as we never hear it spoken of or quoted, it seems very clear that no one ever reads it. We grace our store-house of useful curiosities with one or two specimens of the bright golden ore hid in abundance in this unexplored mine. As the extracts are made as short as possible, the reader will observe that the words at the head of each are not always our author's, but often merely our own nomenclature for the gems in our little cabinet:

Fortune.—Ill-fortune never crushed that man whom good-fortune deceived not.

Self-reliance.—He knows not his own strength, that hath not met adversity.

Counsel.—No man is so foolish, but may give another good counsel sometimes; and no man is so wise, but may easily err, if he will take no other's counsel but his own.

True Wisdom.—Wisdom without honesty is mere craft and cozenage.

Discernment.—There are many that, with more ease, will find fault with what is spoken foolishly, than can give allowance to that wherein you are wise silently.

Stupidity.—A man cannot imagine that thing so foolish, or rude, but will find or enjoy an admirer.

Short-sightedness of Discontent.—If we would consider what our affairs are indeed, not what they are called, we should find more evils belonging to us, than happen to us.

Man, a Mimetic Animal.—I have considered our whole life is like a play: wherein every man, forgetful of himself, is in travail with expression of another.

A Bricklayer's Cunning.—I have discovered that a feigned familiarity in great ones, is a note of certain usurpation on the less.

Vice and Virtue.—If we will look with our understanding, and not our senses, we may behold virtue and beauty (though covered with rags) in their brightness; and vice and deformity so much the fouler, in having all the splendour of riches to gild them, or the false light of honour and power to help them.

Self-approval.—The worst opinion gotten for doing well should delight us.

Being above seeming.—I am glad when I see any man avoid the infamy of a vice; but to shun the vice itself were better.

The best Writer.—The order of God's creatures in themselves is not only admirable and glorious, but eloquent: then he who could apprehend the consequence of things in their truth, and utter his apprehensions as truly, were the best writer or speaker.

Poesy.—A dulcet and gentle philosophy, which leads on and guides us by the hand to action, with a ravishing delight, and incredible sweetness.

DEATH OF LORD ROSSMORE.

Lord Rossmore, who, for many years in the latter part of the last century, was commander-in-chief of the forces in Ireland, died suddenly during the night, between the 5th and 6th of August 1801, at his house in Dublin, having attended a viceregal drawing-room at the Castle till so late as eleven o'clock on the preceding evening. Sir Jonah Barrington, who was Lord Rossmore's neighbour in the country, relates, in his *Personal Sketches of his Own Times*,* an occurrence connected with his lordship's unlooked-for death, which he frankly calls 'the most extraordinary and inexplicable' of his whole existence. It may be premised that his lordship was a remarkably healthy old man, and Sir Jonah states that he 'never heard of him having a single day's indisposition.' Lady Barrington had met Lord Rossmore at the drawing-room, and received a cheerful message from him for her husband, regarding a party they were invited to at his country-house of Mount Kennedy, in the county of Wicklow.

Sir Jonah and Lady Barrington retired to their chamber about twelve, and 'towards two,' says Sir Jonah, 'I was awakened by a sound of a very extraordinary nature. I listened: it occurred first at short intervals; it resembled neither a voice nor an instrument; it was softer than any voice, and wilder than any music, and seemed to float in the air. I don't know wherefore, but my heart beat forcibly; the sound became still more plaintive, till it almost died away in the air; when a sudden change, as if excited by a pang, altered its tone: it seemed *descending*. I felt every nerve tremble: it was not a *natural* sound, nor could I make out the point whence it came.

'At length I awakened Lady Barrington, she heard it as well as myself, and suggested that it might be an Eolian harp: but to that instrument it bore no similitude: it was altogether a different *character of sound*. She at first appeared less affected than myself, but was subsequently more so.

'We now went to a large window in our bedroom, which looked directly upon a small garden underneath: the sound, which first appeared *descending*, now seemed obviously to *ascend* from a grassplot immediately below our window. It continued; Lady Barrington requested that I would call up her maid, which I did, and she was evidently much more affected than either of us. The sounds lasted for more than half an hour. At last a deep, heavy, throbbing sigh seemed to issue from the spot, and was as shortly succeeded by a sharp but low cry, and by the distinct exclamation, thrice repeated, of "Rossmore! Rossmore! Rossmore!" I will not attempt to describe my own sensations; indeed I cannot. The maid fled in terror from the window, and it was with difficulty I prevailed on Lady Barrington to return to bed: in about a minute after, the sound died gradually away, until all was silent.

'Lady Barrington, who is not *superstitious*, as I am, attributed this circumstance to a hundred different causes, and made me promise that I would not mention it next day at Mount Kennedy, since we should thereby be rendered *laughing-stocks*.

* 2 vols. London, 1827. Vol. ii. pp. 151–155.

At length, wearied with speculations, we fell into a sound slumber.

'About seven the ensuing morning, a strong rap at my chamber-door awakened me. The recollection of the past night's adventure rushed instantly upon my mind, and rendered me very unfit to be taken suddenly on any subject.

'It was light: I went to the door, when my faithful servant, Lawler, exclaimed on the other side: "Oh Lord, sir!"

"What is the matter?" said I hurriedly.

"Oh, sir!" ejaculated he, "Lord Rossmore's footman was running past the door in great haste, and told me in passing that my lord, after coming from the Castle, had gone to bed in perfect health, but that, about *half after two* this morning, his own man, hearing a noise in his master's bed (he slept in the same room), went to him, and found him in the agonies of death; and before he could alarm the other servants, all was over!"

'I conjecture nothing. I only relate the incident as unequivocally *matter of fact.* Lord Rossmore *was absolutely dying at the moment I heard his name pronounced!*'

Sir Jonah was very much quizzed for publishing this story; many letters were sent to him on the subject, some of them abusing him as an enemy to religion. He consequently, in a third volume of his Sketches, published five years afterwards, thus referred to his former narration: 'I absolutely persist unequivocally as to the matters therein recited, and shall do so to the day of my death, after which I shall be able to ascertain individually the matter of fact to a downright certainty, though I fear I shall be enjoined to absolute secrecy.' *

It may be interesting to Scottish readers to know, that Lord Rossmore was identical with a youth named Robert Cunningham, who makes some appearance in the history of 'the Forty-five.' Having attached himself, with some other young men, as volunteers to General Cope's army, on its landing at Dunbar, he and a Mr Francis Garden acted as scouts to ascertain the movements of the approaching Highlanders, but, in consequence of tarrying to solace themselves with oysters and sherry in a hostelry at Fisherrow, were captured by a Jacobite party. They were at first threatened with the death due to spies, but ultimately allowed to slip away,† and lived to be, the one an Irish peer, the other a Scotch judge.

THE SEA-SERPENT.

On the 6th of August 1848, H. M. S. *Dædalus*, on her way from the Cape of Good Hope to St Helena, came near a singular-looking object in the water. Captain M'Quhae attempted to wear the ship close up to it, but the state of the wind prevented a nearer approach than two hundred yards. The officers, watching carefully through their glasses, could trace eye, mouth, nostril, and form, in the floating mass to which their attention was directed. The general impression produced was, that the animal belonged rather to the lizard than to the serpent tribe; its movement was steady, rapid, and uniform, as if propelled by fins rather than by undulating power. The size appeared to be very great; but as only a portion of the animal was above water, no exact estimate of dimensions could be made. Neither officers nor seamen ever saw anything similar to it before.

The report of this incident caused a stir among the British naturalists, who were eager to meet the popular fancy of the sea-serpent with facts shewing the extreme improbability of the existence of any such creature. Captain M'Quhae, nevertheless, insisted on the correctness of his report, and many professed to attach little consequence to the merely negative evidence brought against it.

On the 12th of December 1857, the ship *Castilian*, bound from Bombay to Liverpool, was, at six in the evening, about ten miles distant from St Helena. A monster that suddenly appeared in the water was described by the three chief officers of the ship—Captain G. H. Harrington, Mr W. Davies, and Mr E. Wheeler; the description was entered by Captain Harrington in his Official Meteorological Journal, and was forwarded to the Board of Trade. Nothing can be more plain than the honest good faith in which the narrative is written. The chief facts, in the captain's own words, are as follows: 'While myself and officers were standing on the lee-side of the poop, looking towards the island, we were startled by the sight of a huge marine animal, which reared its head out of the water, within twenty yards of the ship; when it suddenly disappeared for about half a minute, and then made its appearance in the same manner again—shewing us distinctly its neck and head, about ten or twelve feet out of the water. Its head was shaped like a long nun-buoy; and I suppose the diameter to have been seven or eight feet in the largest part, with a kind of scroll, or tuft of loose skin, encircling it about two feet from the top. The water was discoloured for several hundred feet from its head: so much so, that on its first appearance my impression was that the ship was in broken water, produced, as I supposed, by some volcanic agency since the last time I passed the island; but the second appearance completely dispelled those fears, and assured us that it was a monster of extraordinary length, which appeared to be moving slowly towards the land. The ship was going too fast, to enable us to reach the mast-head in time to form a correct estimate of its extreme length; but from what we saw from the deck, we conclude that it must have been over two hundred feet long. The boatswain and several of the crew who observed it from the top-gallant fore-castle, state that it was more than double the length of the ship, in which case it must have been five hundred feet. Be that as it may, I am convinced that it belonged to the serpent tribe; it was of a dark colour about the head, and was covered with several white spots.' Captain Harrington, some time afterwards, strengthened his testimony by that of other persons.

These are but examples of many confident reports made by persons professing to have seen the sea-serpent. Between 1844 and 1846, there were reported several appearances of this monster, in the seas fronting the United States and Canada. About the same time, a similar creature was stated to have presented itself near the shores of Norway, considered as identical with one depicted in Pontoppidan's *Natural History of Norway* (1752), of which

* *Sketches, &c.* Vol. iii., 1832, preface, p. xiii.

† See Scott's amusing account of this affair, *Quarterly Review*, xxxvi. 177. See also Home's Works, iii. 84.

a transcript is here given. Twenty years earlier, the sea-serpent was repeatedly seen on the coasts of the United States, also about 1818, and in 1806. It is remarkable with what distinctness, and with what confidence, the observers state their notions of what they saw—not meaning, we suppose, to deceive, but in all good faith taking hasty and

THE SEA-SERPENT—FROM PONTOPPIDAN.

excited impressions for serious and exact observation.

It chances that a creature, described by the beholders in as wonderful terms as were employed in any of the above instances, came ashore on the coast of Orkney in the year 1808. Even then exaggerated and most erroneous accounts of its decaying carcass were transmitted to scientific persons in Edinburgh, so that Dr Barclay, the ablest anatomist of his day, was completely misled in regard to the nature of the animal. Some of the bones of the vertebral column having fortunately been sent to Sir Everard Home, in London, he was able to determine that the creature was a shark, of the species *Squalus Maximus*, but one certainly of uncommon size, for it had been carefully measured by a carpenter with a foot-rule, and found to be fifty-five feet long.

It is not, however, the prevalent belief of naturalists, that the sea-serpent has been in all cases the *Squalus Maximus*. It seems to be now concluded, that the animal actually seen by M'Quhae and Harrington was more probably a certain species of seal known to inhabit the South Seas. The creature so often seen on the American coasts, was in all probability a shark, similar to that stranded in Orkney.

AUGUST 7.

St Donatus, bishop of Arezzo, in Tuscany, martyr, 361. St Cajetan of Thienna, confessor, 1547.

Born.—Adam von Bartsch, engraver, 1757, *Vienna;* Princess Amelia, daughter of George III. of England, 1783; John Ayrton Paris, distinguished physician, 1785, *Cambridge.*

Died.—Leonidas, Spartan hero, slain at Thermopylæ, 480 B.C.; Herod Agrippa, persecutor of the Apostles, 44 A.D., *Cæsarea;* Henry IV. the Great, Emperor of Germany, 1106, *Liege;* Caroline of Brunswick, consort of George IV., 1821, *Hammersmith.*

QUEEN CAROLINE.

On the 7th of August 1821, expired the ill-starred Caroline of Brunswick, stricken down, as was generally alleged, by vexation at being refused admission to Westminster Abbey in the previous month of July, when she desired to participate in the coronation ceremonies of her consort George IV. The immediate cause, however, was an illness by which she was suddenly attacked at Drury Lane Theatre, and which ran its course in the space of a few days.

The marriage of the Prince of Wales with his cousin Caroline Amelia Elizabeth, daughter of the Duke of Brunswick, was essentially one of those unions in which political motives form the leading element, to the almost entire exclusion of personal affection and regard. By his reckless prodigality and mismanagement, he had contracted debts to the amount nearly of £650,000, after having had only a few years before obtained a large parliamentary grant for the discharge of his obligations. His father, George III., who was determined that he should contract this alliance, had engaged that, on his complying with this requisition, another application would be made to the Commons, and a release effected for him out of his difficulties. The prince, thus beset, agreed to complete the match, though he used frequently to intimate his scorn of all *mariages de convênance.* A more serious impediment, such as in the case of an ordinary individual, would have acted as an effectual bar to the nuptials, existed in the union which, a few years before, he had contracted with Mrs Fitzherbert, a Roman Catholic lady, but which the Royal Marriage Act rendered in his case nugatory. This circumstance in his history was long a matter of doubt, but is now known to be a certainty. With such antecedents, it is easy to understand how his new matrimonial connection would be productive of anything but happiness.

Caroline herself is said to have unwillingly consented to the match, her affections being already engaged to another, but is reported to have expressed an enthusiastic admiration of the personal graces and generous qualities of her cousin. Her portrait had been forwarded to him, and he shewed it to one of his friends, asking him at the same time what he thought of it. The answer was that it gave the idea of a very handsome woman. Some joking then followed about 'buying a pig in a poke;' but, observed the prince, 'Lennox and Fitzroy have seen her, and they tell me she is even handsomer than her miniature.' The newspapers lauded her charms to the skies, descanting on the elegance of her figure, style of dress, her intelligent eyes and light auburn hair, and the blended gentleness and majesty by which her demeanour was characterised. They also extolled her performance on the harpsichord, and remarked that, as the prince was passionately fond of music, the harmony of the pair was insured. Great talk was made of the magnificent dressing-room fitted up for the young bride at a cost of twenty-five thousand pounds, and of a magnificent cap, presented by the bridegroom, adorned with a plume in imitation of his own crest, studded with brilliants. Her journey from her father's court to England was beset by many ill-omened delays and mischances, and not less than three months were consumed from various causes on the route. On the noon of Sunday, the 5th of April 1795, she landed at Greenwich, after a tempestuous voyage from Cuxhaven. An enthusiastic ovation attended her progress to London, where she was conducted in triumph to St James's Palace, and received by the Prince of Wales. On his first

introduction to her, his nerves are reported to have received as great a shock as Henry VIII. experienced on meeting Anne of Cleves, and according to a well-known anecdote, he turned round to a friend, and whispered a request for a glass of brandy. Outwardly, however, he manifested the most complete satisfaction, and the rest of the royal family having arrived to pay their respects, a domestic party, such as George III. delighted in, was formed, and protracted till midnight. Three days afterwards, on the 8th of April, the marriage took place, evidently to the immense gratification of the king, who ever testified the utmost respect for his daughter-in-law, and acted through life her guardian and champion.

But this blink of sunshine was destined to be sadly evanescent. The honeymoon was scarcely over ere rumours began to be circulated of disagreements between the Prince and Princess of Wales, and at the end of a twelvemonth, a formal and lasting separation took place. One daughter had been born of the marriage, the Princess Charlotte, whose untimely end, twenty-two years afterwards, has invested her memory with so melancholy an interest. The circumstances attending the disunion of her parents have never been thoroughly explained, and by many the blame has been laid exclusively on the shoulders of her husband. That he was ill fitted for enjoying or preserving the felicities of domestic life, is indisputable; but there can now be no doubt, however much party zeal may have denied or extenuated the fact, that Caroline was a woman of such coarseness of mind, and such vulgarity of tastes, as would have disgusted many men of less refinement than the Prince of Wales. Her personal habits were even filthy, and of this well-authenticated stories are related, which dispose us to regard with a more lenient eye the aversion, and in many respects indefensible conduct, of her husband. His declaration on the subject was, after all, a gentle one: 'Nature has not made us suitable to each other.'

Through all her trials, her father-in-law proved a powerful and constant friend, but her own levity and want of circumspection involved her in meshes from which she did not extricate herself with much credit. On quitting her husband's abode at Carlton House, she retired to the village of Charlton, near Blackheath, where she continued for many years. Here her imprudence in adopting the child of one of the labourers in the Deptford dock-yard, gave rise to many injurious suspicions, and occasioned the issue of a royal commission, obtained at the instance of the prince, for the investigation of her conduct in regard to this and other matters. The results of this inquiry were to clear her from the imputation of any flagitious conduct; but the commissioners who conducted it, passed a censure in their report on the 'carelessness of appearances' and 'levity' of the Princess of Wales. On being thus absolved from the serious charges brought against her, the paternal kindness of George III. was redoubled, and he assigned her apartments in Kensington Palace, and directed that at court she should be received with marked attention. With old Queen Charlotte, however, who is said to have been thwarted from the first in the project of wedding her son to Princess Louisa of Mecklenburg, afterwards the amiable and unfortunate queen of Prussia, Caroline never lived on cordial terms.

In 1814, the Princess of Wales quitted England for the continent, where she continued for six years, residing chiefly in Italy. Her return from thence in 1820, on hearing of the accession of her husband to the throne, and the omission of her name from the liturgy of the English Church, with her celebrated trial on the charge of an adulterous intercourse with her courier or *valet de place*, Bartolomo Bergami, are matters of history. The question of her innocence or guilt is still a disputed point, and will probably ever remain so. She was certainly, in many respects, an ill-used woman, but that the misfortunes and obloquy which she underwent were in a great measure traceable to her own imprudent conduct and want of womanly delicacy, there can also exist no reasonable doubt.

In considering the history of Queen Caroline, an impressive lesson is gained regarding the evils attending ill-assorted marriages, and more especially those contracted from motives of state policy, where all questions of suitability on the ground of love and affection are ignored. As a necessary result of such a system, royal marriages have been rarely productive of domestic happiness. It is satisfactory, however, to reflect that in the case of our beloved sovereign, Queen Victoria and her family, a different procedure has been followed, and the distinct and immutable laws of God, indicated by the voice of nature, accepted as the true guides in the formation of the nuptial tie. The legitimate consequence has been, the exhibition of an amount of domestic purity and happiness on the part of the royal family of Great Britain which leaves nothing to be desired. Her happy and exemplary family life has been clouded by the death of her husband the Prince Consort, and her two children Princess Alice and Prince Leopold. She is the fourth English sovereign whose reign has extended to fifty years.

THE FENMEN.

The Fenmen, or inhabitants of the Fens lying along the east coast of England, were notorious for their obstinate opposition to all schemes of drainage.* The earliest inhabitants would break down embankments, because the exclusion of the water damaged their fishing; and the more enlightened landowners of later days invariably dreaded trouble, and change, and risk of expense, more than annual destruction of property. The fact affords a curious illustration of that indolent spirit, apparently inherent in human nature, which clings, at any cost, to what is familiar.

In one of those schemes for improving matters, which were set on foot from time to time, so far back as the time of the Romans, and which usually assumed considerable importance whenever a more destructive flood than ordinary had produced more than ordinary complaints, we find James I. writing from Theobald's, and urging the undertakers of the work to do their utmost; describing the cause

* An interesting and excellent sketch of the history of the fen drainage is to be found in N. Walker and T. Craddock's *History of Wisbech and the Fens*, published at Wisbech in 1849.

as one in which he himself was much interested, and enjoining them, among other things, to inform him of '*any mutinous speeches which might be raised concerning this business*, so generally intended for the public good.' In any attempt of this kind, it seems, a fair amount of opposition was of course anticipated.

On this occasion the undertakers, four in number, began operations on the 7th of August 1605, with so important a person as Sir John Popham, Lord Chief-Justice, as one of the four; yet, although the scheme was carefully organised, and regularly arranged with the proper commissioners, the Fenmen, after all, brought it to nothing. The undertakers engaged to drain 307,242 acres, in seven years, and to accept in payment 130,000 acres, 'to be taken out of the worst sort of every particular fen proportionably.' The prospect of so handsome a reward was too much for the Fenmen; and so many grievances did they make out, so many objections had they to raise to the scheme, that a commission of inquiry had to be appointed. This commission decided against them; declaring, amongst other plain truths, that 'whereas an objection had been made of much prejudice that might redound to the poor by such draining, they had information by persons of good credit, that in several places of recovered grounds, within the Isle of Ely, &c., such as before that time had lived upon alms, having no help but by fishing and fowling, and such poor means, out of the common fens while they lay drowned, were since come to good and supportable estates.' Yet, although the king had taken up the scheme, and the good of it was self-evident, the plan duly laid, and the operations even commenced, the work had to be discontinued; chiefly because of 'the opposition which divers perverse-spirited people made thereto, by bringing turbulent suits in law, as well against the commissioners as those whom they employed therein, and *making of libellous songs to disparage the work*.'

This instance of the Fenmen's stupid opposition was not peculiar: the following song, which went under the title of *The Powte's Complaint*,* will afford a specimen of the 'libellous' effusions above alluded to:

'Come, brethren of the water, and let us all assemble,
To treat upon this matter, which makes us quake and tremble;
For we shall rue it, if 't be true, that the Fens be undertaken,
And where we feed in Fen and reed, they 'll feed both beef and bacon.

They 'll sow both beans and oats, where never man yet thought it,
Where men did row in boats, ere undertakers bought it:
But Ceres, thou behold us now, let wild-oats be their venture,
Oh let the frogs and miry bogs destroy where they do enter!

* * * * *

Away with boats and rudders; farewell both boots and skatches,
No need of one nor th' other, men now make better matches;
Stilt-makers all and tanners shall complain of this disaster;
For they will make each muddy lake for Essex calves a pasture.

Wherefore let us entreat our ancient winter nurses,
To shew their power so great as t' help to drain their purses;
And send us good old Captain Flood to lead us out to battle,
Then Twopenny Jack, with skales on 's back, will drive out all the cattle.

This noble captain yet was never known to fail us,
But did the conquest get of all that did assail us;
His furious rage who could assuage? but, to the world's great wonder,
He bears down banks, and breaks their cranks and whirlygigs asunder.

* * * * *

Great Neptune (god of seas!), this work must need provoke thee,
They mean thee to disease, and with fen-water choke thee:
But with thy mace do thou deface and quite confound this matter,
And send thy sands to make dry lands, when they shall want fresh water.

* *Poult*, a young trout.

GENERAL PUTNAM'S TREATMENT OF A SPY.

In the course of the transactions of the second year of the American war of independence, General Putnam caught a man lurking about his post at Peekskill, on the Hudson. A flag of truce came from Sir Henry Clinton, claiming the prisoner as a lieutenant in the British service. The answer of the old general was equally brief, and to the point:

'HEAD-QUARTERS, *7th August* 1777.

'Edmund Palmer, an officer in the enemy's service, was taken as a spy lurking within our lines. He has been tried as a spy, condemned as a spy, and shall be executed as a spy; and the flag is ordered to depart immediately.

ISRAEL PUTNAM.

'*P. S.*—He has, accordingly, been executed.'

Diction somewhat similar to this regarding the treatment of an offender in Scotland fifty years earlier, is on record. It proceeded from the Earl of Islay, who ruled Scotland for Sir Robert Walpole, in the reign of George II., and was, amongst other things, an extraordinary lord of session:

'EDINBURGH, *February* 28, 1728

'I, Archibald, Earl of Islay, do hereby prorogate and continue the life of John Ruddell, writer in Edinburgh, to the term of Whitsunday next, and no longer, by ——. ISLAY, I.P.D.'

The letters following the signature mean, 'In presentia Dominorum,' in the presence of the Lords; *i. e.*, the judges of the criminal court over which Islay presided; so that we must presume this trenchant rescript to have been produced in sufficiently dignified circumstances.

LADY CLERK'S DREAM-STORY.

Lady Clerk, of Penicuick, *née* Mary Dacre, who spent a long widowhood in Edinburgh,* where some little singularities of dress made her extremely well known, used to relate (and ultimately communicated to *Blackwood's Magazine*†) a dream-story, of the general truth of which she was well assured. It represented her father, a Cumberland gentleman,‡ as attending classes in Edinburgh about the year 1731, and residing under the care of an uncle, Major Griffiths, of the regiment then stationed in the castle. The young man, who was accustomed to take rambles with some companions, announced to his uncle and aunt one night, that he and his friends had agreed to join a fishing-party, which was to go out in a boat from Leith the next morning at six o'clock. No objection being made, they separated for the night; but during her sleep Mrs Griffiths screamed out: 'The boat is sinking; save, oh save them!' To pursue Lady Clerk's relation: 'The major awaked her, and said, "Were you uneasy about the fishing-party?" "Oh, no," she said, "I had not once thought of them." She then composed herself, and soon fell asleep again; in about another hour, she cried out, in a dreadful fright: "I see the boat is going down!" The major again awoke her, and she said: "It has been owing to the other dream I had; for I feel no uneasiness about it." After some conversation, they both fell sound asleep; but no rest could be obtained for her; in the most extreme agony, she again exclaimed: "They are gone—the boat is sunk!" When the major awaked her, she said: "Now I cannot rest: Mr Dacre must not go, for I feel, should he go, I would be miserable till his return; the thoughts of it would almost kill me."' In short, on the strength of this dream, Mrs Griffiths induced her nephew to send a note of apology to his companions, who, going out, were caught in a sudden storm, and perished.

Unlike many stories of the same kind, this one can be traced to an actual occurrence, which was duly chronicled in the brief records of the time. On the 7th of August 1734 (Lady Clerk's suggested date being three years too early), five men of respectable positions in life, including Patrick Cuming, a merchant, and Colin Campbell, a shipmaster, accompanied by two boys, one of whom was 'John Cleland, a nephew of Captain Campbell's,' went out in a boat with two sailors, to fish in the Firth of Forth. All was well till eleven o'clock, when a squall came on from the south-west, and they were forced to run for Prestonpans. On their way, Captain Campbell, observing a *flan* coming on, called to a sailor to loose the sail; but the man failed to acquit himself rightly, and the boat went over on its side. The party clung to it for a while, but one after another fell off, or sunk in trying to swim to land, all except Captain Campbell, who was taken up by a boat, and brought ashore nearly dead with fatigue, after being five hours in the water.§

* See some reference to Lady Clerk in our first volume, page 520.

The Welsh Man's Inventory.

In one of the miscellaneous collections of the British Museum Library, there is a quaint old broadside, adorned with a coarse wood-cut, designed to burlesque the goods and chattels of a Welsh gentleman or yeoman, at the same time raising mirth at his style of language and pronunciation. It is remarkable how strong a resemblance the whole bears to the *jeux d'esprit* indulged in by the Lowland Scots at the expense of the simple mountaineers of the north, who are a people kindred to the Welsh. The *Infentory* and its quaint vignette are here reproduced:

'Han Infentory of the Couds of William Morgan, *ap* Renald, *ap* Hugh, *ap* Richard, *ap* Thomas, *ap* Evan, *ap* Rice, in the county of Clamorgan, Shentleman.

Imprimis, in the *Pantry of Poultry* (for hur own eating).—One creat pig four week old, one coose, two black-puddings, three cow-foot.

Item, in the *Pantry of Plate*—One cridiron, one fripan, one tripan, three wooden ladle, three cann.

Item, in the *Napery*—Two towel, two table-cloath, four napkin, one for hurself, one for hur wife Shone, two for cusen *ap* Powell, and Thomas *ap* Hugh, when was come to hur house.

Item, in the *Wardrope*—One Irish rugg, one frize shirkin, one sheep-skin tublet, two Irish stocking, two shooe, six leather point.

Item, in the *Tary*—One toasting shees, three oaten-cake, three pint of cow-milk, one pound cow-putter.

Item, in the *Kitchen*—One pan with white curd, two white pot, two red herring, nine sprat.

Item, in the *Cellar*—One firkin of wiggan, two gallon sower sider, one pint of perry, one little pottle of *Carmarden* sack, *alias* Metheglin.

Item, in the *Armory of Weapon* to kill hur enemy—One pack-sword, two-edge, two Welsh-hook, three long club, one cun, one mouse-trap.

Item, in the *Carden*—One ped carlike, nine onion, twelve leek, twelve worm, six frog.

Item, in the *Leas-way*—Two tun cow, one mountain calf.

Item, in the *Common-Field*—Two Welsh nag, twelve long-leg'd sheep, fourteen and twenty coat.

Item, in the *Proom-close*—Three robin-run-hole, four hare: *hur own coods, if you can catch hur.*

Item, in the *Parn*—One half heblet of oate, seven pea, two pean.

Item, in the *Study* (*hur was almost forgot hur!*)—One Welsh Pible, two almanac, one *Erra Pater*, one Seven Champions, for St Taffy sake, twelve pallat, one pedigree.

Item, in the *Closet*—Two straw-hat, one pouse.

Item, more Cattle apout the house—Two tog, three cat, twelve mouse (*hur was eat hur toast cheese*), 1000 white flea with plack pack.

Item, more Lumber about the house—One wife, two shild, one call hur plack *Shack*, and t'other little *Morgan*.

Item, in the *Yard*, under the wall—One wheel, two pucket, one ladder, two rope.

This Infentory taken Note in the Presence of hur own Cusen Rowland Merideth ap Howel, and Lewellin Morgan ap William, in 1749, *upon the Ten and Thirtieth of Shun.*

The above-named William Morgan dyed when hur had threescore-and-twenty years, thirteen months, one week, and seven days.

A Note of some Legacy of a creat deal of Coods bequeathed to hur Wife and hur two Shild, and all hur Cusens, and Friends, and Kindred, in manner as followeth:

Imprimis—Was to give hur teer wife, *Shone Morgan*, all the coods in the ped-room.

Item—Was to give hur eldest sun, *Plack Shack*, 40 and 12 card to play at Whipper-shinny, 4 ty to sheat hur cusen; beside awl hur land to the full value of 20 and 10 shillings 3 groats per annum.

Item—Was to give to hur second sun, little *Morgan* ap *Morgan*, hur short ladder under the wall in the yard, and two rope.

Item—Was to give to hur Cusen Rowland *Merideth* ap *Howell* and *Lewellin Morgan*, whom was made hur executor, full power to pay awl hur tets, when hur can get money.

Seal'd and delibered in the Presence of Eban ap Richard ap Shinkin ap Shone, hur own Cusen, the Cap and Year abobe written.

London: Licensed, entered, printed, &c.'

W. E.

AUGUST 8.

Saints Cyriacus, Largus, Smaragdus, and their companions, martyrs, 303. St Hormisdas, martyr.

Born.—Dominic Baudius, jurist and philologist, 1561, *Lisle;* Jacques Basnage de Beauval, Protestant theologian and historian, 1653, *Rouen;* Francis Hutcheson, moral philosopher, 1694, *North of Ireland.*

Died.—Cardinal Peter d'Ailly, ecclesiastic and author, 1419, *Compiègne;* Pope Alexander VI. (Roderic Borgia), infamous pontiff, 1503; Dr Antoine Arnauld, celebrated opponent of the Jesuits, and friend of Pascal, 1694, *Brussels;* Louis François Armand du Plessis, Duke of Richelieu, captor of Minorca, 1788; Sir Richard Worsley (*History of the Isle of Wight*), 1805, *Appledurcombe in Wight;* George Canning, statesman, 1827, *Chiswick;* Thomas Crofton Croker, author of *Irish Fairy Tales*, 1854, *London;* John Austin, jurist, 1867.

GEORGE CANNING.

There is a certain moral grandeur popularly ascribed to the *doctrinaire* which is denied to the statesman. There are few politicians who receive the unreserved admiration accorded to those who have done nothing but write books, or yielded their lives to the advocacy of a single cause. The *doctrinaire*—the propounder of a fixed set of opinions—advises mankind, but does not undertake to manage them. Through a long series of years he may publish his convictions with pertinacious uniformity, without hindrance and without responsibility. Such consistency is sometimes contrasted with the wavering tactics of the statesman, to the unfair disadvantage of the latter. A statesman sets himself to lead a people, and is less careful to entertain them with his private convictions than to discover what principles they are inclined to accept and to commit to practice. The *doctrinaire's* business is to proclaim what is true, whether men hear or reject; the statesman's is to ascertain and recommend what is practicable. The statesman is often compelled to defer his private judgment to popular prejudice, and to rest content with bending what cannot be broken. Sir Robert Peel was a free-trader long before free-trade was possible. These reserves are inseparable from statesmanship, nor need they involve dissimulation. A statesman, being a practical man, regards all speech as lost labour which is not likely to be reproduced in action. There is, as all know, a base statesmanship, which does not aspire to lead from good to better, but which panders to popular folly for selfish ends. Of this we do not speak. We merely note the fact, that the consistency of the *doctrinaire* is an easy virtue compared with the statesman's arduous art: the first *tells* what is right; the other *persuades* millions to do it. A statesman who has led with any credit a free people, has necessarily encountered difficulties and temptations of which the solitary student has had no experience, and possibly no conception.

George Canning, whilst one of the ablest European statesmen of the present century, was not doctrinally far in advance of his generation; yet for England he did much worthy service, and through his genius English principles acquired new influence the world over. He was born in Marylebone, London, on the 11th of April 1770. His father was a young gentleman, whose family had cast him off for making a poor marriage; and, while Canning was an infant, he died, it is said, of a broken heart. His mother commenced schoolkeeping for her support, but it did not pay, and then she tried the stage, but with little better success. An uncle meanwhile intervened, and sent Canning to Eton, where he quickly made his mark by his aptitude for learning, and by starting, at the age of sixteen, a small periodical work, entitled *The Microcosm.* It was written by himself and three school-fellows, and was published at Windsor, weekly, from November 1786 to August 1787. Canning's articles, in their elegance and wit, foreshadowed the future man. *The Microcosm* provoked

the Westminster boys to commence *The Trifler*. To their first number they prefixed a caricature representing Justice in the act of weighing their merits against the Etonians, the latter being aloft, while their rivals rested on the ground. Young Canning took his pen, and thus interpreted the symbol:

'What mean ye by this print so rare,
Ye wits—of Eton jealous—
But that *we* soar aloft in air,
And *ye* are heavy fellows?'

From Eton he passed to Oxford, and thence to Lincoln's Inn, with the intention of studying for the bar; but such was his readiness in debate, that his friends persuaded him that politics were his true vocation. At this time he was on familiar terms with Sheridan and Fox, and other leading Whigs, but to their disappointment he sought alliance with Pitt, and under his auspices he entered parliament in 1793. As soon as by trial Pitt had tested the quality of his young recruit, he placed him on active service, and left him to bear the brunt of some formidable attacks. Canning enjoyed and grew under this discipline, and found wit and eloquence equal to all demands. With the *Anti-Jacobin* periodical—begun in 1797 and concluded in 1798, to resist and ridicule democratic opinions—he was largely concerned, and its best verses and *jeux d'esprit* were written by him. His *Needy Knife-Grinder*, a burlesque of a poem by Southey, is known to everybody, being a stock-piece in all collections of humorous poetry. In 1800, Canning was married to Joan Scott, a daughter of General Scott, who brought with her a dowry of £100,000.

Canning's life, from 1793 to 1827, is inwrought with the parliamentary history of England, sometimes in office, and sometimes in opposition. He was a steady enemy of the French Revolution and of Napoleon; he advocated the Irish union, the abolition of the slave trade, and Catholic emancipation; but resisted parliamentary reform, and the repeal of the Test and Corporation Acts. As secretary of state for foreign affairs, he was peculiarly distinguished. His sympathies were heartily liberal; and the assertion of Lord Holland, that Canning had 'the finest logical intellect in Europe,' seemed to find justification in his state-papers and correspondence, which were models of lucid and spirited composition. Against the craft of the Holy Alliance he set his face steadily, and was always ready to afford counsel and help to those who were struggling after constitutional freedom. With real joy he recognised the republics formed from the dissolution of Spanish dominion in America, and one of his last public acts was the treaty which led to the deliverance of Greece from the Turks.

Canning was only prime minister during a few months preceding his death. On the resignation of the Earl of Liverpool, through illness, Canning, in April 1827, succeeded him as premier; and as a consequence of his known favour for the Catholics, Lord Eldon, the Duke of Wellington, Sir Robert Peel, and other Tories threw up their places. Canning had, therefore, to look for support to the Whigs, and with much anxiety and in weak health he fought bravely through the session to its close in July, when he retired to the Duke of Devonshire's villa at Chiswick, and there died on the 8th of August 1827.

M. Guizot, in an account of *An Embassy to the Court of St James's in* 1840, relates a curious anecdote of Canning's death, in connection with a description of Lady Holland. He writes: 'Lady Holland was much more purely English than her husband. Sharing with him the philosophic ideas of the eighteenth French century, in politics she was a thoroughly aristocratic Whig, without the slightest Radical tendency, proudly liberal, and as strongly attached to social hierarchy, as faithful to her party and her friends. . . . . This person, so decidedly incredulous, was accessible, for her friends and for herself, to fears childishly superstitious. She had been slightly ill, was better, and admitted it. "Do not speak of this," she said to me, "it is unlucky." She told me that, in 1827, Mr Canning, then ill, mentioned to her that he was going for change and repose to Chiswick. She said to him: "Do not go there; if I were your wife, I would not allow you to do so." "Why not?" asked Mr Canning. "Mr Fox died there." Mr Canning smiled; and an hour after, on leaving Holland House, he returned to Lady Holland, and said to her in a low tone: "Do not speak of this to any one; it might disturb them." "And he died at Chiswick," concluded Lady Holland with emotion.'

NEWSPAPER MANAGEMENT IN THE SEVENTEENTH CENTURY.

In the seventeenth century, there was no such term as editor, implying a literary man devoted to the general management of a journal, with a share in such original composition as it required. We only hear of the printer, or at most of the publisher. In those days, the printer found himself surrounded with difficulties, and often, from the imperfection and simplicity of his arrangements, he was thrown into positions by no means dignified.

The following curious notices, &c., are from some of the earliest English newspapers; *circ.* 1620—1626.

'*The Stationer to the Reader.*—We should also present you with the French News, but for that some, who neither know what hath past before, nor how businesses depend one vpon another, haue patcht vp a Pamphlet with broken relations, contradicted newes of Sea-fights, and most non-sence Translations of matters of State, wee cannot but informe you, how you haue been wronged, and wee preuented, by those who would thrust out any falsitie, if they were but persuaded that the nouelty will sell it.'

The above is from a paper published in 1622. It is not very clear, certainly, but at anyrate that which the 'stationer' (publisher) means to convey to his readers may be arrived at without much difficulty. We have copied it literally, as illustrative at once of the typography, orthography, and punctuation of that age.

The annexed quaint notice is from a correspondent of one of these periodicals in the same year. Having given intelligence of the wars at that time being waged abroad, with running comments thereon, the writer concludes by saying to the editor: 'And thus, sir, I end a long letter, wherein I haue dilated the discourse, by attempting to giue the reasons of each motion, and to describe the persons and places, to giue light to the storie, which you shall doe well to keepe by you, for it will make you the better to

vnderstand whatsoeuer shall be written of these wars.'

Here is another (same year) from a military correspondent to a similar journal, and who seems to have suffered some loss in his calling: 'Now, courteous Reader, hauing heard the truth of the matter, moderate your griefe, and doe not discourage a young braue warrior, by lamenting for some small losse by him sustained, seeing also that commonly the issues of battailes and warlike actions are variable and inconstant, and that many times it happeneth, that those that the one day haue the worst, the next day haue the better hand.'

In publishing an account of what had occurred to the Spanish fleet in America, in 1623, the translator (and printer) thus apologetically introduces his intelligence:

'*The Printer to the Reader.*—This Spanish originall comming to my hands most opportunely, tooke the aduantage of my liking it, and sudden apprehension, that it would please the Reader, whosoeuer: not so much because thereby is proposed a kinde of variety of newes, as in that the glory of God is made apparant in His workes, and wonderfull Prouidence, that can preserue men out of raging seas, and afford His mercy when wee thinke that it is quite denied vs: and although I may incurre an imputation by leaning more to the true sense then to the words as they lye in order: yet I will be bold to say, that the sentences here extended, shall neither receiue exoticke interpretation, nor bee carryed with any wanton hand from the true meaning: be therefore thus fauorable, I pray, to reade it without a strict comparison of the originall: and accept of an honest intent, that aymeth as much at the satisfaction of worthy deseruers, as any profit can arise out of so meane a worke.'

Another writer of the same period, at the conclusion of his intelligence as to 'the State of Affairs of Europe,' oddly says: 'In this manner stand the affaires of Europe, which I cannot compare better then to a wounded man, newly drest, and in great danger of life, so that vntill his second opening, and taking the aire, the surgion himselfe cannot tell what will become of him: but if you, gentle Reader, affect to vnderstand (by way of indulgencie and desire of his well-doing) the state of his health & body, I wil myselfe attend the next dressing, & according to the effect of the surgery certifie you, what hope there is of recouery, that is to say, if euer these commanders take the field; these threatning armies meet one another; these prepared forces make any encounter; and these martial affairs come to deciding, I will come toward you with honest information, and not hide my talent in a napkin, but acquaint you with as much as falls to my poore portion to know.'

Here is an apology for some news-letters omitted for want of space: 'Reader, I cannot let thee haue the letters for want of roome vntill next weeke.'

Another journal, of a date somewhat later, contains the following apologetic notice on account of an error: 'Whereas there is notice given in the *Gazette* published yesterday, that one Mr Fox has been scandalized in this paper: This is to certify that there was never any such relation printed in any intelligence published by Benjamin Harris; but by some others that have counterfeited his title. But as for the mistakes in the elections at *Rye*, and other places, we do once for all acknowledge that, taking them up on common fame, we have sometimes been mistaken; but we are resolved for the future to be so very cautious and careful, as to endeavour not to give the least offence upon this or any other account to any person whatsoever.'

'Touching for the King's Evil.—In 1664 occurs the following announcement on this subject, of course with the direct cognizance of his majesty Charles II.:—'His sacred majesty having declared it to be his royal will and purpose to continue the healing of his people for the evil, during this month of May; and then to give over till Michaelmas next. I am commanded to give notice thereof, that the people may not come up to the town in the interim, and loose their labour.'

'Notice to Correspondents' in Olden Times.—At the foot of a newspaper of the early part of the seventeenth century, an invitation to amateurs is given in the following quaint terms:—'Ale persons who are pleased to favour us with any comical or sollid stories, may repair to the "Three Kings," Ludgate, and they shall have them very carefully put in.'

The circulation of newspapers may be considered as having reached perfection, when a penny could buy the sheet and another penny insure its quick and safe transmission to any part of the country. In such a state of things, it becomes difficult to imagine or recall the difficulties which beset the obtaining of a newspaper only a few years ago. When we cast back our thoughts twenty years, we find the sheet costing fourpence-halfpenny at the least; when we go back twenty or thirty years more, we find it was sevenpence, the greater part of which sum went into the public exchequer. The number of sheets printed by any journal up to 1814 was usually a few hundreds; only two or three came to thousands. It was, indeed, mechanically impossible that there should be a newspaper circulation above two or three thousand, for, before any larger number could be thrown off, the news would have been cold, and the next number in requisition.

When we go back a century, or a century and a half, we find that the journals of the empire were but a handful. There was not one north of Edinburgh till 1746; there was not one established on a permanent basis in Edinburgh till 1718. News were in those days sent about in private letters, and in the gossip of conversation. The wandering beggar, who came to the farmer's house craving a supper and bed, was the principal intelligencer of the rural population of Scotland so late as 1780. In Queen Anne's time, to receive a regular news-sheet from the metropolis was the privilege of lords, squires, and men of official importance. At an earlier time, this communication was not a printed sheet at all, but a written sheet, called a *News-letter*, prepared in London, copied by some process or by the hand, and so circulated from a recognised centre. When such a sheet arrived at the hall, with any intelligence unusually interesting, the proprietor would cause his immediate dependants to be summoned, and would from his porch read out the principal paragraphs (see illustration on the following page). So did the news of William's landing at Torbay, of King Charles's restoration, of his father's tragic death, reach the ears of a large part of the people of England. The reader of our national history will have a very imperfect comprehension of it, if he does not bear in mind how slowly and imperfectly intelligence of public matters was conveyed in all times which we now call past, and how much of false news was circulated. In the case of an insurrection, the whole surrounding circumstances might be changed before a fourth of the nation was apprised of what had taken place, or was prepared to move. Or, supposing that a landing was expected on the south coast, in connection with party-movements within the empire, the heads of the conspiracy might all be in the Tower before any one could be sure that the fleet was even in sight.

One peculiarity of the newspaper management of old days is sufficiently obvious to any one who examines the files. There was no adequate system of home-reporting. It seems to have been mainly by private and arbitrary means that a domestic paragraph

came to the office. An amusing illustration of this primitive system of reporting occurs in the *Caledonian Mercury* for March 3, 1724: 'We hear,' says the paper, 'that my Lord Arniston, one of the ordinary lords of session, is dead.' In next number appears this apologetic, but certainly very awkward, paragraph:

ENGLISH COUNTY GENTLEMAN READING THE NEWS.

'It was by mistake in our last that Lord Arniston was dead, occasioned by the rendezvous of coaches hard by his lordship's lodging, that were to attend the funeral of a son of the Right Honourable the Earl of Galloway; wherefore his lordship's pardon and family is humbly craved.' W. E.

AUGUST 9.

St Romanus, martyr. St Nathy, or David, priest in Ireland. St Fedlimid, or Felimy, bishop of Kilmore, confessor, 6th century.

Born.—Izaak Walton, author of *The Complete Angler*, 1593, *Stafford;* John Dryden, poet, 1631, *Aldwinkle, Northamptonshire;* John Oldham, satirical poet, 1653, *Shipton, Gloucestershire;* Thomas Telford, eminent engineer, 1757, *Westerkirk, Dumfriesshire.*

Died.—Simon Ockley, orientalist (*History of the Saracens*), 1720, *Swavesey;* Robert Potter, translator of *Æschylus*, &c., 1804, *Lowestoff, Norfolk;* Mrs Charles Mathews (Madame Vestris), celebrated vocalist and actress, 1856, *Fulham.*

IZAAK WALTON.

Uncanonized, Izaak Walton is the patron saint of anglers. About scarce another author centre memories of such unmixed gentleness and peace. To speak of Walton is to fall to praising him. As Charles Lamb says: 'It might sweeten a man's temper at any time to read the *Complete Angler*.'

Of Walton's early life little is known beyond the fact that he was born at Stafford in 1593. It is presumed he was apprenticed in London to a sempster or linen-draper, for soon after coming of age he had a shop of his own in the Royal Exchange, Cornhill. In this situation he could hardly have had elbow-room, for the shops in the Exchange were but 7½ feet long by 5 wide. From this, in 1624, he moved to a house 'on the north side of Fleet Street, two doors west of the end of Chancery Lane,' thus under the very shadow of Temple Bar. In the crowd and din of the junction there of Fleet Street and the Strand, it is a piquant reflection at this day, that an author whose name is wedded with green fields and quiet waters once abode. Subsequently he removed round the corner to the seventh house on the west side of Chancery Lane.

In this neighbourhood Walton tasted much sorrow. He married at Canterbury, in 1626,

Rachel Floud, maternally descended from Archbishop Cranmer. Seven children were the fruit of this union, but they all died in childhood, and last of all the mother also, in 1640. The narrow accommodations which London tradesmen then assigned to their families are sufficient to account for such tragic results. Meanwhile Walton's business as linen-draper prospered; and for recreation he used 'to go a-fishing with honest Nat, and R. Roe.' His favourite stream was the Lea, a river which has its source above Ware, in Hertfordshire, and gliding about the country to the north-east of London, falls into the Thames a little above Blackwall.

Amidst the troubles of the civil war, while London was generally parliamentarian, worthy Izaak remained a steady royalist and churchman. Having accumulated a small independence, and anxious, it is supposed, to escape from the scene of so many domestic afflictions, and from possible annoyance on the score of his faith and politics, he gave up shopkeeping, about 1643, and retired into the country. In 1646, he contracted a second marriage with Anne Ken, sister of the saintly bishop of Bath and Wells. She died in 1662, leaving her husband a son Izaak and a daughter Anne to comfort him in his prolonged old age.

Walton was fifty when he gave up business, and forty years of leisure remained for his enjoyment. Authorship he had begun before he left his shop. In the parish church of St Dunstan he had been a hearer and, as he says, 'a convert' to the preaching of Dean Donne, the poet. An intimate friendship ensued between the divine and the linen-draper, and when Donne died in 1631, Walton was tempted into writing his elegy; and to a collection of the dean's *Sermons*, published in 1640, he prefixed *The Life of Dr John Donne*. His success in this piece of biography led on to other efforts of the same kind, as inclination and opportunity offered. In 1651, appeared his *Life of Sir Henry Wotton;* in 1662, *The Life of Mr Richard Hooker;* in 1670, *The Life of Mr George Herbert;* and in 1678, *The Life of Dr Sanderson*. These five biographies, brief yet full, written in sympathy yet with faithfulness, with reverence, modesty, and discretion, have been accepted as choice miniatures of the several worthies who are their subjects, and are reprinted and read to this day with unabated admiration.

Not the *Lives*, however, but *The Complete Angler or Contemplative Man's Recreation* is Walton's true title to fame. It was published in 1653, the year in which Oliver Cromwell was declared Protector, and Walton lived to see it pass through four other editions—namely, in 1655, 1664, 1668, and 1676. How often it has since been reprinted, annotated by admiring editors, and extolled by critics of every mind, time would fail to tell. The *Angler* has long ago taken an undisputed place among English classics, and to speak of its abounding poetry, wisdom, and piety would be to repeat criticism which has passed into commonplace.

The advices which Walton gives for the treatment of live-bait—as, for instance, the dressing of a frog with hook and wire, needle and thread, '*using him as though you loved him*, that is, harm him as little as you may possible, that he may live the longer,' and the recommendation of a perch for taking pike, as 'the longest-lived fish on a hook'—have subjected him to the charge of cruelty. Hence Byron writes in *Don Juan* of—

> 'Angling, too, that solitary vice,
> Whatever Izaak Walton sings or says;
> The quaint, old, cruel coxcomb, in his gullet
> Should have a hook, and a small trout to pull it.'

But people in the seventeenth century concerned themselves little or nothing with animal suffering. Boyle, a good Christian and contemporary of Walton's, records experiments with animals in the air-pump with a coolness which makes us shudder. The Puritans objected to bull and bear baiting, not, as Lord Macaulay observes, in pity for bull or bear, but in aversion and envy at the pleasure of the spectators. Strange as it may seem, compassion for animals is a virtue, the coming in of which may be remembered by living men.

Blessed with fine health, Walton carried the vigour of manhood into old age; in his eighty-third year, we find him professing a resolution to begin a pilgrimage of more than a hundred miles, to visit his friend Cotton on the Dove in Derbyshire. In the great frost of 1683, which covered the Thames with ice eleven inches thick, split oaks and forest trees, and killed the hollies, and in which nearly all the birds perished, old Izaak died in his ninety-first year. He was at the time on a visit to his daughter Anne, at Winchester, and in Winchester Cathedral he lies buried. In a will made a few months before, he declared his 'belief to be, in all points of faith, as the Church of England now professeth;' a declaration of some consequence, he asserts, on account of 'a very long and very true friendship with some of the Roman Church.'

DRYDEN—THE WEAPON SALVE.

What a blurred page is presented to us in the life of Dryden—in one short year bemoaning Cromwell and hailing Charles—afterwards changing his religion, not without a suspicion of its being done for the sake of court-favour—a noble, energetic poet, yet capable of writing licentious plays to please the debased society of his age—a gentleman by birth, yet fain to write poetical translations from the classics for Jacob Tonson at so much a line! Notwithstanding all short-comings, Dryden is not merely a venerated figure in the literary Pantheon of England, but one not a little loved. We all enter heartily into the praise of 'Glorious John.'

Dryden had many enemies; no man could write in those days without incurring hatred. Hence it arose that the following notice appeared in a London newspaper in December 1679. 'Upon the 17th instant, in the evening, *Mr Dryden*, the great poet, was set upon in Rose Street, in Covent-Garden, by three persons, who called him a rogue, and other bad names, knockt him down, and dangerously wounded him, but upon his crying out "Murther!" they made their escape. It is conceived that they had their pay beforehand, and designed not to rob him, but to execute on him some cruelty, if not popish vengeance.' Soon afterwards the following advertisement was issued: 'Whereas, &c., &c., if any person shall make discovery of the said offenders, to the said *Mr Dryden*, or to any justice of peace for the liberty of Westminster, he shall

not only receive fifty pounds, which is deposited in the hands of Mr Blandard, goldsmith, next door to Temple Bar, for the said purpose; but if the discoverer himself be one of the actors, he shall have the fifty pounds, without letting his name be known, or receiving the least trouble by any prosecution.'

In Dryden's version of Shakspeare's *Tempest*, Ariel is made to save Hippolito's life by directing Ferdinand's sword to be anointed with weapon-salve and wrapped up close from the air. Believers were not wanting in this extraordinary nostrum, so well suited to an age when every gentleman carried a sword as a matter of course, which, equally as a matter of course, he was ready to draw on the slightest provocation. Sconce, the hero of Glapthorne's comedy of *The Hollander*, knew a captain reported to have obtained some of the precious ointment from the witches of Lapland, and is extremely anxious to get some himself, that he may safely 'confront the glistering steel, outface the sharpest weapon.' An apothecary's man gives him an unguent which he warrants genuine, thirty citizens blown up by an explosion of gunpowder having been saved by dressing the smoke of the powder with the salve! Sconce is so convinced by this evidence, that when he has occasion to test the efficacy of the ointment, and finds it of little avail, he attributes the failure to some impediment in his blood, and fully credits the doctor's assertion that—

> 'The same salve will cure
> At any distance—as if a person hurt
> Should be at York, the weapon dressed at London
> On which the blood is.'

Davenant says (*The Unfortunate Lovers*, Act II., scene I.):

> 'Greatness hath still a little taint i' th' blood;
> And often 'tis corrupted near the heart;
> But these are not diseases held, till by
> The monarch spied who our ambition feeds,
> Till at surfeits with his love; nor do we strive
> To cure or take it from ourselves, but from
> His eyes, and then our medicine we apply
> Like the weapon-salve, not to ourselves but him
> Who was the sword that made the wound.'

The 'ever-memorable' John Hales, of Eton, thought it worth while to make a serious attack on the weapon-salve, in a 'letter to an honourable person' (1630). He declares it is but 'a child of yesterday's birth,' one amongst the many pleasant phantasies of the Rosicrucians; and as for the cures it has worked, 'the effect is wrought by one thing, and another carries the glory of it. A man is wounded; the weapon taken, and a wound-working salve applied to it; in the meanwhile, the wounded person is commanded to use abstinence as much as may be, and to keep the wound clean. Whilst he thus doth, he heals, and the weapon-salve bears the bell away.' No man in his right senses would ever have thought of curing a wound by anointing the weapon that inflicted it; therefore the discovery must have been the result of experience, in which case there must have been a fortuitous concurrence of circumstances scarcely credible. 'First the salve, made for some other end, must fall on the weapon, and that upon the place where the blood was, and there rest, and then some man must observe it, and find that it wrought the cure.' He then shews that if the doctrine be true, that it is through the blood that the cure is worked, the salve would be just as efficacious applied whereon the blood fell, and is therefore foolishly called weapon-salve; and having thus deprived it both of reputation and name, he winds up his letter triumphantly thus: 'I have read that a learned Jew undertook to persuade Albertus, one of the Dukes of Saxony, that by certain Hebrew letters and words, taken out of the Psalms, and written on parchment, strange cures might be done upon any wound; as he one day walked with the duke, and laboured him much to give credit to what he discoursed in that argument, the duke suddenly drew his sword, and wounding him in divers places, tells him he would now see the conclusion tried upon himself. But the poor Jew could find no help in his Semhamphoras, nor his Hebrew characters, but was constrained to betake himself to more real chirurgery. I wish no man any harm, and therefore I desire not the like fortune might befall them who stand for the use of weapon-salve; only this much I will say, that if they should meet with some Duke of Saxony, he would go near to cure them of their errors, howsoever they would shift to cure their wounds.'

The latest allusion to this wonderful medicine we can find, is in Mrs Behn's *Young King*, published in 1690, in which play one of the characters is cured of a wound by a balm—

> 'That like the weapon-salve
> Heals at a distance.'

QUEEN ELIZABETH AT TILBURY FORT.

During the first week of August, in the eventful year 1588, there was doubt in England whether the much-dreaded Spanish Armada would or would not enter the Thames, in its attack upon the freedom and religion of England. Both sides of the Thames were hastily fortified, especially at Gravesend and Tilbury, where a chain of boats was established across the river to bar the passage. There was a great camp at Tilbury Fort, in which more than twenty thousand troops were assembled. After having reviewed the troops assembled in London, the queen went down to encourage those encamped at Tilbury, where her energetic demeanour filled the soldiery with enthusiasm. Riding on a war-charger, wearing armour on her back, and holding a marshal's truncheon in her hand—with the Earls of Essex and Leicester holding her bridle-rein, she harangued them thus:—'My loving people, we have been persuaded by some that are careful of our safety, to take heed how we commit ourselves to armed multitudes, for fear of treachery. But I assure you I do not desire to live to distrust my faithful and loving people. Let tyrants fear! I have always so behaved myself that, under God, I have placed my chiefest strength and safeguard in the loyal hearts and good-will of my subjects; and, therefore, I have come amongst you at this time, not as for my recreation and sport, but being resolved in the midst and heat of the battle to live or die amongst you all—to lay down for my God, for my kingdom, and for my people, my honour and my blood, even in the dust. I know that I have but the body of a weak and feeble woman; but I have the heart of a king, and of a king of England

too, and think foul scorn that Parma, or Spain, or any prince of Europe, should dare to invade the borders of my realm! To which, rather than any dishonour shall grow by me, I myself will take up arms, I myself will be your general, the judge and rewarder of every one of your virtues in the field. I know already by your forwardness, that you have deserved rewards and crowns; and we do assure you, on the word of a prince, they shall be duly paid you. In the meantime, my lieutenant-general shall be in my stead, than whom never prince commanded more noble or more worthy subject. Nor will I suffer myself to doubt, but that by your obedience to my general, by the concord in the camp, and your valour in the field, we shall shortly have a famous victory over those enemies of my God, my kingdom, and my people.' The harangue is given in slightly different form by different historians; but the substance is the same in all.

However much historians may have differed, and still do differ, concerning the character of Elizabeth, there can be no doubt of the fitness of such an harangue to rouse the people to an heroic resistance. She was no longer youthful; but her sex and her high spirit recommended her to the hearts of her people. 'By the spirited behaviour,' says Hume, 'she revived the tenderness and admiration of the soldiery; an attachment to her person became a kind of enthusiasm among them; and they asked one another, whether it were possible Englishmen could abandon this glorious cause, could display less fortitude than appeared in the female sex, or could ever by any dangers be induced to relinquish the defence of their heroic princess?' The so-called 'Invincible Armada,' as most English readers are aware, did not afford an opportunity for Elizabeth's land-forces to shew their valour; its destruction was due to other agencies.

THE DUKE OF SUSSEX'S ANNULLED MARRIAGE.

The annulling of the late Duke of Sussex's first marriage, in August 1794, was one of the sad consequences of the Royal Marriage Act. That statute was passed about twenty years before, at the request, and almost at the command, of George III. The king, who held very high notions concerning royal prerogatives, had been annoyed by the marriages of two of his brothers with English ladies. He wished to see the regal dignity maintained in a twofold way—by forbidding the marriage of English princes and princesses with English subjects; and by rendering the consent of the reigning sovereign necessary, even when the alliance was with persons of royal blood. The Royal Marriage Act, by making provision for the last-named condition, virtually insured the first-named so long as the king should live: seeing that he had resolved never to give his consent to the marriage of any of his children with any of his own subjects. The nation sympathised deeply with the amiable prince whose happiness was so severely marred on this particular occasion. While travelling in Italy in 1792, the duke formed an attachment to Lady Augusta Murray, daughter of the Earl of Dunmore. The earl was not in Italy at that time; but Lady Dunmore consented to a private marriage of her daughter with the Duke of Sussex (who was then about twenty years of age). The duke could not have been ignorant of the Royal Marriage Act, nor is it likely that the existence of such a statute could have been unknown to Lady Dunmore; this afterwards afforded an argument in the hands of the king's party. The young couple, after a residence at Rome of several months, came to England. At the desire of the lady and her friends, the duke consented to a second marriage-ceremony, more public and regular than the first. The couple took lodgings in South Molton Street, at the house of a coal-merchant; merely that they might, by a residence of one month in the parish of St George's, Hanover Square, be entitled to have their banns asked in the church of that parish. They were regularly married on the 5th of December 1793, under the names of Augustus Frederick, and Augusta Murray. It was an anxious time for the lady, seeing that she was about to become a mother, and had every motive for wishing to be recognised as a true wife. She was, however, destined to disappointment. The king never forgave the duke for this marriage, which he inflexibly determined not to recognise. In his own name, as if personally aggrieved in the matter, the obstinate monarch instituted a suit against his own son in the Court of Arches, for a nullity of the marriage. Within one week of Lady Augusta's confinement, the king's proctor served a citation on the Duke of Sussex, to answer the charges of the suit. The investigations underwent many costly changes. At one time the privy-council made searching inquiries; at other times other tribunals; and the fact of the marriage at St George's Church had to be rendered manifest by the testimony of the mother and sister of Lady Augusta, the clergyman who had performed the marriage-ceremony, the coal-merchant and his wife, and another witness who was present. So far as the church was concerned, the marriage was in all respects a valid one; but the terms of the Royal Marriage Act were clear and decided; and after many months of anxious doubt, the duke and Lady Augusta were informed, by the irreversible judgment of the courts, that their marriage was no marriage at all in the eyes of the English law, and that their infant son was illegitimate. Later sovereigns sought to alleviate the misery thus occasioned to an amiable family (a daughter was born before the Duke of Sussex and Lady Augusta finally separated), by giving a certain degree of rank and position to those who were *taboo'd* from the royal circle; but nothing could fully compensate for the misery and disappointment that had been occasioned. Lady Augusta, in a letter to a friend written in 1811, said: 'Lord Thurlow told me my marriage was good in law; religion taught me it was good at home; and not one device of my powerful enemies could make me believe otherwise, nor ever will.' The Duke of Sussex settled an income on Lady Augusta, out of the allowance he received from parliament; and the king took care, during the whole remainder of his life, not to give the duke a single office or post that would augment his resources. In 1826, Lord (then Mr) Brougham, in a speech relating to the duke, characterised the Royal Marriage Act, which had produced so much misery, as 'the most unfortunate of all acts;' while Mr Wilberforce stigmatised it as 'the most unconstitutional act that ever disgraced the statute-book.'

AUGUST 10.

St Lawrence, martyr, 258. St Deusdedit, confessor. St Blaan, bishop of Kinngaradha among the Picts, in Scotland, about 446.

ST LAWRENCE.

THIS being a very early saint, his history is obscure. The Spaniards, however, with whom he is a great favourite, claim him as a native of the kingdom of Aragon, and even go so far as remark, that his heroism under unheard-of sufferings was *partly* owing to the dignity and fortitude inherent in him as a Spanish gentleman. Being taken to Rome, and appointed one of the deacons under Bishop Xystus, he accompanied that pious prelate to his martyrdom, anno 257, and only expressed regret that he was not consigned to the same glorious death. The bishop enjoined him, after he should be no more, to take possession of the church-treasures, and distribute them among the poor. He did so, and thus drew upon himself the wrath of the Roman prefect. He was called upon to account for the money and valuables which had been in his possession; 'The emperor needs them,' said he, 'and you Christians always profess that the things which are Cæsar's should be rendered to Cæsar.' Lawrence promised, on a particular day, to shew him the treasures of the church; and when the day came, he exhibited the whole body of the poor of Rome, as being the true treasures of a Christian community. 'What mockery is this?' cried the officer. 'You desire, in your vanity and folly, to be put to death—you shall be so, but it will be by inches.' So Lawrence was laid upon a gridiron over a slow fire. He tranquilly bore his sufferings; he even jested with his tormentor, telling him he was now done enough on one side—it was time to turn him. While retaining his presence of mind, he breathed out his soul in prayers, which the Christians heard with admiration. They professed to have seen an extraordinary light emanating from his countenance, and alleged that the smell of his burning was grateful to the sense. It was thought that the martyrdom of Lawrence had a great effect in turning the Romans to Christianity.

The extreme veneration paid to Lawrence in his native country, led to one remarkable result, which is patent to observation at the present day. The bigoted Philip II., having gained the battle of St Quintin on the 10th of August 1557, vowed to build a magnificent temple and palace in honour of the holy Lawrence. The Escurial, which was constructed in fulfilment of this vow, arose in the course of twenty-four years, at a cost of eight millions, on a ground-plan which was designed, by its resemblance to a gridiron, to mark in a special manner the glory of that great martyrdom. The palace represents the handle. In its front stood a silver statue of St Lawrence, with a gold gridiron in his hand; but this mass of the valuable metals was carried off by the soldiers of Napoleon. The only very precious article now preserved in the place, is a bar of the original gridiron, which Pope Gregory is said to have found in the martyr's tomb at Tivoli. The cathedral at Exeter boasted, before the Reformation, of possessing some of the coals which had been employed in broiling St Lawrence.

Born.—Bernard Nieuwentyt, eminent Dutch mathematician, &c., 1654; Armand Gensonné, noted Girondist, 1758, *Bordeaux;* Sir Charles James Napier, conqueror of Scinde, 1782, *Whitehall.*

Died.—Magnentius, usurper of Roman empire, 353, *Lyon;* John de Witt and his brother Cornelius, eminent Dutch statesmen, murdered by the mob at the Hague, 1672; Cardinal Dubois, intriguing statesman, 1723, *Versailles;* Gabrielle Emilie de Breteuil, Marquise du Chastelet, translator of Newton's *Principia*, 1749, *palace of Luneville;* Dr Benjamin Hoadly, eldest son of the bishop, and author of the *Suspicious Husband*, 1757, *Chelsea;* Ferdinand VI. of Spain, 1759, *Madrid;* John Wilson Croker, Tory politician and reviewer, 1857; Sir George Thomas Staunton, wrote on Chinese affairs, 1859.

BERNARD NIEUWENTYT, THE REAL AUTHOR OF PALEY'S 'NATURAL THEOLOGY.'

On the 10th of August 1654, the pastor of Westgraafdyke, an obscure village in the north of Holland, had a son born to him. This child, named Bernard Nieuwentyt, was educated for the ministry, but to the great disappointment of his reverend father, the youth resolutely declined to enter the church. Studying medicine, he acquired the degree of doctor; and then settled down contentedly in his native place in the humble capacity of village leech. Nieuwentyt, however, was very far from being an ordinary man. While the boorish villagers considered him an addle-pated dunce, unable to acquire sufficient learning to fit him for the duties of a country minister, he was sedulously pursuing abstruse mathematical and philosophical studies; when he became a contributor to the *Leipsic Transactions*, the principal scientific periodical of the day, the learned men of Europe admired the abilities of the man who, by his neighbours, was considered to be little better than a fool. The talents of Nieuwentyt were at last recognised by his countrymen, and he was offered lucrative and honourable employment in the service of the state; but the unambitious student, finding in science its own reward, could never be persuaded to leave the seclusion of his native village.

Though the name of Nieuwentyt is scarcely known in this country, yet the patient student of the obscure Dutch hamlet has left an important impress on English literature. Towards the close of the seventeenth century, he contributed a series of papers to the *Leipsic Transactions*, the object of which was to prove the existence and wisdom of God from the works of creation. These papers

were collected, and published in Dutch, and subsequently translated into French and German. Mr Chamberlayne, a Fellow of the Royal Society, translated the work into English, and it was published by the evergreen house of Longman in 1718, under the title of *The Religious Philosopher*. The work achieved considerable popularity in its day, but, another line of argument becoming more fashionable, it fell into oblivion, and until a few years ago was utterly forgotten. In 1802, the well-known English churchman and author, William Paley, published his equally well-known *Natural Theology*. The well-merited popularity of this last work need not be noticed here; it has gone through many editions, and had many commentators, not one of whom seems ever to have suspected that it was not the genuine mental offspring of Archdeacon Paley. But, sad to say, for common honesty's sake, it must be proclaimed that Paley's *Natural Theology* is little more than a version or abstract, with a running commentary, of Nieuwentyt's *Religious Philosopher!*

Many must remember the exquisite gratification experienced, when reading, for the first time, Paley's admirably interesting illustration of the watch. Alas! that watch was stolen, shamefully stolen, from Bernard Nieuwentyt, and unblushingly vended as his own, by William Paley! As a fair specimen of this great and gross plagiarism, a few passages on the watch-argument may be here adduced. The Dutchman finds the watch 'in the middle of a sandy down, a desert, or solitary place;' the Englishman on 'a heath;' and thus they describe it:

Nieuwentyt. So many different wheels, nicely adapted by their teeth to each other.

Paley. A series of wheels, the teeth of which catch in and apply to each other.

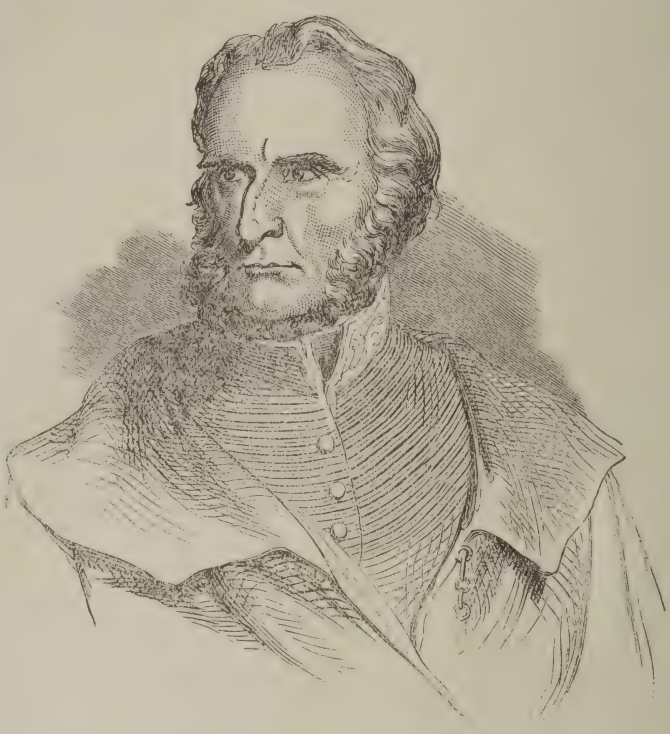
Nieuwentyt. Those wheels are made of brass, in order to keep them from rust; the spring is steel, no other metal being so proper for that purpose.

Paley. The wheels are made of brass, in order to keep them from rust; the spring of steel, no other metal being so elastic.

Nieuwentyt. Over the hand there is placed a clear glass, in the place of which if there were any other than a transparent substance, he must be at the pains of opening it every time to look upon the hand.

Paley. Over the face of the watch there is placed a glass, a material employed in no other part of the work, but in the room of which if there had been any other than a transparent substance, the hour could not have been seen without opening the case.

The preceding quotations are quite sufficient to prove the identity of the two works. Paley, in putting forth the *Natural Theology* as his own, may have been guided by his favourite doctrine of expediency; but if he did not succumb to the temptation of wilful fraud, he must have had very confused ideas on the all-important subject of *meum* and *tuum*. And no one can have any hesitation in naming Bernard Nieuwentyt the author of Paley's *Natural Theology*.



In conclusion, it may be added that, though everybody knows the meaning of the words plagiarist and plagiarism, yet few persons are acquainted with their derivation. Among the more depraved classes in ancient Rome, there existed a nefarious custom of stealing children and selling them as slaves. According to law, the child-stealers, when detected, were liable to the penalty of being severely flogged; and as the Latin word *plaga* signifies a stripe or lash, the ancient kidnappers were, in Cicero's time, termed *plagiari*—that is to say, deserving of, or liable to, stripes; and thus both the crime and criminals received their names from the punishment inflicted.

SIR CHARLES JAMES NAPIER.

When one recalls the character and expressions of this person and his brother William, author of *The History of the Peninsular War*, he cannot but feel a curiosity to learn whence was derived ability so vivid and blood so hot. They were two of the numerous sons of the Hon. George Napier, 'comptroller of accounts in Ireland,' a descendant of the celebrated inventor of the logarithms, but more immediately of Sir William Scott of Thirlstain, a scholar and poet of the reign of Queen Anne. Their mother was the Lady Sarah Lennox, who has been noticed in this work (under February 14) as a great-grand-daughter of Charles II., and the object of a boyish flame of George III. The attachment of Charles Napier to his mother was deep and lasting, as his many letters to her attest; she lived to see him advance to middle life, and one envies the pride which a woman must have had in such a son.

In childhood, the future conqueror of Scinde was sickly, and of a demure and thoughtful turn, but he early displayed an ardent enthusiasm for a military life. When only ten years of age, he rejoiced to find he was short-sighted, because a portrait of Frederick the Great, which hung up in his father's room, had strange eyes, and he had heard Plutarch's statement mentioned, that Philip, Sertorius, and Hannibal had each only one eye, and that Alexander's eyes were of different colours. The young aspirant for military fame even wished to lose one of his own eyes, as the token of a great general; a species of philosophy which recalls to mind the promising youth, depicted by Swift, who had all the *defects* characterising the great heroes of antiquity. Though naturally of a very sensitive temperament, he overcame all his tendencies to timidity by his wonderful force of will, and became almost case-hardened both to fear and pain. Throughout life, from boyhood to old age, he was constantly meeting with accidents, which, however, had no effect in diminishing his passion for perilous adventures. On one occasion, when a mere boy, he struck his leg in leaping against a bank of stones, so as to inflict a frightful wound, which, however, he bore with such stoical calmness as to excite the admiration of many rough and stern natures. Another time, at the age of seventeen, he broke his right leg leaping over a ditch when shooting, and by making a further scramble after being thus disabled, to get hold of his gun, produced such a laceration of the flesh, and extravasation of blood, that it was feared by the surgeons that amputation would be necessary. This was terrible news to the youth, as he rather piqued himself on a pair of good legs, and he resolved, according to his own account, to commit

suicide rather than survive such a mutilation. The servant was sent out by him for a bottle of laudanum, which he hid under his pillow; but in the meantime a change for the better took place in the condition of his limb, and the future hero was saved to his country. But the pains of this misfortune were not yet over; the leg was set crooked, and it became necessary to bend it straight by bandages, an operation which fortunately succeeded, and left the limb, to use his own words, 'as straight a one, I flatter myself, as ever bore up the body of a gentleman, or kicked a blackguard.' His narration of this adventure, written many years afterwards, affords a striking specimen of the wonderful vigour of his character, and we have only to regret that our space does not allow us to transcribe it at full length.

SIR CHARLES JAMES NAPIER.

A curious incident connected with his boyish days, which the ancients would have regarded as a presage of his future greatness, ought not to be omitted. Having been out angling one day, he had caught a fish, and was examining his prize, when a huge eagle flopped down upon him, and carried off the prey out of his hands. Far, however, from being frightened, he continued his sport, and on catching another fish, held it up to the royal bird, who was seated on an adjoining tree, and invited him to try his luck again.

In the days of which we write, mere boys were often gazetted to commissions in the army; an abuse in connection with which many of our readers will remember the story of the nursery-maid announcing to the inquiring mamma, who had been disturbed one morning by an uproar overhead, 'that it was only the major greeting for his porridge.' In 1794, when only twelve years old, young Napier obtained a commission in the 33d, or Duke of Wellington's Regiment, but was afterwards successively transferred to the 89th and 4th Regiments. After this he attended a school at Celbridge, a few miles from Dublin, and made himself conspicuous there by raising, among the boys, a corps of volunteers. In 1799, he first entered really on the duties of his profession by becoming aide-de-camp to Sir James Duff, a staff situation, which he afterwards resigned to his brother George, to enter as a lieutenant the 95th or Rifle Corps. After the peace of Amiens he made further changes, and in 1806 entered the 50th Regiment as major, a capacity in which he was present at the battle of Corunna, of his share in which he subsequently penned a most graphic and interesting account. He was here severely wounded in different parts of the body; and at last, after enduring an amount of pain and exposure which would have terminated the existence of any other man, was taken prisoner by the French, and detained for three months in captivity. His liberation was owing to the generosity of Marshal Ney, who, on hearing that he had an old mother, widowed and blind, magnanimously ordered that he should be released, and thereby exposed himself to the serious displeasure of Bonaparte.

Rejoining, after a while, his regiment in the Peninsula, Charles Napier received a dreadful wound at the battle of Busaco, by which his upper jaw-bone was shattered to pieces, causing unspeakable agony, both at the time of extraction of the bullet, and for many months afterwards. The gaiety, however, and elasticity of spirit which he manifested on no occasion more conspicuously than during pain and suffering, are most whimsically given utterance to in a letter to a friend at home, in which he says that he offered a piece of his jaw-bone, which came away with the bullet, to a monk for a relic; telling him, at the same time, that it was a piece of St Paul's wisdom-tooth, which he had received from the Virgin Mary in a dream! The holy man, he adds, would have carried it off to his convent, but on being demanded a price for it, said he never gave money for relics, upon which Napier returned it to his pocket In another letter he compares himself, with six wounds in two years, to General Kellarman, who had as many wounds as he was years old—thirty-two. On recovering to a certain extent from his Busaco wound, he again took the field, was present at the battle of Fuentes d'Onoro and the second siege of Badajos; and in 1811 was promoted to a lieutenant-colonelcy in a

colonial corps, and sent out to Bermuda. Towards the end of 1814 he returned to England, was placed on half-pay, and with the view of studying the theory of his profession, entered, with his brother William, the Military College at Farnham, where he remained for two years. A period of comparative inaction followed, but in 1822 he received the appointment of military governor of Cephalonia—a situation in which he was more successful in gaining the affections of the inhabitants than pleasing the authorities at home, and his vocation consequently came to an end in 1830.

The most important epoch in Sir Charles Napier's life was yet to come, and in 1842, at the age of sixty, he was appointed as major-general to the command of the Indian army within the Bombay presidency. Here Lord Ellenborough's policy led Napier to Scinde, for the purpose of quelling the Ameers, who had made various hostile demonstrations against the British government after the termination of the Afghan war. His campaign against these chieftains resulted, as is well known, after the victories of Meanee and Hyderabad, in the complete subjugation of the province of Scinde, and its annexation to our eastern dominions. Appointed its governor by Lord Ellenborough, his administration was not such as pleased the directors of the East India Company, and he accordingly returned home in disgust, but was sent out again by the acclamatory voice of the nation, in the spring of 1849, to reduce the Sikhs to submission. On arriving once more in India, he found that the object of his mission had already been accomplished by Lord Gough. He remained for a time as commander-in-chief; quarrelled with Lord Dalhousie, the governor-general; then throwing up his post, he returned home for the last time. Broken down with infirmities, the result of his former wounds in the Peninsular campaign, he expired about two years afterwards at his seat of Oaklands, near Portsmouth, in August 1853, at the age of seventy-one.

The letters of Sir Charles Napier, as published by his brother and biographer, Sir William Napier, the distinguished military historian, exhibit very decidedly the stamp of an original and vigorous mind, blended with a certain degree of eccentricity, which evinces itself no less in him than in his eminent cousin and namesake, Admiral Sir Charles Napier, of naval and parliamentary celebrity. A curious specimen of this quality is given in the following letter, addressed by him to a private soldier:

'Private James N——y,—I have your letter. You tell me you give satisfaction to your officers, which is just what you ought to do; and I am very glad to hear it, because of my regard for every one reared at Castletown, for I was reared there myself. However, as I and all belonging to me have left that part of the country for more than twenty years, I neither know who Mr *Tom Kelly* is, nor who your father is; but I would go far any day in the year to serve a Celbridge man; or any man from the barony of Salt, in which Celbridge stands: that is to say, if such a man behaves himself like a good soldier, and not a drunken vagabond, like James J——e, whom you knew very well, if you are a Castletown man. Now, Mr James N——y, as I am sure you are, and must be a remarkably sober man, as I am myself, or I should not have got on so well in the world as I have done: I say, as you are a remarkably sober man, I desire you to take this letter to your captain, and ask him to shew it to your lieutenant-colonel, and ask the lieutenant-colonel, with my best compliments, to have you in his memory; and if you are a remarkably sober man, mind that, James N——y, a remarkably sober man, like I am, and in all ways fit to be a lance-corporal, I will be obliged to him for promoting you now and hereafter. But if you are like James J——e, then I sincerely hope he will give you a double allowance of punishment, as you will deserve for taking up my time, which I am always ready to spare for a good soldier but not for a bad one. Now, if you behave well, this letter will give you a fair start in life; and if you do behave well, I hope soon to hear of your being a corporal. Mind what you are about, and believe me your well-wisher, Charles Napier, major-general and governor of Scinde, because I have always been a remarkably sober man.'

The sobriety to which the writer of the above refers in such whimsical terms was eminently characteristic of Sir Charles Napier through life. He abstained habitually from the use of wine or other fermented liquor, and was even a sparing consumer of animal food, restricting himself entirely, at times, to a vegetable diet. Though of an ardent enthusiastic temperament, impetuous in all his actions, and a most devoted champion of the fair sex, his moral deportment throughout was of the most unblemished description, even in the fiery and unbridled season of youth. His attachment to his mother has already been alluded to, and no finer exhibition of filial love and respect can be presented than the letters written home to her from the midst of war and bloodshed, by her gallant son. As an officer and gentleman, he was the soul of honour, and devoted above all things to promoting the welfare of the army, and the elevation of the military profession. And the uprightness and generous nature of the man were not more conspicuous than the energy, zeal, and courage of the soldier.

MURDER OF THE DE WITTS.

The murder of the De Witts, on the 10th of August 1672, was an atrocity which attracted much attention throughout Europe. John and Cornelius de Witt, born at Dort, in Holland, were the sons of a burgomaster of that town. John, in 1652, was made Grand Pensioner of Holland. At a time when the Seven United Provinces formed a republic, John de Witt was favourable to a lessening of the power which was possessed by the stadtholder or president, and which was gradually becoming too much assimilated to sovereign power to be palatable to true republicans. During the minority of William, Prince of Orange (afterwards king of England), the office of stadtholder was held in suspension, and the United Provinces were ruled by the states-general, in which John de Witt was all-powerful. It was virtually he who negotiated a peace with Cromwell in 1652; who afterwards carried on war with England; who sent the fleet which shamed the English by burning some of the royal ships in the Medway; who concluded the peace of Breda in 1667; and who formed a triple alliance with England and Sweden, to guarantee the possessions of Spain against the ambition of Louis XIV. De Witt's plans concerning foreign policy were cut short by a manœuvre on the part of France to rekindle animosity between

England and Holland. A French army suddenly entered the United Provinces in 1672, took Utrecht, and advanced to within a few miles of Amsterdam. It was just at this crisis that home-politics turned out unfavourably for De Witt. He had given offence previously by causing a treaty to be ratified directly by the states-general, instead of first referring it, according to the provision of the Federation, to the acceptance of the seven provinces separately—a question, translated into the language of another country and a later date, of 'States' rights' as against 'Federal rights.' He had also raised up a party against him by procuring the passing of an edict, abolishing for ever the office of stadtholder. When the French suddenly appeared at the gates of the republican capital, those who had before been discontented with De Witt accused him of neglecting the military defences of the country. William, the young Prince of Orange, was suddenly invested with the command of the land and sea forces. About this time, Cornelius de Witt, who had filled several important civil and military offices, was accused of plotting against the life of William of Orange; he was thrown into prison, tortured, and sentenced to banishment. The charge appears to have been wholly unfounded, and to have originated in party malice. John de Witt, whose life had already been attempted by assassins, resigned his office, and went to the Hague in his carriage to receive his brother as he came out of prison. A popular tumult ensued, during which a furious mob forced their way into the prison, and murdered both the brothers with circumstances of peculiar ferocity. John de Witt, by far the more important man of the two, appears to have possessed all the characteristics of a patriotic, pure, and noble nature. The times in which he lived were too precarious and exciting to allow him to avoid making enemies, or to enable him, under all difficulties, to see what was best for his country; but posterity has done him justice, as one of the great men of the seventeenth century.

FOUNDING OF GREENWICH OBSERVATORY.

On the 10th of August 1675, a commencement was made of that structure which has done more for astronomy, perhaps, than any other building in the world—Greenwich Observatory. It was one of the few good deeds that marked the public career of Charles II. In about a year the building was completed; and then the king made Flamsteed his astronomer-royal, or 'astronomical observator,'

GREENWICH OBSERVATORY.

with a salary of £100 a year. The duties of Flamsteed were thus defined—'forthwith to apply himself, with the most exact care and diligence, to the rectifying the table of the motions of the heavens, and the places of the fixed stars, so as to find out the so much-desired longitude of places for the perfecting the art of navigation.' It will thus be seen that the object in view was a directly practical one, and did not contemplate any study of this noble science for its own sake. How the sphere of operations extended during the periods of service of the successive astronomers-royal—Flamsteed, Halley, Bradley, Bliss, Maskelyne, Pond, and Airy—it is the province of the historians of astronomy to tell. Flamsteed laboriously collected a catalogue of nearly three thousand stars; Halley directed his attention chiefly to observations of the moon; Bradley carried the methods of minute measurements of the heavenly bodies to a degree of perfection never before equalled; Bliss confined his attention chiefly to tabulating the relative positions of sun, moon, and planets; Maskelyne

was the first to measure such minute portions of time as tenths of a second, in the passage of stars across the meridian; Pond was enabled to apply the wonderful powers of Troughton's instruments to the starry heavens; while Airy's name is associated with the very highest class of observations and registration in every department of astronomy.

Considered as a building, Greenwich Observatory has undergone frequent changes, to adapt it to the reception of instruments either new in form, large in size, or specially delicate in action. Electricity has introduced a whole series of instruments entirely unknown to the early astronomers; akin in principle to the electric telegraph, and enabling the observers to record their observations in a truly wonderful way. Again, photography is enabling astronomers to take maps of the moon and other heavenly bodies with a degree of accuracy which no pencil could equal. Meteorology, a comparatively new science, has been placed under the care of the astronomer-royal in recent years—so far as concerns the use of an exquisite series of instruments for recording (and most of them *self*-recording) the various phenomena of the weather. The large ball which surmounts one part of Greenwich Observatory falls at precisely one o'clock (mean solar time) every day, and thus serves as a signal or monitor whereby the captains of ships about to depart from the Thames can regulate the chronometers, on which the calculation of their longitudes, during their distant voyages, so much depends. The fall of this ball, too, by a series of truly wonderful electrical arrangements, causes the instantaneous fall of similar balls in London, at Deal, and elsewhere, so that Greenwich time can be known with extreme accuracy over a large portion of the kingdom. During every clear night, experienced observers are watching the stars, planets, moon, &c. with telescopes of wonderful power and accuracy; and during the day, a staff of computers are calculating and tabulating the results thus obtained, to be published annually at the expense of the nation. The internal organisation of the observatory is of the most perfect kind; but it can be seen by very few persons, except those officially employed, owing to the necessity of keeping the observers and computers as free as possible from interruption.

John Flamsteed, who presided over the founding of the Greenwich Observatory, and from whom it was popularly called Flamsteed House, was of humble origin, and weakly and unhealthy in childhood (born 19th August 1646; died December 31, 1719). His father, a maltster at Derby, set him to carry out malt with the brewing-pan, which he found a very tiresome way of effecting the object; so he set to, and framed a wheel-barrow to carry the malt. The father then gave him a larger quantity to carry, and young Flamsteed felt the disappointment so great, that he never after could bear the thoughts of a wheel-barrow. Many years after, when he reigned as the astronomer-royal in the Greenwich Observatory, he chanced once more to come into unpleasant relations with a wheel-barrow. Having one day spent some time in the Ship Tavern with two gentlemen-artists, of his acquaintance, he was taking a rather ceremonious leave of them at the door, when, stepping backwards, he plumped into a wheel-barrow. The vehicle immediately moved off down-hill with the philosopher in it; nor did it stop till it had reached the bottom, much to the amusement of the by-standers, but not less to the discomposure of the astronomer-royal.*

'THE TENTH OF AUGUST.'

The 10th of August 1792 is memorable in modern European history, as the day which saw the abolition of the ancient monarchy of France in the person of the unfortunate Louis XVI. The measures entered upon by prince and people for constitutionalising this monarchy had been confounded by a mutual distrust which was almost inevitable. When the leading reformers, and the populace which gave them their strength, found at length that Austria and Prussia were to break in upon them with a reaction, they grew desperate; and the position of the king became seriously dangerous. In our day, such attempts at intervention are discouraged, for we know how apt they are to produce fatal effects. In 1792, there was no such wisdom in the world.

It was at the end of July that the celebrated manifesto announcing the plans of Austria and Prussia reached Paris. The people broke out in fury at the idea of such insulting menaces. Louis himself was in dismay at this manifesto, for it went far beyond anything that he had himself wished or expected. But his people would not believe him. An indescribable madness seized the nation; and 'Death to the aristocrats!' was everywhere the cry. 'Whatever,' says Carlyle, 'is cruel in the panic-fury of twenty-five million men, whatsoever is great in the simultaneous death-defiance of twenty-five million men, stand here in abrupt contrast, near by one another.' During the night between the 9th and 10th of August, the tocsin sounded all over Paris, and the rabble were invited to scenes of violence by the more unscrupulous leaders—against the wish of many who would even have gone so far as to dethrone the king. Danton gave out the fearful words: 'We must strike, or be stricken!' Nothing more was needed. The danger to the royal family being now imminent, numbers of loyal men hastened to the Tuileries with an offer of their swords and lives. There were also at the palace several hundred Swiss Guards, national guards, and gens d'armes. The commandant, Mandat, placed detachments to guard the approaches to the palace as best he could. When, at six o'clock in the morning, the insurgent mob, armed with cannon as well as other weapons, came near the Tuileries, the unfortunate Louis found that none of his troops were trustworthy save the Swiss Guards: the rest betrayed their trust at the critical moment. A day of horror then commenced. Mandat, the commander of the national guard, going to consult the authorities at the Hôtel de Ville, was knocked down with clubs, and butchered by the mob. They then put to death four persons in the Champs Elysées, whose only fault was that they wore rapiers, and looked like royalists; the heads of these hapless persons, stuck on pikes, were paraded about. The lives of the unhappy royal family were placed in such peril, that they were compelled to take refuge within the walls of the Legislative Assembly, hostile as that assembly was to the king. Louis, his queen, and their children walked

* *Reliquiæ Hearnianæ*, i. 354.

the short distance from the palace-doors to the assembly-doors; but even in this short distance the king had to bear the jeers and hisses of the populace; while the queen, who was an object of intense national hatred, was met with a torrent of loathsome epithets. All through the remainder of that distressing day, the royal family remained ignobly cooped up in a reporter's box at the Legislative Assembly, where, without being seen, they had to listen to speeches and resolutions levelled against kingly power in all its forms; for the assembly, though at this moment protecting the king, was on the eve of dethroning him. Meanwhile blood was flowing at the Tuileries. None of the troops remained faithful to the royal cause except the Swiss Guards, who defended the palace with undaunted resolution, and laid more than a thousand of the insurgents in the dust. A young man, destined to world-wide notoriety, Napoleon Bonaparte, who was in the crowd, declared that the Swiss Guards would have gained the day had they been well commanded. But a fatal indecision ruined all. The poor king was persuaded to send an order to them, commanding them to desist from firing upon 'his faithful people,' as the insurgents were called. The end soon arrived. The rabble forced an entrance into the palace, and even dragged a cannon upstairs to the state-rooms. The Swiss Guards were butchered almost to a man; many of the courtiers and servants were killed while attempting to escape by the windows; some were killed and mutilated after they had leaped from the windows to the ground; while others were slaughtered in the apartments. The Parisians had not yet tasted so much blood as to be rabid against the lives of tender women. Madame Campan, the Princess de Tarente, and a few other ladies were saved from slaughter by a band of men whose hands were still gory, and who said: 'Respite to the women! do not dishonour the nation!' They were escorted safely to a private house; but they had to walk over several dead bodies, to see murder going on around them, to find their dresses trailing in pools of blood, and to see a band of hideous women carrying the head of Mandat on a pike!

This terrible day inaugurated the French Revolution. The king and queen were never again free.

THE MODERN SAMSON.

Thomas Topham, born in London about 1710, and brought up to the trade of a carpenter, though by no means remarkable in size or outward appearance, was endowed by nature with extraordinary muscular powers, and for several years exhibited wonderful feats of strength in London and the provinces. The most authentic account of his performances was written by the celebrated William Hutton, who witnessed them at Derby. We learned, says Mr Hutton, that Thomas Topham, a man who kept a public-house at Islington, performed surprising feats of strength, such as breaking a broomstick of the largest size by striking it against his bare arm, lifting three hogsheads of water, heaving his horse over a turnpike-gate, carrying the beam of a house, as a soldier does his firelock, and others of a similar description. However belief might at first be staggered, all doubt was removed when this second Samson came to Derby, as a performer in public.

The regular performances of this wonderful person, in whom was united the strength of twelve ordinary men, were such as the following: Rolling up a pewter dish, seven pounds in weight, as a man would roll up a sheet of paper; holding a pewter-quart at arm's length, and squeezing the sides together like an egg-shell; lifting two hundred weights on his little-finger, and moving them gently over his head. The bodies he touched seemed to have lost their quality of gravitation. He broke a rope that could sustain twenty hundredweight. He lifted an oaken-table, six feet in length, with his teeth, though half a hundredweight was hung to its opposite extremity. Weakness and feeling seemed to have left him altogether. He smashed a cocoa-nut by striking it against his own ear; and he struck a round bar of iron, one inch in diameter, against his naked arm, and at one blow bent it into a semicircle.

Though of a pacific temper, says Mr Hutton, and with the appearance of a gentleman, yet he was liable to the insults of the rude. The ostler at the Virgin's Inn, where he resided, having given him some cause of displeasure, he took one of the kitchen-spits from the mantel-piece, and bent it round the ostler's neck like a handkerchief; where it excited the laughter of the company, till he condescended to untie it.

This remarkable man's fortitude of mind was by no means equal to his strength of body. Like his ancient prototype, he was not exempt from the wiles of a Delilah, which brought him to a miserable and untimely end (August 10, 1749).

SUPERSTITIONS AND SAYINGS REGARDING THE MOON AND THE WEATHER.

In connection with Greenwich Observatory, it may not be improper to advert to one of the false notions which that institution has helped to dispel—namely, the supposed effect of the moon in determining the weather. It is a very prevalent belief, that the general condition of the atmosphere throughout the world during any lunation depends on whether the moon changed before or after midnight. Almanacs sometimes contain a scientific-looking table constructed on this principle, the absurdity of which appears, if on no other grounds, from the consideration that what is calculated for the meridian of Greenwich may not be correct elsewhere, for the moon may even change before twelve o'clock at Westminster, and after it at St Paul's. If I recollect rightly, this was actually the case with regard to the Paschal full-moon a few years ago, the consequence of which (unless Greenwich-time had been silently assumed to be correct) would have been that Easter-day must have fallen at different times in London and Westminster. There are other notions about the moon which are of a still more superstitious nature.

In this part of the world (Suffolk), it is considered unlucky to kill a pig in the wane of the moon; if it is done, the pork will waste in boiling. I have known the shrinking of bacon in the pot attributed to the fact of the pig having been killed in the moon's decrease; and I have also known the death of poor piggy delayed, or hastened, so as to happen during its increase.

The worship of the moon (a part of, perhaps, the oldest of false religions) has not entirely died out in this nineteenth century of the Christian era. Many persons will courtesy to the new moon on its first appearance, and turn the money in their pockets 'for luck.' Last winter, I had a set of rough country lads in a night-school; they happened to catch sight of the new moon through the window, and all (I think) that had any money in their pockets turned it 'for luck.' As may be supposed, it was done in a joking sort of way, but still it *was* done. The boys could not agree what was the right form of words to use

on the occasion, but it seemed to be understood that there was a proper formula for it.

Another superstition was acknowledged by them at the same time—namely, that it was unlucky to see the new moon for the first time *through glass*. This must, of course, be comparatively modern. I do not know what is the origin of it, nor can I tell that of the saying:

'A Saturday moon,
If it comes once in seven years,
Comes once too soon.'

The application of this is, that if the new moon happens on a Saturday, the weather will be bad for the ensuing month. The average of the last seven years gives exactly two Saturday moons per annum, which is rather above the general average due from the facts of there being seven days to the week, and twenty-nine and a half to the lunation. This year, however (1863), there is but one Saturday moon, which brings the average nearer to the truth. I mention this to illustrate the utter want of observation which can reckon a septennial recurrence of a Saturday moon as something abnormal. Yet many sayings about the weather are, no doubt, founded upon observation; such appears to be the following:

'Rain before seven,
Fine before eleven.'

At anyrate, I have hardly ever known it fail in this district; but it must be borne in mind it is only about ten miles from Thetford, where the annual rainfall is no more than nineteen inches, the lowest registered at any place in the kingdom. Another saying is, that 'There never is a Saturday without sunshine.' This is almost always true, but, as might be supposed from the low annual rainfall, the same might be said of any day in the week with an equal amount of truth.

The character of St Swithin's Day is much regarded here as a prognostication of fine or wet weather; but I am happy to think that the saint failed to keep his promise this year, and though he rained on his own day, did not feel himself obliged to go on with it for the regulation forty days.

Another weather-guide connected with the moon is, that to see 'the old moon in the arms of the new one' is reckoned a sign of fine weather; and so is the turning up of the horns of the new moon. In this position it is supposed to retain the water, which is imagined to be in it, and which would run out if the horns were turned down.

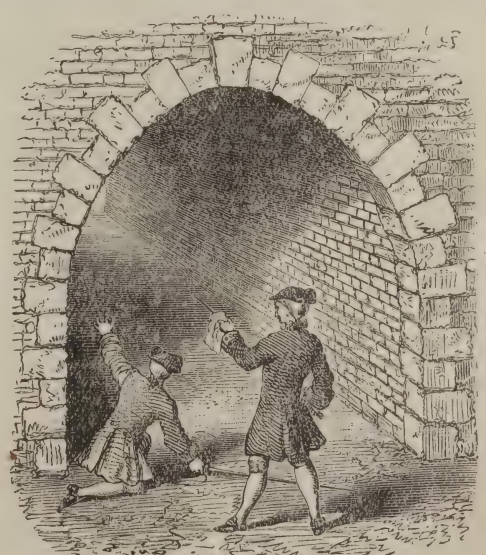
The streaks of light often seen when the sun shines through broken clouds are believed to be pipes reaching into the sea, and the water is supposed to be drawn up through them into the clouds, ready to be discharged in the shape of rain. With this may be compared Virgil's notion, 'Et bibit ingens Arcus' (*Georg.* I. 380); but it is more interesting, perhaps, as an instance of the truth sometimes contained in popular superstitions; for, though the streaks of sunlight are no actual pipes, yet they are visible signs of the sun's action, which, by evaporating the waters, provides a store of vapour to be converted into rain.

Suffolk. C. W. J.

AUGUST 11.

St Tiburtius, martyr, and St Chromatius, confessor, 286. St Susanna, virgin and martyr, about 295. St Gery or Gaugericus, confessor, 619. St Equitius, abbot, about 540.

Born.—Thomas Betterton, celebrated actor, 1635, *Westminster;* Dr Richard Mead, distinguished physician, 1673, *Stepney, London;* Joseph Nollekens, sculptor, 1737, *London;* Jean Victor Moreau, French republican general, 1763, *Morlaix, in Brittany;* Viscount Rowland Hill, Peninsular general, 1772, *Prees, Shropshire.*



Died.—General Sir Samuel Auchmuty, captor of Monte Video, 1822; James Wilson, eminent financial statesman, founder of the *Economist* newspaper, 1860, *Calcutta.*

DR MEAD—ROUGH DOCTORS.

Although a brief general memoir of Dr Mead has been presented under the day of his death, February 16, it may be allowable to open so interesting a subject with a few more particulars.

Mead was a stanch Whig of the old school, and was fortunate enough to render his party a most important service, in a very extraordinary manner. When called in to see Queen Anne on her deathbed, he boldly asserted that she could not live an hour. Though this proved not to be literally true—for the queen lived to the next day—it was substantially so. Intentionally on Mead's part or not, it roused the energies of the Whigs, who made immediate preparations for securing the Hanoverian succession; for which important event, according to Miss Strickland, we are mainly indebted to the physician's prognosis.

The immense difference between the habits and feelings of the present and past century, seems like a wide ocean, dividing two continents, inhabited by distinct races. We can, with a little force to our feelings, imagine a courtly physician, like Mead, visiting his patients with a sword by his side; but we are shocked to hear of two medical men, of high standing, drawing their swords upon each other, and fighting like a couple of bravos, in the open street. Yet such a duello actually took place between Mead and Woodward. The latter, making a false step, fell, and Mead called

DUEL SCENE AT GRESHAM COLLEGE.

upon him to submit, and beg his life. 'Not till I am your patient,' satirically replied the other. He did next moment yield by laying his sword at Mead's feet. Vertue's engraving of Gresham College, in Ward's *Lives of the Professors*, comme-

morates this duel, Woodward being represented on his knees, with his sword dropped, and Mead standing over him, with his sword raised. The admission of these figures into the engraving is a significant sign of the period. Ward, the author of the work, was a protégé of Mead, and probably aimed at flattering him in this manner. It may be noted that, many years after the encounter of Mead and Woodward, two London physicians in high practice had a duel—bloodless—in Hyde Park, in consequence of merely some slighting remark by the one regarding the other.

The gulf between the present and the past century is no greater than that between the latter and its predecessor. A celebrated Dorsetshire physician and master of arts, named Grey, who was buried at Swyre in 1612, is described as 'a little desperate doctor, commonly wearing a pistol about his neck.' Mr Roberts in his *Social History of the People*, informs us that, one day, a sheriff's officer, disguised as a pedler, served Grey with a writ. The doctor caught the fellow by both ends of his collar, and, drawing out a great run-dagger, broke his head in three places; so the man slipped his head through his cloak, and ran away, leaving the garment in the doctor's hands. The officer then complained to a magistrate, that Grey had stolen his cloak, which the doctor, being sent for, denied, and tearing the cloak in many pieces, told the fellow to look for his lousy rags in the kennel. Most of the gentlemen in the county who were young, strong, and convivially inclined, were adopted by Grey as his sons. When the sheriff was attending the assizes with sixty men, this desperate doctor came with twenty of his 'sons,' and drank before the sheriff and his men, daring any one to touch them. And then Grey, in bravado, blew his horn (a curious appendage for a physician), and rode away with his friends.

A very rough-living doctor of the seventeenth century was John Lambe, confidential physician to Villiers, Duke of Buckingham. This man had been indicted and found guilty, at Worcester assizes, for being 'a sorcerer and juggling person, absolutely given over to lewd, wicked, and diabolical courses, an invocator and adorer of impious and wicked spirits.' At this assize the jail-fever broke out with fatal effect upon many persons, and the sagacious authorities, suspecting that Lambe, by his magical arts, had caused the pestilence, were afraid to carry his sentence into execution, lest he might, in a spirit of revenge, make matters worse. They accordingly sent him to London, where he was confined for some time in the King's Bench Prison. He there practised as a doctor, with great success, till, having committed an outrage on a young woman, he was tried at the Old Bailey, but saved from punishment by the powerful influence of his patron and protector, Buckingham. The popular voice accused Lambe of several grave offences, particularly against women; and on the very same day that the duke was denounced in the House of Commons as the cause of England's calamities, his dependent and doctor was murdered by an infuriated mob in the city of London. The story of his death, from a rare contemporary pamphlet, is worth transcribing, as a sample of the lawless conduct of the people and insecure state of the streets of London at the period.

'On Friday, he (Dr Lambe) went to see a play at the Fortune,* where the boys of the town, and other unruly people, having observed him present, after the play was ended flocked about him, and (after the manner of the common people, who follow a hubbub when it is once set on foot) began in a confused manner to assault and offer him violence. He, in affright, made towards the city as fast as he could, and hired a company of sailors that were there to be his guard. But so great was the fury of the people, who pelted him with stones and other things that came next to hand, that the sailors had much to do to bring him in safety as far as Moorgate. The rage of the people about that place increased so much, that the sailors, for their own sake, were forced to leave the protection of him; and then the multitude pursued him through Coleman Street to the Old Jewry, no house being able or daring to give him protection, though he attempted many. Four constables were there raised to appease the tumult; who, all too late for his safety, brought him to the Counter in the Poultry, where he was bestowed upon command of the lord mayor. For, before he was brought thither, the people had had him down, and with stones and cudgels, and other weapons, had so beaten him that his skull was broken, and all parts of his body bruised and wounded, whereupon, though surgeons in vain were sent for, he never spoke a word, but lay languishing till the next morning, and then died.'

On the day of Lambe's death, placards containing the following words were displayed on the walls of London: 'Who rules the kingdom?—The king. Who rules the king?—The duke. Who rules the duke?—The devil. Let the duke look to it, or he will be served as his doctor was served.' A few weeks afterwards, the duke was assassinated by Felton.

JAMES WILSON.

As a rule, the aristocratic-democratic government of Britain does not favour the rise to high official position of men unendowed with fortune. Clever but poor men, who make their way into prominent political situations, are too much under necessities perilous to their honesty, or at least to their independence, to allow of their usually leading that straight course which alone gives success in public life in England. The men of the upper and wealthy circles, who possess the requisite ability and industry, have an advantage over them against which it seems almost impossible for them to make head. The instances, therefore, of high office attained by such men, and administered worthily, are very few. Among the exceptions of our own times, there has been none more remarkable than that presented by the career of the Right Hon. James Wilson, who was from 1853 to 1858 Financial Secretary of the Treasury, and died in 1860 in the position of Financial Member of the Council in India. Mr Wilson—one of the sons of a Quaker manufacturer at Hawick, Roxburghshire, and born there in 1805—commenced life as a hat-manufacturer, first at his native town, and subsequently in London; was prosperous through close application and business talents; gave his mind at leisure time to political economy; in time set up a weekly

* The Fortune Theatre was near the present Whitecross Street.

business paper, *The Economist;* prospered in that too; and so went on, step by step, till in 1847 he obtained a seat in the House of Commons. Wilson was a serious, considerate, earnest man. Whatever he set his hand to, he did with all his might; every point he gained, he always turned to the best advantage for his further progress. It would be a great mistake, however, to suppose that he succeeded purely by industry and application. He was a man of penetrating and original mind. Coming forward in public life at the great crisis when protection and hostile tariffs were to yield to free trade, he was able to give his writings on these subjects a character which did not belong to those of any other person. He always held to the practical points: 'What did business-men do in such and such circumstances?' 'Why did they do it?' and 'Why it was right that they should do it?' His mind, at the same time, could grasp great principles; when Mr Cobden and others, for example, were representing the struggle with protection as a conflict of class with class, and thus making landlords hold their ground with the most desperate tenacity, Mr Wilson saw and avowed that it was a system disadvantageous for all classes, since all classes, in reality, have but one interest. He thus added immense force to the cause of free trade; and it is unnecessary to say, that the soundness of his views has been fully proved by the event.

Mr Wilson might be considered, in 1859, as in the fair way for erelong taking an honoured place in the cabinet. It was a most extraordinary fact in our administrative system; but Mr Wilson's success in his own affairs had overcome all those obstacles to which we have adverted. He would have been hailed among the immediate advisers of his sovereign, as one who had never sacrificed one point of probity or one jot of consistency on the shrine of ambition. At this juncture, a necessity arose for a finance minister for India, and as the difficulties were great, a man of Mr Wilson's talents was thought necessary for the position. He was induced to undertake this duty, and for some time he pursued at Calcutta the same career of assiduous application which had given him distinction at home. His health, however gave way, and this remarkable man sank at the comparatively early age of fifty-six, when just about to complete his plans for the regeneration of the Indian revenue.

There are men who will be heard with one breath complaining of the aristocratic character of our institutions, and with another sneering at the rise of a statesman like James Wilson. It is not for us to reconcile their inconsistencies. It may be remarked, however, that an insinuation often made by such persons, to the effect that he had creditors who remained unsatisfied at the time of his taking office, was untrue. On an embarrassment arising in his firm through losses in indigo speculations, he from his own personal means discharged one-half of the obligations, and the plant of the firm was accepted in full satisfaction for the remainder. On this turning out less favourably than was expected, Mr Wilson devoted a part of the means subsequently acquired to make up for the deficiency; so that, at the time in question, he was entirely free of the slightest imputation of indebtedness. His conduct on this occasion was, indeed, such as to do honour to the place he gained, rather than to detract from it.

KITTY CANNON.

On the 11th of August 1755, died John Lord Dalmeny, eldest son of James, second Earl of Rosebery, in the thirty-first year of his age. In the life of this young nobleman there was a romantic circumstance which has been handed down to us by an English provincial newspaper, and appears to be authentic. In London, some years before his death, he casually encountered a lady who made a deep impression on him, and whom he induced to marry him, and accompany him on a tour of the continent. This union was without the knowledge of relations on either side, but it apparently fulfilled all the essential conditions of matrimony, and the pair lived in great harmony and happiness till the lady was overtaken by a mortal illness. When assured that she was dying, she asked for pen and paper, and wrote the words: 'I am the wife of the Rev. Mr Gough, rector of Thorpe, in Essex; my maiden name was C. Cannon, and my last request is, to be buried at Thorpe.' How she had happened to desert her husband does not appear; but Lord Dalmeny, while full of grief for her loss, protested that he was utterly ignorant of this previous marriage. In compliance with her last wishes, he embalmed her body, and brought it in a chest to England. Under the feigned name of Williams, he landed at Colchester, where the chest was opened by the custom-house officers under suspicion of its containing smuggled goods. The young nobleman manifested the greatest grief on the occasion, and seemed distracted under the further and darker suspicions which now arose. The body being placed uncovered in the church, he took his place beside it, absorbed in profound sorrow; the scene reminded a bystander of Romeo and Juliet. At length he gave full explanation of the circumstances, and Mr Gough was sent for to come and identify his wife. The first meeting of the indignant husband with the sorrow-struck young man who had unwittingly injured him, was very moving to all who beheld it. Of the two, the latter appeared the most solicitous to do honour to the deceased. He had a splendid coffin made for her, and attended her corpse to Thorpe, where Mr Gough met him, and the burial was performed with all due solemnity. Lord Dalmeny immediately after departed for London, apparently inconsolable for his loss. 'Kitty Cannon,' says the local narrator, 'is, I believe, the first woman in England that had two husbands to attend her to the grave together.' In the Peerages, Lord Dalmeny is said to have died unmarried.

AUGUST 12.

St Euplius, martyr, 304. St Muredach, first bishop of Killala, in Ireland, 5th century. St Clare, virgin and abbess, 1253.

Born.—John George Gmelin, naturalist and Siberian traveller, 1709, *Tubingen;* Rev. Rowland Hill, divine, 1745 (O. S.); Thomas Bewick, celebrated wood engraver, 1753, *Cherry Burn, Northumberland;* George IV., king of England, 1762; Robert Southey, poet, 1774, *Bristol;* Francis Horner, politician, 1778, *Edinburgh.*

Died.—Pope Gregory IX., 1241; Sir Thomas Smith, distinguished scholar, and author of *The English Commonwealth,* 1577; Pope Innocent XI., 1689; Nahum

Tate, versifier of the Psalms, 1715, *Southwark;* William Sherard, founder of the botanical chair at Oxford, 1728, *Eltham;* Robert Stewart, Marquis of Londonderry (Lord Castlereagh), Tory statesman, died by his own hand at North Cray, Kent, 1822; George Stephenson, engineer, 1848; Dean Conybeare, geologist, 1857, *Itchinstoke, Hants.*

REV. ROWLAND HILL.

Society, at the present day, rarely witnesses the exhibition of striking and eccentric traits of character on the part of individuals. The figures in the great picture of the human family seldom stand prominently forth from the canvas; angularities and roughnesses are gradually being smoothed, and the tendency to a fixed and unvarying uniformity is continually becoming more and more manifest.

This observation applies with very decided emphasis to the ministrations of the pulpit and the deportment of clergymen. True, we have the vagaries of Mr Spurgeon, and one or two others of a similar class, though even these fall far short of the piquancy to which our ancestors were formerly accustomed under similar circumstances. The innumerable quaintnesses and witty sayings recorded of pulpit oratory in ancient times, the odd *contre-temps* and whimsical incidents narrated by the jest-books in connection with clerical functions and services, are now almost entirely reminiscences of the past. And doubtless it is well that it should be so. The penny-postage, cheap newspapers, and railways, have been as efficacious in banishing them from the present generation, as they have been influential in the extinction of popular superstitions and observances in the remote parts of the kingdom.

One of the last of the old school of divines to which we have just referred was the Rev. Rowland Hill. The son of a Shropshire baronet, whose ancestors had held estates in the county from at least the days of Edward I., he presented to the close of his life, with all his peculiarities, the perfect model of the English gentleman—tall, vigorous, and energetic. Having received a good education at Eton and Cambridge, his eccentricities were prevented from degenerating into offensive displays of ignorance and bad taste; whilst his natural abilities and real kindliness of heart enabled him both to exercise the most extended and beneficial influence in his preaching, and gain the affections and esteem of those with whom he was brought in contact.

In his youthful days, the religious views of Wesley were just making their way amid opprobrium and ridicule to the extensive adoption which they afterwards attained. Their Arminianism, however, was too mild a nutriment for Hill, and he fastened with enthusiastic preference on the tenets of Whitefield, Berridge, and similar preachers of the more fiery sort. The religious convictions which had been impressed on him when still a boy at Eton, were renewed and strengthened during his sojourn at Cambridge, where his incessant activity in endeavouring to gain converts to Calvinism among the students, holding meetings for religious conversation and prayer, and occasionally preaching in the town and neighbourhood, drew down upon him severe rebukes from the college-authorities. He persisted, nevertheless, in his procedure; and having now satisfied himself, from the audiences which he attracted, that preaching was his vocation, he resolved to adopt it as his profession in life. Though retaining a strong attachment to the Church of England, he differed so much from her in many points of discipline and religious worship, that he was unable to bind himself by any pledge to refrain from deviating from her rules. Consequently, though he succeeded in being admitted to deacon's orders, he was refused episcopal ordination by one prelate after another, till at last he abandoned the attempt as hopeless. During the subsequent part of his life, he must therefore be regarded as a Dissenter; but, like Whitefield, he never promulgated any special form of orthodox doctrine, or attached himself to any particular sect. At first, he was entirely itinerary, preaching as opportunity offered; but, latterly, on the Surrey chapel being built for him in London, he assumed the functions of a settled charge, and he is chiefly known in connection with his ministrations in that place of worship.

The anecdotes recorded of Rowland Hill and his pulpit discourse are numerous and piquant. On one occasion, he was preaching for a public charity, when a note was handed up to him, inquiring if it would be right for a bankrupt to contribute. He noticed the matter in the course of his sermon, and pronounced decidedly that such a person could not do so in Christian honesty. 'But, my friends,' he added, 'I would advise you who are not insolvent, not to pass the plate this evening, as the people will be sure to say: "There goes the bankrupt!"' Another time, at the church of St John's, Wapping, he declared: 'I am come to preach to great sinners, notorious sinners, profane sinners—yea, to *Wapping* sinners.' And one day, on announcing from the pulpit the amount of a liberal collection which had been contributed by his hearers, he remarked: 'You have behaved so well on this occasion, that we mean to have another collection next Sunday. I have heard it said of a good cow, that the more you milk her the more she will give.' One wet day he observed a number of persons enter his chapel to take shelter from a heavy shower of rain, and remarked pithily, that many people were blamed for making religion a *cloak;* but he did not think those were much better who made it an *umbrella!* Petitions were frequently handed to him in the pulpit, requesting the prayers of the congregation for certain persons. A wag one day handed up, 'The prayers of the congregation are requested for the Reverend Rowland Hill, that he will not ride in his carriage on Sunday.' Not being aware of the peculiar nature of the request till he had read it too far to recede, he went on to the end, and then added: 'If the writer of this piece of folly and impertinence is at present in the congregation, and will come into the vestry after service, and allow me to put a saddle on his back, I shall be willing to ride home upon him instead of in my carriage.'

He was very kind and charitable to the poor, but had a great intolerance of dirt and slovenliness. On noticing anything of the kind, he would say: 'Here, mistress, is a trifle for you to buy some soap and a scrubbing-brush: there is plenty of water to be had for nothing. Good Mr Whitefield used to say: "Cleanliness is next to godliness."' In impressing upon his hearers the duty of owing

no man anything, he would remark: 'I never pay my debts, and for the best of all reasons, because I never have any debts to pay.' Speaking to tradesmen, he would say: 'You are sometimes more in the path of duty in looking into your ledgers, than into your Bibles. All things should be done decently and in order.' Ludicrous stories are told of people who, from hearing so much about him, imagined his influence must be paramount in every quarter. A sentimental-looking lady one morning made her *entrée* into his study in the most solemn manner. Advancing by measured steps towards the preacher, she began: 'Divine shepherd'——

''Pon my word, ma'am!'

'I hear you have great influence with the royal family.'

'Well, ma'am, and did you hear anything else?'

'Now, seriously, sir—my son has most wonderful poetic powers. Sir, his poetry is of a sublime order—noble, original, fine!'

Hill muttered to himself: 'Well, I wonder what will come next?' and his visitor continued:

'Yes, sir, pardon the liberty, and I therefore called to ask you to get him made *poet laureate!*'

'Ma'am, you might as well ask me to get him made archbishop of Canterbury!' Whereupon the colloquy terminated.

Another day, a foreigner was announced, who entered with: 'Meester Hill, I have heard you are a wonderful great, goot man—can do anyting.'

'Mercy on us! then I must be a wonderful man indeed.'

'Yes, sare, so you are a very wonderful man; so I call to ask you to *make my ambassador do his duty by me.*'

'Sir, I can assure you I have not the honour of knowing him.'

'Oh, sare, but he regard a letter from you.'

'Sir, I can have no possible influence with him, and cannot take the liberty of writing to him on a subject about which I know nothing.'

'But, sare, I will tell you.'

Then seeing no other way of getting rid of his visitor, he concluded by saying: 'Well, sir, you may give my compliments to the ambassador, and say that *I advise him to do his duty;* and that will do as well as writing.'

'Very goot, sare—goot-day.'

He was very severe in rebuking hypocrisy, and those persons who had disgraced their religious profession by some discreditable action. An individual in this predicament met him one morning as he was going out, and saluted him with: 'How do you do, Mr Hill, I am delighted to see you once more?'

'What! ar'n't you hanged yet?' was the reply.

An adherent of Antinomianism, who was rather given to the bottle, asked him one day: 'Now, do you think, Mr Hill, a glass of spirits will drive grace out of my heart?'

'No,' he replied, 'for there is none in it!'

A lady, who led rather a gay and worldly life, once remarked to him: 'Oh! I am afraid lest, after all, I should not be saved!'

'I am glad to hear you say so,' answered Hill, 'for I have been long afraid for you, I assure you.'

On one occasion he was addressing a number of candidates for the ministry, and said: 'I will tell you a story. A barber, having amassed a comfortable independence, retired to his native place, where he became a preacher in a small chapel. Another person from the same village being similarly fortunate, settled there also, and attended the ministry of the barber. Wanting a new wig, he said to his pastor: "*You* might as well make it for me," to which he assented. The wig was sent home, badly made, but charged at nearly double the usual price. The good man said nothing; but when anything particularly profitable escaped the lips of the preacher, he observed to himself: "Excellent—but, *oh! the wig.*" When the barber prayed with apparent unction, he also thought this should touch my heart, but, *oh! the wig.* Now, my dear young brethren, whenever you are placed, *remember the wig!*'

The anecdotes recorded above of this celebrated divine may be depended on for their authenticity; but it is otherwise with a host of other sayings ascribed to him. It is related that he used, in the pulpit, to make personal allusions to his wife, as an example of the transitoriness of beauty and the necessity of humility and self-depreciation. In lecturing on the vanities of dress, he is reported to have said: 'Ladies love fine caps; so does Mrs Hill. Yesterday, came home a five-guinea one; but she will never wear it, for I poked it into the fire, bandbox and all.' On one Sunday morning, the same veracious chroniclers represent him as apostrophising his wife, when entering chapel, with: 'Here comes my wife with a chest of drawers on her head! She went out to buy them, and spent all her money in that hoity-toity bonnet!'

These pleasant little stories, like, unfortunately, many other good things related of different people, are purely fictitious. The subject of them was amused with the generality of them, but expressed great indignation on learning the speeches ascribed to him in reference to Mrs Hill. 'It is an abominable untruth,' he would exclaim, 'derogatory to my character as a Christian and a gentleman—they would make me out a bear!'

In the course of his ministry, Rowland Hill paid three visits to Scotland, the last in 1824. On the first two occasions he delivered sermons to immense crowds in the Edinburgh Circus, and also on the Calton Hill, besides visiting Glasgow and Paisley. His style of preaching was rather a novelty in the north, where the smooth rounded periods of Blair and Robertson had, for many years, formed the models of pulpit eloquence. It was, moreover, made the subject of animadversion by the General Assembly of the Church, who issued a 'pastoral admonition' against countenancing such irregular and itinerant preachers as Rowland Hill and his coadjutors, the Haldanes. In connection with this subject, it is related of him that, on his being asked the reason why his carriage-horses bore such strange names (one of the quadrupeds being denominated *Order*, and the other *Decorum*), he answered: 'Oh, they said in the north, "Mr Hill rides upon the backs of *order* and *decorum;*" so I called one of my horses *Order*, and the other *Decorum*, that they might tell the truth in one way, if they did not in another.'

Rowland Hill married, in 1773, Miss Mary Tudway, of Somersetshire, with whom he lived happily for a space of nearly sixty years. She died in August 1830, and was followed shortly afterwards by her husband, who departed on 11th

April 1833, in his eighty-eighth year. Almost to the last he maintained his mental vigour unimpaired, and delivered his last sermon in Surrey chapel little more than a week previous to his decease. Though so popular and renowned as a preacher, his literary productions are few; but the principal one, his *Village Dialogues*, will, from the vigour and raciness of humour which it displays, interest all classes of readers, apart from any religious predilections.

THE LAST OF THE GEORGES.

The faults of character belonging to George IV. have of late years been largely insisted on, and perhaps it is not possible to extenuate them in any great degree. It is, however, a mistake to suppose that, because a man is a voluptuary, and more remarkable for good manners than good morals, he *therefore* is a person wholly bad. There really is no such being as one wholly bad, or wholly good either. A human being is a mixture of various and often apparently incongruous elements, one relieving and redeeming another, sometimes one assuming a predominance and sometimes another, very much as the accidental provocations of external circumstances may determine. It was so with this monarch, as it was with the humblest of his subjects. *In his lifetime*, one often heard both of pleasant things said, and of amiable things done, by the king. His restoration of the forfeited Scotch peerages in 1824 was a piece of pure generosity towards men who were suffering through no faults of their own. When that measure was determined on, the representative of a forfeited baronet of 1715 applied for a like extension of the royal grace. Though equally suitable from the fact of the family having purchased back their ancestral lands, it was refused by the ministers; but the king, on hearing of it, insisted on the gentleman being gratified. This we can tell on the authority of a person very nearly concerned in the matter.

In Mrs Mathews's Memoirs of her husband is an anecdote shewing conclusively a very great deal of good-nature in the king. The old Polish dwarf, Count Boruwlaski, was, through Mathews's exertions, brought to Carlton House to see the king, who had known him many years before. The two visitors, a dwarf and a player, were treated by the king with great kindness, and, more than this, with much considerate delicacy. It was in July 1821, when the approaching coronation and some less pleasant matters were greatly occupying the royal mind. When Boruwlaski came away, Mathews found him in tears, and learned that it was entirely owing to the kindness the king had manifested towards him. While the two were for a little while apart, the king had taken the opportunity to inquire if the little count required any pecuniary help to make his latter days comfortable, avowing his desire to supply whatever was necessary. The king had also offered to shew his coronation-robes to the dwarf, and further asked if he retained any recollection of a favourite valet of his, whom he named. 'The count professing a perfect remembrance of the man, the king said: "He is now, poor fellow, on his death-bed. I saw him this morning, and mentioned your expected visit. He expressed a great desire to see you, which I ventured to promise he should do; for I have such a regard for him, that I would gratify his last hours as much as possible. Will you, count, do me the favour of paying my poor faithful servant a short visit? He is even now expecting you. I hope you will not refuse to indulge a poor, suffering, dying creature." The count of course expressed his perfect readiness to obey the king's wishes.

'Boruwlaski was first shewn the robes, and then conducted to the chamber of the sick man, which was fitted up with every comfort and care; a nurse and another attendant in waiting upon the sufferer. When the count was announced, the poor invalid desired to be propped up in his bed. He was so changed by time and sickness, that the count no longer recognised the face with which his memory was familiar. The nurse and attendant having retired into an adjoining room, the dying man (for such he was, and felt himself to be) expressed the great obligation he felt at such a visit, and spoke most gratefully of him whom he designated the *best of masters;* told the count of all the king's goodness to him, and, indeed, of his uniform benevolence to all that depended upon him; mentioned that his majesty, during the long course of his poor servant's illness, notwithstanding the circumstances that had agitated himself so long, his numerous duties and cares, his present anxieties and forthcoming ceremonies, had never omitted to visit his bedside *twice every day*, not for a moment merely, but long enough to soothe and comfort him, and to see that he had everything necessary and desirable, telling him all particulars of himself that were interesting to an old and attached servant and humble friend. This account was so genuine in its style, and so affecting in its relation, that it deeply touched the heart of the listener. The dying man, feeling exhaustion, put an end to the interview by telling the count that he only prayed to live long enough to greet his dear master after his *coronation*—to hear that the ceremony had been performed with due honour, and without any interruption to his dignity—and that then he was ready to die in peace.'

Mrs Mathews adds: 'Poor Boruwlaski returned to the royal presence, as I have related, utterly subdued by the foregoing scene; upon which every feeling heart will, I am persuaded, make its own comment, unmixed with party-spirit or prejudice.'*

FRANCIS HORNER.

To the rising generation, the name of Francis Horner is comparatively little known, though as the friend of Jeffrey, Brougham, and Sydney Smith, a contributor to the *Edinburgh Review*, and a brilliant and influential speaker on the side of the Whigs, in the House of Commons, his name is intimately connected with the political and literary history of the early part of the present century. Cut off by an insidious and consuming disease at the premature age of thirty-eight, in the very flower of his parliamentary reputation, he had not yet so far matured his powers as to leave behind a durable impress of his character and abilities. Yet the universal regret by which the tidings of his death were received at the time, testify how exalted were the hopes which the intelligence of his countrymen had entertained respecting him—

* *Memoirs of Charles Mathews*, 1839, iii. 227.

hopes which a perusal of his literary remains, limited in amount as these are, induce us to pronounce to have been thoroughly justifiable.

The history of this brilliant young man is not much diversified by incident. His father was a wealthy merchant in the city of Edinburgh, and Francis received his education in the High School there, then under the rectorship of the distinguished classical scholar, Dr Adam. Always of a studious, retiring disposition, he rarely mingled in the sports of the other boys, among whom, however, he held the proud pre-eminence of being the *dux* or head-scholar. The bent of his mind, from the first, seems to have been towards a profession to which the art of oratory formed a leading adjunct, and he accordingly chose that of an advocate at the Scottish bar. With the view of getting rid of his northern accent, his father sent him, when about seventeen, to an academy at Shacklewell, near London, conducted by a Mr Hewlett, who succeeded so well in smoothing down the young Scotchman's Doric, that in after-life it is said to have been perfectly indistinguishable. Returning to Edinburgh, he commenced his legal studies, and in due time was admitted a member of the Faculty of Advocates. Here his avocations and sympathies naturally brought him into close fellowship with Francis Jeffrey, and the rest of that brilliant coterie which embraced so enthusiastically the cause of progress, and established the *Edinburgh Review* as the promulgator of their sentiments. He was also one of the most distinguished members of the Speculative Society, a debating association in Edinburgh, which then included some of the most splendid oratorical and literary talent in Great Britain.

After practising for some time as an advocate, he resolved on qualifying himself for the English bar, as affording a better field for his talents, and also as opening up to him more readily the path of distinction in public life. He accordingly proceeded to London, where he entered himself as a student at Lincoln's Inn, and was called to the bar in 1807, having the previous year been returned to parliament for the borough of St Ives, in Cornwall, through the influence of Lord Henry Petty, afterwards the Marquis of Lansdowne. He subsequently sat successively in three other parliaments, the last place for which he was returned being St Mawes, in Cornwall. During a period of about ten years, he distinguished himself as one of the most effective members of the Opposition, on all questions of commercial polity, and more especially those relating to the currency. Towards the end of 1816, his constitution, never robust, began visibly to give way, and in the hope of re-establishing his health, he was recommended to try the curative influences of a southern climate. He accordingly proceeded to Italy, and took up his abode at Pisa, where for a time he was cheered by the appearances of convalescence. These, however, proved fallacious, and the difficulty of breathing, and other symptoms of his malady, having returned with renewed severity, he expired on the evening of Saturday, 8th February 1817.

The regret occasioned in England by his death was great and profound. Eloquent tributes to his memory were rendered in the House of Commons by Lord Morpeth, Mr Canning, and others; but it was in private life, among the personal friends to whom he had endeared himself by the uprightness and amiability of his disposition, that his loss was most sensibly felt. Sydney Smith used to declare of him, that he had the ten commandments written in his face, which bore so thoroughly the impress of virtue and honesty, that as the clerical wag remarked, no jury could possibly convict him on any charge, and he might consequently commit all sorts of crimes with impunity. His talents as an orator, statesman, and scholar were only exceeded by the modesty which characterised his whole deportment. Had he survived, there is little doubt that he would have attained to the highest offices in the state, and handed down his name to posterity as one of the ablest and most industrious of our political economists. But, like Henry Kirke White and John Keats, whom, however, he only resembled in the gentleness and goodness of his disposition, the brightness of the morning of his life was prematurely extinguished, and his sun went down whilst it was yet day.

THE OLD AND NEW VERSIONS OF THE PSALMS.

Nahum Tate has a place in literary history solely on account of his connection with one of the two authorised versions of the Psalms, printed in the Book of Common Prayer. His merits would never have given him a niche in the Temple of Fame, but for that authorisation.

The Psalms of David have, individually and partially, been translated into an English lyrical form by many persons; but the collections best known are the 'old version' and the 'new version'—the one under the names of Sternhold and Hopkins, the other under those of Brady and Tate. Thomas Sternhold, in the reign of Henry VIII., being, as Warton says, 'of a serious disposition, and an enthusiast to the reformation, was much offended at the lascivious ballads which prevailed among the courtiers; and with a laudable desire to check these indecencies, undertook a metrical version of the Psalter—"thinking thereby," says Anthony Wood, "that the courtiers would sing them instead of their sonnets; *but they did not*, only some few excepting."' Sternhold translated thirty-seven of the Psalms; and they were published collectively in 1549—'drawen into English metre,' as the title-page expressed it. Some few years after this, John Hopkins (of whom very little is known) translated fifty-eight Psalms from the Hebrew, different from those which had been taken in hand by Sternhold; and in 1562 appeared *The Whole Book of Psalms, collected into English metre, by Thomas Sternhold, John Hopkins, and others. Set forth and allowed to be sung in all Churches before and after Morning and Evening Prayer, and also before and after Sermons.* To this day, it is a matter of controversy how the word 'allowed' is to be understood here; but whether the collection received Episcopal authorisation or not, it came into general use, and was in after-years regularly printed with the Book of Common Prayer. The Psalms, however, underwent such repeated changes in words and general style, that Sternhold and Hopkins would hardly have recognised their own work. As originally written, some of the words and phrases were of such a character that, though perhaps not noticeable at the time, they grated on the taste of a later

age. The following examples are from four of the Psalms:

For why their hartes were nothyng bent,
To him *nor to his trade;*
Nor yet to keep nor to performe
The Covenant that was made!

What! is his goodness clean decaid
For ever and a day?
Or is his promise now delaid,
And doth his truth decay?

Confound them that do apply
And seeke to make my shame;
And at my harme do laugh, and cry
So, so, there goes the game!

Why dost withdraw thy hand aback,
And hide it in thy lappe?
O pluck it out, and be not slack,
To *give thy foe a rappe!*

The last of these four verses is addressed to the Deity! The old version, even after all the dressing-up it received, was a very poor affair; but Bishop Secker said a good word for it. He contended that the Psalms, thus set, suited the common people, for whom they were intended. 'The plainer they are, the sooner they understand them; the lower their style is, the better is it levelled to their capacities; and the heavier they go, the more easily can they keep pace with them.'

Nicholas Brady, born in Ireland in 1659, made a new metrical translation of some of the Psalms; and Nahum Tate, also born in Ireland about the same year, translated others. It is, however, not now known who prepared that 'new version' which comprises the labours of Brady, Tate, and others left unmentioned. Tate was, for a time, poet-laureate. A severe critic has characterised him as 'the author of the worst alterations of Shakspeare, the worst version of the Psalms of David, and the worst continuation of a great poem (*Absalom and Achitophel*) extant;' but this is going a little too far in reference to the Psalms. These translations are, nevertheless, rather spiritless. Dr Watts received a letter from his brother, in which the latter said:—'Tate and Brady still keep near the same pace. I know not what beast they ride (one that will be content to carry double); but I am sure it is no Pegasus. There is in them a mighty deficiency of that life and soul which are necessary to rouse our fancies and kindle and fire our passions.' More modern versions of the Psalms are now very largely used in English churches; but as the ecclesiastical authorities have not made any combined move in the matter, the version of Brady and Tate is still bound up with the Book of Common Prayer.

AUGUST 13.

St Hippolytus, martyr, 252. St Cassian, martyr. St Radegundes, queen of France, 587. St Wigbert, abbot and confessor, about 747.

Born.—Dr William Wotton, author of *Reflections on Ancient and Modern Learning*, 1666, *Wrentham, Suffolk;* Matthew Terrasson, jurist, 1669, *Lyons;* Antoine-Laurent Lavoisier, eminent chemist, 1743, *Paris;* Adelaide, consort of William IV. of England, 1792, *Upper Saxony.*

AN EARTHQUAKE IN SCOTLAND.

Earthquakes are of very rare occurrence in the British Isles, or, at least, such as are of sufficient violence to attract attention. Scientific observers have not yet arrived at any very definite result as to the causes of these phenomena; but it is known that, when begun, they take the form of an earth-*wave*, propagated over a large area in a very small space of time. Observers in distant towns, frightened by what they see and hear, seldom can tell to a second, or even a minute, when these shocks occur; but if the times were accurately noted, it would probably be found that the shocks occur at consecutive instants along a line of country. Among the small number of recorded earthquakes in Great Britain, that of 1816 takes rather a notable place. At about eleven o'clock on the evening of the 13th of August, shocks were felt over nearly the whole of the north of Scotland. The Scottish newspapers gave accounts which, varying in detail, agreed in general results. From Aberdeen, a letter said: 'Where we sat, the house was shaken to the foundation; the heaviest articles of furniture were moved; and a rumbling noise was heard, such as if some heavy bodies were rolling along the roof. In many houses the bells were set ringing, and the agitation of the wires continued visible for some time after the cessation of the shock. It has been described to us, by one who was in Lisbon at that time, as exactly resembling the commencement of the earthquake in that city on the 6th of June 1807.' This Aberdeen letter states that the shock lasted only six seconds, and seemed to travel from south-south-east to north-north-west. A letter from Perth said: 'Persons in bed felt a sensible agitation, or rather concussion, in an upward direction; and if the bed happened to be in contact with the wall, a lateral shock was also felt. In some houses, the chairs and tables moved backwards and forwards, and even the bells were set ringing. Birds in cages were thrown down from the sticks on which they were perched, and exhibited evident signs of fear.' A writer at Montrose said: 'The leaves of folding-tables were heard to rattle; the fire-irons rang against the fenders, bells in rooms and passages were set ringing, in many kitchens the cooking utensils and dishes made a noise, and next morning many of the doors were found difficult to open. One gentleman observed his bookcase move from the wall, and fall back again to it. . . . Many leaped from bed, imagining their houses were falling; while others ran down stairs in great anxiety, supposing that some accident had happened in the lower part of their houses. In this neighbourhood, two excisemen, who were on the watch for smugglers, whom they expected in a certain direction, had lain down on the ground; and when the shock took place, one of them leaped up, calling to his companion: "There they are, for I feel the ground shaking under their horses' feet."' Forres, Strathearn, Dingwall, the Carse of Gowrie, and other towns and districts, had a similar tale to tell. At Dunkeld, the liquor was shaken out of the

glasses as a family sat at supper. At Dornoch, there was a mound crossing a narrow part of the Firth, with three arches at one end for small vessels to go under; those arches were thrown down. At Inverness, women fainted, and many were seen in the streets almost naked, calling out that their children had been killed in their arms. Many houses were damaged, and almost the whole were forsaken by the inhabitants, who fled under an impression that a second shock might occur. . . . The walls of many houses were rent from top to bottom, and several of the largest stones thrown down on the roof.' One of the scared inhabitants declared, that 'he was tossed in his bed, as he had never been tossed out at sea, for full five minutes;' and other ludicrous misstatements of a similar kind were made. There is no evidence that any lives were lost.

HAWKING IN THE OLDEN TIME.

Of all the country sports appertaining to the upper classes during the middle ages, hawking may be fairly considered as the most distinctively aristocratic. It was attended with great expense; its practice was overlaid with a jargon of terms, all necessary to be learned by the gentleman who would fit himself for the company of others in the field; and thus hawking, in the course of centuries, became a semi-science, to be acquired by a considerable amount of patience and study.

Hawking in Europe appears to have originated with the northern nations, and to have grown into importance along with themselves. The training of a hawk for the field was an essential part of the education of a young Saxon nobleman; and a present of a well-trained hawk was a gift to be welcomed by a king. Our Edward the Confessor spent the larger part of the time he did not consume in study in the sports of hunting or hawking; and Alfred the Great is reported to have written a treatise on the last-named sport. It was, however, those enthusiastic sportsmen, the early Norman kings and nobles, who carried the art to perfection, and established its rules and customs; inventing a language for falconry, and surrounding it with all the formalism of the stately rule of feudality.

To be seen bearing a hawk on the hand, was to be seen in the true character of a gentleman; and the grade of the hawk-bearer was known also by the bird he bore. Thus, the gerfalcon was appropriated to a king; the falcon-gentle, to a prince; the falcon of the rock, to a duke; the peregrine-falcon, to an earl; the merlin, to a lady; and so on through the various ranks. The goshawk was permitted to the yeoman; the nobby, to a young man; while the ordinary serving-men were allowed to practise with the kestrel. Priests were permitted the sparrow-hawk, but the higher clergy were, of course, allowed to use the birds pertaining to their rank; and their love of the sport, and pride of display, are satirised by many writers of their own era. In a poem on the evil times of Edward II., preserved in the Auchenleck MS. (Advocates' Library, Edinburgh), the author complains that—

'These abbots and priors do again* their rights,
They ride with hawk and hound, and counterfeit knights.'

* That is, act against.

Piers Plowman is equally loud against their appearing with 'an heap of houndes at their heels;' and Chaucer says:

'They ride coursers like knights,
With hawks and with hounds.'

In the reign of Edward III., the bishop of Ely attended the service of the church in the great abbey at Bermondsey, Southwark, leaving his hawk on its perch in the cloister; the hawk was stolen while there, and the bishop solemnly excommunicated the thieves. Had they been caught, they would have been rigorously treated by the laws, for their crime had been made felony. If a hawk was on any occasion lost, the finder was compelled to make it known to the sheriff of his county, that its noble owner might recover it, or the finder was liable to two years' imprisonment, and payment of the full value of the bird; if he could not do that, his punishment was increased. Fines also awaited such as carried hawks awarded by the laws of the chase to the use only of men higher in rank, and all kinds of protective restrictions surrounded the bird and the pastime.

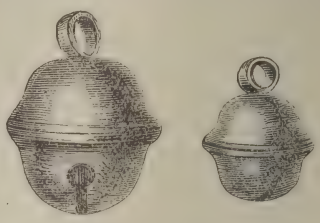
'A knowledge of hunting and hawking was an essential requisite in accomplishing the character of a knight,' says Warton; and a gentleman rarely appeared in public without his hawk on his fist. The custom was carried to the extreme; and a satirist of the fifteenth century very properly censures such as bring their birds to church with them:

'Into the church there comes another sot,
Without devotion strutting up and down,
For to be seen, and shew his braided coat;
Upon his fist sits sparrow-hawk or falcon.'

This constant connection of man and bird was in some degree necessitated, that it might know its master's voice, and be sufficiently familiar with, and obedient to him. It was laid down as a rule in all old manuals of falconry, that the sportsman constantly attend to the bird, feed him, and train him daily; and very minute are the rules laid down by authors who have, like Dame Juliana Berners, written on field-sports. To part with the hawk, even in circumstances of the utmost extremity, was deemed highly ignominious; and by the ancient laws of France, a knight was forbidden to give up his sword and his hawk, even as the price of his ransom.

The engraving on the following page, copied from the book on field-sports, published in 1614, and entitled *A Jewell for Gentrie*, gives us the full costume of a hawker, as well as a curious specimen of the fashion of the day. It represents King James I., as his majesty appeared in the field. He wears a high copatain hat and feather; a close-fitting jerkin, slashed and decorated with bands of lace; his breeches are in the very height of fashion, stuffed and padded to an enormous extent about the hip, tapering toward the knee, and covered with lace and embroidery. To his girdle is hung the large purse in which the hawker carried the implements necessary to the sport, or the hood and jesses removed from the hawk, which was perched on the left hand. This hand was protected from the talons of the bird by being covered with a thick glove, often highly enriched with needle-work and spangles. In his right hand the king carries a staff, which was used to assist the bearer when

following the flight of the hawk on foot, in leaping a rivulet or ditch. Our Henry VIII. had once a very narrow escape of his life when following his bird at Hitchin, in Hertfordshire. In jumping a ditch, the pole broke, and he fell head first into a mass of mud, which must have smothered him, had not one of his followers leaped in after him, and with some difficulty rescued him from his perilous situation.



JAMES I. IN HAWKING COSTUME.

The dress of the hawk may now be described. It consisted of a close-fitting hood of leather or velvet, enriched with needle-work, and surmounted with a tuft of coloured feathers, for use as well as ornament, inasmuch as they assisted the hand in removing the hood when 'the quarry' (or birds for the hawk's attack) came in sight. A series of leathern and silken straps were affixed to the legs, to train the hawk in short flights, and bring him back to hand; or to hold him there, and free him entirely for a course at the game, by means of the jesses and tyrrits or rings. Othello uses a forcible simile from the practice of hawking, when speaking of his wife, he says:

'If I do prove her haggard,
Though that her jesses were my dear heart-strings,
I 'd whistle her off, and let her down the wind,
To prey at fortune.'

A small strap, fastened with rings of leather, passed round each leg of the hawk, just above the talons; they were termed bewets, and each of them had a bell attached. In a flight of hawks, it was so arranged that the different bells varied in tone, so that 'a consort of sweet sounds' might be produced. We engrave two specimens of hawk's bells of mixed metal, which were found in the mud of the Thames, and are still sonorous, one being an octave under the other.

The imagination kindles at the idea of a hawking-party going abroad on a cheerful April morning, over the pleasant fields around an English baronial castle, ladies and gentlemen riding gaily together, while their attendants followed, bearing the perches of the birds, and a motley throng would come after

HAWK'S BELLS.

at a respectful distance, to get a peep at the sports of their betters. The aërial stage on which the play was played gave a peculiar elevation and liveliness to the scene. A sad affair it was for the poor herons and cranes of the neighbouring meres, but a right blithsome time for the gentlefolks who aimed at making them a prey. For the pacific King James, the sport had a fascination that seems to have thrown every other pleasure of life into the shade.

In Heywood's curious play, entitled *A Woman Killed with Kindness*, 1617, is a hawking scene, containing a striking allusion to these bells. It is a vivid picture of country nobles at this favourite sport, and the dialogue is curious for the jargon of hunting-terms used in it. The following is as much of the scene as will assist the reader in reproducing, to 'his mind's eye,' the glories of the hawking-ground in the days of James I.:

'*Sir Charles Mountford.* So; well cast off: aloft, aloft! well flown!
Oh now she takes her at the *sowse*, and strikes her down
To th' earth, like a swift thunder-clap.
Wendall. She hath struck ten angels * out of my way!
Sir Francis Acton. A hundred pound from me!
Sir Charles. What, falconer?
Falconer. At hand, sir!
Sir Charles. Now hath she seiz'd the fowl, and 'gins to *plume* her;
Rebeck her not: rather stand still and *check* her.
So, seize her *gets*, her *jesses*, and her *bells*:
Away!
Sir Francis. My hawk kill'd too!
Sir Charles. Aye; but 'twas at the *querre*,
Not at the *mount*, like mine.
Sir Francis. Judgment, my masters.
Cranwell. Yours missed her at the *ferre*.
Wendall. Aye, but our Merlin first had *plum'd* the fowl.
And twice *renew'd* her from the river, too:
Her bells, Sir Francis, had not both one weight,
Nor was one semi-tune above the other:
Methinks these Milan bells do sound too full,†
And spoil the mounting of your hawk.

* It should be noted, that these gentlemen are betting on the prowess of their hawks. The angel was a gold coin of the value of 6*s.* 8*d.*, and had its name from the figure of the archangel Michael piercing the dragon, which was impressed on the obverse.

† The bells manufactured at Milan were considered to be of the best quality and sweetest sound. A portion of silver was mixed with the metal used in their fabrication.

Sir Charles. 'Tis lost!
Sir Francis. I grant it not. Mine likewise seiz'd a fowl
Within her talons; and you saw her paws
Full of the feathers: both her *petty singles*,
And her *long singles*, grip'd her more than other;
The *terrials* of her legs were stain'd with blood
Not of the fowl only; she did *discomfit*
Some of her feathers; but she brake away.'

The care necessary to the proper training of a hawk has already been alluded to. A continuous attention was given to a favourite bird, so that its natural wildness should be subdued, and it become familiar to its master. 'It can be no more disgrace to a great lord,' says Peacham, 'to draw a fair picture, than to cut his hawk's meat.' The hawk was trained to fly at the game, by means of a lure made in the shape of birds' wings, and partially formed of wing-feathers, inserted in a pad of leather or velvet, quilted with needle-work, and having a swivel-hook on the upper part, to which a long cord was attached; the lure being thrown upward in the air, and guided like a boy's kite; the hawk was trained to fly at, and strike it, as if it was a real bird; he was also trained at the same time to desist, and return to his master's fist, at his whistle. The bird could not get entirely away during this practice, as the long creance or string was appended to one leg by which he might be drawn back. The form of the lure is very clearly given in the wood-cut here copied from Geffry Whitney's *Choice of Emblems and other Devises*, printed at Leyden in 1586. This emblem typifies *spes vana;* and is thus quaintly elucidated by the author:

HAWK'S LURE.

'The eager hawk, with sudden sight of lure,
Doth stoop, in hope to have her wished prey:
So many men do stoope to sights unsure:
And courteous speech doth keep them at the bay.
Let such beware, lest friendly looks be like
The lure, to which the soaring hawk did strike!'

The practice of hawking appears to have suddenly declined in the early part of the seventeenth century. The expense and trouble of training the birds were great, and the improvement effected in firearms made shooting a more convenient and certain sport. Fowling-pieces of a light and elegant kind were manufactured, and to suit the tastes of the wealthy, were inlaid with gold and silver, or enriched by carving the stock with elaborate ornament in relief. 'The art of shooting flying' was cultivated with assiduity, giving a novel interest to field-sports, and hawking lost its charm for ever.

The office of Grand Falconer of England is still a hereditary service of the crown, and held by the Duke of St Alban's. The King's Mews at Charing Cross—the site of the building in which the king's hawks were kept while they *mewed* or moulted—has given a term to the English language, a stable-lane in any of our large cities being commonly called a mews-lane.

giving great clearness to the tone. Others, of a cheaper kind, were made at Dort, in Holland; they emitted a shrill but pleasant sound. Of the ordinary bells, the book of St Albans informs us, 'there is great choice, and they are cheap enough.'

AUGUST 14.

St Eusebius, priest and martyr, about end of 3d century. St Eusebius, priest and confessor at Rome, 4th century.

Born.—Dr Meric Casaubon, eminent Protestant divine, 1599, *Geneva;* C. J. Vernet, French painter, 1714, *Avignon;* Dr Charles Hutton, distinguished mathematician, 1737, *Newcastle-on-Tyne.*

Died.—John I. of Portugal, 1433; Pope Pius II. (Aeneas Silvius Piccolomini), 1464, *Ancona;* Edmund Law, bishop of Carlisle, editor of Locke, 1787, *Rose Castle, Cumberland;* Thomas Sheridan, author of the *Pronouncing Dictionary*, and father of the dramatist, 1788, *Thanet;* George Colman (the elder), dramatist, 1794, *Paddington;* Marquis Luigi Cagnola, distinguished Italian architect, 1833; Rev. Henry Francis Cary, translator of Dante, 1844, *London;* Dr William Buckland, eminent geologist, 1856; George Combe, phrenologist, author of *Essay on the Constitution of Man in Relation to External Objects*, 1858, *Moor Park, Surrey;* A. M. C. Domeril, eminent French naturalist, 1860, *Paris.*

GEORGE COMBE

Was one of those men who, from various causes, do not fill a very conspicuous place in society, and yet exercise a great influence on their own and on future ages. He was a native of Edinburgh, and spent there nearly the whole of his life of seventy years. Having, in his profession of a writer to the Signet, equivalent to solicitor in England, attained, at about forty-five, to a moderate competency, he retired to devote the remainder of his days to literary and philosophical pursuits. An alliance he formed about that time with an elegant woman, the daughter of the celebrated Mrs Siddons, enabled him to do this in a style of dignity and comfort which made his house thenceforth one of the centres of refined society in the northern capital. In his youth, Mr Combe had entered heartily into the then young science of phrenology, and, in company with his accomplished brother, Dr Andrew Combe, and a few other men of talent, he diffused a large amount of knowledge on this subject, and made it for some years a popular study. The bases of the science, however, have never been established to the satisfaction of the philosophic world, and even its popularity has, in the course of years, somewhat faded. Had Mr Combe been a mere vaticinator upon heads, he would not now be of much account in the rolls of fame. He was, in reality, a man of profound philosophical conceptions; one whose views reached far beyond those of the ordinary men of science and letters of his day. Phrenology, and its great patron, Dr Spurzheim, whatever other effect they might have upon his mind, had at least impressed him with the idea that man is, in one important respect, simply a

part of nature, depending on the conditions of his original constitution, and his subsequent nurture and education, for the character he is to bear through life, and on his harmonious action with the other parts of nature surrounding him for success in securing his secular happiness. He put these ideas into a form in which they could be readily apprehended, in his *Essay on the Constitution of Man in relation to External Objects*, and the sale of upwards of a hundred thousand copies in Britain, and its almost equal diffusion in America and Germany, have amply attested that he had here laid hold of a most important, however partial, truth. Inspired by the same views, he wrote several treatises on education, in which the value of a knowledge of the world which surrounds us is eloquently expounded. He everywhere maintained that the brain is the organ of the mind, and as he made no further profession on the subject, it was felt by many that he too much countenanced materialistic doctrines. Against this, however, it ought to be observed, that Mr Combe invariably traced natural affairs to a divine origin and upholding, and never failed to inculcate that God has so constituted the world that the moral faculties of man are certain of an ultimate supremacy. Matter is a thing which may be undervalued as well as overvalued. To say that there is nothing in this world but matter and certain laws impressed upon it, is to take but a poor and narrow view of the *cosmos*. But, on the other hand, matter is a far more respectable thing than many, from their language, seem to consider it. Only think of the endless worlds it constitutes, of the wonderful relations of its chemical elements, of the admirable psychical operations and sentiments of which it is the observable vehicle in organised beings, and we must be lost in admiration of the magnificent purposes with which the Creator has charged it. A memoir of George Combe, by Charles Gibbon, appeared in 1878.

The subject of this notice was tall and thin, with a handsome cast of countenance, and a head of fine proportions. He was generally in weak health, but by great care avoided serious ailments, and succeeded in protracting the thread of life to the Psalmist's period. He was cheerful, social, and benevolent, with a large infusion of the simplicity which seems to form a necessary element in true greatness. From the effect of professional habits, he was methodical to a degree which often provoked a smile; but the fault was essentially connected with the conscientiousness which formed a conspicuous part of his character.

THE FUNERAL OF QUEEN CAROLINE.

Tuesday, the 14th August 1821, presented a singular scene of commotion in London. That day had been fixed by the authorities for the removal of the remains of Queen Caroline from Brandenburgh House, where she had expired a week previously, to Harwich, for the purpose of embarking them there for the continent, in terms of the instructions contained in her own will, which directed that her body should be deposited among those of her ancestors at Brunswick. A military guard had been provided by government for the funeral cortège; but, with the view of avoiding as much as possible, in the circumstances, any popular demonstrations, it was resolved that the procession should not pass through the city, a determination which gave the greatest offence both to the queen's executors and a large portion of the community at large. According to the prescribed route, the procession was to go from Hammersmith, through Kensington, into the Uxbridge Road, then down the Edgeware Road, into the New Road; along the City Road, Old Street, and Mile-end to Romford; and thence through Chelmsford and Colchester to Harwich. On the appointed day, an immense crowd congregated about Hammersmith, though the rain was falling in torrents. On the funeral reaching the gravel-pits at Kensington, and proceeding to turn off to the left, the way was blocked up with carts and wagons, to prevent further advance towards the Uxbridge Road, and the procession, after halting for an hour and a half, was compelled to move on towards London. Arriving at Kensington Gore, an attempt was made by the head of the police force, Sir R. Baker, with a detachment of Life Guards, to force open the park-gates, but in vain, the crowd, which had already given way to many hostile demonstrations, shouting loudly all the while: 'To the City—to the City!' Hyde Park Corner being reached, the gate there was found barricaded, and the procession moved up Park Lane, but was shortly met by similar obstructions. It then returned to the Corner, where the soldiers had, in the meantime, succeeded in clearing an entrance, and made its way through Hyde Park. On reaching Cumberland Gate, this was found closed, and a furious conflict ensued with the mob, who hurled at the troops the stones of the park-wall, which had been thrown down by the pressure of the crowd. Many of the soldiers were severely hurt, and their comrades were provoked to use their firearms, by which two persons were killed and several wounded. After some further clearing away of obstructions, the procession moved down the Edgeware and along the New Roads till it reached the Tottenham Court Road, where the mob made so determined a stand against it proceeding further in the prescribed direction, that Sir R. Baker deemed it most advisable to turn the cortège down the Tottenham Court Road, and thence by Drury Lane through the Strand and the City. So resolute was the popular determination to compel the procession to traverse the city, that every street, including Holborn, through which a detour could have been made to reach the New Road or the City Road, was carefully blocked up and rendered impassable. Having emerged from the City, the funeral train proceeded quietly on its way to Chelmsford, where it arrived at two o'clock on the following morning. From Chelmsford it proceeded to Colchester, and thence to Harwich, where it embarked for the continent on the evening of the 16th. The remains reached Brunswick on the 24th, and were deposited the following day in the cathedral, in the vault of the ducal family. An inscription had been directed by the deceased to be placed on her coffin in the following terms: 'Here lies Caroline of Brunswick, the injured Queen of England,' but the British authorities refused to allow this to be done. While the coffin, however, was lying at Chelmsford, on its way to the coast, the queen's executors affixed to it an engraved plate with the obnoxious title, but it was discovered, and removed by the

authorities in charge, notwithstanding a vehement protest from the other party. Thus closed the tomb on this unfortunate queen, whom, even after death, the storms which had visited her so fiercely while in life, did not cease to pursue.

AUGUST 15.

The Assumption of the Blessed Virgin Mary. St Alipius, bishop and confessor, 5th century. St Mac-cartin, Aid or Aed, bishop and confessor in Ireland, 506. St Arnoul or Arnulphus, confessor and bishop of Soissons, 1087.

Born.—Robert Blake, celebrated admiral, 1599, *Bridgewater;* Gilles Menage, miscellaneous writer (*Dictionnaire Etymologique*), 1613, *Angers;* Frederick William I. of Prussia, 1688; Napoleon Bonaparte, French emperor, 1769, *Ajaccio, France;* Sir Walter Scott, poet and novelist, 1771, *Edinburgh;* Thomas de Quincey, author of *Confessions of an Opium Eater*, 1785, *Manchester.*

Died.—Honorius, Roman emperor, 423; St Stephen, first king of Hungary, 1038, *Buda;* Alexius Comnenus, Greek emperor, 1118; Philippa, queen of Edward III. of England, 1369; James, Earl of Douglas, 1388, *Otterburn;* Gerard Noodt, distinguished jurist, 1725, *Leyden;* Joseph Miller, comedian, 1738; Nicolas Hubert de Mongault, translator of Cicero's Letters, 1746, *Paris;* Dr Thomas Shaw, traveller, 1751, *Oxford;* Thomas Tyrwhitt, editor of Chaucer, 1786; Dr Herbert Mayo, eminent physiologist, 1852, *Bad-Weilbach, near Mayence.*

NAPOLEON BONAPARTE.

After all that has been said and written on the subject of Napoleon Bonaparte, the conclusion is forced upon us, that he had few of the elements in his composition which go to make up the character of a true hero. Of unbounded ambition, perfectly unscrupulous as to the means by which he might accomplish his ends, and tinged throughout by an utter selfishness and regardlessness of others, we can deem him no more entitled to a real and intelligent admiration, than a previous occupant of the French throne, Louis XIV., brilliant in many respects though the reigns of both these men undoubtedly were.

That the first Napoleon was in many ways a benefactor to France, cannot reasonably be denied. By his military and administrative abilities he raised himself to supreme power at a time when the country was emerging from the lawlessness and terrorism to which she had been subjected after the death of Louis XVI. The divided and profligate government of the Directorate had succeeded the anarchy and violence of the leaders of the Convention. Some powerful hand was required as a dictator to hold the reins of state, and arrange in a harmonious and well-adjusted train the various jarring and unstable systems of government. Had he conducted himself with the same prudence as his nephew, the late emperor, he might have died absolute sovereign of France, and the history of that country been written without the narrative of the Restoration of the Bourbons, the Three Days of July 1830, and the Revolution of February 1848. But vaulting ambition with him overleaped itself, and his impetuous self-willed nature, or what he himself used to consider his destiny, drove him headlong to his ruin. Regardless of the warnings addressed to him by the most sagacious of his counsellors, contemptuously defiant of the coalitions formed to impede his progress, and careless, lastly, of the odium which his tyrannical sway in the end excited among his own subjects, he found himself at length left utterly destitute of resources, and obliged to submit to such terms as his enemies chose to impose. His career presents one of the most melancholy and impressive lessons that history affords. And yet how eagerly would a large portion of the French nation revert to a policy which, in his hands, overwhelmed it only with vexation and disaster!

Napoleon's character may be contemplated in three phases—as a statesman, as a commander, and as a private individual. In the first of these capacities, he displayed, as regards France, much that was worthy of commendation in point of political and social reform. A vigorous administration of the laws, a simplification of legal ordinances and forms, a wise and tolerating system in religious matters, many important and judicious sanitary measures, the embellishment of the capital, and patronage afforded to art and science, must all be allowed to have been distinguishing attributes of his sway. But how little did he understand the art of conciliating and securing the allegiance of the countries which he had conquered! A total ignoring of all national predilections and tendencies seems to have been here habitually practised by him, and nowhere was this more conspicuous than in his treatment of Germany. That system of centralisation, by which he sought to render Paris the capital of a vast empire, at the expense of the dignity and treasures of other cities and kingdoms, might flatter very sensibly the national vanity of France, but was certain, at the same time, to exasperate the degraded and plundered countries beyond all hopes of forgiveness. And the outrages which he tacitly permitted his troops to exercise on the unfortunate inhabitants, argue ill for the solidity or wisdom of his views as a governor or statesman.

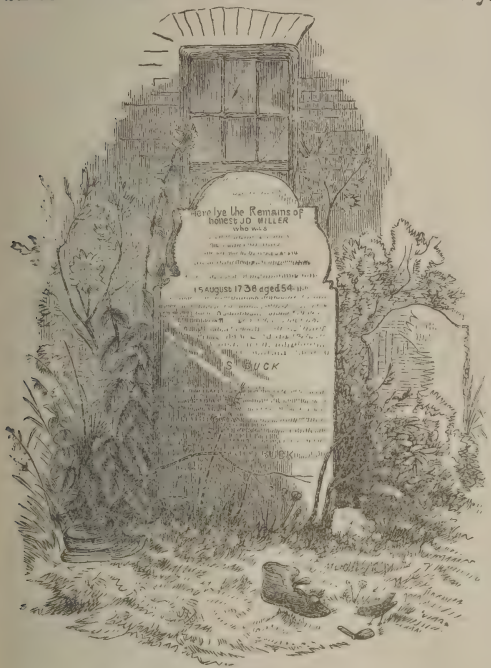
The military genius of Bonaparte has been, and still is, a fruitful theme for discussion. In the early part of his career, he achieved such successes as rendered his name a terror to Europe, and gained for him a *prestige* which a series of continuous and overwhelming defeats in the latter period of his history was unable to destroy. But in the game of war, results alone can form the criterion, and the victories of Marengo, of Austerlitz, and of Wagram can scarcely be admitted in compensation for the blunders of the Russian campaign and the overthrow at Waterloo. One qualification, however, of a great general, the capacity of recognising and rewarding merit, in whatever position it might be found, was eminently conspicuous in Napoleon. Favouritism, and the influence of rank or fortune, were almost entirely unknown in his army. Few of his generals could boast much of family descent, and the circumstance that bravery and military talent were certain to receive their due reward in promotion or otherwise, gave every man a personal interest in the triumph of the emperor's arms.

An inquiry into the personal character of Bonaparte exhibits him perhaps in a still less favourable light than that in which we have hitherto been considering him. Of a cold-blooded and impassible temperament, and engrossed exclusively by the master-passion, ambition, he betrayed no tendencies

towards any of those aberrations by which the characters of so many other great men have been stained. But the very cause which kept his moral purity inviolate, rendered him totally insensible to the promptings of love and affection when his interest seemed to require that they should be disregarded. His ruthless abandonment of Josephine is a proof of this. And the insensibility with which he appears to have regarded the sacrifice of myriads of Frenchmen to his lust for power, leads us to form a very low estimate of the kindness or goodness of his heart. Two facts of his life stand prominently forward as evidence—the one of the dark and arbitrary injustice of his nature, the other of a contemptible jealousy and littleness. These are the judicial murder of the Duke d'Enghien, and the vindictive and unchivalrous persecution of the talented Madame de Staël, and the amiable Louisa, queen of Prussia.

JOE MILLER.

It would be curious to note in how many cases the principle of *lucus a non lucendo* has been used, sometimes unintentionally, and sometimes perhaps as a joke, in the application of names. The man whose name is now the representative of the very idea of joking, Joe Miller, is said never to have uttered a joke. This reputed hero of all jokes, in reality an eminent comic actor of the earlier part of the last century, was born in the year 1684; he was no doubt of obscure origin, but even the place of his birth appears to be unknown. In the year 1715, his name occurs for the first time on the bills of Drury Lane theatre as performing, on the last day of April, the part of Young Clincher in Farquhar's comedy of *The Constant Couple; or a Trip to the Jubilee*. Whatever may have been his previous career, it appears certain that his début was a successful one, for from this time he became regularly engaged on the boards of Drury. It was the custom at that time, during the season when the regular theatres were closed, for the actors of perform in temporary theatres, or in booths erected at the several fairs in and near the metropolis, as in Bartholomew's Fair, Smithfield May Fair, Greenwich Fair, and, in this particular year, at the Frost Fair on the frozen Thames, for it was an extraordinary severe season. We find Joe Miller performing with one of the most celebrated of these movable companies—that of the well-known Pinkethman. At Drury Lane, Miller rose constantly in public esteem. At his benefit on the 25th of April 1717, when he played the part of Sir Joseph Whittol, in Congreve's *Old Bachelor*, the tickets were adorned with a design from the pencil of Hogarth, which represented the scene in which Whittol's bully, Noll, is kicked by Sharper. The original engraving is now extremely rare, and therefore, of course, very valuable.



For a rather long period we find Joe Miller acting as a member of the Drury Lane company, and, in the vacation intervals, first associated with Pinkethman, and subsequently established as an independent booth-theatre manager himself. Joe appears also to have been a favourite among the members of his profession, and it has been handed down to us, through tradition and anecdote, that he was a regular attendant at the tavern, still known as the 'Black Jack,' in Portsmouth Street, Clare Market, then the favourite resort of the performers at Drury Lane and Lincoln's Inn Fields' theatres, and of the wits who came to enjoy their society. It is said that at these meetings Miller was remarkable for the gravity of his demeanour, and that he was so completely innocent of anything like joking, that his companions, as a jest, ascribed every new jest that was made to him. Joe Miller's last benefit-night was the 13th of April 1738. He died on the 15th of August of the same year; and the paragraphs which announce his death in the contemporary *Press* shew that he was

JOE MILLER.

not only greatly admired as an actor, but that he was much esteemed for his personal character.

Miller was interred in the burial-ground of the parish of St Clement Danes, in Portugal Street, where a tombstone was erected to his memory.

JOE MILLER'S TOMBSTONE, ST CLEMENT DANES CHURCHYARD.

About thirty years ago, that burial-ground, by the removal of the mortuary remains, and the demolition of the monuments, was converted into a site for King's College Hospital. Whilst this not unnecessary, yet undesirable, desecration was in progress, the writer saw Joe's tombstone lying on the ground; and, being told that it would be broken up and used as materials for the new building, he took an exact copy of the inscription, which was as follows:

'Here lye the Remains of
Honest Jo: MILLER,
who was
a tender Husband,
a sincere Friend,
a facetious Companion,
and an excellent Comedian.
He departed this Life the 15th day of
August 1738, aged 54 years.
If humour, wit, and honesty could save
The humorous, witty, honest, from the grave,
The grave had not so soon this tenant found,
Whom honesty, and wit, and humour, crowned;
Could but esteem, and love preserve our breath,
And guard us longer from the stroke of Death,
The stroke of Death on him had later fell,
Whom all mankind esteemed and loved so well.
S. DUCK.
From respect to social worth,
mirthful qualities, and histrionic excellence,
commemorated by poetic talent in humble life,
the above inscription, which Time
had nearly obliterated, has been preserved
and transferred to this Stone, by order of
MR JARVIS BUCK, *Churchwarden.*
A.D. 1816.'

The 'merry memory' of the comedian, the phrase used in one of the newspaper-paragraphs announcing Joe Miller's death, and the wit and humour ascribed to him in the epitaph, perhaps relate especially to his acting, or they would seem to contradict the tradition of his incapacity for making a joke. It was after his death, however, that he gained his fame as a jester. Among the society in which he usually mixed was a dramatic writer of no great merit, named John Mottley, the son of a Jacobite officer. This man was reduced to the position of living on the town by his wits, and in doing this he depended in a great measure on his pen. Among the popular publications of that time, was a kind easy of compilation, consisting substantially of the same jests, ever newly vamped up, with a few additions and variations. It was a common trick to place on the title of one of these brochures the name of some person of recent celebrity, in order to give it an appearance of novelty. Thus, there had appeared in the sixteenth century, *Scogan's Jests* and *Skelton's Jests;* in the seventeenth, *Tarlton's Jests, Hobson's Jests, Peele's Jests, Hugh Peter's Jests,* and a multitude of others; and in the century following, previous to the death of Joe Miller in 1738, *Pinkethman's Jests, Polly Peachum's Jests,* and *Ben Jonson's Jests.* It speaks strongly for the celebrity of Joe Miller, that he had hardly lain a year in his grave, when his name was thought sufficiently popular to grace the title of a jest-book; and it was Mottley who, no doubt pressed by necessity, undertook to compile a new collection which was to appear under it. The title of this volume, which was published in 1739, and sold for one shilling, was *Joe Miller's Jests: or, the Wit's Vade-mecum.* It was stated in the title to have been 'first carefully collected in the company, and many of them transcribed from the mouth, of the facetious gentleman whose name they bear; and now set forth and published by his lamentable friend and former companion, Elijah Jenkins, Esq.' This was of course a fictitious name, under which Mottley chose to conceal his own. It must not be concealed that there is considerable originality in Mottley's collection—that it is not a mere republication, under a different name, of what had been published a score of times before; in fact, it is evidently a selection from the jokes which were then current about the town, and some of them apparently new ones. This was perhaps the reason of its sudden and great popularity. A second and third edition appeared in the same year, and it was not only frequently reprinted during the same century, but a number of spurious books appeared under the same title, as well as similar collections, under such titles as *The New Joe Miller,* and the like.

It appears to have been the custom, during at least two centuries, for people who were going to social parties, to prepare themselves by committing to memory a selection of jokes from some popular jest-book; the result of which would of course be, that the ears of the guests were subjected to the old jokes over and over again. People whose ears were thus wearied, would often express their annoyance, by reminding the repeater of the joke of the book he had taken it from; and, when the popularity of Joe Miller's jests had eclipsed that of all its rivals, the repetition of every old joke would draw forth from some one the exclamation: 'That's

a Joe Miller!' until the title was given indiscriminately to every jest which was recognised as not being a new one. Hence arose the modern fame of the old comedian, and the adoption of his name in our language as synonymous with 'an old joke.'

The S. Duck, whose name figures as author of the verses on Miller's tombstone, and who is alluded to on the same tablet, by Mr Churchwarden Buck, as an instance of 'poetic talent in humble life,' deserves a short notice. He was a thresher in the service of a farmer near Kew, in Surrey. Imbued with an eager desire for learning, he, under most adverse circumstances, managed to obtain a few books, and educate himself to a limited degree. Becoming known as a rustic rhymer, he attracted the attention of Caroline, queen of George II., who, with her accustomed liberality, settled on him a pension of £30 per annum; she made him a yeoman of the Guard, and installed him as keeper of a kind of museum she had in Richmond Park, called Merlin's Cave. Not content with these promotions, the generous, but perhaps inconsiderate queen, caused Duck to be admitted to holy orders, and preferred to the living of Byfleet, in Surrey, where he became a popular preacher among the lower classes, chiefly through the novelty of being the 'Thresher Parson.' This gave Swift occasion to write the following quibbling epigram:

'The thresher Duck could o'er the queen prevail;
The proverb says—"No fence against a flail."
From threshing corn, he turns to thresh his brains,
For which her majesty allows him grains;
Though 'tis confest, that those who ever saw
His poems, think 'em all not worth a straw.
Thrice happy Duck! employed in threshing stubble!
Thy toil is lessened, and thy profits double.'

One would suppose the poor thresher to have been beneath Swift's notice, but the provocation was great, and the chastisement, such as it was, merited. For, though few men had ever less pretensions to poetical genius than Duck, yet the court-party actually set him up as a rival, nay, as superior, to Pope. And the saddest part of the affair was, that Duck, in his utter simplicity and ignorance of what really constituted poetry, was led to fancy himself the greatest poet of the age. Consequently, considering that his genius was neglected, that he was not rewarded according to his poetical deserts, by being made the clergyman of an obscure village, he fell into a state of melancholy, which ended in suicide; affording another to the numerous instances of the very great difficulty of doing good. If the well-meaning queen had elevated Duck to the position of farm-bailiff, he might have led a long and happy life, amongst the scenes and the classes of society in which his youth had passed, and thus been spared the pangs of disappointed vanity and misdirected ambition.

THE BATTLE OF OTTERBOURNE AND CHEVY CHASE.

The famous old ballad of *Chevy Chase* is subject to twofold confusion. There are two, if not three, wholly different versions of the ballad; and two wholly independent incidents mixed up by an anachronism. The battle of Otterbourne was a real event. In 1388, the border chieftains carried on a ruthless warfare. The Scots ravaged the country about Carlisle, and carried off many hundred prisoners. They then crossed into Northumberland, and committed further ravages. On their return home, they attacked a castle at Otterbourne, close to the Scottish border; but they were here overtaken, on the 15th of August, by an English force under Henry Percy, surnamed Hotspur, son of the Earl of Northumberland. James, Earl of Douglas, rallied the Scots; and there ensued a desperately fierce battle. The earl was killed on the spot; Lord Murray was mortally wounded; while Hotspur and his brother, Ralph Percy, were taken prisoners. It appears, moreover, that nearly fifty years after this battle, a private conflict took place between Hotspur's *son* and *William*, Earl of Douglas. There was a tacit understanding among the border families, that none should hunt in the domains of the others without permission; but the martial families of Percy and Douglas being perpetually at feud, were only too ready to break through this rule. Percy crossed the Cheviots on one occasion to hunt without the leave of Douglas, who was either lord of the soil or warden of the marches; Douglas resisted him, and a fierce conflict ensued, the particulars of which were not historically recorded. Now, it appears that some ballad-writers of later date mixed up these two events in such a way as to produce a rugged, exciting story out of them. The earliest title of the ballad was, *The Hunting a' the Cheviat;* this underwent changes until it came simply to *Chevy Chase.* In the Rev. George Gilfillan's edition of Percy's *Reliques of Ancient English Poetry*, the oldest known version of the ballad is copied from Hearne, who printed it in 1719 from an old manuscript, to which the name of Rychard Sheale was attached. Hearne believed this to be one Richard Sheale, who was living in 1588; but Percy, judging from the language and idiom, and from an allusion to the ballad in an old Scottish prose work, printed about 1548, inferred that the poet was of earlier date. Various circumstances led Percy to believe that the ballad was written in the time of Henry VI. As given by Hearne and Percy, the *Hunting a' the Cheviat* occupies forty-five stanzas, mostly of four lines each, but some of six, and is divided into two 'Fits' or Sections. The ruggedness of the style is sufficiently shewn in the first stanza:

'The Persè owt of Northombarlande,
And a vowe to God mayde he,
That he wolde hunte in the mountayns
Off Chyviat within dayes thre,
In the mauger * of doughtè Dogles,
And all that ever with him be.'

The ballad relates almost wholly to the conflict arising out of this hunting, and only includes a few incidents which are known to have occurred at the battle of Otterbourne—such as the death of Douglas and the captivity of Hotspur. One of the stanzas runs thus:

'Worde ys commyn to Eaden-burrowe,
To Jamy the Skottishe kyng,
That dougheti Duglas, leyff-tennante of the Merchis,
He lay slayne Cheviat within.'

Percy printed another version from an old manuscript in the Cotton Library. There is also another

* In spite of.

manuscript of this same version, but with fewer stanzas, among the Harleian Collection. This ballad is not confined to the incidents arising out of the hunting by Percy, but relates to the raids and counter-raids of the border-chieftains. Indeed, it accords much better with the historical battle of Otterbourne than with the private feud between the Douglas and the Percy. It consists of seventy stanzas, of four lines each; one stanza will suffice to shew the metre and general style:

'Thus Syr Hary Percye toke the fylde,
For soth, as I you saye:
Jesu Cryste in hevyn on hyght
Dyd helpe hym well that daye.'

But the *Chevy Chase* which has gained so much renown among old ballads, is neither of the above. Addison's critique in the *Spectator* (Nos. 70 and 74) related to a *third* ballad, which Percy supposes cannot be older than the reign of Elizabeth, and which was probably written after—perhaps in consequence of—the eulogium passed by Sir Philip Sidney on the older ballad. Sidney's words were: 'I never heard the old song of Percy and Douglas, that I found not my heart more moved than with a trumpet; and yet it is sung by some blind crowder with no rougher voice than rude style, which being so evil-apparel'd in the dust and cobweb of that uncivil age, what would it work trimmed in the gorgeous eloquence of Pindar!' Addison, approving of the praise here given, dissents from the censure. 'I must, however,' he says, 'beg leave to dissent from so great an authority as that of Sir Philip Sidney, in the judgment which he has passed as to the rude style and evil apparel of this antiquated song; for there are several parts in it where not only the thought but the language is majestic, and the numbers sonorous; at least the apparel is much more gorgeous than many of the poets made use of in Queen Elizabeth's time.' This is taken as a proof that Addison was not speaking of the older versions. Nothing certain is known of the name of the third balladist, nor of the time when he lived; but there is internal evidence that he took one or both of the older versions, and threw them into a more modern garb. His *Chevy Chase* consists of seventy-two stanzas, of four lines each, beginning with the well-known words:

'God prosper long our noble king,
Our lives and safetyes all;
A woful hunting once there did
In Chevy Chase befall.'

The ballad relates mainly to the hunting-exploit, and what followed it: not to the battle of Otterbourne, or to the border-raids generally. Addison does not seem to refer in his criticism to the original ballad; he praises the third ballad for its excellences, without comparing it with any other. Those who have made that comparison, generally admit that the later balladist improved the versification, the sentiment, and the diction in most cases; but Bishop Percy contends that in some few passages the older version has more dignity of expression than the later. He adduces the exploit of the gallant Witherington:

'For Wetharryngton my harte was wo,
That ever he slayne shulde be;
For when both hys leggis were hewyne in to,
Yet he knyled and fought on hys kne.'

The bishop contends that, if this spelling be a little modernised, the stanza becomes much more dignified than the corresponding stanza in the later version:

'For Witherington needs must I wayle,
As one in doleful dumpes;
For when his leggs were smitten off,
He fought upon his stumpes.'

In any sense, however, both the versions—or rather all three versions—take rank among our finest specimens of heroic ballad-poetry.

It will be learned, not without interest, that certain relics or memorials of the fight of Otterbourne are still preserved in Scotland. The story of the battle represents Douglas as having, in a personal encounter with Percy in front of Newcastle, taken from him his spear and its pennon or hanging flag, saying he would carry it home with

THE DOUGLAS BANNER.

him, and plant it on his castle of Dalkeith. The battle itself was an effort of Percy to recover this valued piece of spoil, which, however, found its way to Scotland, notwithstanding the death of its captor. One of the two natural sons of Douglas founded the family of Douglas of Cavers, in Roxburghshire, which still exists in credit and renown; and in their hands are the relics of Otterbourne, now nearly five hundred years old. It is found, however, that history has somewhat misrepresented

the matter. The Otterbourne flag proves to be, not a spear-pennon, but a standard thirteen feet long, bearing the Douglas arms: it evidently has been Douglas's own banner, which of course his son would be most anxious to preserve and carry home. The other relic consists of a pair of, apparently, lady's gauntlets, bearing the white lion of the Percies in pearls, and fringed with filigree-work in silver. It now seems most probable that this had been a love-pledge carried by Percy, hanging from his helmet or his spear, as was the fashion of those chivalrous times, and that it was the loss of this cherished memorial which caused the Northumbrian knight to pursue and fight the Earl of Douglas. We owe the clearing up of this matter to a paper presented by Mr J. A. H. Murray, of Hawick, to the Hawick Archæological Society, when the Douglas banner and the Percy gauntlets were exhibited. It may be said to indicate a peculiar and surely very interesting element in British society, that a family should exist which has preserved such relics as these for half a thousand years. Let American readers remark, in particular, the banner was laid up in store at Cavers more than a hundred years before America was discovered. The writer recalls with curious feelings having been, a few years ago, at a party in Edinburgh where were present the Duke of Northumberland, representative of the Percy of Otterbourne celebrity, and the younger Laird of Cavers, representative of the Douglas whose name, even when dead, won that hard-fought field.

FIRST BRITISH STEAM PASSAGE-BOAT.

On the 15th of August 1812, there appeared in the *Greenock Advertiser*, an *annonce* signed Henry Bell, and dated from the Helensburgh Baths, making the public aware that thereafter a steam passage-boat, the COMET, would ply on the Clyde, between Glasgow and Greenock, leaving the former city on Tuesdays, Thursdays, and Saturdays, and the latter on the other lawful days of the week; the terms 4*s*. for the best cabin, and 3*s*. for the second. This vessel, one of only twenty-five tons burden, had been prepared in the building-yard of John and Charles Wood, Port-Glasgow, during the previous winter, at the instance of the above-mentioned Henry Bell, who was a simple uneducated man, of an inventive and speculative turn of mind, who amused himself with projects, while his more practical wife kept a hotel and suite of baths at a Clyde watering-place. The application of steam to navigation had been experimentally proved twenty-four years before, by Mr Patrick Miller, a Dumfriesshire gentleman, under the suggestions of Mr James Taylor, and with the engineering assistance of Mr Alexander Symington; more recently, a steamer had been put into regular use by Mr Robert Fulton, on the Hudson river in America. But this little *Comet* of Henry Bell, of the Helensburgh Baths, was the first example of a steam-boat brought into serviceable use within European waters. In its proposed trips of five-and-twenty miles, it is understood to have been successful as a commercial speculation; insomuch that, presently after, other and larger vessels of the same kind were built and set agoing on the Clyde. It is an interesting circumstance, that steam-navigation thus sprung up in a practical form, almost on the spot where James Watt, the illustrious improver of the steam-engine, was born. This eminent man appears never to have taken any active concern in the origination of steam-navigation; but, so early as 1816, when he, in old age, paid a visit to his native town of Greenock, he went in one of the new vessels to Rothesay and back, an excursion which then occupied the greater portion of a whole day. Mr Williamson, in his *Memorials of James Watt*, relates an anecdote of this trip. 'Mr Watt entered into conversation with the engineer of the boat, pointing out to him the method of *backing* the engine. With a foot-rule he demonstrated to him what was meant. Not succeeding, however, he at last, under the impulse of the ruling passion, threw off his over-coat, and putting his hand to the engine himself, shewed the practical application of his lecture. Previously to this, the *back-stroke* of the steam-boat engine was either unknown, or not generally acted on. The practice was to stop the engine entirely, a considerable time before the vessel reached the point of mooring, in order to allow for the gradual and natural diminution of her speed.'

THE COMET—FIRST BRITISH STEAM PASSAGE-BOAT.

It is a great pity that Henry Bell's *Comet* was not preserved, which it would have been entitled to be, as a curiosity. It was wrecked one day, by running ashore on the Highland coast, when Bell himself was on board—no lives, however, being lost. The annexed representation of the proto-steamer of Europe, was obtained by Mr Williamson, from an original drawing which had been in the possession of Henry Bell, and was marked with his signature.

BALLAD-SINGERS AND GRUB-STREET POETS.

It was in reality Montaigne, who made the shrewd but now somewhat musty remark: 'Let me have the making of a nation's ballads, and I care little who makes its laws.' The old Frenchman had observed the powerful effect of caustic satire wedded to popular tunes. It has been told, with truth, how *Lilliburlero* gave the finishing-stroke to the Great Revolution of 1688, and 'sung King James II. out of his three kingdoms;' and it is equally historic, that Béranger was a power in the state, seriously damaging to the stability of the restored Bourbon dynasty.

Shakspeare has happily delineated the popular love of ballads, in the sheep-shearer's feast-scene of *The Winter's Tale*. The rustics love 'a ballad in print,' for then they 'are sure they are true;' and listen with easy credulity to those which tell of 'strange fish,' and stranger monstrosities. It must not be imagined that Autolycus's pack contains caricatured resemblances of popular ballads; for the Roxburghe, Pepysian, and other collections, preserve specimens of lyrics, seriously published and sold, which are quite as absurd as anything mentioned by Shakspeare. In the British Museum is one entitled *Pride's Fall: or a Warning for all English Women, by the example of a Strange Monster, lately born in Germany, by a Merchant's proud Wife at Geneva;* which is adorned with a grim wood-cut of the monster, and is intended to frighten women from extravagant fashions in dress.

'From the head to the foot
Monster-like was it born,
Every part had the shape
Of Fashions daily worn.'

The moral of the story is, that all women should 'take heed of wanton pride,' and remember that this sin is rapidly bringing forth a day of judgment, and the end of the world. Such moralities were like the ballad of Autolycus, 'written to a very doleful tune,' and chanted by a blind fiddler to an equally doleful fiddle. Shakspeare has expressed his contempt for the literary merits of these effusions, when he makes Benedick speak of picking out his eyes 'with a ballad-maker's pen;' but the pages of Percy, Ritson, and Evans are sufficient to establish the claim of many balladists to attention and respect, for the simple imagery and natural beauty of their effusions.

Gifford says, 'in Jonson's time, scarcely any ballad was printed without a wood-cut illustrative of its subject. If it was a ballad of "pure love," or of "good life," which afforded no scope for the graphic talents of the Grub-Street Apelles, the portrait of "good Queen Elizabeth," magnificently adorned with the globe and sceptre, formed no unwelcome substitute for her loyal subjects.' Ballad-buyers were fond of seeing these familiar wood-cuts, they were 'old favourites,' and so well-worn by printers, that it is not unusual to find cuts, evidently executed in the days of James I., worked by ballad-printers during the reign of Anne; so indestructible were the coarse old wood-engravings which were then used 'to adorn' the doleful tragedies,' or 'merry new ballads' of the Grub-Street school of sentiment.

The constables kept a wary eye on the political or immoral ballad-singer of London; but Chettle, in *Kind Heart's Dream*, 1592, notes 'that idle, upstart generation of ballad-singers,' who ramble in the outskirts, and are 'able to spread more pamphlets, by the state forbidden, than all the booksellers in London; for only in this city is straight search; abroad, small suspicion; especially of such petty pedlars.' A dozen groats' worth of ballads is said to be their stock in trade; but they all dealt in the pamphlets of a few leaves, that were industriously concocted on all popular subjects by the hack-writers of the day.

In the curious view of the interior of the Royal Exchange, executed by Hollar in 1644, and depicting its aspect when crowded by merchants and visitors, we see one of these itinerant ballad and pamphlet mongers plying her trade among the

BALLAD-SELLER.

busy group. This figure we copy above, on a larger scale than the original, which gives, with minute truthfulness, the popular form of the ballads of that day, printed on a broad sheet, in double columns, with a wood-cut at the head of the story.

The great Civil War was a prolific source of ballad-writing and pamphleteering. It would not be easy to carry libel to greater length than it was then carried, and especially by ballad-singers. These 'waifs and strays,' many of them being the productions of men of some literary eminence, have been gathered into volumes, affording most vivid reminiscences of the strong party-hatred of the time. The earliest of these collections was published in 1660, and is entitled *Ratts Rhimed to Death: or, the Rump-parliament hang'd up in the Shambles*—the title sufficiently indicating the violent character of the songs, gathered under this strange heading. 'They were formerly printed on loose sheets,' says the collector to the reader; adding, 'I hope you will pardon the ill tunes to which they are to be sung, there being none bad enough for them.' Most of them are too coarse for modern quotation; the spirit of all may be gathered from the opening stanza of one:

'Since sixteen hundred forty and odd,
We have soundly been lash'd with our own rod,
And have bow'd ourselves down at a tyraut's nod—
Which nobody can deny.'

The violent personality of others may be understood in reading a few stanzas of *A Hymn to the Gentle Craft, or Hewson's Lamentation.* Colonel Hewson was one of Cromwell's most active officers, and said to have originally been a shoemaker; he had by accident lost an eye.

'Listen awhile to what I shall say,
Of a blind cobbler that's gone astray,
Out of the parliament's highway.
Good people, pity the blind!

His name you wot well is Sir John Hewson,
Whom I intend to set my muse on,
As great a warrior as Sir Miles Lewson.
Good people, pity the blind!

He'd now give all the shoes in his shop,
The parliament's fury for to stop,
Whip cobbler, like any town-top.
Good people, pity the blind!

Oliver made him a famous lord,
That he forgot his cutting-board;
But now his thread 's twisted to a cord.
Good people, pity the blind!

Sing hi, ho, Hewson!—the state ne'er went upright,
Since cobblers could pray, preach, govern, and fight;
We shall see what they'll do now you're out of sight.
Good people, pity the blind!'

For some time after the Restoration, the popular songs were all on the court-side, and it was not until Charles II.'s most flagrant violations of political liberty and public decency, that they took an opposite turn. The court then guarded itself by imposing a licence upon all ballad-singers and pamphleteers. One John Clarke, a bookseller, held this right to license of Charles Killigrew, the Master of the Revels, and advertised in the *London Gazette* of 1682 as follows: 'These are to give notice to all ballad-singers, that they take out licences for singing and selling of ballads and small books, according to an ancient custom. And all persons concerned are hereby desired to take notice of, and to suppress, all mountebanks, rope-dancers, prize-players, and such as make shew of motions and strange sights, that have not a licence in red and black letter, under the hand and seal of the said Charles Killigrew, Master of Revels to his Majesty.' In 1684, a similar advertisement orders all such persons 'to come to the office to change their licences as they are now altered.' The court had reason for all this, for the ballad-singers had become as wide-mouthed as in the days of Cromwell; while the court-life gave scope to obscene allusion that exceeded anything before attempted. The short reign of James II., the birth of the Prince of Wales, and advent of the Prince of Orange, gave new scope for personal satire. Of all the popular songs ever written, none had greater effect than *Lilliburlero* (attributed to Lord Wharton), which Burnet tells us 'made an impression on the king's army that cannot be imagined by those that saw it not. The whole army, and at last the people, both in city and country, were singing it perpetually. And perhaps never had so slight a thing so great an effect.' Some of these songs were written to popular old tunes; that of *Old Simon the King* accompanied the *Sale of Old State Household Stuff*, when James II. was reported to have had an intention to remove the hangings in the Houses of Parliament, and wainscot the rooms; one stanza of this ditty we give as a sample of the whole:

'Come, buy the old tapestry-hangings
Which hung in the House of Lords,
That kept the Spanish invasion
And powder plot on records:
A musty old Magna Charta
That wants new scouring and cleaning,
Writ so long since and so dark too,
That 'tis hard to pick out the meaning.
Quoth Jemmy, the bigoted king,
Quoth Jemmy, the politick thing;
With a threadbare-oath,
And a Catholic troth,
That never was worth a farthing!'

The birth of the Prince of Wales was a fertile theme for popular rhymes, written to equally popular tunes. The first verse of one, entitled *Father Petre's Policy Discovered; or the Prince of Wales proved to be a Popish Perkin*, runs thus:

'In Rome there is a most fearful rout;
And what do you think it is about?
Because the birth of the babe 's come out.
Sing lullaby baby, by, by, by.'

The zest with which such songs would be sung in times of great popular excitement can still be imagined, though scarcely to its full extent. Another, on *The Orange*, contains this strong stanza:

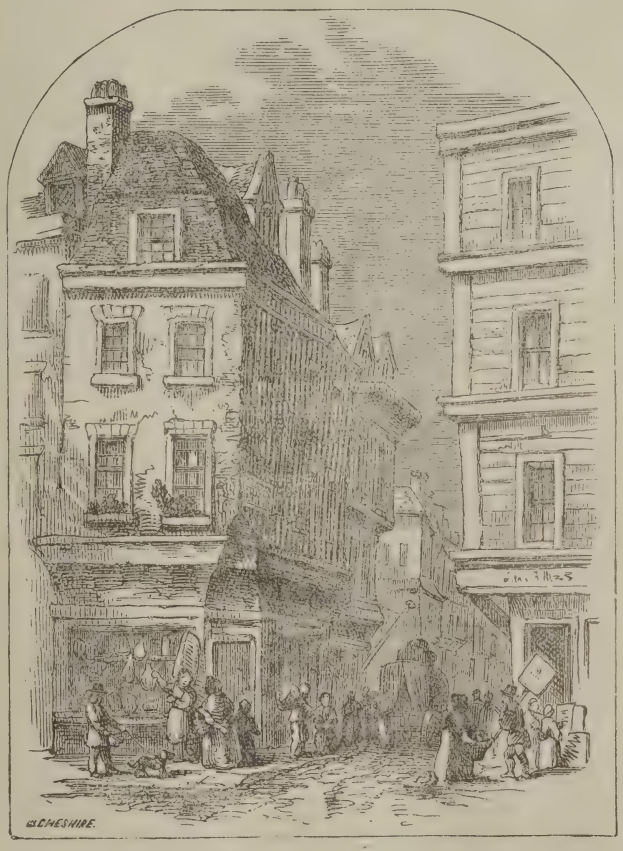
'When the Army retreats,
And the Parliament sits,
To vote our King the true use of his wits;
'Twill be a sad means,
When all he obtains
Is to have his Calves-head dress'd with other men's brains;
And *an Orange.*'

No enactments could reach these lampoons, nor the fine or imprisonment of a few wretched ballad-singers stop their circulation. Lauron, a Dutch

BALLAD-SELLER.—TEMP. WILLIAM III.

artist, then resident in London, has preserved a representation of one of these women offering 'a merry new ballad,' to her customers; and she has a bundle of others in her apron pocket. To furnish

these 'wandering stationers,' as they were termed, with their literary wants, a band of Grub-street authors existed, in a state of poverty and degradation of which we now can have little idea, except by referring to contemporary writers. The half-starved hacks are declared to fix their highest ideas of luxurious plenty in



'Gallons of beer and pounds of bullock's liver.'

Pope in the *Dunciad*, has given a very low picture of the class:

'Not with less glory mighty Dulness crown'd,
Shall take through Grub Street her triumphant round:
And, her Parnassus glancing o'er at once,
Behold a hundred sons, and each a dunce.'

In Fielding's *Author's Farce*, 1730, we are introduced to a bookseller's workroom, where his hacks are busy concocting books for his shop. One of them complains that he 'has not dined these two days,' and the rest find fault with the disagreeable character of their employment; when the bookseller enters, and the following conversation ensues:

'*Book.* Fie upon it, gentlemen!—what, not at your pens? Do you consider, Mr Quibble, that it is above a fortnight since your *Letter from a Friend in the Country* was published? Is it not high time for an answer to come out? At this rate, before your answer is printed, your letter will be forgot: I love to keep a controversy up warm. I have had authors who have writ a pamphlet in the morning, answered it in the afternoon, and compromised the matter at night.

GRUB STREET.

Quibble. Sir, I will be as expeditious as possible.

Book. Well, Mr Dash, have you done that murder yet?

Dash. Yes, sir; the murder is done. I am only about a few moral reflections to place before it.

Book. Very well; then let me have a ghost finished by this day seven-night.

Dash. What sort of a ghost would you have, sir? The last was a pale one.

Book. Then let this be a bloody one.'

This last hit seems levelled at Defoe, who in reality concocted a very seriously-told ghost-story, *The Apparition of Mrs Veal*, to enable a bookseller to get rid of an unsaleable book, *Drelincourt on Death*, which was directly puffed by the ghost assuring her friend, Mrs Bargrave, that it was the best work on the subject.

Pope and his friends amused and revenged themselves on Curll the bookseller, who was the chief publisher of trashy literature in their day, by an imaginary account of his poisoning and preparation for death, as related by 'a faithful, though unpolite historian of Grub Street.' In the course of the narrative, instructions are given how to find Mr Curll's authors, which indicates the poverty-stricken character of the tribe: 'At a tallow-chandler's in Petty France, half-way under the blind arch, ask for the historian; at the Bedstead and Bolster, a music-house in Moorfields, two translators in a bed together; at a blacksmith's shop in the Friars, a Pindaric writer in red stockings; at Mr Summers's, a thief-catcher's in Lewkner's Lane, the man that wrote against the impiety of Mr Rowe's plays; at the farthing pie-house, in Tooting Fields, the young man who is writing my new pastorals; at the laundress's, at the Hole-in-the-wall, in Cursitor's Alley, up three pair of stairs, the author of my church history; you may also speak to the gentleman who lies by him in the flock-bed, my index-maker.'

Grub Street no longer appears by name in any London Directory; yet it still exists and preserves some of its antique features, though it has for the last forty years been called Milton Street. It is situated in the parish of St Giles's, Cripplegate, leading from Fore Street northerly to Chiswell Street.*

* Our view is of the Fore Street entry, which has remained almost unchanged from the days of Steele. The street still preserves its original squalor. Many of the houses are as old as the time of Charles I. A labyrinth of filthy courts, packed with dirty and half-ruined

Its contiguity to the artillery-ground in Bunhill Fields, where the city trainband exercised, is amusingly alluded to in *The Tatler*, No. 41, where their redoubtable doings are narrated: 'Happy was it that the greatest part of the achievements of this day was to be performed near Grub Street, that there might not be wanting a sufficient number of faithful historians, who being eye-witnesses of these wonders, should impartially transmit them to posterity.'

The concocters of News-letters were among the most prolific and unblushing authors of 'Grub-street literature.' Steele, in the periodical just quoted, alludes to some of them by name: 'Where Prince Eugene has slain his thousands, Boyer has slain his ten thousands; this gentleman can, indeed, be never enough commended for his courage and intrepidity during this whole war.' 'Mr Buckley has shed as much blood as the former.' 'Mr Dyer was particularly famous for dealing in whales, insomuch that in five months' time he brought three into the mouth of the Thames, besides two porpuses and a sturgeon. The judicious and wary Mr I. Dawks hath all along been the rival of this great writer, and got himself a reputation from plagues and famines, by which he destroyed as great multitudes, as he has lately done by the sword. In every dearth of news, Grand Cairo was sure to be unpeopled.'

This mob of unscrupulous scribblers, and the ballad-singers who gave voice to their political pasquinades, occasioned the government much annoyance at times. The pillory and the jail were tried in vain.

'Earless on high stood unabashed Defoe.'

It was the ambition of speculative booksellers to get a government prosecution, for it insured the sale of large editions. Vamp, the bookseller in Foote's play, called the *Author*, 1757, makes that worthy shew the side of his head and his ears, cropped in the pillory for his publications; yet he has a certain business pride, and declares, 'in the year forty-five, when I was in the treasonable way, I never squeaked; I never gave up but one author in my life, and he was dying of a consumption, so it never came to a trial.' The poor ballad-singers, less fortunate, could be seized at once, and summarily punished by any magistrate.

The newspapers of the day often allude to these persecutors. The Middlesex grand jury, in 1716, denounced 'the singing of scandalous ballads about the streets as a common nuisance; tending to alienate the minds of the people.' The *Weekly Packet*, which gives this information, adds, 'we hear an order will be published to apprehend those who cry about, or sing, such scandalous papers.' Read's *Weekly Journal* tells us, in July 1731, that 'three hawkers were committed to Tothill Fields Bridewell, for crying about the streets a printed paper called *Robin's Game, or Seven's the Main;*' a satire on the ministry of Sir Robert Walpole. In July 1763, we are told 'yesterday evening two women were sent to Bridewell, by Lord Bute's order, for singing political ballads before his lordship's door in South Audley Street.' State prosecutions have never succeeded in repressing political satire; it has died a natural death for want of strong food!

The Minstrels' Festival at Tutbury.

The castle of Tutbury was a place of great strength, built shortly after the Conquest by Henry de Ferrars, one of William's Norman noblemen, who had received the gift of large possessions in Derbyshire, Staffordshire, and the neighbouring counties. It stands upon a hill so steep on one side that it there needs no defence, whilst the other three were strongly walled by the first owner, who lost his property by joining in the rebellion of Simon de Montfort against Henry III. It was afterwards in the possession of the Dukes of Lancaster, one of whom, the celebrated John of Gaunt, added to its fortifications. During the civil war, it was taken and destroyed by the parliamentary forces; and the ruins only now remain.

During the time of the Dukes of Lancaster, the little town of Tutbury was so enlivened by the noble hospitality they kept up, and the great concourse of people who gathered there, that some regulations became necessary for keeping them in order; more especially those disorderly favourites of both the high and low, the wandering jongleurs or minstrels, who displayed their talents at all festive-boards, weddings, and tournaments. A court was therefore appointed by John of Gaunt, to be held every year on the day after the festival of the Assumption of the Virgin, being the 16th of August, to elect a king of the minstrels, try those who had been guilty of misdemeanours during the year, and grant licences for the future year, all which were accompanied by many curious observances.

The wood-master and rangers of Needwood Forest began the festivities by meeting at Berkley Lodge, in the forest, to arrange for the dinner which was given them at this time at Tutbury Castle, and where the buck they were allowed for it should be killed, as also another which was their yearly present to the prior of Tutbury for his dinner. These animals having received their death-blow, the master, keepers, and deputies met on the Day of Assumption, and rode in gay procession, two and two, into the town, to the High Cross, each carrying a green bough in his hand, and one bearing the buck's head, cut off behind the ears, garnished with a rye of pease and a piece of fat fastened to each of the antlers. The minstrels went on foot, two and two, before them, and when they reached the cross, the keeper blew on his horn the various hunting signals, which were answered by the others; all passed on to the churchyard, where, alighting from their horses, they went into the church, the minstrels playing on their instruments during the time of the offering of the buck's head, and whilst each keeper paid one penny as an offering to the church. Mass was then celebrated, and all adjourned to the good dinner which was prepared for them in the castle; towards the expenses of which the prior gave them thirty shillings.

On the following day, the minstrels met at the bailiff's house, in Tutbury, where the steward of the court, and the bailiff of the manor, who were noblemen of high rank, such as the Dukes of Lancaster, Ormond, or Devonshire, with the wood-master, met them. A procession was formed to go to church, two trumpeters walking first, and then

old houses, are on both sides the way; and the whole neighbourhood is depressing to the spirits, through its hopeless air of poverty.

the musicians on stringed instruments, all playing; their king, whose office ended on that day, had the privilege of walking between the steward and bailiff, thus, for once at least, taking rank with nobility; after them came the four stewards of music, each carrying a white wand, followed by the rest of the company. The psalms and lessons were chosen in accordance with the occasion, and each minstrel paid a penny, as a due to the vicar of Tutbury.

FESTIVAL AT TUTBURY.

On their return to the castle-hall, the business of the day began by one of the minstrels performing the part of a herald, and crying: 'Oyez, oyez, oyez! all minstrels within this honour, residing in the counties of Stafford, Derby, Nottingham, Leicester, and Warwick, come in and do your suit and service, or you will be amerced.' All were then sworn to keep the King of Music's counsel, their fellows', and their own. A lengthy charge from the steward followed, in which he expatiated on the antiquity and excellence of their noble science, passing from Orpheus to Apollo, Jubal, David, and Timotheus, instancing the effect it had upon beasts by the story of a gentleman once travelling near Royston, who met a herd of stags upon the road following a bagpipe and violin: when the music played, they went forward; when it ceased, they all stood still; and in this way they were conducted out of Yorkshire to the king's palace at Hampton Court. The jurors then proceeded to choose a new king, who was taken alternately from the minstrels of Staffordshire and Derbyshire, as well as four stewards, and retired to consider the offences which were alleged against any minstrel, and fine him, if necessary. During this time, the old stewards brought into the court a treat of wine, ale, and cakes, and the minstrels diverted themselves and the company by playing their merriest airs. The new king entered, and was presented by the jurors, the old one rising from his place, and giving the white wand to his successor, pledging him in a cup of wine, and bidding him joy of the honour he had received; the old stewards followed his example, and at noon all entered into a fair room within the castle, where the old king had prepared for them a plentiful dinner.

The conclusion of the day was much in accordance with the barbarous taste of the times: a bull being given them by the prior of Tutbury, they all adjourned to the abbey gate, where the poor beast had the tips of his horns sawed off, his ears and tail cut off, the body smeared over with soap, and his nose filled with pepper. The minstrels rushed after the maddened creature, and if any of them could succeed in cutting off a piece of his skin before he crossed the river Dove into Derbyshire, he became the property of the King of Music, but if not, he was returned sound and uncut to the prior again. After becoming the king's own, he was brought to the High Street, and there baited with dogs three times; the bailiff then gave the king five nobles, equal to about £1, 13*s.* 4*d.*, for his right, and sent the bull to the Earl of Devon's manor of Hardwick, to be fed and given to the poor at Christmas. It has been supposed that John of Gaunt, who assumed the title of King of Castile and Leon in right of his wife, introduced this sport in imitation of the Spanish bull-fights; but in the end the young men of the neighbourhood, who flocked in great numbers to the festival, could not help interfering with the minstrels, and, taking cudgels of about a yard in length, the one party

endeavoured to drive the bull into Derbyshire, the other to keep him in Staffordshire, and this led to such outrage, that many returned home with broken heads. Gradually, as 'old times were changed, old manners gone,' the minstrels fell into disrepute; the castles were destroyed in the civil wars, the nobility spent their time and sought their amusements in London, and harpers were no longer needed to charm away the ennui of their ladies and retainers; the court of minstrels found no employment, and the bull-baiting was strongly objected to by the inhabitants. The Duke of Devonshire consequently abolished the whole proceeding in 1778, after it had lasted through the long period of four hundred years.

The manor of Tutbury was one of those held by cornage tenure: in 1569, Walter Achard claimed to be hereditary steward of Leek and Tutbury, in proof of which he shewed a white hunter's horn, decorated with silver gilt ornaments. It was hung to a girdle of fine black silk, adorned with buckles of silver, on which were the arms and the fleurs-de-lis of the Duke of Lancaster, from whom it descended. The Stanhopes of Elvaston were recently in possession of the badge.

AUGUST 16.

St Hyacinth, confessor, 1257. St Roch, confessor, 14th century.

ST ROCH OR ROQUE

Was a French gentleman, possessing estates near Montpelier, which, however, he abandoned in order to devote himself to a religious life. The date of his death is stated with some uncertainty as 1327. In consequence of working miraculous cures of the plague, while himself stricken with the disease at Placentia, in Italy, Roque was held as a saint specially to be invoked by persons so afflicted. There were many churches dedicated to him in Germany and other countries, and it seems to have been a custom that persons dying of plague should be buried there.

St Roch's Day was celebrated in England as a general harvest-home.

Born.—Ralph Thoresby, antiquary, author of *Ducatus Leodiensis*, 1658, *Leeds;* Catharine Cockburn, dramatist and moral writer, 1679, *London;* Pierre Mechain, mathematician and astronomer, 1744, *Laon;* Frederick, Duke of York, second son of George III., 1763.

Died.—Dr Thomas Fuller, celebrated divine and author, 1661, *Cranford, Middlesex;* Jacques Bernouilli, mathematician and natural philosopher, 1705, *Basel;* Dr Matthew Tindal, freethinking writer, 1733, *London;* Bartholomew Joubert, French general, killed at Novi, 1799; John Palmer, post-reformer, 1818.

TINDAL AND BUDGEL.

Dr Matthew Tindal, a clergyman's son, and a fellow of All Souls' College, Oxford, made himself notable, in the early part of the eighteenth century, by a series of books and pamphlets assailing the pretensions of High Church, and latterly endeavouring to take away the supernatural element from Christianity itself. His writings gave rise to prodigious controversies, which whizzed and sputtered and fumed about the ears of mankind for a good many years, and by and by subsided into the silence of oblivion, in which for fully a hundred years past they have remained.

Tindal cannot be mentioned without some notice of Eustace Budgel, his friend and follower as far as regards religious ideas. Budgel was a relation of Addison, a man of fair talents, and a contributor to the *Spectator* and *Guardian*. Through Addison's influence, when secretary of state, Budgel obtained confidential and lucrative political offices, and his abilities as a writer and speaker promised his speedy rise to distinction. But, cursed with an unhappy temper, an irregular ambition, and an inability to control splenetic, revengeful passions, he lost his official position; and the bursting of the South-sea Bubble left him, in the prime of life, ruined alike in fortune and political influence. His reputation was to follow. At Tindal's death, it was found that he had made Budgel his heir, to the exclusion of his nephew. Budgel was accused of forging the will, which was written by an alleged female accomplice, a Mrs Price; and whether innocent or otherwise, there can be no doubt that he was guilty of dishonesty regarding a considerable sum he had borrowed from Tindal, just previous to his death, and the receipt of which he strenuously denied, till the notes were traced to his possession. The subject was a fruitful one for the wits of the day. Pope writes—

'Let Budgel charge all Grub Street on my quill,
And write whate'er he please, except my will.'

The best epigram on Tindal's will, however, is the following:

'Hundreds of years, th' Old Testament and New
By general consent have passed for true;
In this learn'd age, a doctor, 'god-like great!'*
By dint of reason proved them both a cheat:
A *third* he made,† which, sinking nature's share,
Gave more than he died worth to Reason's heir.
Mal-practice to prevent, of his last thought,
A female scribe engrossed the genuine draught.
But, oh! 'gainst Testaments such reasons shown,
Have taught the world to question e'en his own.
Those seventeen centuries old he scarce could raze,
His own remained unshook not seventeen days.
Yet all perhaps are true; if none, the third,
Of three forged Testaments, seems most absurd.'

Budgel boldly attempted to outface the obloquy of this affair, and for a while seemed to have succeeded; but at length, succumbing to popular indignation, he committed suicide. The evils of undisciplined temper and passions are nowhere more clearly evinced than in the unhappy career of Eustace Budgel.

PALMER, THE POST-REFORMER.

Three hundred years ago, travellers had no choice but to ride on horseback or walk. Kings, queens, and gentlefolk all mounted to the saddle. The practice had existed for generations and centuries. Chaucer's ride to Canterbury is made famous by his own lucid account of that celebrated journey. Ladies were accustomed to ride on pillions fixed on the horse, and generally behind

* So Budgel termed Tindal.
† His own testament, the alleged forged will.

some relative or serving-man. In this way Queen Elizabeth, when she rode into the city from her residence at Greenwich, placed herself behind her lord-chancellor. Judges rode the circuit in jack-boots for centuries, and continued to do so long after other means of conveyance were in general use.*

The first improvement consisted in a kind of rude wagon, which was, in reality, nothing but a cart without springs, the body of it resting solidly upon the axle. In such a vehicle did Elizabeth drive to the opening of her fifth parliament. Mr Smiles, in his interesting *Lives of the Engineers*, relates that, 'that valyant knyght, Sir Harry Sydney, on a certain day in 1583, entered Shrewsbury in his *wagon*, with his trompeter blowynge, verey joyfull to behold and see.' Bad as these conveyances must have been, they had scarcely fair-play on the execrable roads of the period. Even up to the end of the seventeenth century, the roads in most parts of the country were not unlike broad ditches, much water-worn and carelessly strewn with loose stones. It is on record, that on one occasion eight hundred horses were taken prisoners by Cromwell's forces *while sticking in the mud!* During the seventeenth century, it was common, when a long journey was contemplated, for servants to be sent on beforehand, to investigate the country, and report upon the most promising tract. In 1640, the road from Dover to London was the best in England, owing, of course, to the amount of continental traffic continually kept up, and yet the journey of Queen Henrietta and household occupied four long weary days over that short distance.

It was not till towards the close of the sixteenth century that the wagon became used as a public conveyance, and only very rarely then. Fifty years after, we find that a string of stage-wagons travelled regularly between London and Liverpool, each one starting from the Axe Inn, Aldermanbury, every Monday and Thursday, and occupying ten days on the road during summer, and generally about twelve days during winter. About the same time, three men started every Friday morning for Liverpool, from Lad's Lane, London, with a gang of horses for the conveyance of light goods and passengers, usually reaching Liverpool on the Monday evening following.

Stage-coaches were great improvements on all the then existing conveyances, and were destined to work great changes in travelling. A kind of stage-coach was first used in London early in the seventeenth century. Towards the middle of the same century, they were generally adopted in the metropolis, and on the better highways around London, travelling at the rate of two or three miles an hour. Before 1698, stage-coaches were placed on three of the principal roads in the kingdom. The original announcement for that between London and York still exists, and runs as follows: 'Whoever is desirous of going between London and York or York and London, Let them Repair to the Black Swan in Holboorn, or the Black Swan in Coney Street, York, where they will be conveyed in a Stage Coach (if God permits), which starts every Thursday at Five in the morning.' This was only, however, for the summer season; during winter, they did not run at all, but were laid up for the season like ships during arctic frosts. Even in summer, the passengers very frequently got out and walked long distances, the state of the roads in some places compelling them to do so. With the York coach especially, the difficulties were really formidable. Passing through the low Midland counties was sometimes entirely impracticable, and during the time of floods, it was nothing unusual for passengers to remain at some town *en route* for days together, until the roads were dry again. Notwithstanding these drawbacks, stage-coaches increased in number and in popularity, and so decidedly was travelling on the increase, that they now became the subjects of grave discussion; news-letters encouraged or reviled them, and pamphlets were written concerning them. For instance, in one entitled *The Grand Concern of England Explained in Several Proposals to Parliament*, these same stage-coaches are denounced as the greatest evil that had happened of late years to the kingdom, mischievous to trade, and destructive to the public health. Curious to know in what way these sad consequences are brought about, we read on, and find it stated that 'those who travel in these coaches contracted an idle habit of body; became weary and listless when they rode a few miles, and were then unable or unwilling to travel on horseback, and not able to endure frost, snow, or rain, or to lodge in the field!' Opinions on even such a subject as this differed most materially. In the very same year that produced the book to which we have just referred, another writer, descanting on the improvements which had been brought about in the *postal* arrangements of the country, goes on to say, that, 'besides the excellent arrangement of conveying men and letters on horseback, there is of late such an admirable commodiousness, both for men and women, to travel from London to the principal towns in the country, *that the like hath not been known in the world*, and that is by *stage-coaches*, wherein any one may be transported to any place, sheltered from foul weather and foul ways; free from endamaging of one's health and one's body by the hard jogging or over-violent motion; and this not only at a low price (about a shilling for every five miles), but with such velocity and speed in one hour, as that the posts in some forraign countreys make in a day.'

From the information which we have been able to gather on the subject, it would appear that at first stage-coaches were not regarded as very great improvements upon the old stage-wagons. M. Soubrière, a Frenchman of letters, who landed at Dover in the reign of Charles II., alludes to the existence of stage-coaches, but he would seem to have been well acquainted with their demerits, as we may learn from an account which he has left: 'That I might not take post, or again be obliged to use the stage-coach, I went from Dover to London in a wagon. I was drawn by six horses placed in a line, one after another, and driven by a wagoner, who walked by the side of it. He was clothed in black, and appointed in all things like another St George. He had a brave monteror on his head, and was a merry fellow, fancied he

* Lord Cockburn, in his *Memorials*, describes very graphically the difficulties encountered by the Bar travelling in Scotland so late as the last century, and states that he always rode circuits when he was an advocate-depute between 1807 and 1810.

made a figure, and seemed mightily pleased with himself.'

The speed at which the coaches travelled was a great marvel at that time. In 1700, York was a week distant from the metropolis. Between London and Edinburgh, even so late as 1763, a fortnight was consumed, the coach only starting once a month. The intermediate Sunday was quietly spent at Boroughbridge, in Yorkshire, as much for the sake of relief to exhausted nature as from motives of piety. The first vehicle which plied between Edinburgh and Glasgow was started in 1749. It was called 'The Edinburgh and Glasgow Caravan,' and performed the journey of forty-four miles in two days. Ten years after, another vehicle was started, and called the 'Fly,' because it contrived to perform this same journey in a day and a half. Latterly, it took the daylight of one day. It is a perfectly authentic anecdote that, about 1780, a gentleman, anxious to make favour with a young lady, learning that she was to travel from Glasgow to Edinburgh, on a particular day, took the whole remaining inside-seats, had her all to himself of course, and succeeded in winning her as his wife. Mr Smiles tells us that, during the last century, the Fly coach from London to Exeter stopped at the latter place the fifth night from town; the coach proceeded next morning to Axminster, and there a woman-barber '*shaved the coach.*' The fact was that, on any of the roads, the difference of half a day, or even a day, was a small matter. Time was of less consequence than safety. The coaches were advertised to start 'God willing,' or about such and such an hour as shall seem good to the majority of the passengers. Thoresby tells us, that he was even accustomed to leave the coach (on the journey from London to York) and go in search of fossil shells in the fields, on either side of the road, while making the journey between these two places. Whether or not the coach was to stop at some favourite inn, was determined, in most cases, by a vote of the passengers, who would generally appoint a chairman at the beginning of the journey. Under such circumstances, we cannot wonder that disputes, especially about stopping at wayside-inns, should be of frequent occurrence. Perhaps the driver had a pecuniary interest in some particular posting-house, and would exert an influence, sometimes tyrannical, to obtain the consent of the passengers to a place of his choosing. In 1760, an action was tried before the Court of King's Bench to recover damages, on the plea that, during a stage-coach journey, the driver wished to compel the passengers to dine at some low inn on the road. They preferred to walk on to a respectable inn at some little distance, and desired the driver to call for them, as he must pass the place. Instead of doing so, he drove past the inn at full speed, leaving them to get up to London as best they could. The jury found for the passengers in £20 damages. On another occasion, a dispute arose, which resulted in a quarrel between the guard and a passenger, the coach stopping to see the two fight it out on the road!

While yet the ordinary stage-coach was found equal to all the requirements on most of the old coach-roads, the speed at which it travelled did not at all satisfy the enterprising merchants of Lancashire and Yorkshire. In 1754, a company of merchants in Manchester started a new vehicle, called the 'Flying Coach,' which seems to have earned its designation by the fact, that it proposed to travel at the rate of four or five miles an hour! The proprietors, at the commencement, issued the following remarkable prospectus: 'However incredible it may appear, this coach will actually (barring accidents) arrive in London in four days and a half after leaving Manchester.' Three years afterwards, the Liverpool merchants established another of these 'flying machines on steel springs,' as the newspapers of the period called them, which was intended to eclipse the Manchester one in the matter of speed. It started from Warrington (Liverpool passengers reaching the former place the night previous to starting), and only *three* days had to be taken up in the journey to London. 'Each passenger to pay two guineas—one guinea as earnest, and the other on taking coach; 14lbs. of luggage allowed, and 3*d.* per pound for all luggage in excess.' About as much more money as was required for the fare was expended in living and lodgings on the road, not to speak of fees to guard and driver. Sheffield and Leeds followed with their respective 'flying coaches,' and before the last century closed, the whole of them had acquired the respectable velocity of eight miles an hour.

These flying-coaches were the precursors of a great reform effected by a man of energetic nature in 1784. John Palmer, a person of substance at Bath, having been pleased to establish and conduct a theatre there, became strongly impressed with a sense of the antiquated system for both sending human beings and letters along the road between his town and the metropolis. He often desired to have occasional assistance from a London star, but was balked by the dilatoriness of the coach-travelling. Even to communicate with the London houses was insufferably tedious, for then the post starting in London on Monday did not reach Bath till Wednesday. Palmer travelled all over the country, and found everywhere the same insufficiency; he memorialised the government; he took means to inform the public; he clearly shewed how easy it would be to effect vast improvements tending to economise the time and money of the public. As usual, he was set down as a half-crazed enthusiast and *bore;* the post-office authorities were against him to a man; even those who saw and admitted his data, could not be brought to say more than that, while sure on the whole to fail, his system might give a slight impulse in the right direction. It was only through the enlightened judgment of Pitt, that he was able to commence, in the year mentioned, that system of rapid mail-coaches which lasted up to the days of railways. The first mail-coach in accordance with Mr Palmer's plan, was one from London to Bristol, which started at eight in the morning of the 8th of August 1784, and reached its destination at eleven at night. The benefits to the public quickly became too manifest to be denied even by the most inveterate of his opponents, and—mark the national gratitude! The government had entered into a regular contract with him, engaging to give him two-and-a-half per cent. upon the saving effected in the transmission of the letters. It was clearly shewn soon after that this saving amounted to £20,000 a year. Parliament, however, would not vote the fulfilment of the bargain, and Mr Palmer was *cheated* with grant of only £50,000.

The history of Palmer's reform was precisely that of Rowland Hill fifty years later—the same enlightened energy in one man, the same official conservatism of antiquated absurdities, the same sluggishness on the part of the public whose benefit was sought—not exactly the same reward. Hill's reward, too, was slight compared with his work; he received a public testimonial of £13,360 in 1842; and in 1864, now a K.C.B., he retired on his full salary of £2000 a year for life, while parliament in the same year voted him £20,000.

EUGENE ARAM.

Seldom has there been a robber and murderer, in the middle station of society, unconnected with great political movements, whose life has become the theme both of a novel and a poem. Eugene Aram is among these few. His case has attracted the attention of writers of fiction, both from the extraordinary circumstances connected with it, and the cultivated mind of the man himself.

Eugene Aram was born in Yorkshire. He received a fair school education; then became clerk in a London counting-house; then returned to his native place, set up a school, and married unfortunately. He next lived at Knaresborough, where, by great application, he obtained an extensive knowledge of the Greek, Hebrew, and Latin languages and literature. All this took place before 1744. In that year he came again to London, and was engaged as usher at a school in Piccadilly. Here he worked laboriously, and added a considerable knowledge of Chaldee and Arabic to his previous store of information, intending to apply it to the production of a lexicon. During his subsequent engagement at various other schools, he studied Celtic, and also acquired a very extensive knowledge of botany.

Such a man appeared to be among the last who would commit a robbery and a murder; and hence the intense surprise and pain that followed certain disclosures. In 1758, some workmen, digging about St Robert's Cave, near Knaresborough, found the remains of a man who appeared to have been murdered. Fourteen years before, a shoemaker, named Daniel Clark, had mysteriously disappeared from Knaresborough, and had not since been seen or heard of. It was recollected that one Richard Housman was the last person seen in his company; and the finding of the dead body (which was believed to be that of Clark) led to the apprehension of Housman. On his examination, Housman stated that the body was not Clark's, but that Clark's body, nevertheless, lay buried at a spot which he named. This admission led to further inquiries, which implicated Eugene Aram; and about the middle of August, Housman and Aram were committed for trial. The trial, which did not take place till the following year, disclosed a strange history. Clark married in 1744. Aram was living at Knaresborough at the time, poor, and united to a wife with whom he appears to have lived very unhappily. Three needy men—Clark, Aram, and Housman—entered into a conspiracy for borrowing as much valuable property as possible, as if for Clark's wedding, and then dividing the spoil amongst them. Clark was soon afterwards missing, and suspicion fell upon the other two, but nothing definite was found out. Aram deserted his wife, who had some suspicion of what he had done. Housman, at the inquest, stated that Aram murdered Clark, to conceal the evidence about the robbery; but Aram (who owned to the fraud) denied all knowledge of the murder. At the trial, Housman was acquitted of murder, and was admitted as king's evidence against Aram. Everything told heavily against the unhappy usher. He made a most elaborate defence, which could only have proceeded from an educated man. This remarkable defence was read before the court from manuscript; and in it he endeavoured to shew that all the facts against him had the usual defect of mere circumstantial evidence. He was found guilty, and condemned to death; he made a partial confession, then attempted to end his existence with a razor, and was finally brought out to the place of execution at York, and hanged on 6th August 1759.

This almost inexplicable history has attracted many pens, as we have said. In 1828, the late Thomas Hood wrote *The Dream of Eugene Aram*, a poem of thirty-six stanzas. In a preface to the poem, Hood described how the subject was suggested to his mind by a horrible dream. 'A lifeless body, in love and relationship the nearest and dearest, was imposed upon my back, with an overwhelming sense of obligation, not of filial piety merely, but some awful responsibility, equally vague and intense, and involving, as it seemed, inexpiable sin, horrors unutterable, torments intolerable—to bury my dead, like Abraham, out of my sight. In vain I attempted, again and again, to obey the mysterious mandate; by some dreadful process the burden was replaced with a more stupendous weight of imagination, and an appalling conviction of the impossibility of its fulfilment. My mental anguish was indescribable; the mighty agonies of souls tortured on the supernatural racks of sleep, are not to be penned.' Eugene Aram, it was known, when an usher in a school at Lynn, was accustomed to talk to the boys frequently on the subject of murder—for a reason which they could not understand, but which was probably the result of remorse in his own heart. Hood's horrible dream, and this fact, together suggested the idea of the poem. School-boys are represented at sport in the evening. Near them was the usher, 'a melancholy man,' alternately reading and brooding. He sees a gentle lad reading a book, and asks what it is. *The Death of Abel.* The usher started, and then said that he himself had dreamed, on the preceding night, that he had committed a murder. He narrated the dream, and a terrible one it is. Once in the course of his narration, he felt that his manner was too intensely earnest, and said—

> 'My gentle boy, remember this
> Is nothing but a dream!'

And again he said—

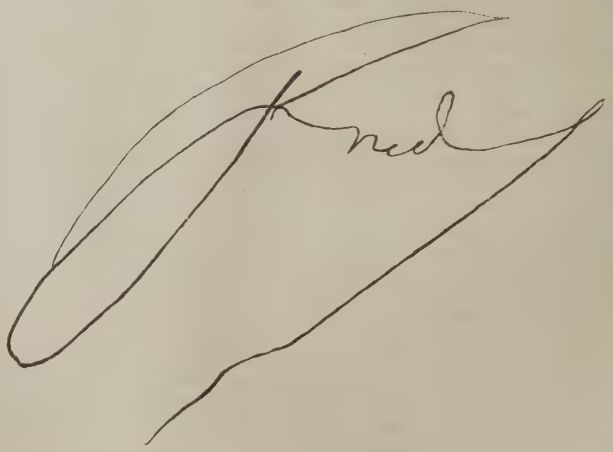
> 'Oh, God! that horrid, horrid dream
> Besets me now awake!
> Again, again with busy brain,
> The human life I take;
> And my red right hand grows raging hot,
> Like Cranmer's at the stake.'

Sir E. B. Lytton (when Mr Bulwer) published his romance of *Eugene Aram* in 1831, and dedicated it to Sir Walter Scott. In his preface he said: 'During Aram's residence at Lynn, his reputation for learning had attracted the notice of my

grandfather—a country gentleman living in the same county, and of more intelligence and accomplishments than, at that day, usually characterised his class. Aram frequently visited at Heydon, my grandfather's house, and gave lessons, probably in no very elevated branches of erudition, to the younger members of the family.' Sir Edward expresses a belief, that though there cannot be much *moral* doubt of the guilt of Eugene Aram, the *legal* evidence was not such as would suffice to convict him at the present day. He at first intended his *Eugene Aram* for the stage, but made it into a romance instead of a drama. Mr Godwin, author of *Caleb Williams*, once told Sir Edward that 'he had always thought the story of Eugene Aram peculiarly adapted for fiction, and that he had more than once entertained the notion of making it the foundation of a novel.'

AUGUST 17.

St Mamas, martyr, about 275. Saints Liberatus, Abbot, and six monks, martyrs, 483.



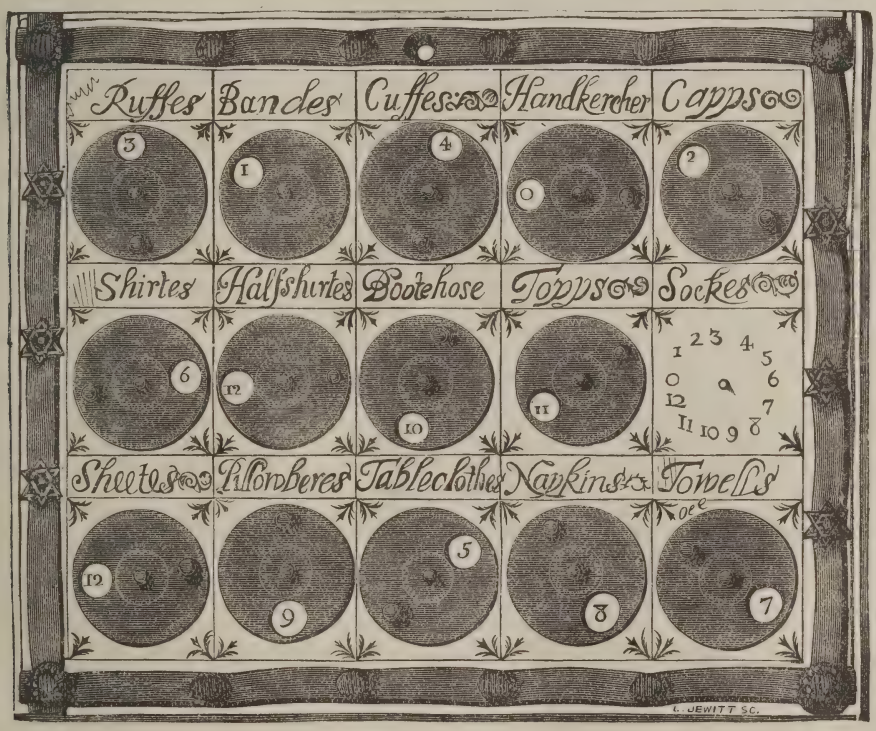
Born—Thomas Stothard, artist, 1755, *Longacre, London;* Dr William Carey, missionary and oriental scholar, 1761, *Paulerspury, Northamptonshire;* Richard Lalor Shiel, politician and dramatist, 1791, *Dublin.*

Died.—Carloman of Austrasia, eldest son of Charles Martel, 755, *Vienne, Dauphiné;* John Gower, early English poet, 1408; Edward V. and his brother Richard, Duke of York, smothered in the Tower, 1483; Admiral Robert Blake, 1657, *Plymouth;* Madame Anne le Fevre Dacier, translator of Homer and other classic authors, 1720; Frederick II. (the Great) of Prussia, 1786, *Potsdam;* Matthew Boulton, engineer and partner of Watt, 1809, *Soho, Birmingham;* Dr Edward Pearson, Arminian champion, 1811, *Rempstone, Nottinghamshire.*

FREDERICK THE GREAT.

On the 17th of August 1786, died the most remarkable sovereign which Prussia has yet produced, and one of the most remarkable sovereigns of Europe in the eighteenth century. Mr Carlyle, whose most elaborate and extensive work is his *History of Frederick II., called Frederick the Great*, gives a graphic picture of his hero, as he is supposed to have been about the year 1776. Writing in 1856, Mr Carlyle says: 'About fourscore years ago, there used to be seen sauntering on the terraces of Sans Souci, for a short time in the afternoon—or you might have met him elsewhere at an earlier hour, riding or driving in a rapid business manner on the open roads, or through the scraggy woods and avenues of that intricate amphibious Potsdam region—a highly interesting lean little old man, of alert though slightly stooping figure; whose name among strangers was King Frederick II., or Frederick the Great of Prussia, and at home, among the common people, who much loved and esteemed him, was *Vater Fritz*—Father Fred—a name of familiarity which had not bred contempt in that instance. He is a king every inch of him, though without the trappings of a king. Presents himself in a Spartan simplicity of vesture: no crown but an old military cocked-hat—generally old, or trampled and kneaded into absolute softness, if new; no sceptre but one like Agamemnon's, a walking-stick cut from the woods, which serves also as a riding-stick (with which he hits the horse 'between the ears,' say authors); and for royal robes, a mere soldier's blue coat with red facings, coat likely to be old, and sure to have a good deal of Spanish snuff on the breast of it; rest of the apparel dim, unobtrusive in colour or cut, ending in high over-knee military boots, which may be brushed (and, I hope, kept soft with an underhand suspicion of oil), but are not permitted to be blackened or varnished; Day and Martin with their soot-pots forbidden to approach.

'The man is not of godlike physiognomy, any more than of imposing stature or costume: close-shut mouth with thin lips, prominent jaws and nose, receding brow, by no means of Olympian height; head, however, is of long form, and has superlative gray eyes in it. Not what is called a beautiful man; nor yet, by all appearance, what is called a happy. On the contrary, the face bears evidence of many sorrows, as they are termed, of much hard labour done in this world; and seems to anticipate nothing but more still coming. Quiet stoicism, capable enough of what joy there were, but not expecting any worth mention; great unconscious and some conscious pride, tempered with a cheery mockery of humour—are written on that old face; which carries its chin well forward, in spite of the slight stoop about the neck; snuffy nose rather flung into the air, under its old cocked-hat—like an old snuffy lion on the watch; and such a pair of eyes as no man or lion or lynx of that century bore elsewhere, according to all the testimony we have.' After quoting a few words from Mirabeau, Carlyle proceeds: 'Most excellent potent brilliant eyes, swift-darting as the stars, steadfast as the sun; gray, we said, of the azure-gray colour; large enough, not of glaring size; the habitual expression of them vigilance and penetrating sense, rapidity resting on depth. Which is an excellent combination; and gives us the notion



AUTOGRAPH OF FREDERICK THE GREAT.

of a lambent outer radiance springing from some great inner sea of light and fire in the man. The voice, if he speaks to you, is of similar physiognomy: clear, melodious, and sonorous; all tones are in it, from that of ingenuous inquiry, graceful sociality, light-flowing banter (rather prickly for most part), up to definite word of command, up to desolating word of rebuke and reprobation.'

THE WASHING TALLY.

A washing tally, here engraved of a reduced size, was found not many months ago behind some oak-panelling in the old Chaplain's Room at Haddon Hall, in Derbyshire, in the same room in which many other curious relics are preserved—jack-boots, pewter-plates, fire-dogs, cradles, and other things, which each tell their tale of bygone-times, and of the home-life of the Vernons—the once noble owners of the place. It is, judging from the style of the engraving, the lettering, and ornamentation, of the time of King Charles I., and the names of the articles of dress enumerated upon it well accord with that period. This 'tally' was first made public in the *Reliquary*, where it is fully described, and where also the engraving here given appears. From that account the following description and particulars as to costume, &c., are selected under the care of the author: 'The Washing Tally, here engraved of a reduced size, is five inches and a half in length, and four and a half inches in depth. It is formed of a piece of beech-wood of the size described, and of a quarter of an inch in thickness, covered with linen at the back and sides. In construction, it is

THE WASHING TALLY.

precisely similar to a "Hornbook"—in front, the different articles are printed from copper-plate, and protected by a sheet of horn. Around the edge a narrow strip of thin brass, fastened down with highly-ornamental nails, attaches the horn, the paper, and the linen to the wood. The tally is divided into fifteen squares, in each of which is a dial numbered from 0 to 12, and above each square is the name of the article intended to be taken into account. The articles are "ruffes," "bandes," "cuffes," "handkercher," "capps," "shirtes," "halfshirtes," "bootehose," "topps," "sockes," "sheetes," "pillowberes," "tableclothes," "napkins," and "towells." On each of the dials is a circular brass indicator, fastened by a little pin in its centre, so as to turn round at pleasure. Each of these indicators is pierced on one side, close to its outer edge, with a round hole through which one number on the dial is visible. Opposite to this opening is a raised point by which the indicator may be turned.

'In keeping an account of the articles "sent to the wash," it was, as will be seen, simply necessary to turn each indicator to the figure representing the number of each article looked out, and when none were sent, the 0 was brought in requisition. I have, for the purpose of this illustration, turned the indicator so as to shew each number, and as one of the indicators is fortunately missing, I am also enabled to shew one of the dials in full. As the

tally now stands, the account of washing would be as follows:—

Ruffes,	3	Topps,	11
Bandes,	1	Sockes (indicator removed)	
Cuffes,	4	Sheetes,	12
Handkercher,	none	Pillowberes,	9
Capps,	2	Tableclothes,	5
Shirtes,	6	Napkins,	8
Halfshirtes,	12	Towells,	7
Bootehose,	10		

'Towels, however, do not appear at all times to have belonged to the domestic arrangements of the owner of this interesting relic, for in place of that name the words *laced bands* has been written on the horn, in the olden times. The writing is now nearly obliterated, but may be seen by a careful observer.'

A similar tally, in the possession of a gentleman of Liverpool, has been figured in the *Transactions* of the Historic Society of Lancashire and Cheshire:

'Washing-days, at the time of the Tudors and Stuarts (the period to which the washing tally belongs), though a little more important than in the preceding ages, had none of those unpleasantnesses and terrors which are said now to accompany them. Articles which required washing were "few and far between," whilst those of a texture which would not "stand a wash" were usually worn. The dyer was far more commonly employed than the laundress, and his trade thus covered a "multitude of sins" of omission of personal cleanliness, which the laundress would have remedied with more healthy results.

'Velvets, taffeta, and rich silks were, in the middle ages, often worn by the wealthy without any underclothing whatever, while the domestics, and people of lower order, wore coarse woollen, also without underclothing. The possession of a linen shirt, even with the highest nobles, was a matter of note, and it was but few wardrobes which contained them. Night-gowns were not known, and the custom was to sleep entirely without clothing. Under the Tudors, night-gowns were worn, but they were formed mostly of silk or velvet, so that no washing was required. Anne Boleyn's night-dress was made of black satin, bound with black taffeta, and edged with velvet of the same colour. One of Queen Elizabeth's night-gowns was of black velvet, trimmed with silk lace, and lined with fur; and in 1568, her majesty ordered George Bradyman to deliver "threescore-and-sixe of the best sable skynnes, to furnish us a night-gowne." In another warrant from her majesty in 1572, she orders the delivery of "twelve yards of purple velvet, frized on the backe syde with white and russet silke," for a night-gown for herself, and also orders the delivery of fourteen yards of murry damask for the "makyng of a nyght-gown for the Erle of Leycester." Night-dresses for ladies were, at a later period, called "night-rails," and, in the reign of Queen Anne, it became the fashion for them to be worn in the daytime in the streets, over the usual dress. This gave rise to many curious satires. Night-caps, too, were mostly of velvet and silk, and these, with the velvet night-dresses, the silken shirts, and other matters of a like kind, eased the laundress, though they must have added to the discomfort of the wearer.

'Clothes were, in former times, usually washed in the river, but not unfrequently in the common wells of towns, from which the water was fetched for culinary purposes and for drinking. In 1467, the corporation of Leicester, to prevent the constant fouling of the water, ordered that no woman do wash clothes or other corruption in the common wells. At Lyme, an order by court was given in 1608, that none do wash their bucks in the street (*i. e.* in the stream of running water which supplied the town), under a penalty of 6*s.* 8*d.* The "buck" here alluded to, was the quantity of family linen put to wash. "Buck," was "to wash," and was also used for the quantity of linen washed at once—a tub full of linen "in buck." Thus "to wash a buck," was to wash a tub of clothes; "buck ashes," were the ashes of which the lye for washing was made; "buck-basket," the basket in which the linen was carried; "buck-pan," the washing tub; and to be "bucked," was to be soaked or drenched with water. The "buck-basket" will be familiar to every reader, as described by Sir John Falstaff, as "rammed with foul shirts and smocks, socks, foul stockings, and greasy napkins, that, Master Brook, there was the rankest compound of villainous smells that ever offended nostril."

'The clothes being placed in the tub, the women, sometimes several in number, with their dresses tucked up, danced upon them to beat out the impurities. When washed at the river-side, they were beaten on wood or stones. Under Henry VIII., the royal laundress was ordered to procure enough "sweet powder, sweet herbs, and other sweet things," as might be requisite for the "sweet keeping" of the linen.'

A word or two on the different articles enumerated on the tablet, may not be out of place. The 'ruffe' was the frill, or plaited collar so generally worn in the reign of Elizabeth, and in the succeeding reign, and which are made familiar by the many portraits of the 'virgin queen' and the 'illustrious notables' of her reign which are extant. They were sometimes worn of gigantic size, and propped up, and made to keep in form by a framework of wire, which, with the strong starch—which Stubbes called '*the devil's own liquor, I mean starch*'—held them up about the neck of the wearer. Under the Stuarts, the ruffs gradually lessened in size. The ruffs worn by men were of similar shape to those worn by women, and almost of an equally extravagant size. The 'band,' from which the small bands still worn by the clergy took their origin, were collars of linen, cambric, or other material, worn around the neck. When starched to stand up, they were simply 'bands;' when allowed to lie flat on the shoulders, they were called 'falling-bands.' The 'laced bands' were the richly worked lace neckcloths so frequently seen in portraits of the Stuart period. It may interest our fair readers to know, that the origin of the name of 'band-box' is traced to these articles of attire—the boxes originally being made to keep ruffs and bands in.

The 'cuffe' was the lower part of the sleeve, which was sometimes quite plain, and at others richly embroidered, or formed of lace, and was worn turned back over the wrist. '"Handkerchers," or handkerchiefs, were, in the days when this tally was first used, costly articles. Laced handkerchiefs "first came in vogue" under Queen

Elizabeth, and in that and the succeeding reigns were "laced round with gold." Also

> "Handkerchiefs were wrought
> With names and true-love knots,"

and many of the pretty devices are given and worn as love-tokens—the gallants sometimes wearing them as favours in their hats. The term "cap" would, of course, include night-caps, and these were, under both Tudors and Stuarts, frequently most elegantly embroidered, worked in filigree on velvet or silk, and trimmed with costly lace.

"Shirt" was a term applied equally to that part of both male and female attire worn next the skin. They were made usually of fine Holland, but not unfrequently of silk, and were occasionally embroidered. The Holland-shirts of both male and female had, in some instances, the ruffs and hand-ruffs, the bands and wrist-bands, of cambric or lace attached to them. "Half-shirts" were stomachers, more richly decorated with embroidery and lace, over which the boddice was laced from side to side. "Boot-hose." Hose formerly were not stockings as we now wear them, but were drawn up the full length of the leg, and sometimes even to the waist, and had pockets in their sides. In the time of the Tudors and Stuarts, they were worn of great variety of materials and of colour, and were in some instances very costly. They were often termed "nether stocks."

"Tops" were the Holland, linen, and lace-linings and frills, worn around the full-hanging boots of the Cavaliers. The tops were exceedingly full and rich among the higher class, and their "getting-up" must have been a somewhat tiresome operation for the laundress. The "sock" was frequently beautifully worked, and was drawn on over the hose or stocking, and reached up to the calf of the leg.

"Pillowberes" is the old term for what we call "pillow-cases;" that is, the covering of the pillow, sometimes also called "pillow-slips," or "pillow-ties."

"Table-cloths" have been in use in England certainly since the Saxon period, and in that and every succeeding age.

'The word "napkin" was formerly applied to handkerchiefs and table-linen, as well as to cloths for head-dresses, &c. "Napery" was the general term for linen, especially that for the table. "Towel" requires no explanation.'

As the 'Horn-book' gradually gave way to the 'Battledore' and the 'Primer,' so the 'Washing Tally' has given place to the 'Lady's and Gentleman's Washing-books,' to be found in the shop of every stationer. But, like the Horn-book, the original was far more lasting, more useful, and, in the end, much less expensive, than the modern books are which have been substituted for them.

L. L. J.

AUGUST 18.

St Agapetus, martyr, about 275. St Helen, empress, 328. St Clare of Monte Falco, virgin, 1308.

Born.—Dr Henry Hammond, eminent English divine, 1605, *Chertsey;* Brook Taylor, mathematician, 1685, *Edmonton;* John, Earl Russell, from 1846 to 1852 Prime Minister of Great Britain, 1792, *London.*

THE REBEL LORDS OF 1746.

Four of the Scotch nobility, who had joined in the insurrection of 1745, were condemned to death. One, the Earl of Cromarty, was pardoned, very much out of pity for his wife and large family. A second, Lord Lovat, was executed in 1747. The remaining two suffered decapitation on Tower Hill, on the 18th of August 1746, while the country was still tingling with the fear it had sustained from the rising. Of these, the Earl of Kilmarnock, a gentle-natured man of two-and-forty, professed penitence. The other, Lord Balmerino, a bluff old dragoon, met death with cheerful resignation, avowing his zeal for the House of Stuart to the last. The scaffold erected for this execution was immediately in front of a house which still exists, marked as No. 14 Tower Hill. The two lords were in succession led out of this house on to the scaffold, Kilmarnock suffering before Balmerino, in melancholy reference to his higher rank in the peerage. Their mutilated bodies, after being deposited in their respective coffins, are said to have been brought back into the house, and in proof of this, a trail of blood is still visible along the hall and up the first flight of stairs. There is a contemporary print of the execution, representing the scaffold as surrounded by a wide square of dragoons, beyond which are great multitudes of people, many of them seated in wooden galleries. The decapitated lords were all respectfully buried in St Peter's Chapel within the Tower.

There were in all between eighty and ninety men put to death for their concern in the Forty-five. Many of them suffered on Kennington Common, including two English gentlemen, named Francis Townley and George Fletcher, who had joined the prince at Manchester. The heads of these two were fixed at the top of poles, and stuck over Temple Bar, where they remained till 1772, when one of them fell down, and in a storm, the other soon followed. There were people living in London not long ago, who remembered having in their childhood seen these grisly memorials of civil strife. Many readers will remember the jocular remark made by Goldsmith to Johnson, with reference to the rebel heads of Temple Bar. Johnson, who was well known to be of Jacobite inclinations, had just quoted to Goldsmith from *Ovid*, when among the poets' tombs at Westminister Abbey—

> 'Forsitan et nostrum nomen miscebitur istis.'

Passing on their way home under Temple Bar, Goldsmith slily whispered in Johnson's ear, pointing to the heads—

> 'Forsitan et nostrum nomen miscebitur *istis*.'

Previous to the rebellion of 1745, Temple Bar, for about thirty years, exhibited the head of a

barrister named Layer, who had been executed for a Jacobite conspiracy, soon after Atterbury's Plot. At length, one stormy night, the head of Layer was tumbled down from its station, and being found in the morning by a gentleman named Pearce, was taken into a neighbouring public-house. It is said to have there been buried in the cellar; nevertheless, a skull was purchased as Layer's by Dr Rawlinson, an antiquary, and, on his death in 1755, was buried in his right hand.*

DECLINE AND END OF THE JACOBITE PARTY.

It is scarcely necessary to remark that Jacobitism proceeded upon a principle, which is not now in any degree owned by anybody in the United Kingdom—that a certain family had a simply hereditary right to the crown and all the associated benefits, and could not be deprived of it without the same degree of injustice which attends the taking of a man's land, or his goods, or anything else that is his. 'The king shall enjoy *his own* again!' was the burden of a song of the Commonwealth, which continued in vogue among the Stuart party as long as it existed. Those who made and sang it, had no idea of any right in the many controlling this supposed right of one; and there, of course, lay their great mistake. Granting, however, that the Jacobites viewed the case of the Stuarts as that of a family deprived of a right by unjust means, we must admit that their conduct in trying to effect its restoration was not merely logical, but generous. In the heat of contention, the Revolution party could not so regard it; but *we* may. We may—while deploring the short-sightedness of their principles—admire their sacrifices and efforts, and pity their sufferings.

After the House of Brunswick had been well settled in England, the chance of a restoration of the Stuarts became extremely small. The attempt of 1745, brilliant as it was in some respects, was a thing out of time, a mere temporary and, as it were, impertinent interruption of a state of things quite in a contrary strain. The Jacobites were chiefly country gentlemen—men of the same type who are now known as ultra-conservatives. They were important in their own local circles, but could exercise little influence on the masses. The essential weakness of their cause is shewn in the necessity they were under of putting a mask upon it.

A constant correspondence was kept up between them and the Stuarts, but under profound secrecy. Portraits and medals of the royal exiles were continually coming to them, to keep alive their bootless loyalty. An old lady would have the face of James III. so arranged in her bedroom, that it was the first thing she saw on opening her eyes in the morning. The writer has seen a copy of the Bible, with a print of that personage pasted on the inside of the first board. The contemplation of it had been a part of the owner's devotions. There was also a way of shewing the Stuart face by a curious optical device, calculated to screen the possessor from any unpleasant consequences. The face was painted on a piece of canvas, in such a way that no lineament of humanity was visible upon it; but when a polished steel cylinder was erected in the midst, a beautiful portrait of 'the king' or 'the prince' was visible by reflection on the metal surface. There were also occasional presents of peculiar choice articles from the Stuarts to their adherents. A gentleman in Perthshire still possesses the silver collar of an Italian greyhound, which was sent to his grandmother, considerably more than a hundred years ago, the collar being thus inscribed: 'C. STEWARTUS PRINCEPS JUVENTUTIS.' On the other hand, when some ingenious manufacturer produced a ribbon or a garter coloured tartan-wise, and containing allusive inscriptions, initials, or other objects, samples of it would be duly transmitted to the expatriated court.

The Jacobites dealt largely in songs metaphorically conveying their sentiments, and some of these, from this very additional necessity of metaphor, are tolerably effective as samples of poetry. Dr William King, president of St Mary's Hall, Oxford, and Dr John Byrom of Manchester, were the chief bards of the party about the middle of the century. The Jacobites also dealt largely in mystically significant toasts. If the old squire, in giving 'The king,' brought his glass across a water-jug, it was held to be a very clever way of shewing that he meant 'The king over the water.' If some Will-Wimble-like dependent, on being asked for his toast, proposed, 'The king *again*,' it was accepted as a dexterous hint at a Restoration. One of Dr Byrom's toasts was really a clever equivoque:

'God bless the king—I mean the Faith's Defender.
God bless—no harm in blessing—the Pretender.
Who that Pretender is, and who that king,
God bless us all, is quite another thing.'

This was set forth in Byrom's works, as 'intended to allay the violence of party-spirit.' One of the hopeful sons of the squire was sure of an additional apple, if he could clearly enunciate to the company at table the following alphabet:

A. B. C.	A Blessed Change.
D. E. F.	D— Every Foreigner.
G. H. J.	Get Home James.
K. L. M.	Keep Loyal Ministers.
N. O. P.	No Oppressive Parliaments.
Q. R. S.	Quickly Return, Stuart.
T. U. W.	Tuck Up Whelps (Guelphs).
X. Y. Z.	'Xert Your Zeal.

As another specimen of their system of equivocation, take the following verses, as given on the fly-leaf of a book which had belonged to a Jacobite partisan:

I love with all my heart — The Tory party here
The Hanoverian part — Most hateful doth appear
And for their settlement — I ever have denied
My conscience gives consent — To be on James's side
Most glorious is the cause — To be with such a king
To fight for George's laws — Will Britain's ruin bring
This is my mind and heart — In this opinion I
Though none should take my part } Resolve to live and die

To appearance, this was a long poem of short lines, conveying nothing but loyalty to the Hanover family, while, in reality, it was a short poem in long lines, pronouncing zealously for the Stuarts.

* *Temple Bar, the City Golgotha.* By a Member of the Inner Temple. 1853.

Mr Richard Almack, F. S. A., Melford, exhibited at a meeting of the Archæological Institute, a very affecting memorial of the Jacobite party, in the form of an impression from a secretly engraved plate, supposed to have been executed by Sir Robert Strange, and of which a copy is here reproduced on wood. It professedly is a sort of cenotaph of the so-called 'Martyrs for King and Country in 1746.' The form, as will be observed, is that of a full-blown five-petalled rose, on which are thirty-five small circles, containing each the

MEMORIAL OF JACOBITE MARTYRS.

name of some one who suffered for the cause at the close of the insurrection of 1745–6; as also, on the extremities, those of Prince Charles and Prince Henry Benedict, with the dates of their births. Amongst the names of the sufferers are those of Captain John Hamilton, who had been governor of Carlisle for the Prince, and surrendered it to the Duke of Cumberland, Sir Archibald Primrose, Francis Buchanan of Arnprior, Colonel Townley, who had raised a rebel regiment at Manchester, and Captain David Morgan, originally a barrister. The others were persons of less account; most of them were put to death in barbarous circumstances on Kennington Common. [A second plate, similar in form to the one engraved above, was in 1884 in the possession of Miss Foster, Larkholm, near Liverpool. This plate contains a different set of names, amongst which appear those of Lords Balmerino and Kilmarnock.] Jacobitism may be said to have ceased to have a profession of faith at the death of Charles Edward in 1788. Little of it survived in favour of Cardinal York, who, at the death of his brother, was content to issue a medal bearing his name as 'Henricus Nonus Dei Gratia Rex,' with the meek addition, 'Haud desideriis Hominum, sed voluntate Dei.' The feeling may be said to have merged in an attachment to George III., on his taking so strong a part against the French Revolution and Friends of the People—a position which made him something like a Stuart himself.

AUGUST 19.

ELIZABETH, ELECTRESS PALATINE.

Happiness such as rarely falls to the lot of crowned heads, might have been the portion of this lovely and interesting woman, had not a foolish ambition of being called a queen blighted in a moment the whole tenor of her life. The eldest child of James VI. of Scotland, she was born at the palace of Falkland, and when baptized, had for a sponsor the city of Edinburgh, in the proxies of its provost and bailies, who stoutly held to their right of seeing the princess brought up in the Protestant faith. When her father departed, in 1603, to take possession of the English throne, he left his consort and young family to follow him; and their progress through the counties was marked by festivals and pageants nearly as grand as those which had signalised the king's own progress. After a short stay at Windsor, it was deemed necessary that the little princess should be withdrawn from her father's palace and placed under the superintendence of Lord and Lady Harrington, at Combe Abbey. Very pleasant is the picture of the life led at this lovely spot, where beautiful gardens, aviaries, park, and river, charmed the eyes of those who had been accustomed to the wild, desolate Scottish scenery. Many noble young ladies were sent to share in the education of Elizabeth, which seems to have been admirably conducted by Lord Harrington: a sincere Christian and learned man, he strove to instruct his pupil more thoroughly in life and its duties, than in mere outside show, and but for the lavish expenditure, arising from her generosity, which he could not subdue, we may say that he succeeded well.

At the age of fifteen, the young princess was removed to London, and proposals of marriage came from all the countries in Europe. France and Spain drew back, on the ground of religious differences, and at length Frederick V., Elector palatine, was the accepted suitor, who, though snubbed by the queen for his want of a kingly title, was yet the first in rank of the German princes, ruling those wide and fertile Rhenish Provinces which now form so valuable a part of

the Prussian dominions. His reception in October 1612 was of a most joyous kind; water-processions, tiltings, masques, and feasts filled up the days, until the sad death of Prince Henry threw the royal family into mourning. He and his sister had always been strongly attached, and his last words were for her. The opportunity was, however, given for her lover to offer his best consolations, and the deep attachment formed at this period was never abated during the many trials of their married life. St Valentine's Day was appropriately chosen for the marriage-ceremony; the first royal one that had ever been performed according to the liturgy of the Church of England. James's vanity induced him to load himself on this joyous occasion with six hundred thousand pounds worth of jewels, and the bride's white satin dress was embroidered with pearls and gems, and her coronet set in pinnacles of diamonds and pearls. Having taken a sad farewell of her parents, whom she was never to see again, she sailed to Flushing, and proceeded on a sort of triumphal march through Holland and Germany, arriving at her beautiful palace of Heidelberg amidst arches of flowers and hearty welcomes from her subjects. Frederick lifted her over the threshold in his arms, according to old German custom, and introduced her to his mother and relatives in rooms furnished with solid silver. The great tun of wine stood on the terrace, and was twice drunk dry by the scholars, soldiers, and citizens, who dined in the meadows beneath, by the banks of the Neckar. For six years this happy couple reigned in equal prosperity and popularity; three lovely children rejoiced their parents' hearts; when the Bohemians, roused to insurrection by the oppression of the emperor of Germany, offered their crown to Frederick.

Very thankful would the Elector have been to decline such a desperate venture as that of matching his strength with the Imperial forces: but Elizabeth urged him on with the question, 'Why he had married a king's daughter, if he dreaded being a king?' The stadtholder, Maurice, was on her side of the question; while the Electress-Dowager supported her son. Maurice one day abruptly asked the Electress-Dowager: 'If there were any green baize to be got in Heidelberg?' 'Yes, surely,' answered she; 'but what for, Maurice?' 'To make a fool's cap for him who might be a king and will not!' was the reply of Maurice. Thus overcome, Frederick signed the acceptance of the ancient crown of Bohemia, and in October he and his family made a ceremonial entry into the old city of Prague, where Taborites, Hussites, Lutherans, and Catholics were soon at daggers-drawing with each other and their chosen sovereign. The Spanish army immediately seized on Heidelberg and the Palatinate, whilst the Duke of Bavaria's cannon boomed over the Weissenberg, and his soldiers descended on Prague. The unfortunate king assisted his wife into the carriage in which she had to fly for her life, saying: 'Now I know what I am. We princes seldom hear the truth until we are taught it by adversity.' The Catholics broke out into songs of exultation. Mr Floyd, a member of parliament in England, was expelled from the House, branded, and flogged, for repeating a squib, 'that the king's daughter fled from Prague like an Irish beggar-woman with her babe at her back.' Placards were fixed on the walls of Brussels, offering a reward for 'a king run-away a few days since, of adolescent age, sanguine colour, middle height, a cast in one of his eyes, no moustache, only down on his lip, not badly disposed when a stolen kingdom did not lie in his way—his name, Frederick.' Henceforth this royal pair, with their large family of little princes and princesses, were only indebted to charity for a home.

By the kindness of the States-General, Elizabeth found refuge at the Hague. She maintained a brave heart, indulged in her favourite sport of hunting, and seemed to suffer little from the difficulties and privations incidental to a life of penury. Her dejected husband was generally with the armies which were desolating Germany during the fearful Thirty Years' War, until death carried him away in 1632, at a distance from his loving wife, in the castle of Mentz: sorrow at witnessing the miseries of his people broke his heart when but thirty-six years of age. The sad tidings were wholly unexpected by his poor widow, and for three days she was unable to speak; her brother, Charles I., shewed her great sympathy and kindness, allowing her £20,000 a year, and begging her to come to him. This she declined; but her two elder sons, Prince Charles and Rupert, spent much time at the English court, until the former was once more settled in a part of the Palatinate.

Elizabeth occupied herself with the education of her daughters and younger sons, until the troubles began in England, when two of her sons, including 'the fiery Rupert,' joined their unfortunate uncle. The close of the struggle with the death of Charles, threw the Electress at once into deep grief, and something like want, for her English pension necessarily ceased. Her court, nevertheless, became a refuge for the persecuted loyalists, whilst her kind, affectionate temper, made her friends among all sects and parties. Louisa, one of her daughters, shewed such talent for painting, that her pictures were often disposed of to assist the needy household; this clever woman afterwards became a nun at Chaillot, much to her mother's sorrow.

The restoration in 1660, brought a last ray of hope to the sorrowful life of Elizabeth. She longed to see her native country once more; and when her nephew, the king, declared his inability to bear the expense of a state-visit, she determined to come incognito, to her generous friend, Lord Craven, who offered her his house in Drury Lane. We soon hear of her entering into the gaieties of London, and being the first lady of the court; £12,000 a year was settled upon her, and happiness seemed in store; but in less than a year after her arrival, inflammation of the lungs attacked her, and she died on the eve of St Valentine's Day, just forty-nine years after she had been made a happy bride, and was buried at Westminster Abbey, with a torchlight procession on the Thames. Of her seven sons, not one left a grandson; and it was through her youngest daughter, Sophia, that the present royal family came to the British throne.

COUNT RUMFORD.

Sir Benjamin Thompson, better known as Count Rumford, was one of those few but fortunate men who have both the means and the inclination to be useful to society generally. He was continually

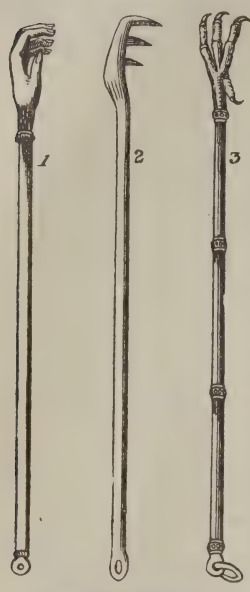
doing something or other, that had for its object, or one of its objects, public or individual improvement. He was an American, born at Rumford, in New England, in 1752. After receiving a good education, and marrying advantageously, he espoused the cause of the mother-country against the colonies during the American war, and was knighted by George III. for his services. Sir Benjamin, in 1784, made a continental tour, and eventually entered the service of the king of Bavaria, in the singular capacity of a general reformer. He remodelled the whole military system of the country; he suppressed a most pernicious system of mendicancy that prevailed in Munich; he taught the people to like and to cultivate potatoes, against which they had before had a prejudice; he organised a plan for employing the poor in useful pursuits; and he introduced a multitude of new and curious contrivances of various kinds. He was made a count for his services. He returned to England in 1799, but lived mostly in France, till his death on the 19th of August 1814. Count Rumford's papers in the *Philosophical Transactions*, and his detached scientific essays, range over the subjects of food, cooking, fuel, fireplaces, ventilation, smoky chimneys, sources of heat, conduction of heat, warm baths, uses of steam, artificial illumination, portable lamps, sources of light, broad-wheeled carriages, &c. He was well-versed in English, French, German, Spanish, and Italian. He founded the 'Rumford Medal' of the Royal Society: leaving £1000 stock in the three per cents, the interest of which is applied biennially, in payment for a gold medal, to reward the best discoverers in light and heat; and he benefited many other scientific institutions.

Count Rumford adopted a singular winter-dress while at Paris—white from head to foot. This he did in obedience to the ascertained fact, that the natural heat of the body radiates and wastes less quickly through light than dark-coloured substances. But the most remarkable achievement of Rumford's life, perhaps, was the suppression of the beggars at Munich. Mendicancy had risen to a deplorable evil, sapping the industrial progress of the people, and leading to idleness, robbery, and the most shameless debauchery. The civil power could not battle against the evil; but Rumford took it in hand. He caused a large building to be constructed, and filled it with useful implements of trade—but without letting the beggars into the secret. Having instructed the garrison and the magistrates in the parts they were to fill, he fixed on the 1st of January 1790, as the day for a *coup d'état*, when the beggars would be more than usually on the look-out for New-year's gifts. 'Count Rumford began by arresting the first beggar he met with his own hand. No sooner had their commander set the example, than the officers and soldiers cleared the streets with equal promptitude and success, but at the same time with all imaginable good-nature; so that before night, not a single beggar was to be seen in the whole metropolis. As fast as they were arrested, they were conducted to the town-hall, where their names were inscribed, and they were then dismissed with directions to repair the next day to the new workhouse provided for them, where they would find employment, and a sufficiency of wholesome food. By persevering in this plan, and by the establishment of the most excellent practical regulations, the count so far overcame prejudice, habit, and attachment, that these heretofore miserable objects began to cherish the idea of independence—to feel a pride in obtaining an honest livelihood—to prefer industry to idleness, and decency to filth, rags, and the squalid wretchedness attendant on beggary. In order to attain these important objects, he introduced new manufactures into the electoral dominions.'*

ROBERT BLOOMFIELD.

Robert Bloomfield, when he wrote his *Farmer's Boy*, drew upon his own experience. His father was a tailor, his mother a village-schoolmistress, his uncle a farmer, and under this uncle the fatherless lad was placed. But the labour of his employment, it is said, proved too much for a delicate constitution; so he went to live in London with an elder brother, and learned the trade of a shoemaker. The Muses whispered their secrets in his ear, as he sat working in his garret, and he wrote down what they said: in due time, with the help of a patron, the shoemaker's verses were published, and the polite world was astonished.

In these days, when the advantages and opportunities of education have been extended to the humblest in the land, and the simplest village letter-carrier is expected to be informed as to higher matters than mere numbers of houses and names of streets, poems from the pens of men of humble origin are not such a wonderful thing as they were in Bloomfield's time. The art of writing verses is as simple to acquire as the art of mending shoes. Further than this, all men, from whatever classes they may have sprung, and how differently soever they may have been reared to manhood, have inherently the same passions, hopes, feelings, and tendencies. The sweet influences of nature sway the farmer's boy and the lord's heir alike, if in different degrees, or after different fashions. The difficulty which stands in the way of a rustic, when he takes a pen in his hand, is not how to find thoughts, or feel emotions, but how to give expression to them. This difficulty education has tended much to remove, and hence we now encounter poetic post-boys and rhyming shoemakers much more often than we used to do.



Poor Robert Bloomfield! Ambition led him astray! He was lifted off his feet. When the great smiled on him, he thought himself famous; when they forgot him in due course, he sickened and despaired, and only preserved his reason by surrendering his life. It is a sad thing not to distinguish clearly what one is, and what one is not, and a most dangerous thing for one who is deserving to hanker after notoriety.

THE SCRATCH-BACK.

The curious little instruments here figured are of extreme rarity, and probably not many of our readers have ever heard of, much less seen, any examples of them. The name, 'Scratch-back,' is not very euphonious, but it is remarkably expressive, and conveys a correct notion of the use of the curious little instrument to which it belongs. The

* *Gentleman's Magazine*, vol. lxiv. part 2. p. 395.

'scratch-back' was literally, as its name implies, formed for the purpose of scratching the backs of our fair and stately great and great-great-grand-mothers, and their ancestresses from the time of Queen Elizabeth; and very choicely set and carved some of them assuredly were. Sometimes the handles were of silver elegantly chased, and we have seen one example where a ring on the finger of the hand was set with brilliants. But few of these relics have passed down to our times, and even in instances where they are preserved, their original use has been forgotten. At one time, scratch-backs were almost as indispensable an accompaniment to a lady of quality as her fan and her patch-box. They were kept in her toilet, and carried with her even to her box at the play.

SCRATCH-BACKS.

The first one, engraved on the accompanying illustration, is twelve inches in length. At the upper end is an ivory knob, with a hole, through which a cord could be passed for suspension to the waist, or for hanging in the dressing-room. The handle or shaft is mottled, and the *practical* end, or scratcher, is a beautifully carved hand of ivory. The fingers are placed in the proper position for the operation, and would lead one to believe that the carver must have studied pretty closely from nature. The finger-nails are particularly sharp and well formed, and designed to scratch in the most approved fashion. This seems to have been the most favourite form for this strange instrument, of which form I have seen three examples.

The second example in our engraving is of about the same length as the one just described. This instrument is made entirely of horn, one end being pierced for suspension, and the other formed into three teeth or claws, sharp at the ends and bent forward. It is particularly simple in construction, but evidently would be as effective as the more artistic and elaborate example just described.

The third specimen which I give is, like the first, partly of ivory, and beautifully carved. The stick or shaft is of tortoise-shell, and it has a little silver ring at the top, and a rim of silver to cover the junction of the tortoise-shell and ivory. The scratcher is formed like the foot of a bird, with the claws set, and, of course, made very sharp at the points. The foot is beautifully carved, and remarkably well formed; and the instrument must have been one of the best of its class. On the under-side of the foot of this example are the initials of its fair owner, A. W., cut into the ivory.

It would add to the interest of this little notice could we tell our readers to whom these precious little relics had belonged, and whose fair backs they had scratched; but this we cannot do. All we can do is, to give them representations of these curious instruments, explain their uses, describe their construction, and heartily congratulate our fair friends on their not being required in our day. In former times, when personal cleanliness was not considered essential, when the style of dress worn was anything but conducive to comfort and ease—for it must be remembered that, in the last century, ladies' immensely-high head-dresses, when once fixed, were frequently not disturbed or altered for a month, and not until they had become almost intolerable to the wearer and to her friends—and when the domestic manners of the aristocracy, as well as others, were not of the most refined and delicate kind, the use of these little instruments, with many other matters which we may yet take the opportunity of describing, became almost essential. In our day they are not so, and we have no fear of seeing their use revived.

L. L. J.

AUGUST 20.

St Oswin, king of Deira and martyr, 651. St Bernard, abbot of Clairvaux, 1153.

ST BERNARD.

St Bernard, often styled by Catholics 'the last of the Fathers,' was unquestionably one of the greatest men of the middle ages. He was the son of a knight, and was born at the castle of Fontaines, in Burgundy, in 1091. His mother was a pious woman, who encouraged his inclination for religious thought and study, and he had scarcely passed out of boyhood, when he formed the resolution to be a monk. His capacity for leadership displayed itself very early. He drew thirty companions, including his brothers, after him into the Cistercian monastery of Citeaux; and such was his persuasive eloquence, that mothers hid their sons, and wives their husbands, lest he should steal them from them. The discipline of the Cistercians was very severe, but it did not reach the mark of Bernard's ardour. He determined not only to extirpate the desires of the flesh, but the sense of enjoyment itself. He seldom ate except to save himself from fainting, and passed whole days in ecstatic contemplation, 'so that seeing he saw not, and hearing he heard not.' To escape the worldly talk of friends who visited him, he stopped his ears with flax, and burying his head in his cowl, allowed them to go on as they chose, every now and then addressing them in some sentence of admonition. When he worked, he selected the most menial occupations, such as digging, hewing wood, and carrying burdens. In spite of these austerities, his mind found comfort and relaxation in nature. He was accustomed to say, that whatever knowledge he had of the Scriptures, he had chiefly acquired in the woods and fields, and that beeches and oaks had ever been his best teachers in the Word of God. By centuries anticipating Wordsworth, he wrote to a pupil: 'Trust to one who has had experience. You will find something far greater in the woods than you will find in books. Stones and trees will teach you that which you will never learn from masters. Think you not you can suck honey from the rock, and oil from the flinty rock? Do not the

mountains drop sweetness, the hills run with milk and honey, and the valleys stand thick with corn?'

A capable man like Bernard was not to be lost in privacy. As Citeaux became crowded with devotees, the abbot, a shrewd judge of character, selected Bernard, and sent him into the wilderness at the head of twelve companions to found a new settlement. After wandering northwards for ninety miles, they fixed their abode in a woody valley, called Wormwood, in Champagne, and erected a log-hut, which, under Bernard's genius, grew into the renowned Abbey of Clairvaux. This was in 1115, when Bernard was a young man of twenty-four.

The saintly rigour of his life, his eloquence as a preacher, and his courage in attacking civil and ecclesiastical wrong-doers, gradually raised Bernard into European fame, and letters and visitors from far and near drifted to Clairvaux. The force of his influence became especially manifest in 1130, when, on the death of Pope Honorius II., two popes—Innocent II. and Anacletus II.—each claimed to be the true and only vicar of Christ. The rulers of Europe were at a loss to decide between the rivals. Louis VI. of France convened a council to consider the question, to which Bernard was invited. The assembly waited with awe for his opinion, believing that the Holy Spirit would speak through his mouth. He declared for Innocent, and the council at once broke up perfectly satisfied. Henry I. of England he convinced as easily. 'Are you afraid,' said Bernard, 'of incurring sin if you acknowledge Innocent? Bethink you how to answer for your *other* sins to God, *that one* I will take and account for.' Henry accepted the offer, and yielded supremacy to Innocent.

Bernard troubled himself less with errors of opinion than errors of conduct, and though he had many contests with heretics, they appear to have been prompted by others rather than undertaken from choice. One of his most notable controversies was with Abelard, the Rationalist of the twelfth century, who was accused of unsound doctrine, and dangerous speculation on the mystery of the Trinity. Abelard challenged Bernard to a public logical disputation. Bernard hesitated, and refused. 'When all fly before his face,' said Bernard, 'he selects me, the least, for single combat. I refuse, because I am but a child, and he a man of war from his youth.' These fears were overcome by his friends, and a council was called at Sens, to which the king of France and a crowd of nobles and ecclesiastics repaired. Abelard came with a troop of disciples; Bernard, with two or three monks, as it behoved a Cistercian abbot to travel. Abelard seems to have discovered that he had made a mistake. He was used to address the reason of scholars, and the gathering at Sens was made up of men on whose minds his logic would have slight effect, whilst his adversary's impassioned oratory would be irresistible. Bernard had scarcely opened his discourse, when, to the speechless astonishment of all, Abelard rose up, said he refused to hear more, or answer any questions. He appealed to Rome, and at once left the assembly. The council, nevertheless, proceeded to condemn Abelard, and the pope affirmed the decree. Two years afterwards, in 1142, Abelard died.

Perhaps the greatest business of Bernard's life was the preaching-up of the second Crusade. He was fifty-five, and worn and old for his years, and thought his time for rest had come, when an order arrived from Rome, that he should bestir himself and raise the spirit of Europe against the Turks. Pale and attenuated to a degree which seemed almost supernatural, he made a tour among the towns of France and Germany, preaching with a success so prodigious that in some districts scarcely one man was left to seven women.

The times of crusade fever were usually sad times for the Jews. Simultaneously with the growth of the passion for fighting and slaughtering the infidels abroad, hatred was developed against the Jews at home. Following in the wake of Bernard's preaching, a monk named Rodolph travelled through the towns on the Rhine inciting the people to the massacre of the Jews. Bernard, hearing of the atrocities committed in the name of Christ, with a humanity far in advance of his age, at once intervened. 'Does not the church,' he inquired, 'triumph more fully over the Jews by convincing or converting them from day to day, than if she, once and for ever, were to slay them all with the edge of the sword?' Rodolph he denounced as a child of the devil, and meeting him at Mayence, managed to send him home to his monastery. A Jewish contemporary attests Bernard's service, saying: 'Had not the tender mercy of the Lord sent priest Bernard, none of us would have survived.'

Miracles without end are related of Bernard, with an amount of minute and authentic testimony which it is puzzling to deal with. 'His faithful disciples,' writes Gibbon, 'enumerate twenty or thirty miracles wrought by him in a day, and appeal to the public assemblies of France and Germany, in which they were performed. At the present hour, such prodigies will not obtain credit beyond the precincts of Clairvaux; but in the preternatural cures of the blind, the lame, and the sick, who were presented to the man of God, it is impossible for us to ascertain the separate shares of accident, of fancy, of imposture, and of fiction.'

He died in 1153, and was canonised in 1174. The Roman Church celebrates his festival on the 20th of August. St Bernard's writings have been repeatedly published, and contain passages of great vigour, eloquence and pathos, and abound in interesting references to the modes of life in the fierce and gloomy century in which his lot was cast.

Born.—Robert Herrick, English poet, 1591; George Villiers, Duke of Buckingham, favourite of James I. and Charles I., 1592, *Brookesley, Leicestershire;* Louis Bourdaloue, celebrated preacher, 1632, *Bourges;* Thomas Simpson, distinguished mathematician, 1710, *Market-Bosworth, Leicestershire;* George Eden, Earl of Auckland, governor general of India, 1784.

ROBERT HERRICK.

No one makes himself familiar with the merry, melancholy Robin Herrick without loving him. It is better not to analyse the feeling: perhaps we should find in it more elements of love than either respect or admiration.

Robert Herrick, Errick, Heyrick, or, as he himself wrote his name, Hearick, was the son of a goldsmith, and born in Cheapside. Very little is known of him, though his poems gained him, in his own time, considerable reputation. He seems to have been educated at Westminster, and undoubtedly entered as a Fellow-Commoner of St John's College, Cambridge—the college of Wordsworth. Ultimately taking holy orders, he received from Charles I. the living of Dean Priors, in Devonshire, from which he was ejected in 1648, but to which he was afterwards restored by Charles II.

We ought to accept the general dissoluteness of morals in Herrick's day as some sort of excuse for certain tendencies of his which he naïvely denominates 'jocund.' Facts have handed down nothing to his discredit, and it is but charitable to receive his own testimony :—

> 'To his book's end this last line he 'd have placed :
> Jocund his muse was, but his life was chaste.'

So sings Ovid, so Martial, so Catullus. Muretus justly comments: 'Whoever is like Catullus in his poems, is seldom like Cato in his morals.'

Herrick lived to be over eighty, in celibacy, and his maid 'Prue' seems to have gained his affection by taking excellent care of him. In his hearty, indolent, little verses he does not forget to praise her.

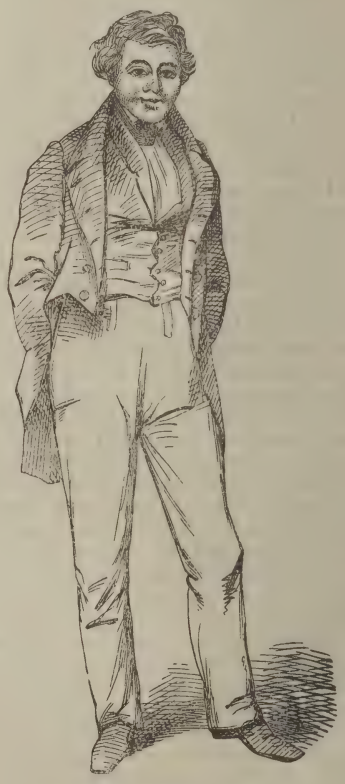
While residing occasionally in London, he became one of Ben Jonson's famous clique, and seems almost to have worshipped the burly demigod. Indeed he has canonised him in twelve honest lines, with his usual poet's love of rites and forms.

HIS PRAYER TO BEN JONSON.

When I a verse shall make,
  Know I have prayed thee,
For old religion's sake,
  Saint Ben, to aid me.

Make the way smooth for me,
  When I, thy Herrick,
Honouring thee, on my knee
  Offer my lyric.

Candles I 'll give to thee,
  And a new altar:
And thou, Saint Ben, shall be
  Writ in my psalter.



Herrick's poetry was for more than a century in complete oblivion, and much of it was worthy of no better fate; but a selection of it ought not to be wanting in any library of English literature. His *Nuptial Song* is inferior to none; and his *Fairy Land* is full of the daintiest thoughts, fresh coined by an exquisite fancy. Saint Ben was far behind him in pathos and simple tenderness: his *Charms and Ceremonials* are a storehouse of quaint old English customs; and Wordsworth could not have written a sweeter epitaph than this:

UPON A VIRGIN.

Here a solemn fast we keep,
While all beauty lies asleep.
Hush'd be all things; no noise here,
But the toning of a tear:
Or a sigh of such as bring
Cowslips for her covering.

TALENT WITHOUT CONDUCT: THE LIFE OF WILLIAM MAGINN, LL.D.

Amid the many melancholy instances of genius and talent impeded and finally extinguished by the want of a little ordinary prudence and circumspectness of conduct, Dr Maginn is prominently conspicuous. Possessed of one of the most versatile of minds, which enabled him to pass with the utmost ease from grave to gay, from the rollicking fun of 'The Story without a Tail,' and 'Bob Burke's Duel,' to the staidness and delicate discrimination of the 'Shakspeare Papers,' and the classic elegance of the

WILLIAM MAGINN, LL.D.

'Homeric Ballads,' he yet found himself incompetent to the proper husbanding and turning to account of these gifts, and, after enduring the last miseries of a debtor's prison, fell a victim soon afterwards to consumption. The leading events of his biography are few and soon told.

He was a native of Cork, and born there in 1794. His father was proprietor of a school of considerable reputation in that city, to the management of which the son succeeded when little more than twenty,

having previously passed with distinguished reputation through a course of study at Trinity College, Dublin. He continued to discharge the duties of this office with much credit for some years till he abandoned it to devote himself entirely to a literary life. Some of his first essays were trifles and *jeux d'esprit*, written in connection with a literary society in Cork, of which he was a member. They excited a good deal of local attention. In 1816, he obtained the degree of LL.D., and soon after became a contributor to the *Literary Gazette*, then under the management of Mr William Jerdan, who says that Maginn was in the habit of sending him 'a perfect shower of varieties; classic paraphrases, anecdotes, illustrations of famous ancient authors, displaying a vast acquaintance with, and fine appreciation of them.' It is principally, however, with *Blackwood's* and *Fraser's Magazines* that his name is associated, being a contributor to the former almost from its commencement, whilst the latter owed mainly its existence to him, being projected by him in company with Mr Hugh Fraser. A characteristic anecdote is related of his first meeting with Mr Blackwood. He had already contributed to the *Magazine* several biting papers, which had excited a considerable ferment both in Edinburgh and Cork; but the intercourse between him and his publisher had as yet been wholly epistolary, the latter not even knowing the name of his correspondent. Determined now to have an interview with Mr Blackwood, Maginn set out for Edinburgh, where he arrived on a Sunday evening, and on the ensuing forenoon he presented himself in the shop in Princes Street, where the following conversation took place. It must be observed, in passing, that Mr Blackwood had received numerous furious communications, more especially from Ireland, demanding the name of the writer of the obnoxious articles, and he now believed that this was a visit from one of them to obtain redress *in propriâ personâ*.

'You are Mr Blackwood, I presume?'

'I am.'

'I have rather an unpleasant business, then, with you regarding some things which appeared in your magazine. They are so and so' (mentioning them); 'would you be so kind as to give me the name of the author?'

'That requires consideration, and I must first be satisfied that'——

'Your correspondent resides in Cork, doesn't he? You need not make any mystery about that.'

'I decline at present giving any information on that head, before I know more of this business—of your purpose—and who you are.'

'You are very shy, sir. I thought you corresponded with Mr Scott of Cork' (the assumed name which he had used).

'I beg to decline giving any information on that subject.'

'If you don't know him, then, perhaps you *could* know your own handwriting' (drawing forth a bundle of letters from his pocket). 'You need not deny your correspondence with that gentleman—I am that gentleman.'

Such, as related by Dr Moir, was Dr Maginn's introduction to the proprietor of this noted periodical, the pages of which, for several years afterwards, continued to be enriched with some of his most original and piquant articles. A disagreement, however, in process of time, took place between him and Mr Blackwood, and led him to the projection of *Fraser's Magazine*, to which, amid innumerable other articles, he supplied nearly all the letter-press of the celebrated 'Gallery of Literary Portraits.' One of his articles, a review of the novel entitled *Berkeley Castle*, led to a duel with the Hon. Grantley Berkeley, which, after three rounds of shots had been exchanged without doing further damage than grazing the heel of Dr Maginn's boot and the collar of Mr Berkeley's coat, ended in the parties quitting the ground, on the interference of the seconds, without speaking a word, or making any explanation.

Notwithstanding the many sources of livelihood which our author's prolific and versatile genius opened up to him, his improvident habits kept him constantly in difficulties, which at last so thickened upon him, that he repeatedly became the inmate of a jail; and in the spring of 1842, the misery and depression of spirits which he had undergone, terminated in a rapid decline. In the vain hope of re-establishing his health, he retired from London to Walton-on-Thames, where, however, his disease gradually gained strength; his frame wasted to a shadow; and in the month of August 1842, he expired. To the last he retained almost undiminished his wonderful flow of humour and animal spirits, and talked and jested with his friends as far as his reduced strength and emaciated frame would permit. He complained bitterly of the neglect with which he had been treated by his party (the Tories); and there can be no doubt that, to a certain extent, the reproach was well founded, though the generosity of Sir Robert Peel was liberally displayed a few days before Maginn's death, on his unfortunate situation being brought under the notice of the premier.

Maginn's character presents much of the conventional characteristics of the Irishman—warm-hearted, generous, and impulsive, freely imparting of his substance to his friends in their need, and as readily borrowing from them to supply his wants in his own. The reckless conviviality of his nature disposed him not unfrequently to excesses which ultimately shattered and destroyed his constitution. Such a vein, however, of *bonhommie* and real kindliness of heart was perfectly irresistible. His conversation is described as a jumble of incongruous subjects, theology, politics, and general literature, all cemented together in an overpowering style of drollery, which, however, not unfrequently left the listeners at a loss whether to surrender themselves unconditionally to the influence of the ludicrous or admire the great common-sense and profound vein of philosophy conspicuous in all his remarks. The ease and rapidity with which he wrote were astonishing. Jumping out of bed, he would seat himself in his shirt at his desk, and run off in an hour one of his brilliant papers for *Blackwood* or *Fraser*. Not unfrequently, it must be added, he composed with the pen in one hand and a glass of brandy-and-water in the other. Much of what he wrote was necessarily of an ephemeral character, and his works will therefore, probably, in a succeeding generation, be comparatively little read; whilst his memory, like that of Foote, is preserved as that of a brilliant wit and conversationalist. Yet he was far from being a mere droll or after-dinner talker. His 'Shakspeare Papers' contain some of

the most delicately appreciative touches which have ever been presented on the subject of our great national dramatist; and his 'Homeric Ballads' will fairly rival in vigour and classic genius the *Lays of Ancient Rome* of Macaulay.

The following epitaph was written for Maginn by his friend, John G. Lockhart:

WALTON-ON-THAMES, AUGUST 1842.

Here, early to bed, lies kind WILLIAM MAGINN,
Who, with genius, wit, learning, life's trophies to win,
Had neither great lord nor rich cit of his kin,
Nor discretion to set himself up as to tin;
So, his portion soon spent—like the poor heir of Lynn—
He turned author ere yet there was beard on his chin,
And, whoever was out, or whoever was in,
For your Tories his fine Irish brains he would spin;
Who received prose and rhyme with a promising grin—
'Go ahead, you queer fish, and more power to your fin,'
But to save from starvation stirred never a pin.
Light for long was his heart, though his breeches were thin,
Else his acting, for certain, was equal to Quin;
But at last he was beat, and sought help of the bin
(All the same to the doctor, from claret to gin),
Which led swiftly to jail, and consumption therein.
It was much, when the bones rattled loose in the skin,
He got leave to die here, out of Babylon's din.
Barring drink and the girls, I ne'er heard a sin:
Many worse, better few, than bright, broken Maginn.

AUGUST 21.

Saints Bonosus and Maximilian, martyrs, 363. St Richard, bishop of Andria, confessor, 12th century. St Bernard Ptolemy, founder of the Olivetans, 1348. St Jane Frances de Chantal, widow and abbess, 1641.

Born.—James Crichton (*The Admirable*), celebrated scholar, 1561; St Francis de Sales, celebrated Catholic divine, 1567, *Sales, Savoy;* Dionysius Petau, chronologer (*De Doctrinâ Temporum*), 1583, *Orleans;* King William IV. of England, 1765, *St James's Palace;* Augustin Louis Cauchy, mathematician, 1789, *Paris.*

Died.—John Dudley, Duke of Northumberland, statesman, beheaded in the Tower, 1553; Lady Mary Wortley Montagu, celebrated letter-writer, 1762.

LADY MARY WORTLEY MONTAGU.

Lady Mary Pierrepont (afterwards Lady Mary Wortley Montagu) was the eldest daughter of the Earl of Kingston (created Marquis of Dorchester in 1706, and Duke of Kingston in 1715) and Lady Mary Fielding. She was born in 1690, at Thoresby, in Nottinghamshire. She had one brother and two sisters. Her mother died in 1694. As she grew up, she became remarkable for the beauty of her person, an obvious superiority of intellect, and a fondness for reading and study. With some assistance from Burnet, bishop of Salisbury, she acquired a knowledge of the Latin language, and in 1710, had completed a translation of *Epictetus* from the Latin version. Mr Edward Wortley Montagu, eldest son of the Hon. Sydney Montagu, and grandson of the Earl of Sandwich, happened one day to meet Lady Mary Pierrepont in the apartment of his sister Miss Anne Wortley. He was charmed with her beauty, her cultivated mind, her wit; and when he learned that she could read Latin, and wanted to peruse *Quintus Curtius*, but did not possess a copy, he sent her in a few days a superb edition of that author, together with some complimentary verses. This introduction led to a correspondence, a courtship, and proposals of marriage,

LADY MARY WORTLEY MONTAGU.

which were at first accepted by Lord Dorchester, but finally rejected when Mr Wortley refused to settle his landed estates on his eldest son, if he should have one, irrevocably, whatever might be the character and conduct of that son. Lord Dorchester chose a person for husband to Lady Mary, to whom she had a decided aversion. The consequence was, that she eloped with Mr Wortley Montagu, and they were married in 1712. Their only son was born in 1713, their only daughter in 1716.

Edward Wortley Montagu was a good scholar, and having travelled much, was skilled in modern languages. He was a man of clear understanding, much attached to polite literature, and was acquainted with Garth, Congreve, Steele, and Addison. He was a member of parliament for the borough of Huntingdon, and soon after the accession of George I., obtained a seat at the Treasury-board. For some years after her marriage, Lady Mary resided in various places, at Hinchinbroke (the seat of Lord Sandwich), at Huntingdon, at hired houses in Yorkshire, and in London. She was then 'beautiful exceedingly,' and was distinguished for her wit and gaiety. Lady Mary and her husband kept up an intercourse with the wits above mentioned and others, including Pope, with whom, however, during this period, they seem to have had only a very general acquaintance. In August 1716, Mr Wortley Montagu being appointed ambassador to Turkey, he and his wife proceeded to Constantinople, a part of the world then very unfamiliar, compared with what it has since become. Lady Mary's quick and penetrating mind could not fail to be struck by a social scene so different from

anything else in Europe, and she wrote of all she saw to her sister, the Countess of Mar. When the pair returned from the East in 1718, they took a furnished house at Twickenham, at the suggestion of Pope, who had entered into a correspondence with Lady Mary during her absence; but even then the intercourse between Lady Mary and Pope does not appear to have been frequent. In a letter to her sister, the Countess of Mar, dated Twickenham, 1720, she says: 'I see sometimes Mr Congreve, but very seldom Mr Pope, who continues to embellish his house at Twickenham He has made a subterranean grotto, which he has furnished with looking-glasses, and they tell me it has a very good effect.' Pope, however, visited Lady Mary occasionally till 1721, when the estrangement between them seems to have originated with Pope, who, in a well-known letter to Lord Hervey, says, 'neither had I the least misunderstanding with that lady, till after I was the author of my own misfortune by discontinuing her acquaintance.' The causes of the subsequent quarrel between them are only conjecturally and imperfectly known. Mr W. Moy Thomas, in the first volume of his new edition (the third) of Lord Wharncliffe's *Letters and Works of Lady Mary Wortley Montagu*, 1861, has entered into a full and minute investigation of her character and conduct; and has been enabled, with the aid of letters and other manuscripts which remain, to wipe away or neutralise the stains of filthy slander with which Pope, Horace Walpole, and others, had befouled her. It is to be fully admitted that this clever woman was wanting in delicacy, and sometimes allowed her love of satire and pleasantry to outrun her discretion; but of gross errors of conduct there is no reason to believe her guilty.

One grievous blight to her happiness arose from the conduct of her son, which was eccentric almost to madness. Shocked by his depravity, the father ultimately made use of the power which he had reserved to himself, and disinherited his son, leaving his vast property, amounting to £1,300,000, to the family of the Earl of Bute (the prime-minister of George III.), who in 1736 had married his only daughter.

Lady Mary had, for some time, suffered from ill health, and about 1738, her face became disfigured by an eruption, which shut her out from general society, and from which she continued to suffer during the rest of her life. Her husband was almost constantly absent, looking after the great coal-fields in Yorkshire and Durham, which had fallen to him by inheritance; the conduct of her son had become a source of scandal and extreme grief; her sister, Lady Mar, had become insane; and the coarse slanders of Pope and his party were a constant annoyance. Under these circumstances, and probably with the hope of recovering her health, she took the resolution of residing in the warm south. She left England in July 1739, and after visiting the principal cities of Italy, fixed her residence at Louvere, on the shore of Lake Iseo, north-west of Brescia. There she occupied a palace, and amused herself with her garden, her silk-worms, and her vineyard. About 1758, she settled at Venice, where she resided till the death of Mr Wortley Montagu in 1761. She was now upwards of seventy-one years of age, but in compliance with the solicitations of her daughter, Lady Bute, to whom she wrote on the subject of their common loss in terms of deep grief, she set out for England in the winter of 1761. She reached the shores of her native land in January 1762, and on the 21st of August following, died of a cancer in her breast.

Lady Mary kept a journal or diary, which was begun at the time of her marriage, and was continued almost to the day of her death. It was very voluminous, and passed, after her decease, into the hands of Lady Bute, who always kept it under lock and key, and shortly before her death committed it to the flames. In this diary, during her first absence from England, she had copied her own letters to her correspondents, and from it, after her return home, she compiled the celebrated *Turkish Letters*, which were circulated in manuscript among her friends during her lifetime, but were not published till 1763. On her last return home she had given a copy to Mr Sowden, a clergyman of Rotterdam, 'to do what he pleased with,' and he sold it for £500 to Lord Bute, who intended to suppress it. In the interval between the gift and the sale, the manuscript had been copied (without Mr Sowden's knowledge, as he affirmed), and was published in three volumes, under the editorship of Captain Cleland, a literary man of notoriety at that time, who in 1767, published a fourth volume, which is suspected to have been a forgery of his own.

The first publication of Lady Mary Wortley Montagu's works, was under the editorship of Mr Dallaway in 1803, in five volumes. He professed to have printed them from the original manuscripts in the possession of the Marquis of Bute, and the works were preceded by an indifferently written life. In 1837, appeared *The Letters and Works of Lady Mary Wortley Montagu, Edited by her Great-Grandson, Lord Wharncliffe*, 3 vols. 8vo. The chief value of this edition, which is little more than a reprint of Dallaway's, with a few notes of correction and explanation, is an introduction under the title of *Biographical Anecdotes*, by Lady Louisa Stuart, daughter of Lord and Lady Bute, and granddaughter of Lady Mary. Lady Louisa was born in 1757, and was consequently in her eightieth year when these lively and interesting 'Anecdotes' were published in 1837.

CURIOUS PRAYER.

A gentleman in America has projected a work to be published under the title of *The Book of Uncommon Prayer*. Any one conversant with books of anecdote, will readily bethink him of much suitable material for such a volume. Perhaps no more appropriate example than the following, from an old copy of *Fog's Journal*, has ever appeared: 'O Lord, thou knowest that I have nine houses in the city of London, and likewise that I have lately purchased an estate in fee-simple in the county of Essex. Lord, I beseech Thee to preserve the two counties of Essex and Middlesex from fires and earthquakes; and as I have a mortgage in Hertfordshire, I beg Thee likewise to have an eye of compassion on that county. And, Lord, for the rest of the counties, Thou mayest deal with them as Thou art pleased. O Lord, enable the Bank to answer all their bills, and make all my debtors good men. Give a prosperous voyage and return to the *Mermaid* sloop, which I have insured; and Lord, Thou hast said, "That the days of the wicked are short," and I trust Thou wilt not forget Thy promises, having purchased an estate in reversion of Sir J. P.,

a profligate young man. Lord, keep our funds from sinking; and if it be Thy will, let there be no *sinking* fund. Keep my son Caleb out of evil company, and from gaming-houses. And sanctify, O Lord, this night to me, by preserving me from thieves and fire, and make my servant honest and careful, whilst I, Thy servant, lie down in Thee, O Lord. Amen.'

PUPPETS A HUNDRED AND FIFTY YEARS AGO.

The annexed singular hand-bill, which we find, with its curious vignette heading, in an odd volume of literary curiosities, was published probably towards the end of the seventeenth century. It presents an interesting illustration of the amusements of that period.

'At PUNCH'S Theatre.

For the Entertainment of the

Four Indian Kings, viz.

(A) The Emperor *Tee Yee Neen Ho Ga Row.*
(B) King *Sa Ga Yean Qua Rah Tow.*
(C) King *E Tow oh Koam.*
(D) King *Oh Nee Yeath Tow no Riow.*

This present *Munday, May* 1, at Seven a-Clock

AUGUST 22.

St Symphorian, martyr, about 178. St Hippolytus, bishop and martyr, 3d century. St Timothy, martyr, 311. St Philibert, abbot of Jumièges, 684. St Andrew, deacon and confessor, about 880.

Born.—Philip Augustus II. of France, 1165; Aimé Bonpland, distinguished naturalist and friend of Humboldt, 1773, *La Rochelle;* Thomas Tredgold, engineer, 1788, *Brandon, near Durham;* John B. Gough, temperance orator, 1817, *Sandgate, Kent.*

Died.—Pope Nicholas III., 1280; Philippe de Valois, king of France, 1350, *Nogent-le-Roi, near Chartres;* Richard III. of England, killed at Bosworth Field, 1485; Guillaume Budé (Budæus), scholar and author, 1540; Thomas Percy, Earl of Northumberland, beheaded at York, 1572; Dominic Baudius, jurist and philologist, 1613, *Leyden;* Pierre le Moine, Jesuit and poet, 1672, *Paris;* Louis Francois de Boufflers, duke and marshal of France, distinguished commander, 1711, *Fontainbleau;* William Whiston, celebrated divine and translator of Josephus, 1752, *London;* George, Lord Lyttelton, author of *Dialogues of the Dead*, 1773, *Hagley, near Stourbridge;* John Henry Tischbein, eminent painter, 1789, *Cassel;* Warren Hastings, governor general of India, 1818, *Daylesford, Worcestershire;* Dr Franz Joseph Gall, founder of phrenology, 1828, *Paris;* Richard Oastler, 'The Factory King,' leader of the 'Ten-hours' Movement,' 1861, *Harrogate.*

WILLIAM WHISTON.

We are afraid that, except as an affix to a translation of *Josephus*—a stock-book in every ordinary library—the name of William Whiston suggests

very little to modern memories. Yet at the beginning of the eighteenth century he—a restless, indiscreet, and loquacious man of learning—was in everybody's mouth, and by his heresies contrived to keep the Church of England for years in a fidget.

He was the son of a clergyman, and was born at Norton, near Twycross, in Leicestershire, in 1667. At Cambridge, he greatly distinguished himself by his mathematical attainments, and won the friendship of Newton, whose *Principia* he studied and appreciated. In 1696, he published his first work, the forerunner of a multitude, entitled *A New Theory of the Earth from its Original to the Consummation of all Things, wherein the Creation of the World in Six Days, the Universal Deluge, and the General Conflagration as laid down in the Holy Scriptures are shewn to be perfectly agreeable to Reason and Philosophy;* it ran through six editions. The flood he accounted for by a comet, but the wits objected, that while he had covered the earth with water, he had provided no means for drawing it off. Newton, in 1701, made him his deputy in the duties of the Lucasian chair, and in 1703, resigned the chair itself, and procured the election of Whiston as his successor. Gradually he began to broach and promulgate Arian doctrine on the subject of the Trinity, and the result was, that in 1710, he was banished from the university, and the year after his professorship was declared vacant. These penalties only added fuel to his zeal; so that he provoked Convocation to censure his writings, and for five years to keep his case dangling before the public. Meanwhile Whiston sought his living by teaching mathematics in London, and Steele and Addison found him an audience at Button's coffee-house for a series of astronomical lectures. He tried to establish a sect, and held a meeting for worship in his house in Cross Street, Hatton Garden, but he could never get beyond a dozen or score of disciples. Apparently without any power of considerate reticence, he published his fancies as quickly as they were formed. He turned Baptist; he asserted the Jews would be restored to Palestine and the millennium begin in 1766, and that an earthquake in London would swallow up 7000 men, and the remainder would be converted. He had a method for finding the longitude, by means of signal-vessels moored at various points in the ocean, which he held was everywhere fathomable. In fact, his brain teemed with odd notions, theological, literary, and scientific.

There was no lack of friends who respected his honesty and learning, but his habit of blunt, free speech and immovable self-will, rendered it very difficult to assist him effectually. His Arianism was shared by many ecclesiastics, who regretted his retreat from the church as wholly unnecessary. Whiston, one day talking with Chief-Justice King, entered into a discussion about signing articles which were not believed, for the sake of preferment. King freely sanctioned the latitudinarian practice, saying: 'We must not lose our usefulness for scruples.' Whiston expressed his sorrow to hear his lordship say so, and proceeded to inquire, whether he permitted similar prevarication in the law-courts. The chief-justice said, 'No,' whereon Whiston rejoined: 'Suppose God Almighty should be as just in the next world as my lord chief-justice is in this, where are we then?' King was silent. When Queen Caroline heard the story, she said: 'No answer was to be made to it.'

With Caroline, wife of George II., Whiston was somewhat of a favourite. She allowed him £50 a year, and usually sent for him every summer when she was out of town, to spend a day or two with her. At Richmond, on one occasion, she asked him what people thought of her. He told her that she was esteemed as a lady of great abilities, a patron of learned men, and a kind friend of the poor. 'But,' said she, 'no one is without faults, what are mine?' Whiston begged to be excused, but she insisting, he informed her majesty that she did not behave with proper reverence in church. She pleaded in excuse that the king would talk to her. He asked her to remember, that during worship, she was in the presence of One greater than kings. Confessing her fault, she went on: 'Pray tell me what is my next?' With fine tact Whiston evaded the dangerous topic with the promise: 'When your majesty has amended the fault of which we have spoken, we shall then proceed to the next.'

Another good story is told of his frank speech. A party, in which Addison, Pope, Walpole, and Secretary Craggs were included, was debating whether a secretary of state could be an honest man, and Whiston was appealed to for his opinion, which may be imagined. Craggs said: 'It might do for a fortnight, but not longer.' With much simplicity Whiston inquired: 'Mr Secretary, did you ever try it for a fortnight?'

Whiston lived till he was eighty-five, dying in London in 1752. His long life was one of great literary activity, but his multitudinous publications, amongst which was an autobiography abounding in injudicious revelations, have long been neglected. Vain yet sincere, sceptical yet credulous, insensible alike to fear and favour, where he thought the interests of truth concerned; many laughed at Whiston's eccentricities, but those who knew him most intimately, were those who held him in highest honour for substantial virtue and uprightness.

WARREN HASTINGS:

THE GREY GEESE OF ADDLESTROP HILL.

The brilliant but mud-streaked history of Warren Hastings has been made familiar to the present generation by a masterly pen. It is not necessary here to repeat the tale of him who was the subject of a ruthless, though futile party prosecution of ten years by the House of Commons, and lived to enjoy the unexampled honour of having that House to *rise* to him on his entering it, an act of unpremeditated veneration. He enjoyed a long retirement from the cares of office at his seat of Daylesford, in Worcestershire, those paternal acres, to recover which for his family had been the great impulse and inspiration of his early life. There he died at the advanced age of eighty-five.

We find a simple circumstance in the private latter life of Mr Hastings, which has come into a curious connection with modern literature. It will be remembered that the first of the *Tales of My Landlord* opens with the description of a moor on the Scottish border, which was encumbered with a number of huge blocks, called the *Grey Geese of Mucklestane Moor*, and connected with which was

a legend, to the effect that a noted witch was driving her geese to market, when, losing patience with their waywardness, she suddenly exclaimed: 'Deevil! that neither they nor I ever stir from this spot more!' and instantly she and her flock were transformed into blocks of stone, as they had ever since remained, until the Black Dwarf appropriated them for the building of his lonely cottage. In the annotated edition of his novels, Sir Walter fails to tell that he took up this idea from a communication to the *Gentleman's Magazine* of April 1808. In this paper it is stated that, on the top of an eminence in the parish of Addlestrop, in Gloucestershire, there was a number of blocks of stone, which had stood there from time immemorial, under the name of the *Grey Geese of Addlestrop Hill*, until they had lately been taken by Mr Warren Hastings, and formed into a rock-work for the decoration of his grounds at Daylesford. There was added a ballad which had been composed evidently for the amusement of the circle at Daylesford—as follows:

'Beneath the gray shroud of a wintry cloud
The day-star dimly shone;
And the wind it blew chill upon Addlestrop Hill,
And over the Four-shire Stone.

But the wind and the rain they threaten'd in vain;
Dame Alice was up and away:
For she knew to be healthy, and wealthy, and wise,
Was early to bed, and early to rise,
Though never so foul the day.

O foul was the day, and dreary the way;
St Swithin the good woman shield!
For she quitted her bower in an evil hour
To drive her geese a-field.

To rival this flock, howe'er they might mock,
Was never a wight could aspire;
The geese of Dame Alice bred envy and malice
Through many a bordering shire.

No wonder she eyed with delight and with pride
Their plumes of glossy gray:
And she counted them o'er, and she counted a score,
And thus to herself 'gan say:

"A score of gray geese at a groat a piece,*
Makes six-and-eightpence clear;
Add a groat, 'tis enow to furnish a cow,
And I warrant, we'll make good cheer.'

But ah! well-a-day, no mortal may say
What fate and fortune ordain;
Or Alice, I ween, had her loss foreseen,
Where most she look'd for gain.

And didst thou not mark the warnings dark?
'Twas all on a Friday morn—
She tripp'd unawares as she hurried down stairs,
And thrice was her kirtle torn.

And thrice by the way went the gander astray
Ere she reach'd the foot of the hill;
And the raven's croak from a neighbouring oak
Proclaim'd approaching ill.

And now and O now had she climb'd the steep brow
To fatten her flock on the common,
When full in her path, to work her scath,
She met with a weird woman.

This hag she was foul both in body and soul,
All wild and tatter'd in trim,
And pale was the sheen of her age-wither'd een—
Was never a witch so grim.

And "Give me," quoth she, "of thy fair poultry—
Or dear shalt thou rue this day."
So hoarse was the note of the beldam's throat,
That the geese they hiss'd with dismay.

But the dame she was stout, and could fleer and could flout:
"Gramercy! good gossip," she cried,
"Would ye taste of my fry, ye must barter and buy,
Though weal or woe betide.

"'Twere pity in sooth, 'gin ye had but a tooth,
Ye should lack for a giblet to chew:
Belike of the claw, and the rump, and the maw,
A hell-broth ye mean to brew."

O sour look'd the hag; and thrice did she wag
Her hoar head scatter'd with snow:
And her eye through the gloom of wrath and of rheum
Like a comet predicted woe.

And anon she began to curse and to ban
With loud and frantic din.
But the spell which she mutter'd must never be utter'd,
For that were a deadly sin.

Then sudden she soars in the whirlwind, and roars
To the deep-voic'd thunder amain;
And the lightning's glare envelops the air,
And shivers the rocks in twain.

But Alice she lay 'mid the wrack and the fray
Entranc'd in a deathlike swoon,
Till the sheep were in fold, and the curfew toll'd;
She arose by the light of the moon.

And much did she muse at the cold evening's dews,
That reflected the pale moonbeam;
But more at the sight that appeared by its light—
And she counted it all a dream.

O what is yon heap that peers o'er the steep,
'Mid the furze and the hawthorn glen!
With trembling and fear the dame she drew near,
And she knew her own geese again!

But, alas! the whole flock stood as stiff as a stock;
And she number'd them one by one.
All grisly they lay, and they lie to this day
A flock, as it were, of gray stone!

"Thy birds are not flown," cried a voice to her moan;
"O never again shall they fly,
Till Evenlode flow to the steeple at Stow
And Oddington mount as high.

"But here shall they stand, forlorn on dry land,
And parch in the drought and the blast,
Nor e'er bathe a feather, save in fog and foul weather,
Till many an age be past.

* 'We are told that at an early period of our history, a goose was sold for 3*d*., and a cow for 7*s*. The superiority of Dame Alice's geese in their original state, to judge of them by their present size, must plead her excuse for estimating them at a penny above the market-price.'

"More fetter'd and bound than geese in a pound,
Could aught their bondage atone;
They shall ne'er dread the feast of St Michael at least,
Like geese of flesh and bone.

"But pitying fate at length shall abate
The rigour of this decree,
By the aid of a sage in a far-distant age;
And he comes from the East country.

"A pundit his art to this seer shall impart;
Where'er he shall wave his wand,
The hills shall retire, and the valleys aspire,
And the waters usurp the land.

"Then, Alice, thy flock their charm shall unlock,
And pace with majestic stride,
From Addlestrop heath, to Daylesford beneath,
To lave in their native tide.

"And one shall go peep like an isle o'er the deep,
Another delighted wade,
At the call of this wizard, to moisten her gizzard
By the side of a fair cascade.

"This sage to a dame shall be wedded, whose name
Praise, honour, and love shall command;
By poets renown'd, and by courtesy crown'd
The queen of that fairy-land!"

Here ceased the high strain—but seek not in vain
To unravel the dark record:
Enough that ye wot, 'twas traced to the spot
By a clerk of Oxenford.'

THE BATTLE OF BOSWORTH :

WELSH TALES CONNECTED THEREWITH.

The 22d of August 1485 was an important day for England, not merely in putting an end to the reign and the life of a usurper and murderer, whose rule was a disgrace to it, but in finally freeing it from the civil contentions comprehended under the title of the Wars of the Roses. It must, after all, be admitted that the atrocious Crookback somewhat redeemed his life by the way he ended it. It was worthy of his brave race, and of the pretensions he had set up, that he should perish in the thick of a fight which was to conclude his dynasty.

On the other hand, the gallant adventure of Henry of Richmond in landing with only two thousand Frenchmen to fight his way to the English crown, his stout struggle at Bosworth, and the picturesque incident of Stanley picking up Richard's crown, and placing it on the brows of Henry on the battle-field, raise expectations with which the subsequent events are somewhat out of harmony.

It should be more borne in mind than it is, that the first of the Tudor sovereigns was a Welsh noble, and owed much to the friendship of his warm-blooded countrymen. He was particularly indebted to the men of Pembrokeshire, his native county. At the time of the battle of Tewkesbury, Henry was a boy at Pembroke Castle, but this place not being thought one of safety, he was removed by his uncle, Jasper, Earl of Pembroke, to Tenby. Here he was received with much hospitality by the mayor, John White, who secretly conveyed him to Britanny in one of his own vessels. Afterwards, when he returned, it was at Milford he landed, marching thence to meet 'the bloody and usurping boar' at Bosworth-field. Henry, upon coming to the throne, was not unmindful of the assistance he had received. He rewarded the mayor of Tenby with a lease, at a nominal rent, of all the crown-lands about that town; 'a good recompense,' says the historian of Pembrokeshire, 'to one man for a good deede done to the whole realme.' It is a rather curious circumstance, that Mr George White, the present mayor of Tenby (1863), is a descendant of him who aided Henry in his escape; is, like his ancestor, a wine-merchant; and resides on the spot occupied by his family more than four centuries ago.

The treacherous Stanley may have placed the crown upon Richmond's head on Bosworth field, but the hand that virtually crowned him was that which dealt the gallant Richard his death-wound. According to Welsh tradition, the deed was done by Rhys ap Thomas, commonly called 'the valiant Welshman.' This hero of the principality came of a warlike stock. His grandfather fell fighting for the white rose, at Mortimer's Cross; his father was murdered as he lay spent and wounded by the side of the corpse of David Gough, whom he had killed in single-combat. Rhys himself was brought up at the court of Philip of Burgundy, and did credit to his knightly training. The death of his two elder brothers, killed in some petty border skirmishes, left him the representative of his race, and lord of the greater part of Carmarthenshire. During the latter part of Edward IV.'s reign, and through the minority of his successor, the Welsh chieftain occupied himself in training his tenantry in the art of war, that he might be ready for the troublous times he foresaw must come.

When Richard III. became aware of the intention of the Earl of Richmond to dispute his right to the English throne, he wished to assure himself of the support of Rhys ap Thomas. To that end he sent commissioners to Carmarthen, to administer the oath of allegiance to Rhys, and demand the surrender of his son and heir, a boy of four years old, as hostage for his fidelity. Not caring to defy Richard's anger, the Welshman took the oath, though much against his will, but declined to give up his child. To mollify the king for this disobedience, he (or rather the abbot of Talye for him) wrote a letter to Richard, asserting his loyalty, and promising to obey his majesty's commands by preventing the landing of Richmond at Milford Haven. He says he 'deems it not unseasonable to annex this voluntary protestation: that, whoever, ill affected to the state, shall dare to land in those parts of Wales, where I have employments under your majesty, must resolve with himself *to make his entrance and irruption over my belly!*' As for the delivery of his heir, he pleads his infancy, 'more fit to be embosomed in a mother's care, than exposed to the world; nature as yet not having the leisure to initiate him in that first lecture of feeding himself;' concluding significantly by declaring that if the king persisted in depriving him of the sole prop of his house, the better part of himself, 'I were then divided in my strength, which, united, might perhaps, serve as most useful were I called to some weighty employments for the good of your service.'

Not long after the despatch of this politic letter, the abbot of Talye and the bishop of St David's

employed all their influence with Rhys to persuade him to join the party of the Earl of Richmond. The latter promised him full absolution for breaking his oath, a matter which did not trouble the soldier's conscience so much as violating the promises he had given under his hand and seal. The wily ecclesiastic set him at ease on that point, by shewing that Richmond could not be looked upon as ill affected to the state, seeing he came to relieve it from an unrighteous ruler, while it would not be difficult to keep to the letter of the remaining clause of his voluntary protestation. While Rhys was debating with himself, a letter arrived from Richmond soliciting his assistance, and promising great rewards in the event of success. This decided the Welsh captain's course of action. He at once took the field with two thousand men, kinsmen and friends flocked to his standard, and setting out for Milford Haven, he welcomed Richmond ashore, and tendered his services to him, at the same time satisfying his own scruples by lying down on the ground and allowing the earl to pass over his body.

Of the part he played in the battle of Bosworth, his biographer gives the following account: 'While the avant-guards were in hot chase, the one of the other, King Richard held not his hands in his pockets; but, grinding and gnashing his teeth, up and down he goes in quest of Richmond, whom, no sooner espying, than he makes at him, and, by the way, in his fury, manfully overthrew Sir William Brandon, the earl's standard-bearer, as also Sir John Cheney, both men of mighty force and known valiancy. In Wales we say, that Rice ap Thomas, who from the beginning closely followed the earl, and ever had an eye to his person, seeing his party begin to quail, and the king's to gain ground, took the occasion to send unto Sir William Stanley, giving him to understand the danger they were in, and entreating him to join his forces for the disengaging of the earl, who was not only in despair of victory, but almost of his life. Whereupon (for it seems he understood not the danger before) Sir William Stanley made up to Rice ap Thomas, and joining both together, rushed in upon their adversaries and routed them, by which means the glory of the day fell on the earl's side; King Richard, as a just guerdon for all his facinorous acts and horrible murders, being slain on the field. One Welsh tradition says that Rice ap Thomas slew Richard, manfully fighting with him hand to hand, and we have one strong argument in defence of our tradition, to prove that he was the man who in all likelihood had done the deed; for from that time forward, the Earl of Richmond, as long as he lived, did ever honour him with the title of Father Rhys.'

Be this as it may, Rhys ap Thomas was knighted on the field, and was afterwards employed in the war with France and the rebellions at home. He was made a knight of the Garter and privy-councillor, and appointed constable and lieutenant of Brecknock, chamberlain of Carmarthen and Cardigan, seneschal and chancellor of Haverfordwest, Ross, and Builth, justiciar of South Wales, and governor of the principality. At the end of Henry VII.'s reign, the recipient of so many honours retired to Wales, where he practised the national virtue of hospitality in a style of great magnificence till his death, at the good old age of seventy-six. His tomb, although sadly ruinated, may still be seen in St Peter's Church, Carmarthen; while his memory is preserved in the poetic literature of his countrymen, whose bards have delighted to sing of Rhys-ap-Thomas as the sword and buckler of his country, the champion of Cambria, the shield of Britain, the scourge of the obstinate, the protector of the innocent, and the flower of Cambro-Britons.

RICHARD WATTS'S BEQUEST.

The tendency of Englishmen to follow out the instincts of the individual character has been strikingly shewn in what may be called odd and whimsical bequests. It is no unusual thing amongst us, to see some singularity of opinion or fancy thus carried out, in the case of some obscure citizen, for hundreds of years after he has ceased to breathe.

Richard Watts, recorder of Rochester in the reign of Queen Elizabeth, was a man of large property, who had represented his city in parliament, and entertained his sovereign in his house. It is said that, on Elizabeth taking leave of him as a guest, he expressed regret that his house had not been larger and more commodious; when she replied '*Satis*' (enough); in consequence of which royal laconism, the house was afterwards called Satis House. Part of the old building, standing on Bully Hill, still retains the name.

By his will, dated August 22, 1579, this house, with its furniture, was left to be sold for the maintenance of some almshouses in the High Street, and especially to provide 'six good matrices or flock-beds and other sufficient furniture, to harbour or lodge poor travellers or wayfaring men, being no common rogues, *nor procters*, and they, the said wayfaring men, to harbour and lodge therein no longer than one night, unless sickness be the further cause thereof; and these poor folk there dwelling to keep the same sweet, and courteously intreat the said poor travellers; and every one of them, at their first coming in, to have fourpence; and to warm them at the fire of the resident within the said house, if need be.' It is said that the objection made in the above will to proctors, thus fixing a lasting stigma on the legal profession, arose from the fact that when Mr Watts was travelling on the continent, he was seized with a serious illness, and calling in a proctor to make his will, he found, on his recovery, that the traitorous man of law had conveyed all the estates to himself, instead of writing the wishes of his client. Another author has, however, suggested that the word proctor or procurator was applied to those itinerant priests, who in the reign of Queen Elizabeth travelled secretly about England, with dispensations from the pope to absolve her subjects from their allegiance.

A few years after the death of Mr Watts, his widow, who married a second time, disputed the will, and was allowed to retain Satis House, on condition of paying over land to the value of twenty pounds a year; an immense increase has since arisen in the value of the property, so that the annual income is above £1000: one large estate which was then a marsh in Chatham, is now drained and covered with houses. The almshouses are of brick, three stories high, with large square windows and projecting centre. They were fully repaired in 1771, by Nathaniel Hood, then mayor

of Rochester, and an inscription, describing the nature of the bequest, engraved on a tablet in front; but now, alas! a poor traveller will knock in vain for admittance, the wishes of the hospitable founder having been altogether set aside though the four pennies may be obtained on application to the mayor. Among the file of orders retained by the provider, or man who distributes this money, is one dated 1677, as follows: 'Brother Wade: Pray relieve these two gentlemen, who have the king's letters recommendatory, and give them twelve pence a man, and foure a piece to the other five.'

The remainder of the income is appropriated to the payment of the poor's rates. Over the monument in the cathedral to the memory of Watts is a bust taken during his lifetime, and representing a man with a bald head, short hair, and a long flowing beard. It will be remembered by many of our readers that our distinguished countryman, Charles Dickens, has chosen this house at Rochester as the groundwork of one of his Christmas stories.

THE HYDES—CURIOSITIES OF THEIR GENEALOGY.

Alexander Hyde, who died bishop of Salisbury, August 22, 1667, was son of Sir Lawrence Hyde, of the Close of Sarum. He had been, at the Restoration, made dean of Winchester, 'through the recommendation of his kinsman, Lord Chancellor Clarendon.' *

This is nearly all that can now be learned regarding Bishop Hyde, of whom we may fairly presume that he would never have risen to great prominence but for the power and influence of his eminent nephew, the chancellor.

The fact of two queens-regnant of England being granddaughters of the Chancellor Earl of Clarendon, has made the genealogy of the Hydes of some interest to poking antiquaries. It appears beyond question that the paternal ancestry was respectable, Lawrence Hyde, the grandfather of the chancellor, and father of the bishop of Salisbury, being a younger son of Robert Hyde of Norbury and Hyde, in Cheshire, a family which had been settled there from the time of Henry III. There is, however, a sort of legendary account of a humble *ancestress*, which has several times been adverted to in print. In a manuscript note of apparently a century old, now in our possession, it is stated that the common ancestor of the chancellor and bishop 'married a tub-woman, and retired to Dinton, in the county of Wilts [the birthplace of the chancellor].' If this were true, it would be a curious consideration that the grandfather's grandmother of the queens Mary and Anne was of such plebeian origin. Some years ago, there was a discussion of this subject in the *Notes and Queries* The fact alleged was, that Lord Clarendon, when a young lawyer, had married a wealthy brewer's widow, who had originally come into her future husband's employment as a tub-woman, 'to carry out beer from the brew-house.' And it was conclusively shewn that this could not be true, as both of the chancellor's wives were women of family. There was, however, nothing brought forward on that occasion at issue with the old genealogical note in our possession, which makes the alleged tub-woman the mother of the bishop, and consequently grandmother of the chancellor. Nor in that version of the tale is there anything difficult to be believed. A younger son of Sir Robert Hyde of Norbury might very fairly have married a rich brewer's widow, and that widow might very fairly have risen from the humble condition ascribed to her by the tradition. Generally, where a story of this kind has taken root, there is some foundation for it.

Another genealogical particular connected with the two queens is equally remarkable, and can be better authenticated—namely, that a cousin of their mother, the Duchess of York, died in Emanuel Hospital, Tothill Fields, Westminster, so recently as December 1771. She was named Mrs Windymore, or Windlemore, and stated to be 108 years of age at the time of her death. The *Gentleman's Magazine* and *Annual Register* both notice her demise, and her connection with royalty, and our old genealogical note enters her as next in descent from the son of the bishop of Salisbury.

* Hoare's *Wiltshire*, § *Salisbury*, p. 628.

THE FATE OF RUTH OSBORNE.

It is a curious proof of the ignorance in which the English populace was allowed to rest down to very recent times that, so lately as the 22d of August 1751, a man was executed at Tring for being concerned in the murder of a poor woman suspected of witchcraft. It was in the year 1745 that this poor woman, Ruth Osborne by name, having vainly besought one Butterfield for a little milk, went away muttering, that she wished the Pretender would soon come and carry off his cattle. He soon after fell into ill health and adversity, and it became impressed on his mind that the ill-will of Mrs Osborne was the cause of all his misfortunes. To counteract her evil influence, a renowned wise-woman or white-witch was fetched all the way from Northamptonshire. This sagacious female, on her arrival at Tring, confirmed the general opinion, and at once took measures to remove the spell; and as a preliminary step, she appointed six able men, armed with pitchforks, to guard Butterfield's house night and day; taking care, as a necessary precaution, to hang certain charms round the watchers' necks, to prevent them from being bewitched also. The wise-woman's mode of treatment proving expensive, and not producing the desired effect of improving Butterfield's health and circumstances, it was determined to try another plan; one that, by a severe punishment, would deter the assumed witch from her evil courses, as well as, at the same time, produce a profit to Butterfield and the neighbouring publicans, by collecting a mob of thirsty beer-drinkers. Accordingly, the public-criers of the adjoining towns of Hemel-Hempstead, Leighton-Buzzard, and Winslow, were employed to make the following announcement on their respective market-days: '*This is to give notice, that on Monday next a man and woman are to be publicly ducked at Tring, in this county, for their wicked crimes.*'

The parish overseer of Tring, learning that John Osborne and his wife Ruth, both upwards of seventy years of age, were the persons alluded to in the above notice, determined to protect them as far as he could, and for their better safety, lodged them in the workhouse. The master of the

workhouse, to make the poor creatures more secure, secretly removed them, late on Sunday night, to the vestry of the parish church, vainly hoping that the sacred character of the edifice might have some effect in restraining their lawless persecutors. On the Monday, however, a mob, consisting of more than five thousand persons—not all of the lowest class, for about one half were well mounted on horseback—assembled, and, proceeding to the workhouse, demanded that the Osbornes should be delivered up to them. The master assured the crowd that the persons sought for were not in the house, but the rabble disbelieving him, broke open the doors, and searched all parts of the building, looking into drawers, trunks, and even the salt-box, supposing, in their dense ignorance, that the alleged witch and wizard could conceal themselves in the same space as would contain two cats. Disappointed of their victims, the mob, becoming infuriated, proceeded to demolish the workhouse; and having collected a quantity of straw, they lighted firebrands, threatening to murder the master, and burn down the whole town of Tring, if their demand were not instantly complied with. Thus threatened, the master told where the Osbornes were concealed, and then the mob, with yells of fiendish delight, broke open the church-doors, seized their helpless victims, and carried them off to a neighbouring pond. Decency and humanity imperatively forbid any description of the horrible scene of brutal cruelty that ensued. Suffice it to say, that the woman was murdered in the pond, and the man, still breathing, was tied to the dead body of his wife, and expired soon afterwards.

Neither the clergyman of Tring, nor those of the adjoining parishes, interfered to save these wretched victims of superstition. But the legal authorities determined to punish some, at least, of the perpetrators of the brutal crime. A coroner's inquest was held on the body of Ruth Osborne, twelve of the principal gentlemen of Hertfordshire being summoned as the jury. For at an inquest held a short time previously on a similar case of murder at Frome, in Somersetshire, the jurors, selected, as is usual, from the lower middle class, would not convict the prisoner. The Hertfordshire gentlemen, however, brought in a verdict of wilful murder against one Thomas Colley and twenty-one other known and unknown persons. At the ensuing county assizes, Colley being tried and found guilty, was sentenced to be executed, and hung in chains at the place where the murder was committed. To prevent a rescue, and impress on the ignorant minds of the country-people the power of the law, and an idea of the crime that had been perpetrated, the arrangements for the execution were conducted with military display and unusual solemnity. In the *Universal Magazine* of that year, we read as follows:

'Thursday, August 22d.—About ten in the morning, Mr Thomas Colley, condemned for the murder of Ruth Osborne, as a supposed witch, received the sacrament at Hertford, administered to him by the Rev. Mr Edward Bouchier, when he signed a solemn declaration of his faith relating to witchcraft; which he desired might be carried to the place of execution, and was there publicly read at his earnest request, just before he was turned off, by the Rev. Mr Randall, minister of Tring, who attended him in his last moments. He was escorted by one hundred and eight men belonging to the regiment of Horse Guards Blue, with their officers and two trumpets; and the procession was slow, solemn, and moving. Friday night he was lodged in St Alban's jail, and at five the next morning, he was put in a one-horse chaise with the executioner, and came to the place of execution about eleven; and after half an hour spent in prayer, he was executed, and immediately after hung up in chains on the same gibbet he was hanged on. The infatuation of the greater part of the people in that country was so great, that they would not be seen near the place of execution, insisting that it was a hard case to hang a man for destroying an old wicked woman, that had done so much damage by her witchcraft. A very odd accident happened in Tring town; which was, that just as the prisoner's wife and daughter were permitted to speak to him, one of the trooper's pistols in his holsters went off, occasioned by his handkerchief accidentally getting into the holster, which he pulling out, drew the trigger, and the ball went into the ground; but no other damage ensued than putting the corps in some disorder, it being at first imagined to have been fired out of a window.'

THE FIRST ROYAL TELEGRAM ACROSS THE ATLANTIC.

In the month of August 1858, the first royal telegraphic message crossed the Atlantic from Europe to America. In 1854, the colonial government of Newfoundland offered certain terms, in the form of guarantee, to a company undertaking to lay a submerged telegraph beneath the Atlantic from that colony to Ireland. This offer was followed, during that and the next two years, by elaborate experiments on the best form and size of cable, and by soundings to determine the depth of the Atlantic at various places. The greatest depth plumbed reached the vast amount of 25,000 feet (about five miles). A company was then definitely formed, and a cable manufactured. The cable weighed about one ton per mile, and was 2500 miles long—1700 miles for the direct distance from Valentia in Ireland to Cape Race in Newfoundland, and 800 miles for bendings, deviations, and unforeseen contingencies; there were 350,000 miles of wire altogether in the cable, taxing the wire-drawers of the United Kingdom to the utmost to produce it in time. The British government lent the warship *Agamemnon* to take out half the cable, while the American government lent the *Niagara* to take out the other half. All being ready, operations commenced on the 5th of August 1857. The two magnificent ships, attended by the *Susquehanna*, *Leopold*, *Willing Mind*, and *Advice* set forth from Valentia. The portion of the cable on board the *Agamemnon* was uncoiled; and by means of central blocks, grooved-sheaves, friction-rollers, cramps, breaks, grips, and other mechanical appliances, it was lowered into the ocean as fast as the ship progressed. But disaster was impending. By the morning of the 11th, the engineer found that the cable had too much 'slack'—that is, too much of it had run out in proportion to the straight line traversed; it lay at the bottom of the ocean in too serpentine or zigzag a way. He therefore caused the grip-machinery to be tightened; this was

unskilfully done, and the cable snapped. Thus, at a distance, in a straight line, of 350 miles from Ireland, the broken end of the cable sank to the bottom in 12,000 feet depth of water—more than forty times the height of St Paul's Cathedral!

One whole year was lost, in addition to a large sum of money. During the winter and spring months, many attempts were made to raise the broken end of the cable, splice it to the unused portion, and pursue the voyage to America; but the cable broke again and again, chiefly owing to the uneasy movement of the ship in stormy weather. At length the *Agamemnon* and the *Niagara* made another attempt under better auspices. They steamed out to mid-ocean, spliced together their two portions of the cable, and then parted company—the one returning to Valentia, the other proceeding onward to Cape Race. It was on the 29th of July 1858 that this parting of the two ships commenced; and as the distance between them increased, the officials on board the two ships interchanged telegraphic messages with each other, through the submerged portion of cable. Notwithstanding the perils and obstacles afforded by a tremendous sea, both vessels reached their destinations on the 5th of August—the *Agamemnon* having payed-out 1020 nautical miles of cable, and the *Niagara* 1030—equal altogether to about 2400 English statute miles. Each ship sent a telegraphic message to the other through this wonderful length of submerged cable; but the actual connection from shore to shore could not be made, because the land ends of the cable were not yet adjusted. At length the necessary attachments were made; and the submarine cable was placed in unbroken connection with the whole telegraphic system of England at one end, and with that of America at the other. The directors of the company in London exchanged compliments with their agents and coadjutors in New York; the lord mayor of London did the same with the mayor of New York. On the 20th, the cable communicated the first *commercial* news from the New World to the Old, in the form of a telegram announcing a collision between the *Arabia* and *Europa* mail-steamers near Cape Race. On the 22d, Queen Victoria and President Buchanan exchanged compliments. The Queen sent the following message: 'The Queen desires to congratulate the President upon the successful completion of this great international work, in which the Queen has taken the greatest interest. The Queen is convinced that the President will join with her in fervently hoping that the electric cable, which now connects Great Britain with the United States, will prove an additional link between the two nations, whose friendship is founded upon their common interests and reciprocal esteem. The Queen has much pleasure in thus directly communicating with the President, and in renewing to him her best wishes for the prosperity of the United States.' This message occupied about two hours in transmission from London to Washington. The President replied to it in a suitable strain.

The bright hopes thus raised were destined to be cruelly damped, as the cable ceased to act on the 3d of September. The experience gained by this failure was no doubt a help towards the success of 1866, and since that time telegraphic communication with America has been uninterrupted.

AUGUST 23.

Saints Claudius, Asterius, Neon, Domnina, and Theonilla, martyrs, 285. St Theonas, archbishop of Alexandria, 300. St Justinian, hermit and martyr, about 529. St Apollinaris Sidonius, confessor, bishop of Clermont, 482. St Eugenius, bishop in Ireland, 618. St Philip Beniti, confessor, 1285.

Born.—Louis XVI., king of France, 1754, *Versailles;* Sir Astley Cooper, eminent surgeon, 1768, *Brooke, Norfolk;* William Frederick I., king of the Netherlands, 1772; Friedrich Tiedemann, physiologist, 1781, *Cassel;* Frank Stone, artist, 1800, *Manchester.*

Died.—Flavius Stilicho, great Roman general, beheaded at *Ravenna*, 408; Sir William Wallace, Scottish hero, 1305, executed at *Smithfield, London;* William Warham, archbishop of Canterbury, 1532; George Villiers, Duke of Buckingham, assassinated at *Portsmouth*, 1628; Jacques Vergier, poet and tale-writer, assassinated at *Paris*, 1720.

WILLIAM WALLACE.

Edward I. of England having by craft and violence taken military possession of Scotland; the chief nobles of the land having submitted to him; it was left to a young gentleman of Renfrewshire, the celebrated William Wallace, to stand forth in defence of the expiring liberties of his country. He was, in some respects, well fitted to be a guerilla chief, being of lofty stature and hardy frame, patient of fatigue and hardship, frank in his manners, and liberal to his associates, while at the same time of sound judgment and a lover of truth and justice. The natural ascendancy of such qualities quickly put him at the head of large, though irregular forces, and he won an important victory at Stirling over some of Edward's principal officers (Sept. 11, 1297). A month later, he and Andrew of Moray are found, under the title of *Duces exercitus regni Scotiæ*, administering in national affairs—sending two eminent merchants to negotiate with the two Hanse towns of Lubeck and Hamburg. Next year, in a public document, Wallace appears by himself under the title of *Custos regni Scotiæ*. During this interval of authority, acting upon a cruel though perhaps unavoidable policy, he executed a complete devastation of the three northern counties of England, leaving them a mere wilderness. Edward led an army against him in person, and gaining a victory over him at Falkirk (July 22, 1298), dispersed his forces, and put an end to his power.

While most of the considerable men submitted to the English monarch, Wallace proceeded to France, to make interest with its king, Philip the Fair, in behalf of Scotland. Philip gave him some encouragement, and furnished him (this fact has only of late become known) with a letter of recommendation to the pope. Afterwards, being glad to make peace with Edward for the sake of the recovery of his authority over Flanders, Philip entered into an agreement to deliver up the ex-governor of Scotland to his enemy. The fact, however, was not accomplished, and Wallace was able to return to his own country. Being there betrayed by Sir John Monteith into the hands of the English, he was led to London; subjected to a mock-trial at Westminster, as if he had been a traitor to his sovereign Edward I.; and, on the

23d of August 1305, put to a cruel death on Smithfield.

The Scottish people have ever since cherished the memory of Wallace as the assertor of the liberties of their country—their great and ill-requited chief. What Tell is to the Swiss, and Washington to the Americans, Wallace is to them. It is true that he had little or no mercy for the English who fell into his hands, and that he ravaged the north of England. If, however, the English put themselves into the position of robbers and oppressors in a country which did not belong to them, they were scarcely entitled to much mercy; and, certainly, at a time so rude as the close of the thirteenth century, they were not very likely to receive it.

GEORGE VILLIERS, FIRST DUKE OF BUCKINGHAM.

'Princes and lords are but the breath of kings.' Seldom has this sentiment been more strikingly exemplified than in the case of this nobleman. His rapid and unmerited advancement, effected solely by a sovereign's capricious will, stands almost, if not entirely, unparalleled in history. His father was Sir George Villiers of Brokesby, in Leicestershire, who possessed but a moderate property, was twice married, and had nine children. The duke—his father's fourth son—was by his second wife, Mary, daughter of Anthony Beaumont of Glenfield, Leicestershire, and was born on the 20th of August 1592. He was educated at home in fencing, riding, dancing, and other gentlemanly accomplishments of the period, and, at the age of eighteen, went to France for his further improvement. After travelling there for about three years, he returned to England in 1613, and obtained an appointment at court as cup-bearer to King James I., 'who of all wise men living,' says Clarendon, 'was the most delighted and taken with handsome persons in fine clothes.' Young Villiers was remarkable for the beauty of his person, the gracefulness of his air, the elegance of his dress, the suavity and sprightliness of his conversation. The king was delighted with him, and, in token of his admiration, gave him the familiar name of Steenie, in allusion to a beautiful portrait in Whitehall representing St Stephen, the proto-martyr. Honours now fell rapidly upon him. Here is a glance at his progress:

1615.—Knighted, and made one of the Gentlemen of the Bedchamber.

1616.—Master of the Horse; Knight of the Garter; Baron of Whaddon; Viscount Villiers.

1617.—Earl of Buckingham; Marquis of Buckingham; Lord High Admiral; Chief-justice in Eyre, south of Trent; Master of the King's Bench; High Steward of Westminster; Constable of Windsor Castle.

1623.—Earl of Coventry; Duke of Buckingham; Warden of the Cinque Ports; Steward of the Manor of Hampton Court.

Thus, in the course of ten years, King James raised his favourite from a poor cup-bearer to the highest title a sovereign has to bestow. Nor did he lavish on him merely titles and lucrative appointments; he enriched him with magnificent grants from the royal domains; thus placing him not only among the highest, but among the wealthiest, noblemen in the land. The royal lordship of Whaddon alone, from which the duke derived his first title, contained four thousand acres and a chase sufficient for a thousand deer. To gratify his favourite still more, the king extended his patronage to his whole family. His mother was, in 1618, created Countess of Buckingham; his elder brother, John, was made Baron Villiers and Viscount Purbeck; his younger brother, Christopher, was, in 1623, created Earl of Anglesey and Baron of Daventry; his half-brother, William, was, in 1619, created a baronet; and his other half-brother, Edward, was knighted in 1616, and in 1622 was appointed president of Munster, in Ireland—a lucrative post of great honour, which had previously always been held by a nobleman. The duke's influence at court was not diminished by the death of King James, for he had become no less a favourite with the succeeding monarch, Charles I.; so much so, indeed, that Clarendon, who, on the whole, speaks favourably of Villiers, asserts that 'all preferments in church and state were given by him; all his kindred and friends promoted to the degree in honour, or riches, or offices that he thought fit; and all his enemies and enviers discountenanced as he appointed.'

'To him the church, the realm, their powers consign;
Through him the rays of regal bounty shine;
Turned by his nod the stream of honour flows;
His smile alone security bestows:
Still to new heights his restless wishes tower,
Claim leads to claim, and power advances power,
Till conquest, unresisted, ceased to please,
And rights submitted left him none to seize.'

—Dr Johnson *on Wolsey.*

Raised to this pinnacle of power, the duke displayed a presumption perfectly intolerable. One or two instances will amply illustrate this. When sent to France, by Charles I., to bring over Henrietta, his betrothed wife, the queen of France, being indisposed, was confined to her bed, and the duke was permitted to have an interview with her in her chamber. But, instead of approaching her as an ambassador, he had 'the insolence to converse with her as a lover!' The Marchioness of Sencey, the queen's lady of honour, who was present, gave the duke a severe reproof, saying: 'Sir, you must learn to be silent; it is not thus we address the queen of France!' Afterwards, when the duke would have gone on another embassy to the French court, it was signified to him, that for reasons *well known to himself*, his presence would not be agreeable to the king of France. The duke exclaimed: 'He would go and see the queen in spite of the French court!' 'And to this pretty affair,' remarks our authority, 'is to be ascribed the war between the two nations!' His insolence to Henrietta herself, when queen of England, was even more audacious. 'One day,' says Clarendon, 'when he unjustly apprehended that the queen had shewn some disrespect to his mother, in not going to her lodging at an hour she had intended to go, and was hindered by mere accident, he came into her chamber in much passion, and after some expostulations rude enough, he told her, she should repent it. Her majesty answering with some quickness, he thereupon replied insolently to her—that there had been queens in England who had lost their heads!'

The duke had a strong passion for magnificence. In 1617, only three or four years after his first entrance at court, he gave a most sumptuous entertainment on his being created a marquis. The banquet, which was held in Whitehall, was served up in the French fashion, under the auspices of Sir Thomas Edmondes, who had recently returned from France. 'You may judge,' writes an eye-witness of the feast, 'by this scantling, that there were said to be seventeen dozens of pheasants, and twelve partridges in a dish; throughout which, methinks, were more spoil than largesse. In spite of many presents,' the feast cost six hundred pounds.* Buckingham was equally excessive in the splendour of his equipage. Coaches, which were first introduced into England in 1580, were at first only used with a pair of horses, but Buckingham, about 1619, had his coach drawn by six horses, which was, says Wilson, 'wondered at as a novelty, and imputed to him as a mastering pride.' He was also remarkable for his extravagance in dress. 'He had twenty-seven suits of clothes made, the richest that embroidery, lace, silk, velvet, silver, gold, and gems could contribute; one of which was a white uncut velvet, set all over, both suit and cloak, with diamonds valued at fourscore thousand pounds, besides a great feather stuck all over with diamonds, as were also his sword, girdle, hat, and spurs.' He could also afford to have his diamonds so loosely tacked on, that when he chose to shake a few off on the ground, he obtained all the fame he desired from the pickers-up; for he never condescended to take back those which he had dropped. In the masques and banquets with which he entertained the court, he is said to have usually expended for the evening from one to five thousand pounds.†

The consequences of the duke's rise were most disastrous to the kingdom. He had little or no genuine patriotism, and either did not understand, or would not heed, the rights and requirements of his fellow-subjects. Indebted for his own position to mere favouritism, he, who was now sovereign all but in name, dispensed posts of importance and responsibility on the same baneful principles. Discontent became general. The ancient peers were indignant at having a man thrust over their heads with little to recommend him but his personal appearance and demeanour. The House of Commons were still more indignant at having measures, which they knew to be ruinous to the country, forced on them by a minister who, to gain his own ends, would not hesitate to hazard the honour and prosperity of the whole nation. This was especially manifested in two of his proceedings. From a private pique of his own, he involved his country first in a war with Spain, and afterwards with France, both of which wars brought discredit and perplexity on England. The House of Commons prepared a bill of impeachment against him, containing no less than sixteen charges; and the king only warded off the blow by suddenly dissolving parliament. This, as Clarendon admits, was not only irregular but impolitic. The country became exasperated, and Buckingham's life was known to be in danger. 'Some of his friends,' says Sir Symonds d'Ewes, 'had advised him how generally he was hated in England, and how needful it would be for his greater safety to wear some coat-of-mail, or some secret defensive armour, but the duke, sighing, said: "It needs not—there are no Roman spirits left!' Warnings and threatenings were alike unheeded, and the duke proceeded to head a new expedition, which he had planned to relieve the Protestants of Rochelle. Having engaged a house at Portsmouth, to superintend the embarkation of his forces, he passed the night there with the duchess, and others of his family, and on Saturday, August 23, 1628, "he did rise up," says Howell, "in a well-disposed humour out of his bed, and cut a caper or two, and being ready, and having been under the barber's hands, he went to breakfast, attended by a great company,' among whom were some Frenchmen, whose eager tones and gesticulations were mistaken by some of the bystanders for anger. The duke, being in private conversation with Sir Thomas Fryar, was stooping down to take leave of him, when he was suddenly struck over his shoulder with a knife, which penetrated his heart. He exclaimed: 'The villain has killed me!' and at the same moment pulling out the knife, which had been left in his breast, he fell down dead.

Many of the attendants at first thought he had fallen from apoplexy, but, on seeing the effusion of blood from his breast and mouth, they perceived that he had been assassinated, and at once attributed the act to one of the Frenchmen who had just before been so eagerly conversing with him. Some hasty spirits, drawing their swords, rushed towards the Frenchmen, to take summary vengeance on them all, and were restrained with so much difficulty, that, according to Clarendon, 'it was a kind of a miracle that the Frenchmen were not all killed in that instant.' The Duchess of Buckingham and the Countess of Anglesey, having entered a gallery looking into the hall, beheld the lifeless body of the duke. 'Ah, poor ladies!' writes Lord Carlton, who was present at the murder, 'such were their screechings, tears, and distractions, that I never in my life heard the like before, and hope never to hear the like again.' Amid this distracting scene, a man's hat was found near the door where the murder was committed, and in the crown of it was sewn a written paper containing these words: 'That man is cowardly base, and deserveth not the name of a gentleman or souldier, that is not willinge to sacrifice his life for the honor of his God, his Kinge, and his Countrie. Lett no man Commend me for doeinge of it, but rather discommend themselves as the cause of it, for if God had not taken away our hartes for our sinnes, he would not have gone so longe vnpunished. Jo: felton.'

Felton, the owner of the hat, was found, says Lord Carlton, 'standing in the kitchen of the same house, and after inquiry made by a multitude of captains and gentlemen, then pressing into the house and court, and crying out amain, "Where is the villain? Where is the butcher?" he most audaciously and resolutely drawing forth his sword, came out, and went amongst them, saying boldly: "I am the man; here I am!" Upon which divers drew upon him, with an intent to have then despatched him; but Sir Thomas Morton, myself, and some others used such means (though with much trouble and difficulty) that we drew him out of their hands,' and he was conveyed by a guard

* Mrs Thomson's *Life of the Duke of Buckingham.*
† See Disraeli's *Curiosities of Literature*, vol. vi. 237.

of musketeers to the governor's house. John Felton, who was a younger son of a Suffolk gentleman, 'was by nature,' says Sir Henry Wotton, 'of a deep melancholy, silent, and gloomy constitution, but bred in the active way of a soldier, and thereby raised to the place of lieutenant to a foot company, in the regiment of Sir James Ramsay.' On being questioned as to his motives for committing the murder, he replied, that he was dissatisfied, partly because his pay was in arrear, and partly because the duke had promoted a junior officer over him, but that his chief motive was to 'do his country a great good service;' and that he 'verily thought, in his soul and conscience, the remonstrance of the parliament was a sufficient warrant for what he did upon the duke's person.' He underwent several examinations, always asserting that he had no accomplices; and when the Earl of Dorset threatened, in the king's name, to examine him on the rack; he said: 'I do again affirm, upon my salvation, that my purpose was known to no man living; and more than I have said before, I cannot. But if it be his majesty's pleasure, I am ready to suffer whatever his majesty will have inflicted upon me. Yet this I must tell you by the way, that if I be put upon the rack, I will accuse you, my Lord Dorset, and none but yourself.' This bold resolve astounded the examiners. They hesitated, and consulted the judges, who unanimously replied, that 'torture was not justifiable according to the law of England.' So that by this firmness Felton did, indeed, 'great good service to his country.' He forced from the judges an avowal of a law which condemned all their former practice. He was imbued with fanaticism, had a revengeful spirit, and gloried in manifesting it. Having once been offended by a gentleman, he cut off a piece of his own finger, and enclosing it with a challenge, sent it to him, to shew how little he heeded pain provided he could have vengeance. He continued in prison till November, passing the time in deep penitence and devotion, and was executed at Tyburn towards the end of the month, and was afterwards hung in chains at Portsmouth.

The Duke of Buckingham, who had married Catherine, daughter and sole heir of Francis, Earl of Rutland, was thirty-six years old at his death. His body was buried, by command of the king, in Westminster Abbey, and a sumptuous monument was erected within the communion rails of the church at Portsmouth; but it has recently been removed into the north aisle of the chancel. The house in which Buckingham was assassinated still exists, with but slight modern alterations, being marked No. 10 in the High Street of Portsmouth. The kitchen to which Felton retired is a distinct building at the further end, according to our view.

HOUSE AT PORTSMOUTH IN WHICH THE DUKE OF BUCKINGHAM WAS ASSASSINATED.

The duke's murder is said to have been preceded by many supernatural warnings, the most curious of which was the reputed appearance of his father's ghost. The story, which is gravely and circumstantially related by Clarendon, is long and tedious, but the substance of it is as follows:

About six months before the duke's murder, as one Mr Towse, an officer of the king's wardrobe, was lying awake in his bed at Windsor, about midnight there appeared at his bedside, 'a man of a very venerable aspect, who drew the curtains of his bed, and fixing his eyes upon him, asked him, if he knew him. The poor man, half-dead with fear,' on being asked the second time, said, he thought he was Sir George Villiers, the father of the Duke of Buckingham. The ghost told him he was right; and then charged him to go to the duke, and assure him that if he did not endeavour to ingratiate himself with the people, and abate their malice against him, he would not be suffered to live long. The next morning, Mr Towse tried to persuade himself that his vision had been only a dream, and dismissed the subject from his mind. But at night the same apparition visited him, and, with an angry countenance, reproached him for not having attended to his charge, and told him he should have no peace till he did so. Mr Towse promised to obey; but in the morning, not at all relishing the commission, he again treated it as a mere dream. On the third night, the same apparition again stood at his bed, and, with 'a terrible countenance, bitterly reproached him for not performing what he had promised to do.' Mr Towse now ventured to address the spectre, and assure him that he would willingly execute his command, but that he knew not how to gain access to the duke, or if he did, how to convince him that the vision was anything more than the delusion of a distempered mind. The ghost replied, that he should have no rest till he had fulfilled his

commission; that access to the duke was easy; and that he would tell him two or three particulars, in strict secrecy, to repeat to him, which would at once insure confidence in all he should say, 'and so repeating his threats, he left him. Mr Towse obtained an interview with the duke, who, on being told "the secret particulars," changed colour, and swore no one could have come to that knowledge except by the devil; for that those particulars were known only to himself, and to one person more, who he was sure would never speak of it.' After this interview, the duke appeared unusually thoughtful, and in the course of the day he had a long conference with his mother. But he made no change in his conduct; nor is it known whether or not he gave any credit to the story of the apparition, though it is supposed that his repetition of it to his mother, made a strong impression on her, for when the news of his murder was brought her, 'she seemed not in the least degree surprised, but received it as if she had foreseen it.'

THE PIG-FACED LADY.

There can be few that have not heard of the celebrated pig-faced lady, whose mythical story is common to several European languages, and is most generally related in the following manner: A newly-married lady of rank and fashion, being annoyed by the importunities of a wretched beggar-woman, accompanied by a dirty, squalling child, exclaimed: 'Take away your nasty pig, I shall not give you anything!' Whereupon, the enraged beggar, with a bitter imprecation, retorted: 'May your own child, when it is born, be more like a pig than mine!' And so, shortly afterwards, the lady gave birth to a girl, perfectly, indeed beautifully, formed in every respect, save that its face, some say the whole head, exactly resembled that of a pig. This strange child thrived apace, and grew to be a woman, giving the unhappy parents great trouble and affliction—not by its disgusting features alone, but by its hoggish manners in general, much easier to be imagined than minutely described. The fond and wealthy parents, however, paid every attention to this hideous creature, their only child. Its voracious and indelicate appetite was appeased by food, placed in a silver trough. To the waiting-maid, who attended on the creature, risking the savage snaps of its beastly jaws, and enduring the horrid grunts and squeaks of its discordant voice, a small fortune had to be paid as annual wages, yet seldom could a person be obtained to fill the disagreeable situation longer than a month. A still greater perplexity ever troubled the wealthy parents, namely, what would become of the unfortunate creature after their decease? Counsel learned in the law were consulted, and it was determined that she should be married, the father, besides giving a magnificent dowry in hand, settling a handsome annuity on the happy husband for as long as she should live. But experience proving, that after the first introduction, the boldest fortune-hunters declined any further acquaintance, another course was suggested. This was to found a hospital, the trustees of which were bound to protect and cherish the pig-faced damsel, until her death relieved them from the unpleasing guardianship. And thus it is that, after long and careful research on the printed and legendary histories of pig-faced ladies, the writer has always found them wanting either a husband or a waiting-maid, or connected with the foundation of a hospital. But as there are exceptions to all general rules, so there is an exceptional story of a pig-faced lady; according to which, it appears that a gentleman, whose religious ideas were greatly confused by the many jarring sects during the Commonwealth, ended his perplexity by adopting the Jewish faith. And the first child born to him, after his change of religion, was a pig-faced girl! Years passed, the child grew to womanhood before the wretched father perceived that her hideous countenance was a divine punishment, inflicted on him for his grievous apostasy. Then a holy priest reconverted the father, and on the daughter being baptized, a glorious miracle occurred; a copious ablution of holy-water changing the beastly features to the human face divine. This remarkable story is said to be recorded by a choice piece of monumental sculpture, erected in some one of the grand old cathedrals in Belgium. It might, however, be better to take it *cum grano salis*—with a whole bushel thereof—rather than go so far, on so uncertain a direction, to look for evidence.

There are several old works, considered sound scientific treatises in their day, filled with the wildest and most extravagant stories of monsters, but none of them, as far as the writer's researches extend, mentions a pig-faced man or woman. St Hilaire, the celebrated French physiologist, in his remarkable work on the anomalies of organisation, though he ransacks all nature, ancient and modern, for his illustrations, never notices such a being. What, then, it may be asked, has caused this very prevalent myth? Probably some unhappy malformation, exaggerated, as all such things are, by vulgar report, gave origin to the absurd story; which was subsequently enlarged and disseminated by the agency of lying catch-penny publications of the chap-book kind. There was exhibited in London, a few years ago, a person who, at an earlier period, might readily have passed for a pig-faced lady, though the lower part of her countenance resembled that of a dog more than a pig. This unfortunate creature, named Julia Pastorana, was said to be of Spanish-American birth. After being exhibited in London, she was taken to the continent, where she died; and such is the indecent cupidity of showmen, so great is the morbid curiosity of sight-seers, that her embalmed remains were re-exhibited in the metropolis during the last year!

The earliest printed account of a pig-faced lady that the writer has met with, was published at London in 1641, and entitled *A Certain Relation of the Hog-faced Gentlewoman.* From this veracious production, we learn that her name was Tanakin Skinker, and she was born at Wirkham, on the Rhine, in 1618. As might be expected, in a contemporary Dutch work, which is either a translation or the original of the English one, she is said to have been born at Windsor on the Thames. Miss Skinker is described as having 'all the limbs and lineaments of her body well featured and proportioned, only her face, which is the ornament and beauty of all the rest, has the nose of a hog or swine, which is not only a stain and blemish, but a deformed ugliness, making

all the rest loathsome, contemptible, and odious to all that look upon her.' Her language, we are further informed, is only 'the hoggish Dutch *ough, ough!* or the French *owee, owee!*' Forty thousand pounds, we are told, was the sum offered to the man who would consent to marry her, and the author says: 'This was a bait sufficient to make every fish bite at, for no sooner was this publicly divulged, but there came suitors of all sorts, every one in hope to carry away the great prize, for it was not the person but the prize they aimed at.' Gallants, we are told, came from Italy, France, Scotland, and England—were there no Irish fortune-hunters in those days?—but all ultimately refused to marry her. The accompanying illustration is a *fac-simile* of a wood-cut on the title-page of the work, representing a gallant politely addressing her with a 'God save you, sweet mistress,' while she replies only with the characteristic 'Ough!' Unlike some other pig-faced ladies, Miss Skinker always dressed well, and was 'courteous and kind in her way to all.' And the pamphlet ends by stating, that she has come to look for a husband in London, but whether she resides at Blackfriars or Covent Garden, the writer will 'say little,' lest the multitude of people who would flock to see her might, in their eagerness, pull the house down in which she resides.

In the earlier part of this century, there was a kind of publication in vogue, somewhat resembling the more ancient broadside, but better printed, and

THE LADY WITH A PIG'S HEAD.

adorned with a rather pretentious coloured engraving. One of those, published by Fairburn in 1815, and sold for a shilling, gives a portrait of the pig-faced lady, her silver trough placed on a table beside her. In the accompanying letter-press, we are informed that she was then twenty years of age, lived in Manchester Square, had been born in Ireland, of a high and wealthy family, and on her life and issue by marriage a very large property depended. 'This prodigy of nature,' says the author, 'is the general topic of conversation in the metropolis. In almost every company you join, the pig-faced lady is introduced, and her existence is firmly believed in by thousands, particularly those in the west end of the town. Her person is most delicately formed, and of the greatest symmetry; her hands and arms are delicately modelled in the happiest mould of nature; and the carriage of her body indicative of superior birth. Her manners are, in general, simple and unoffending; but when she is in want of food, she articulates, certainly, something like the sound of pigs when eating, and which, to those who are not acquainted with her, may perhaps be a little disagreeable.'

She seems, however, to have been disagreeable enough to the servant who attended upon her and slept with her; for this attendant, though receiving one thousand pounds per annum, as wages, left the situation, and gave the foregoing particulars to the publisher. And there can be little doubt that this absurd publication caused a poor simpleton to pay for the following advertisement, which appeared in the *Times* of Thursday, the 9th of February 1815:

'For the Attention of Gentlemen and Ladies.—A young gentlewoman having heard of an advertisement for a person to undertake the care of a lady, who is heavily afflicted in the face, whose friends have offered a handsome income yearly, and a premium for residing with her for seven years, would do all in her power to render her life most comfortable; an undeniable character can be obtained from a respectable circle of friends; an answer to this advertisement is requested, as the advertiser will keep herself disengaged. Address, post paid, to X. Y., at Mr Ford's, Baker, 12 Judd Street, Brunswick Square.'

Another simpleton, probably misled in the same manner, but aspiring to a nearer connection with the pig-faced lady, thus advertised in the *Morning Herald* of February 16, 1815:

'Secrecy.—A single gentleman, aged thirty-one, of a respectable family, and in whom the utmost

confidence may be reposed, is desirous of explaining his mind to the friends of a person who has a misfortune in her face, but is prevented for want of an introduction. Being perfectly aware of the principal particulars, and understanding that a final settlement would be preferred to a temporary one, presumes he would be found to answer the full extent of their wishes. His intentions are sincere, honourable, and firmly resolved. References of great respectability can be given. Address to M. D., at Mr Spencer's, 22 Great Ormond Street, Queen's Square.'

For oral relations of the pig-faced lady, we must go to Dublin. If we make inquiries there respecting her, we shall be shewn the hospital that was founded on her account. We will be told that her picture and silver trough are to be seen in the building, and that she was christened Grisly, on account of her hideous appearance. Any further doubts, after receiving this information, will be considered as insults to common sense. Now, the history of Steevens's Hospital, the institution referred to, is simply this: In 1710, Dr Steevens, a benevolent physician, bequeathed his real estate, producing £650 per annum, to his only sister, Griselda, during her life; and, after her death, vested it in trustees for the erection and endowment of a hospital. Miss Steevens, being a lady of active benevolence—a very unusual character in those days, though happily not an uncommon one now—determined to build the hospital in her lifetime. Devoting £450 of her income to this purpose, she collected subscriptions and donations, and by dint of unceasing exertion, succeeded in a few years in opening a part of the building, equal to the accommodation of forty patients. Whether it was the uncommon name of Grizelda, or the uncommon benevolence of this lady, that gave rise to the vulgar notion respecting her face, will probably be never satisfactorily explained. But her portrait hangs in the library of the hospital, proving her to have been a very pleasant-looking-lady, with a peculiarly benevolent cast of countenance.

A lady, to whom the writer applied for information, thus writes from Dublin: 'The idea that Miss Steevens was a pig-faced lady still prevails among the vulgar; when I was young, everybody believed it. When this century was in its teens, it was customary, in genteel society, for parties to be made up to go to the hospital, to see the silver trough and pig-faced picture. The matron, or housekeeper, that shewed the establishment, never denied the existence of those curiosities, but always alleged she *could* not shew them, implying, by her mode of saying it, that she dared not, that to do so would be contrary to the stringent orders she had received. The housekeeper, no doubt, obtained many shillings and tenpennies by this equivocating mode of keeping up the delusion. Besides, many persons who had gone to the hospital to see the trough and picture, did not like to acknowledge that they had not seen them. I can form no opinion of the origin of the myth, but can give you another instance of its dissemination. Old Mr B., whom you may just recollect, had an enormous silver punch-bowl, much bruised and battered by long service in the cause of Bacchus. The crest of a former proprietor, representing a boar's head, was engraved upon it: and my poor aunt, not inappropriately, considering the purposes for which the bowl was used and the scenes it led to, used to call it the pig-trough. Every child and servant in the house believed that it was one of the pig-faced lady's troughs; and the crest, her correct likeness. The servants always shewed it as a great curiosity to their kitchen-visitors, who firmly believed the stupid story. And I have always found, in the course of a long life, that ignorant minds accept fiction as readily as they reject truth.'

The pig-faced lady is not unfrequently exhibited, in travelling-caravans, by showmen at fairs, country-wakes, races, and places of general resort. The lady is represented by a bear, having its head carefully shaved, and adorned with cap, bonnet, ringlets, flowers, &c. The animal is securely tied in an upright position, into a large arm-chair, the cords being concealed by the shawl, gown, and other parts of the *lady's* dress.

AUGUST 24.

St Bartholomew, apostle. The Martyrs of Utica, or The White Mass, 258. St Ouen or Audoen, archbishop of Rouen, confessor, 683. St Irchard or Erthad, bishop and confessor in Scotland, 10th century.

ST BARTHOLOMEW.

One of the twelve apostles, is believed to have travelled on a mission into Armenia, and to have there suffered martyrdom by being flayed alive. A knife, consequently, became the emblem of St Bartholomew, as may be seen on many of the old clog almanacks, described in a former part of this work. At the abbey of Croyland, there used to be a distribution of knives each St Bartholomew's Day, in honour of the saint.

The insetting of chilly evenings is noted at this season of the year, and has been expressed in a popular distich:

St Bartholomew
Brings the cold dew.

Born.—Letizia Bonaparte (*née* Ramolini), mother of Napoleon, 1750, *Ajaccio, Corsica;* William Wilberforce, philanthropist and religious writer, 1759, *Hull.*

Died.—Cneius Julius Agricola, Roman general, 93, *Rome;* Alphonso V., of Portugal, 1481, *Cintra;* Admiral Gaspard de Coligni, murdered at Paris, 1572; Colonel Thomas Blood, noted for his attempt to steal the regalia from the Tower, 1680; John, Duke of Lauderdale, minister of Charles II., 1682; Dr John Owen, eminent divine, 1683, *Ealing;* Theodore Hook, novelist, 1841.

THEODORE HOOK.

If fine personal qualities, as a handsome figure and agreeable countenance, quick intelligence and brilliant wit, with an unfailing flow of animal spirits, were alone able to secure happiness, Theodore Hook ought to have been amongst the happiest and most fortunate of mankind, for he possessed them all. We know, however, that something more is needed—above all, conscientiousness, sense of duty, or at least common prudence—to make life a true success. No man could more

thoroughly illustrate the vanity of all gifts where this is wanting, than Theodore Hook.

His early days were spent in an atmosphere which naturally tended to foster and develop his peculiar genius. His father was a favourite musical composer, whose house was the resort of all the popular characters of the day—musical, theatrical, and otherwise. Theodore was found to have an exquisite ear for music, and soon became noted among his father's coteries as a first-rate singer and player on the pianoforte. One night he astonished the old gentleman by singing and accompanying on the instrument two songs, one serious and the other comic, which the latter had never heard before. On inquiry, they turned out to be original compositions, both as regarded words and music. Here an assistant was unexpectedly discovered, by the elder Hook, to aid him in his labours, as hitherto he had always been obliged to employ the services of some poetaster to furnish the libretto of his musical pieces. Thus encouraged, Theodore set to work, and produced *The Soldier's Return; or, What can Beauty do?* a comic opera, in two acts, first represented at Drury Lane in 1805. Its success was such as to stimulate him to further efforts, and at the age of sixteen he became a successful dramatist and song-writer, the pet of the *coulisses* and green-room, to which he had a free entrée, and the recipient of a handsome income, rarely procurable by a man's personal exertions at so early an age. The pieces written by him at this period comprise—*Catch Him who Can; The Invisible Girl; Tekeli, or the Siege of Mongratz; Killing no Murder*, and others; but few, if any, of these now keep possession of the stage.

As may have been expected, the more solid branches of education seem to have been little attended to in the case of Hook. The first school to which he was sent, was a 'seminary for young gentlemen' in Soho Square, where, by his own account, he used regularly to play the truant, amusing himself by wandering about the streets, and devising all sorts of excuses to account to his teacher for his absence. On one occasion, unfortunately for him, he had remained at home, asserting to his parents that a general holiday had been granted to the scholars. His brother on the same day, which happened to be the rejoicing for the peace of Amiens, was passing Theodore's school, and seeing it open, was induced to go in and make inquiries, from which he learned that the young vagabond had not shewn face there for the last three weeks. The result was his being locked up for the remainder of the day in the garret, and debarred from seeing the illuminations and fireworks in the evening. From this academy he was sent to a school in Cambridgeshire, and afterwards to Harrow, where he had Lord Byron and Sir Robert Peel for his companions, but made little progress in classic learning, study and application being to him a most irksome drudgery. On the death of his stepmother in 1802, he was prematurely withdrawn from school, and from this period remained at home, in the enjoyment of the congenial atmosphere of his father's house, and the reputation and more solid advantages which the brilliancy of his talents enabled him to secure.

Hook's turn for quizzing and practical jokes was very early displayed, and innumerable anecdotes are recorded of this propensity. They are connected chiefly with the theatre, to which his occupations constantly led him, and where he was the soul and mirth-inspirer of the motley community behind the scenes. On one occasion he nearly frightened Dowton, the comedian, out of his wits, by walking up to him instead of the proper personator of the part, and delivering a letter. On another, when Sheridan was contesting the seat for Westminster, the cry of 'Sheridan for ever!' was heard by the astonished audience proceeding apparently from the evil spirit in the 'Wood-Demon,' and producing one of those incongruous effects which are so much relied on for raising a laugh in pantomime or burlesque. A mischievous trick of another kind, in which he was aided by Liston, may also be mentioned. A young gentleman of Hook's acquaintance had a great desire to witness a play, and also escort a fair cousin thither, but was terrified lest his going to a theatre should come to the knowledge of his father, a rigid Presbyterian, who held such places in abhorrence. He communicated his difficulties to his gay friend. 'Never mind the governor, my dear fellow,' was the reply; 'trust to me; I'll arrange everything—get you a couple of orders, secure places—front-row; and nobody need know anything about it.' The tickets were procured, and received with great thankfulness by Mr B——, who started with his relative for the playhouse, and the pair soon found themselves absorbed in an ecstasy of delight in witnessing the drolleries of Liston. But what was their confusion when the comedian, advancing to the foot-lights during a burst of laughter at one of his performances, looked round the dress-circle with a mock-offended air, and exclaimed: 'I don't understand this conduct, ladies and gentlemen! I am not accustomed to be laughed at; I can't imagine what you can see ridiculous in *me;* why, I declare' (pointing at the centre box with his finger), 'there's Harry B——, too, and his cousin Martha J——; what business have they to come here and laugh at me, I should like to know? I'll go and tell his father, and hear what *he* thinks of it!' The consternation caused to the truant couple by this unexpected address, and the eyes of the whole audience being turned on them, may be more readily imagined than described, and they fled from the house in dismay.

In the days of which we write, the abstraction of pump-handles and street-knockers was a favourite amusement of the young blades about town, some of whom prided themselves not a little in forming a museum of these trophies. Hook was behind no one in such freaks. One of them was the carrying off the figure of a Highlander, as large as life, from the door of a tobacconist, wrapping it up in a cloak, and tumbling it into a hackney-coach as 'a friend, a very respectable man, but a little tipsy,' with a request to the coachman to drive on. The following anecdote is related in the *Ingoldsby Legends*, but will well bear repetition. On the occasion of the trial of Lord Melville, Hook had gone with a friend to Westminster Hall to witness the proceedings. As the peers began to enter, a simple-looking lady from the country touched his arm, and said: 'I beg your pardon, sir, but pray who are those gentlemen in red now coming in?'

'Those, ma'am,' he replied, 'are the barons of

England; in these cases, the junior peers always come first.'

'Thank you, sir, much obliged to you. Louisa, my dear (turning to her daughter, who accompanied her), tell Jane these are the barons of England; and the juniors (that's the youngest, you know) always goes first. Tell her to be sure and remember that when we get home.'

'Dear me, ma,' said Louisa, 'can that gentleman be one of the *youngest?* I am sure he looks very old.'

This *naiveté* held out an irresistible temptation to Theodore, who, on the old lady pointing to the bishops, who came next in order, with scarlet and lawn sleeves over their doctors' robes, and asking, 'What gentlemen are those?' replied: 'Gentlemen, ma'am! these are not gentlemen; these are *ladies*, elderly ladies—the dowager-peeresses in their own right.'

His interrogator looked at him rather suspiciously, as if to find out whether or not he was quizzing her; but reassured by the imperturbable air of gravity with which her glance was met, turned round again to her daughter, and whispered: 'Louisa, dear, the gentleman says that these are elderly ladies and dowager-peeresses in their own right; tell Jane not to forget *that*.'

Shortly afterwards, her attention was drawn to the speaker of the House of Commons, with his richly-embroidered robes. 'Pray, sir,' she exclaimed, 'who is that fine-looking person opposite?'

'That, ma'am, is Cardinal Wolsey.'

'No, sir!' was the angry rejoinder, 'we knows a good deal better than that; Cardinal Wolsey has been dead and buried these many years.'

'No such thing, my dear madam,' replied Hook, with the most extraordinary *sang froid;* 'it has indeed been so reported in the country, but without the least foundation in truth; in fact, these rascally newspapers will say anything!'

The good lady looked thunderstruck, opened her eyes and mouth to their widest compass, and then, unable to say another word, or remain longer on the spot, hurried off with a daughter in each hand, leaving the mischievous wag and his friend to enjoy the joke.

A well-known story is told of Hook and Terry the actor making their way into a gentleman's house with whom they had no acquaintance whatever, but the appetising steams issuing from whose area gave indications of a glorious feast being in the course of preparation. The anecdote is perfectly true, though the real scene of the adventure was not, as commonly represented, a suburban villa on the banks of the Thames, but a town-mansion somewhere in the neighbourhood of Soho Square. Hook caught at the idea suggested by Terry, that he should like to make one of so jovial a party; and arranging with his friend that he should call for him there that evening at ten o'clock, hurried up the steps, gave a brisk rap with the knocker, and was at once admitted to the drawing-room. The room being full, no notice was taken of him at first, and before the host discovered him, he had already made his way to the hearts of a knot of guests by his sallies of drollery. The master of the house at last perceiving a stranger, went up, and politely begged his name, as he felt rather at a loss. Hook replied with a perfect torrent of volubility, but expressed in the suavest and most fascinating terms, and effectually preventing any interruption to his discourse. An explanation at last came out, that he had mistaken both the house and the hour at which he ought to have dined with a friend. The old gentleman's civility then could not allow him to depart, as his friend's dinner-hour must now be long past, and a guest with such a flow of spirits must prove a most agreeable acquisition to his own table. Hook professed great reluctance to trespass thus on the hospitality of a perfect stranger, but was induced, seemingly with much difficulty, to remain, and partake of dinner. So delightful a companion and so droll a fellow had never been met before, and so much mirth and jollity had never till now enlivened the mansion. At ten o'clock, Mr Terry was announced, and Hook, who had seated himself at the pianoforte, in the performance of one of his famous extemporaneous effusions, brought his song to a close as follows:

> 'I am very much pleased with your fare;
> Your cellar's as prime as your cook;
> My friend's Mr Terry the player,
> And I 'm Mr Theodore Hook!'

Nor was this by any means the only entertainment of the kind which his assurance and farcical powers enabled him to obtain. Passing one day in a gig with a friend by the villa of a retired chronometer-maker, he suddenly reined up, remarked to his friend what a comfortable little box that was, and that they might do worse than dine there. He then alighted, rang the bell, and on being admitted to the presence of the worthy old citizen, said that he had often heard his name, which was celebrated throughout the civilised world, and that being in the neighbourhood, he could not resist the temptation of calling and making the acquaintance of so distinguished a public character. The good man was quite tickled with the compliment; pressed his admirer and friend to stay dinner, which was just ready; and a most jovial afternoon was spent, though on the way home the gig containing Hook and his companion was smashed to pieces by the refractory horse, and the two occupants had a narrow escape of their lives. Another of his adventures, in which he seems to have taken his cue from Tony Lumpkin, was driving up to an old gentleman's house, ordering the servant who appeared to take his mare to the stable and rub her down well, and then proceeding to the parlour, stretched himself at full-length on the sofa, and called for a glass of brandy and water. On the master of the house making his appearance and inquiring the business of his visitor, Hook became more vociferous than ever, declared that he had never before met with such treatment in any inn, or from any landlord, and ended by saying that his host must be drunk, and he should certainly feel it his duty to report the circumstance to the bench. The old gentleman was confounded, but in a short time Hook pretended to discover his blunder of having taken the house for an inn, and made ten thousand apologies, adding that he had been induced to commit the mistake by seeing over the entrance-gate a large vase of flowers, which, he imagined, indicated the sign of the Flower-pot. This said vase happened to be cherished by its owner with special complacency as a most unique and chaste ornament.

and here was it degraded to the level of a pot-house sign!

Another story is told of Hook, in which he improved on a well-known device related of Sheridan. Getting into a hackney-coach one day, and being unable to pay the fare, he bethought himself of the plan adopted by the celebrated wit just mentioned on a similar occasion, and hailed a friend whom he observed passing along the street. He made him get into the carriage beside him, but on comparing notes he found his companion equally devoid of cash as himself, and it was necessary to think of some other expedient. Presently they approached the house of a celebrated surgeon. Hook alighted, rushed to the door, and exclaimed hurriedly to the servant who opened it: 'Is Mr —— at home? I must see him immediately. For God's sake do not lose an instant.' Ushered into the consulting-room, he exclaimed wildly to the surgeon: 'Thank heaven! Pardon my incoherence, sir; make allowance for the feelings of a husband, *perhaps a father*—your attendance, sir, is instantly required—instantly—by Mrs ——. For mercy's sake, sir, be off.' 'I'll be on my way immediately,' replied the medical man. 'I have only to get my instruments, and step into my carriage.' 'Don't wait for your carriage,' cried the pseudo-distressed parent; 'get into mine, which is waiting at the door.' Esculapius readily complied, was hurried into the coach, and conveyed in a trice to the residence of an aged spinster, whose indignation and horror at the purport of his visit was beyond all bounds. The poor man was glad to beat a speedy retreat, but the fury of the old maiden-lady was not all he was destined to undergo, as the hackney-coachman kept hold of him, and mulcted him in the full amount of the fare which Hook ought to have paid.

All these and similar escapades, however, were fairly eclipsed by the famous Berners-street hoax, which created such a sensation in London in 1809. By despatching several thousands of letters to innumerable quarters, he completely blocked up the entrances to the street, by an assemblage of the most heterogeneous kind. The parties written to had been requested to call on a certain day at the house of a lady, residing at No. 54 Berners Street, against whom Hook and one or two of his friends had conceived a grudge. So successful was the trick, that nearly all obeyed the summons. Coal-wagons, heavily laden, carts of upholstery, vans with pianos and other articles, wedding and funeral coaches, all rumbled through, and filled up the adjoining streets and lanes; sweeps assembled with the implements of their trade; tailors with clothes that had been ordered; pastry-cooks with wedding-cakes; undertakers with coffins; fishmongers with cod-fishes, and butchers with legs of mutton. There were surgeons with their instruments; lawyers with their papers and parchments; and clergymen with their books of devotion. Such a babel was never heard before in London, and to complete the business, who should drive up but the lord mayor in his state-carriage; the governor of the Bank of England; the chairman of the East India Company; and even a scion of royalty itself, in the person of the Duke of Gloucester. Hook and his confederates were meantime enjoying the fun from a window in the neighbourhood, but the consternation occasioned to the poor lady who had been made the victim of the jest, was nearly becoming too serious a matter. He never avowed himself as the originator of this trick, though there is no doubt of his being the prime actor in it. It was made the subject of a solemn investigation by many of the parties who had been duped, but so carefully had the precautions been taken to avoid detection, that the inquiry proved entirely fruitless.

In 1813, Hook received the appointment, with a salary of £2000 a year, of accountant-general and treasurer of the Mauritius, an office which one would have supposed to be the very antipodes to all his capacities and predilections. How it came to be conferred on him, does not clearly appear; but it exhibits a memorable instance, among others, of the reckless selection, too often displayed in those days, in the choice of public officials. What might have been expected followed. The treasurer was about as fitted by nature for discharging the duties of such an office as a clown in a pantomime, and the five years spent by him in the island were little more than a round of merriment and festivities. An investigation of his accounts at last took place, and a large deficit, ultimately fixed at about £12,000, was discovered. There seems no reason for believing that Hook had been guilty of the least embezzlement or mal-appropriation of the government funds; but there can be no doubt that his negligence in regard to his duties was most reprehensible, trusting their performance entirely to a deputy, who committed suicide about the time of the inquiry being instituted. A criminal charge was made out against the unfortunate accountant-general, and in 1818, he was sent home under arrest. His buoyancy of spirits, however, never failed him, and meeting at St Helena one of his old friends, who asked him if he was going home for his health, he replied: 'Yes, I believe there's something wrong with the chest!'

On landing in England, it was found that there was no ground for a criminal action against him, but that as responsible for the acts of his deputy, his person and estate were amenable to civil proceedings. The whole of his property in the Mauritius and elsewhere was accordingly confiscated, and he underwent a long confinement, first in a sponging-house in Shire-Lane, and afterwards in the King's Bench Prison. Thrown again on his own resources, he produced several dramatic pieces, which achieved a respectable amount of success. The great event, however, at this period of his life, was his becoming editor of the *John Bull* newspaper, which, under his management, made itself conspicuous by its stinging and too often scurrilous attacks on the Whig party. An inexhaustible fund of metrical lampoon and satire was ever at the command of its conductor, and he certainly dealt out his sarcasm with no sparing hand. Some of the most famous of his effusions were directed against Queen Caroline and her party at the time of the celebrated trial. *Whyttington and his Catte*, the *Hunting of the Hare*, and *Mrs Muggins's Visit to the Queen*, were reckoned in their day by the Tories as uncommonly smart things.

Have you been to Brandenburgh? heigh! ma'am, ho! ma'am;
Have you been to Brandenburgh! ho!
O yes! I have been, ma'am, to visit the queen, ma'am,
With the rest of the gallantee show.

What did you see, ma'am? heigh! ma'am, ho! ma'am,
What did you see, ma'am? ho!
We saw a great dame, with a face as red as flame,
And a character spotless as snow.
* * * *

Mrs Muggins's Visit was a satire on Queen Caroline's drawing-room, at Brandenburgh House, and is said to be a very good specimen of Hook's style in improvisation, an art which he possessed in a wonderful degree.

Some years before Hook's obtaining his disastrous appointment at the Mauritius, he had published, under an assumed name, a novel entitled *The Man of Sorrow*, but its success was very doubtful. It was not till after he had passed through the furnace of adversity, and undergone the pains of incarceration, that he gave to the world that series of works of fiction which, prior to the days of Dickens and Thackeray, had so unbounded a popularity as the exponents of middle-class life. With great smartness and liveliness of description, they partake eminently of the character of the author whose gifts were much more brilliant than solid. Deficient in the latter element, and possessing, in a great measure, an ephemeral interest, it becomes, therefore, doubtful whether they will be much heard of in a succeeding generation.

The *bons mots* recorded of Theodore Hook are multifarious, but they have all more or less a dash of the flippancy and impudence by which, especially in early life, he was characterised. Walking along the Strand one day, he accosted, with much gravity, a very pompous-looking gentleman. 'I beg your pardon, sir, but may I ask, are you anybody particular?' and passed on before the astonished individual could collect himself sufficiently to reply. In the midst of his London career of gaiety, when a stripling, he was induced by his brother James, who was seventeen years his senior, to enter himself at St Mary's Hall, Oxford, where his sojourn, however, was but brief. On being presented for matriculation to the vice-chancellor, that dignitary inquired if he was prepared to sign the Thirty-nine Articles.

'O yes,' replied Theodore, 'forty, if you like!' It required all his brother's interest with Dr Parsons to induce him to pardon this petulant sally. The first evening, it is said, of his arrival at Oxford, he had joined a party of old schoolfellows at a tavern, and the fun had become fast and furious. Just then the proctor, that terror of university evil-doers, made his appearance, and advancing to the table where Hook was sitting, addressed him with the customary question: 'Pray, sir, are you a member of this university?' 'No, sir,' was the reply (rising and bowing respectfully); 'pray, sir, are you?'

Somewhat discomposed by this unexpected query, the proctor held out his sleeve, 'You see this, sir?'

'Ah,' replied the young freshman, after examining with much apparent interest for a few moments the quality of the stuff. 'Yes, I perceive, Manchester velvet; and may I take the liberty, sir, of inquiring how much you may have paid per yard for the article?' Discomfited by so much imperturbable coolness, the academical dignitary was forced to retire amid a storm of laughter.

The Mauritius affair proved a calamity, from the effects of which Hook never recovered. With a crushing debt constantly suspended *in terrorem* over him, and an enfeebled frame, the result of his confinement in prison, and partly also of the unwholesome style of living, as regards food, in which he had indulged when abroad, his last years were sadly embittered by ill health, mental depression, and pecuniary embarrassment. Outwardly, he seemed still to enjoy the same flow of spirits; but a worm was gnawing at the heart, and his diary at this period discloses a degree of mental anguish and anxiety which few of those about him suspected. He died at Fulham, on 24th August 1841, in his fifty-third year.

THE ST BARTHOLOMEW MASSACRE.

The prodigious event bearing this well-known name, was mainly an expression of the feelings with which Protestantism was regarded in France in the first age after the Reformation; but the private views of the queen-mother, the atrocious Catharine de' Medici, were also largely concerned. After the death of her husband, Henry II., she had an incessant struggle, during the reigns of the boy-kings, her sons, who succeeded, for the supreme power. It seemed within her grasp, but for the influence which the Protestant leader, the Admiral Coligni, had acquired over the mind of Charles IX. This young monarch was a semi-maniac. He was never happy but when taking the most violent exercise, riding for twelve or fourteen hours consecutively, hunting the same stag for two or three days, only stopping to eat, and reposing but a few hours in the night. He had, during the absence of Catharine, listened to Coligni, and agreed to an expedition against the Spaniards in alliance with the Prince of Orange. When the proud mother returned, she found herself supplanted by the chief of the Huguenot party, whose triumph in her eyes would be absolute ruin to her family. The king had accepted the idea of war with delight; he demanded the constant presence of the admiral, and kept him half the night in his bedroom, calculating the number of his armies, and laying down plans for marching. From this moment the death of the Protestant leader was determined on.

The opportunity of the marriage between Henry of Navarre and the Princess Margaret, which took place on the 18th of August 1572, was seized upon; the Huguenots of rank had followed their leader to Paris; a gallery was erected for them outside Notre Dame, that their prejudices might not be wounded, and nothing was seen but festivity and concord between the disagreeing parties. But on the 22d, Coligni was shot at from a window by a follower of the Duke de Guise, and wounded in two places; his party were highly indignant at the outrage, crowded round the house, and threats of vengeance were heard; these were used by the king's relatives to convince him that he and all about him were in danger of immediate destruction, if he did not permit a general massacre. The Dukes de Guise, Anjou, Aumale, and others agreed to carry out the dreadful decree; the bell of St Germain de l'Auxerrois was to toll out the signal in the dead of the night. From a balcony in the Louvre, which opened out of the ball-room, and looked into the Seine, the guilty mother and trembling son watched the proceedings. The house where Coligni lay wounded was first attacked; he

met his fate with the heroism of a Christian hero; his body was thrown from the window, and his followers shared the same fate. All the streets in Paris rang with the dreadful cry: 'Death to the Huguenot! kill every man! kill! kill!' Neither men, women, nor children were spared; some asleep, some kneeling in supplication to their savage assailants; about thirty thousand innocent persons were thus butchered by a furious mob, allowed to give vent to their fanatical passion. All that day it continued; towards evening the king sent out his trumpeter to command a cessation; but the people were not so easily controlled, and murders were committed during the two following days. Five hundred men of rank, with many ladies of equally high birth, and ministers of religion, were among the victims; every man, indeed, might kill his personal enemy without inquiry being made as to his religion, and Catholics suffered as well as Huguenots. The large cities of the provinces, Rouen, Lyon, &c., caught the infection, which the queen-mother took no steps to prevent, and France was steeped in blood and mourning.

The king at first laid the blame on the Houses of Guise and Coligni, but he afterwards went to the parliament, and acknowledged himself as the author, claiming the merit of having given peace to France by the destruction of the Protestants. But his life was ever after one of bitter remorse and horror. Not many days after, he said to his surgeon: 'I feel like one in a fever, my body and mind are both disturbed; every moment, whether asleep or awake, visions of murdered corpses, covered with blood, and hideous to the sight, haunt me. Oh, I wish they had spared the innocent and imbecile!' In less than two years, the unfortunate young king had joined his victims; a prey to every mental and physical suffering that could be imagined.

The black turpitude and wickedness of the Bartholomew Massacre is very obvious; but it is not less true that it was a great blunder. The facts were heard of all over Europe with a shudder of horror. They have been a theme of reproach against Catholics ever since. It may be considered as a serious misfortune for any code of opinions whatever to have such a terrible affair associated with it.

THE BARTHOLOMEW ACT, 1662.

When High Church had the upper hand in the reign of Charles I., it did not scruple to pillory the Puritans, excise their ears, and banish them. When the Puritans got the ascendancy afterwards, they treated high-churchmen with an equally conscientious severity. At the Restoration, all the reforming plans of the last twenty years were found utterly worn out of public favour, and the public submitted very quietly to a reconstitution of the church under what was called the Act of Uniformity, which made things very unpleasant once more for the Puritans. By its provisions, every clergyman was to be expelled from his charge on the 24th of August 1662, if, by that time, he did not declare his assent to everything contained in the revised Book of Common Prayer; every clergyman who, during the period of the Commonwealth, had been unable to obtain episcopal ordination, was commanded now to obtain that kind of sanction; all were to take an oath of canonical obedience; all were to give up the theory on which the old 'Solemn League and Covenant' had been based; and all were to accept the doctrine of the king's supremacy over the church. The result was, that two thousand of the clergy signalised this Bartholomew Day by coming out of the church. Baxter, Alleyne, Calamy, Owen, and Bates, were among them; while Milton, Bunyan, and Andrew Marvell, were among the laymen who adhered to their cause. The act became the more harsh from its coming into operation just before one whole year's tithes were due. Two thousand families, hitherto dependent on stipends for support, were driven hither and thither in the search for a livelihood; and this was rendered more and more difficult by a number of subordinate statutes passed in rapid succession. The ejected ministers were not allowed to exercise, even in private houses, the religious functions to which they had been accustomed. Their books could not be published without episcopal sanction, previously applied for and obtained. A statute, called the 'Conventicle Act,' punished with fine, imprisonment, or transportation, every one present in any private house where religious worship was carried on—if the total number exceeded by more than five the regular members of the household. Another, called the 'Oxford Act,' imposed on these unfortunate ministers an oath of passive obedience and non-resistance; and if they refused to take it, they were prohibited from living within five miles of any place where they had ever resided, or of any corporate town, and from eking out their scanty incomes by keeping schools, or taking in boarders. A second and stricter version of the Conventicle Act deprived the ministers of the right of trial by jury, and empowered any justice of the peace to convict them on the oath of a single informer, who was to be rewarded with one-third of the fines levied; no flaw in the legal document, called the *mittimus*, was allowed to vitiate it; and the 'benefit of the doubt,' in any uncertain cases, was to be given to the accusers, not to the accused.

Writers who take opposite sides on this subject naturally differ as to the causes and justification to be assigned for the ejection; but there is very little difference of opinion as to the misery suffered during the years intervening between 1662 and 1688. Those who, in one way or other, suffered homelessness, hunger, and penury on account of the Act of Uniformity and the ejection that followed it, have been estimated at 60,000 persons, and the amount of pecuniary loss at twelve or fourteen millions sterling. Defoe, Penn, and other contemporary writers, set down upwards of 5000 Nonconformists as the number who perished within the walls of prisons; and many, like Baxter, were hunted from house to house, from chapel to chapel, by informers, whose only motive was to obtain a portion of the fines levied for infringement of numerous statutes.

Considered as a historical fact, *dissent* may be said to have begun in England on this 24th August 1662, when the Puritans, who had before formed a body *within* the church, now ranged themselves as a dissenting or Nonconformist sect *outside* it.

BARTHOLOMEW FAIR.

The great London Saturnalia—the Smithfield fair on the anniversary of St Bartholomew's Day—died a lingering death in 1855, after flourishing for seven centuries and a half. Originally established for useful trading purposes, it had long survived its claim to tolerance, and as London increased, had become a great public nuisance, with its scenes of riot and obstruction in the very heart of the city.

When Rahere, minstrel and jester to Henry I., left the gaieties of the court for the proprieties of the cloister, he exhibited much worldly prudence in arranging his future career. He affirmed that he had seen Bartholomew the apostle in a vision, and that he had directed him to found a church and hospital in his honour in the suburbs of London, at Smithfield. The land was the more readily granted by the king, Henry II.; for it was waste and marshy, and would be improved by the proposed foundation. Osier Lane (now spelled in Cockney form with an H) marks the site of a small brook, lined with osiers, which emptied itself in the Fleet River. The marsh was drained, and the monastery founded on its site in 1123; Rahere was made prior, and great success attended the shrine of St Bartholomew, where many miracles were affirmed to have been effected in aid of the afflicted. But the new prior, having been an active man of the world, looked to temporal as well as spiritual aid; he therefore included the right to hold a great fair on the festival of his patron saint, and this brought traders from all parts to Smithfield, for they had the royal safeguard—'firm peace to all persons coming to and returning from the fair'—during the three days it was held. Cattle and merchandise were the staple of such fairs. The safeguard given to traders in days when travelling was difficult and dangerous, and the ease with which men might combine to go in companies to them, made them generally useful; hence shopkeepers laid in their stock from them, and housekeepers furnished their homes with articles not readily obtained elsewhere. The pious might join in a great church-festival, the pleasure-seekers find amusement in the wandering minstrels and jesters who were drawn to the busy scene, or stare with wonder at some performing-monkey or other 'outlandish beast,' who was sure to find favour with the sight-loving Londoners.

Several centuries elapsed, and the whole character of English life altered, before the trading-fair became exclusively a pleasure-fair. It was not until the cessation of our civil wars, and the quiet establishment of the House of Tudor upon the throne, that trade assumed its important position, and commercial enterprise elevated and enlarged its boundaries. In the reign of Queen Elizabeth, Bartholomew Fair ceased to be a cloth-fair of any importance; but its name and fame is still preserved in the lane running parallel to Bartholomew Close, termed 'Cloth-fair,' which was 'generally inhabited by drapers and mercers' in the days of Strype, and which still preserves many antique features, and includes, in a somewhat modernised form, some of the old houses founded by Lord Rich and his successors, who obtained the grant of the hospital property in the reign of Henry VIII. The fair was always proclaimed by the lord mayor, beneath the arch shewn in our cut, to the very end of its existence; and its original connection with the cloth trade was also shewn in a burlesque proclamation the evening before by a company of drapers and tailors, who met at 'the Hand and Shears,' a house-of-call for their fraternity

CLOTH-FAIR.

in Cloth-fair, from whence they marched, shears in hand, to this archway, and announced the opening of the fair, concluding the ceremony by a general shout and 'snapping of shears.'

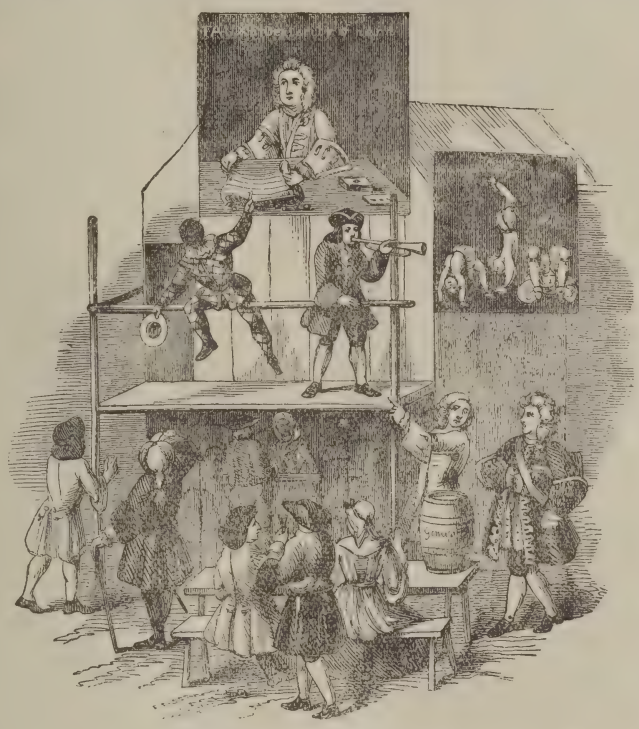
Keutzner, the German traveller, who visited England in 1598, tells us, 'that every year, upon St Bartholomew's Day, when the fair is held, it is usual for the mayor, attended by the twelve principal aldermen, to walk in a neighbouring field, dressed in his scarlet gown, and about his neck a golden chain.' A tent was pitched for their accommodation, and wrestling provided for their amusement. 'After this is over, a parcel of live rabbits are turned loose among the crowd, which are pursued by a number of boys, who endeavoured to catch them with all the noise they can make.' The next vivid picture of the fair we obtain from an eye-witness, shews how great the change in its character during the progress of the reign of Elizabeth. This photograph of the fair in 1614, we obtain in Ben Jonson's comedy, which takes its title from, and is supposed to be chiefly enacted in, the precincts of the fair. There was hardly a trace now left of its old business character—it was all eating, drinking, and amusement. It had become an established custom to eat roast-pig here; shows were established for the exhibition of 'motions' or puppet-plays, sometimes constructed on religious history, such as 'the Fall of Nineveh,' 'the History of the Chaste Susanna,' &c.; others

were constructed in classic story, as 'the Siege of Troy,' or 'the Loves of Hero and Leander;' which is enacted in the last act of Ben Jonson's play, and bears striking resemblances to the burlesques so constantly played in our modern theatres. Shows of other kinds abounded, and zoology was always in high favour. One of Ben's characters says: 'I have been at the Eagle and the Black Wolf, and the Bull with the five legs, and the Dogs that dance the Morrice, and the Hare with the Tabor.' Some of these performances are still popular 'sights:' the hare beating the tabor amused our Anglo-Saxon forefathers, as it may amuse generations yet unborn. Over-dressed dolls ('Bartholomew-Fair babies'), and 'gilt gingerbread,' with drums, trumpets, and other toys were abundantly provided for children's 'fairings.'

In 1641, the fair had increased greatly, and become solely devoted to pleasure—such as it was. In a descriptive tract of that date, we are told it was 'of so vast an extent that it is contained in no less than four several parishes—namely, Christchurch, Great and Little St Bartholomew's, and St Sepulchre's. Hither resort people of all sorts and conditions. Christchurch cloisters are now hung full of pictures. It is remarkable, and worth your observation to behold, and hear the strange sights, and confused noise in the fair. Here, a knave, in a fool's coat, with a trumpet sounding, or on a drum beating, invites you to see his puppets; there, a rogue like a wild woodman, or in an antic shape like an incubus, desires your company to view his motion; on the other side, Hocuspocus, with three yards of tape or ribbon in his hand, shews his art of legerdemain to the admiration and astonishment of a company of cockloaches. Amongst these, you shall see a gray goose-cap (as wise as the rest), with a "what do ye lacke" in his mouth, stand in his booth, shaking a rattle or scraping a fiddle, with which children are so taken, that they presently cry out for these fopperies; and all these together make such a distracted noise, that you would think Babel not comparable to it.'

In the reign of Charles II., the fair became a London carnival of the grossest kind. The licence was extended from three to fourteen days, the theatres were closed during this time, and the actors brought to Smithfield. All classes, high and low, visited the place. Evelyn records his visit there, so does John Locke, and garrulous Pepys went often. On August 28, 1667, he notes that he 'went twice round Bartholomew Fair, which I was glad to see again.' Two days afterwards, he writes: 'I went to Bartholomew Fair, to walk up and down; and there, among other things, find my Lady Castlemaine at a puppet-play (*Patient Grisel*), and a street full of people expecting her coming out.' This infamous woman divided her affections between the king, Charles II., and Jacob Hall, the rope-dancer, who was a great favourite at the fair, and salaried by her ladyship. In 1668, Pepys again notes two visits he paid to the fair, in company with Lord Brouncker and others, to see 'The mare that tells money, and many things to admiration—and then the dancing of the ropes, and also the little stage-play, which is very ridiculous.'

LEE AND HARPER'S BOOTH, BARTHOLOMEW FAIR.



In 1699, Ned Ward notes in his *London Spy*, a visit he paid to the fair, viewing it from a public-house near the Hospital Gate, under the influence of a pipe. 'The first objects, when we were seated at the window, that lay within our observation, were the quality of the fair, strutting round their balconies in their tinsel robes, and golden leather buskins, expressing such pride in their buffoonery stateliness, that I could but reasonably believe they were as much elevated with the thought of their fortnight's pageantry, as ever Alexander was with the thought of a new conquest; looking with great contempt on their split deal-thrones upon the admiring mobility gazing in the dirt at our ostentatious heroes, and their most supercilious doxies, who looked as awkward and ungainly in their gorgeous accoutrements, as an alderman's lady in her stiff-bodied gown upon a lord-mayor's festival.' One of the most famous of these great theatrical booths was that owned by Lee and Harper, and represented in the above engraving, copied from a curious general view of the fair, designed to form a fan-mount, and probably published about 1728.*

* It was re-engraved and printed by Mr Setchel, of King's Street, Covent Garden, 1824, but that print is now rare. It was accompanied by a few descriptive lines of letter-press, in which the date of 1721 was assigned to

Here one of the old favourite sacred dramas is being performed on the history of Judith and Holophernes, and both these characters parade the stage in front; the hero in the stage-dress of a Roman general; the heroine in that of a Versailles court-masque, with a feathered head-dress, a laced stomacher, and a hooped petticoat of crimson silk, with white rosettes in large triangles over its ample surface. A few of these Bartholomew-fair dramas found their way into print, the most remarkable of the series being the *Siege of Troy*, by Elkanah Settle, once the favourite court-poet of Charles II., and the rival of Dryden; ultimately a poor writer for Mrs Mynn's booth, compelled in old age to roar in a dragon of his own invention, in a play founded on the tale of St George. These dramas are curiously indicative of popular tastes, filled with bombast interspersed with buffoonery, and gorgeous in dress and decoration. There is an anecdote on record of the proprietress of this show refusing to pay Oram, the scene-painter, for a splendid set of scenes he was engaged to paint, because he had used Dutch metal instead of leaf-gold in their decoration. Settle's *Siege of Troy* is a good specimen of these productions, and we are told in the preface, 'is no ways inferior to any one opera yet seen in either of the royal theatres.' One of the gorgeous displays offered to the sightseers is thus described: 'The scene opens and discovers Paris and Helen, fronting the audience, riding in a triumphant chariot, drawn by two white elephants, mounted by two pages in embroidered livery. The side-wings are ten elephants more, bearing on their backs open castles, umbrayed with canopies of gold; the ten castles filled with ten persons richly drest, the retinue of Paris; and on the elephants' necks ride ten more pages in the like rich dress. Beyond and over the chariot is seen a Vistoe* of the city of Troy, in the walls of which stand several trumpeters, seen behind and over the head of Paris, who sound at the opening of the scene.' Of course such magnificent people talk 'brave words,' like Ancient Pistol. Paris declares:

> 'Now when the tired world's long discords cease,
> We 'll tune our Trumps of War to Songs of Peace.
> Where Hector dragg'd in blood, I 'll drive around
> The walls of Troy; with love and laurels crown'd.'

All this magniloquence is relieved by comic scenes between a cobbler (with the appropriate name of Bristles) and his wife, one 'Captain Tom,' and 'a numerous train of Trojan mob.'

FAUX THE CONJUROR'S BOOTH.

The regular actors, as we have before observed, were transplanted to the fair during its continuance, and some of them were *pro-tem* proprietors and managers of the great theatrical booths. Penkethman, Mills, Booth, and Doggett were of the number. The great novelist, Henry Fielding, commenced his career as part-proprietor of one of these booths, continuing for nine years in company with Hippisley, the favourite comedian, and others. It was at his booth, in 1733, that the famous actress, Mrs Pritchard, made her great success, in an adaptation by Fielding, of Molière's *Cheats of Scapin*.

The fan-mount, already described, furnishes us with another representation of a booth in the fair; and it will be perceived that they were solid erections of timber, walled and roofed with planks, and perfectly weather-proof. In this booth 'Faux's dexterity of hand' is displayed, as well as a 'famous posture-master,' whose evolutions are exhibited in a picture outside the show. Faux was the Robert Houdin of his day, and is recorded to have died worth £10,000, which he had accumulated during his career. *The Gentleman's Magazine* for February 1731, tells us that the Algerine ambassadors visited him, and at their request he shewed them a view of Algiers, 'and raised up an apple-tree which bore ripe apples in less than a minute's time, which several of the company tasted of.' There was abundance of other shows to gratify the great British public; wild beasts, monsters, learned pigs, dwarfs, giants, *et hoc genus omne* abounded. 'A prodigious monster

the original; but inasmuch as 'The Siege of Gibraltar' is exhibited in one of the peep-shows, and that siege did not occur till 1727, the earlier date is assuredly wrong. This error was first pointed out by Mr Morley in his elaborate and beautiful volume, *Memoirs of Bartholomew Fair*, which contains 500 pages of curious reading for all who wish to go fully into its history and associations.

* A vista, or long perspective view.

is advertised, 'with one head and two distinct bodies;' and 'An admirable work of nature, a woman having three breasts.' Then there was to be seen, 'A child alive, about a year and a half old, that has three legs.' It appears that nobility and even royalty patronised these sights, thus 'The tall Essex woman,' in the reign of George I., 'had the honour to shew herself before their Royal Highnesses the Prince and Princess of Wales, and the rest of the royal family, last Bartholomew Fair.' A distinguished visitor is seen in our last engraving decorated with the ribbon and star of the Garter. The figure is by some supposed to represent the premier, Sir Robert Walpole, who was a frequent visitor to the fair; his attention is directed to Faux's booth by an attendant; but these figures may be intended to depict the Prince of Wales, who visited the fair in company with Rich, the manager and actor, who did duty as cicerone on the occasion.

The licence and riot which characterised the proceedings in Smithfield, at last aroused the civic authorities, and after much rioting and many ineffectual attempts, the fair was again limited to three days' duration, by a resolution of the court of common council in 1708. The theatrical booths were still important features in the fair, and in 1715, we hear of 'one great playhouse erected for the king's players—the booth is the largest that ever was built.' During the run of the *Beggar's Opera*, it was reproduced by Rayner and Pullen's company at the fair. In 1728, Lee and Harper produced a ballad-opera on the adventures of Jack Sheppard, and in 1730, another devoted to the popular hero—Robin Hood. Dramatic entertainments ultimately declined, but monstrosities never failed, and gratified the Londoners to the last day of the existence of the fair. Pig-faced ladies were advertised, if not seen; but learned pigs were never wanting, who could do sums in arithmetic, tell fortunes by cards, &c. Wild-beast shows ended in being the principal attraction, though they were the most expensive exhibitions in the fair; a shilling being charged for admission.

The mayor endeavoured to stem the irregularities of the fair in 1769, by appointing seventy-two officers to keep the peace and prevent gambling, as well as to hinder the performance of plays and puppet-shows. In 1776, the mayor refused permission to erect booths at all, which occasioned great rioting. Some years before this, the deputy-marshal lost his life in endeavouring to enforce order in the fair. The most dangerous rioters were a body of blackguards, who termed themselves 'Lady Holland's Mob,' and assembled to proclaim the fair after their own fashion, the night before the mayor did so. Hone says, 'the year 1822 was the last year wherein they appeared in any alarming force, and then the inmates of the houses they assailed, or before which they paraded, were aroused and kept in terror by their violence. In Skinner Street especially, they rioted undisturbed until between three and four in the morning: at one period that morning, their number was not less than five thousand, but it varied as parties went off or came in to and from the assault of other places. Their force was so overwhelming, that the patrol and watchmen feared to interfere, and the riot continued till they had exhausted their fury.'

The last royal visit to the fair took place in 1778, when the Duke and Duchess of Gloucester rode through it. Flockton's puppets were at this time a great attraction. Mr Lane, 'his majesty's conjuror,' and Mr Robinson, 'conjuror to the queen,' divided the attention of amateurs of their art. Polito's 'Grand collection of wild beasts' were brought from Exeter Change; 'The famous ram with six legs,' 'The unicorn ram,' 'The performing-serpents,' and other wonders in natural history, also invited visitors; as well as 'A surprising large fish,' affirmed to have 'had in her belly, when found, one thousand seven hundred mackerel.'

When Hone visited the fair in 1825, he saw, in a penny-show, the mermaid which had been exhibited about a year before in Piccadilly, at the charge of half-a-crown each person. This imposture was a hideous combination of a dried monkey's head and body, and the tail of a fish, believed to have been manufactured on the coast of China, and exhibited as the product of the seas there.* George Cruikshank has preserved its features, and we are tempted to reproduce his spirited etching.

THE MERMAID.

'A mare with seven feet' was a *lusus naturæ* also then exhibited, giants and dwarfs of course abounded, as they ever do at fairs!

Atkin's and Wombwell's menageries were the great shows of the fair in its expiring glory. They still charged the high price of one shilling admission. Richardson's theatre was the only successful rival in price and popularity—here was a charge of boxes 2*s*., pit 1*s*., gallery 6*d*.; but the deluded

* This was in the summer of 1822, and afterwards, when the price was reduced to a shilling, a contemporary journal described it as 'now the great source of attraction in the British metropolis; and three to four hundred people every day pay their shilling each, to see a disgusting sort of a compound animal, which contains in itself everything that is odious and disagreeable.' Though naturalists and journalists fully exposed the imposture, we are at the same time assured, that 'this circumstance does not appear to affect the exhibition, which continues as crowded as ever.'

exclusives who paid for box or pit seats, found on entering only a steep row of planks elevated above each other in front of the stage, without any distinction of parties, or anything to prevent those on the top row from falling between the supports to the bottom! Here, in the course of a quarter of an hour, a melodrama, with a ghost and several murders—a comic song by way of interlude, and a pantomime—were all got through to admiring and crowded audiences; by which the manager died rich.* Richardson was also proprietor of another 'show' in the fair; this was 'The beautiful spotted negro boy,' a child whose skin was naturally mottled with black, and whose form has been carefully delineated in a good engraving, here copied.

THE SPOTTED BOY.

He was a child of amiable manners, much attached to Richardson, who behaved with great kindness toward him; consequently both of them were in high favour with the public.† He was the last of the great natural curiosities exhibited there, for the fair gradually dwindled to death, opposed by the civic authorities and all decent people. It was at one time resolved to refuse all permission to remove stones from pavement or roadway, for the erection of booths; but the showmen evaded the restriction by sticking their poles in large and heavy tubs of earth. Then high ground-rents were fixed, which proved more effectual; and in 1850, when the mayor went as usual to Clothfair-gate to proclaim the opening of the fair, he found nothing awaiting to make it worth that trouble. No mayor went after, and until 1855, the year of its suppression, the proclamation was read by a deputy.

* Mr George Daniel, in his *Merrie England in the Olden Time*, says: 'The following account of Bartholomew Fair receipts, in 1828, may be relied on. Wombwell's Menagerie, £1700; Atkin's ditto, £1000; and Richardson's Theatre, £1200—the price to each being sixpence. Morgan's Menagerie, £150; admission, threepence. Balls, £80; Ballard, £89; Keyes, £20; Frazer, £26; Pike, £40; Pig-faced Lady, £150; Corder's Head, £100; Chinese Juggler's, £50; Fat Boy and Girl, £140; Salamander, £30; Diorama of Navarino, £60; Scotch Giant, £20. The admission to the last twelve shows varied from twopence to one halfpenny.'

† This remarkable child was born in the island of St Vincent, in 1808; his parents were natives of Africa, and both black; the child's skin and hair were spotted or mottled all over dark-brown and white; it was brought to Bristol when only fifteen months old, and an arrangement made with Richardson for its exhibition. The showman took an affectionate interest in the child, and had it christened Geo. Alex. Gratton. It lived to the age of four years and three-quarters, and was buried at Great Marlow, in Buckinghamshire, where a monument was placed to record its death and Richardson's attachment.

AUGUST 25.

St Ebba or Tabbs, virgin and abbess, 683. St Gregory, abbot and confessor, 776. St Louis, king of France, 1270.

Born.—Charles Etienne Louis Camus, mathematician and author, 1699, *Crécy en Brie.*

Died.—Gratianus, Roman emperor, assassinated, 383, *Lyon;* Louis IX. of France (St Louis), 1270, *Tunis, Africa;* Henry VII., emperor of Germany, 1313, *Sienna;* Margaret of Anjou, queen of Henry VI. of England, 1482, *France;* Dr David Hartley, philosopher (*Observations on Man*), 1757, *Bath;* Thomas Chatterton, poet, 1770, *London;* David Hume, philosopher and historian, 1776, *Edinburgh;* James Watt, celebrated improver of the steam-engine, 1819, *Heathfield, near Birmingham;* Sir William Herschel, eminent astronomer, 1822, *Slough;* Daniel Stuart, noted improver of the newspaper-press, 1846.

CHATTERTON.

The crowd through which we had to elbow our way, a few years ago, at the Manchester Art Exhibition, in order to get a sight of the picture of Chatterton, lying on his bed in his little London garret, set us thinking. It was not from any absolute merit in the picture, though that was great, that it attracted so many eyes. How was it then? No doubt the morbid feeling, which pushes through a crowd, to see the mangled remains of some traveller killed by an accident, drew some; doubtless that fondness for the horrible, which leads women to read all the tragic tales in newspapers, to the neglect of brilliant leading articles, drew many more; but in every connoisseur, more or less, there must have been mixed up a human sympathy with genius, and an interest in its fate, which the pitifulness of the sad history of the marvellous boy roused into activity.

Thomas Chatterton was born in Bristol, on the 20th of November 1752. His father was successively a writing-master, one of the cathedral choir, and master of a free school in the city, and died a short time before Chatterton was born; his mother, after her husband's death, supported herself by sewing, and keeping a small day-school. She seems to have been a very worthy and respectable person: beyond her fondness for her son, we hear little of her.

The boy, at first mistaken for a dunce, finally learned his letters from an old illuminated manuscript: then a change took place in him, and at eight years old, it is said, he would read without

urging, and read anything and everything, from morning till night.

He was a moping boy. He would shut himself up in his bedroom, and cared for no companions. Sometimes, he would burst into tears; at others, stare in some one's face for many minutes together, without appearing to observe them. There were neighbours wise enough to see madness in these peculiarities, but none who discerned the self-absorption of genius. Indeed, until the lad was dead, no one seems to have regarded his eccentricities in that light.

In August 1760, being nearly eight years of age, Chatterton was admitted into a Bristol charity-school. While here, he would express disgust at being taught nothing but reading, writing, and arithmetic, and privately, though not neglecting school-tasks, turned his attention to other studies.

CHATTERTON.

He read incessantly, and amongst other acquirements, made himself an adept in heraldry. And when he could, he haunted the buildings and the meadows of St Mary Redcliffe, where he would lie and look fixedly at the church, as if he were 'in a kind of trance.' He betrayed an intense love of everything which was old. It is interesting to speculate as to what civilising influences the advantages of a classical education, if he had been so favoured, would have exercised over him.

Before he had been at this school three years, certain poems made their appearance. Some verses of his, on a sacred subject, figured in *Felix Farley's Bristol Journal* for January 8, 1763; in less than a year after this he indulged a satirical vein, to the exposure of hypocrisy. He was a precocious boy, and his genius developed itself with astounding rapidity.

Chatterton's next feat was to provide Mr Burgum, a pewterer, and 'fond of talking about his family,' with the following document: '*Account of the family of the De Berghams, from the Norman Conquest to this time, collected from Original Records, Tournament Rolls, and the Heralds of March and Garters' Records.* By Thomas Chatterton.' This account, though unfinished, gave great satisfaction, and procured Chatterton five shillings; upon which he produced a continuation of it to the time of Charles II., at which point he paused. In this last portion, appeared the name of a poet, John de Bergham, and, as a specimen of his style, a poem, *The Romaunte of the Cnyghte*, with a modern rendering. Where did this poem come from? it was asked. Chatterton answered—from the manuscripts and old parchments, which his father had taken from the chest called Canynge's chest, in St Mary Redcliffe's. That his father had taken such manuscripts was a known fact, and that Chatterton had the remains of them locked up in his garret, was admitted by his mother and sister: yet when foolish Mr Burgum went up to London with his pedigree to the Herald's office, after Chatterton's death, it appears that he was laughed at.

On the 1st of July 1767, Chatterton was made apprentice to Mr Lambert, an attorney. He slept with the footboy, and took his meals with the servants, and he never liked the place: he was very proud. But he had not much employment; so he pored over Spenser, and Chaucer, and old English chronicles, and scribbled satirical poems of a loose, irreligious tendency. Chatterton has been charged with dissolute habits, and Masson, in his *Story of the Year* 1770, produces a curious proof that there was some ground for the charge, so far as regarded some female companion; but little, if anything, has been clearly established. His habits were regular, his diet simple, his intimate friends few; let any precocious boy of sixteen, who never had a father, whose moral training has been deficient, and whose too prying intellect has ranged through so many books for and against religion, that it leans to infidelity—if he finds himself with strong passions, and without sin, first cast a stone.

In September 1768, Chatterton blazed out into notoriety. A new bridge superseded an old one, with appropriate ceremonies, and to *Felix Farley's Bristol Journal* a certain Dunhelmus Bristoliensis contributed a 'Description of the Mayor's first passing over the Old Bridge, taken from an old Manuscript.' Astonished antiquarians besieged the editor, and Dunhelmus Bristoliensis turned out to be Thomas Chatterton. The original was demanded, and Dunhelmus prevaricated. Upon this the boy was treated roughly; till, drawing himself up to the height of his proud self-assurance, he referred them to those same old relics in his garret, and obstinately retained the key.

The attention which he excited by these matters introduced Chatterton to the pewterer's partner, a Mr Catcott, and to Mr Barrett, a surgeon, both respectable men, and the latter at the time busy compiling a history of Bristol. From the stores in the garret the boy supplied both these worthy literati with matter at once curious and valuable. Mr Catcott was furnished with *The Bristowe Tragedy, Rowley's Epitaph*, and other pieces of ancient poetry, by Thomas Rowley, poet-laureate to 'Maistre Canynge,' the wealthy founder of St Mary Redcliffe, and quondam mayor of the city; and Mr Barrett with interesting information, hitherto unknown, to be used in his history.

Some specimens of the original parchments were also produced in the boy's more generous moments, and were never in the least suspected, although, as it appears, their antiquity will wash off with a sponge.

But ere long the ambitious boy grew much dissatisfied with Bristol. His friends remunerated him, indeed, but inadequately; and as he had a deep affection for his mother and sister, and a curious desire to provide them with articles of dress better than their wont, he tried other means of raising funds and becoming a notoriety. He first expresses his dissatisfaction with Mr Catcott by a little bill:

Mr G. Catcott,

To the exors. of T. Rowley,

To pleasure rec^{d} in read$_{g}$ his Historic works, . .	£5	5	0
——— his poetic works, . . .	5	5	0
	£10	10	0

Having given vent to his spleen by this humorous document, which was probably never sent, nor meant to be sent, he wrote to Dodsley, the London publisher. The old parchments, it seems, had proved by this time so productive, that he had by him quite a stock of poems by Thomas Rowley: these he offered to Dodsley for publication. But nothing could be made of Dodsley. Upon which it occurred to Chatterton that Horace Walpole, recently much deceived in certain poems, styled Ossian's, which the boy had read, might feel an interest in Rowley; upon which a correspondence was commenced. He began by sending Walpole a series of notices of ancient painters, for his *History of Painting*, and receives a letter of thanks. Upon this he sends other notices, and also accounts of hitherto unknown poets, with specimens of their style, and the mind of Walpole became uneasy. Nevertheless he waited, to see if any fresh material would turn up; upon which Chatterton, growing indignant at Mr Walpole's delay, and characteristically attributing the apparent neglect to his having confessed himself a poor woman's son, demanded his manuscripts. The author of *The Castle of Otranto* at once returned them, with a letter of advice about the extreme vileness of literary forging.

During this time the apprentice's views on religious subjects underwent further changes. He finally rejected Christianity, though not irreligiously. The man who draws and carries in his pocket articles of belief, entirely for his own private use, is in our opinion a religious man. Such a document, in Chatterton's handwriting, and much soiled, may be seen in the British Museum. Chatterton also, during this period, formed a connection with a London magazine, and wrote a considerable quantity of verse, chiefly satirical.

Early in 1770, Chatterton was dismissed from the service of Mr Lambert, and the occasion was this: In some strange humour of mind, made up of vexation and satirical spleen, with a temporary touch, it may be, of that infirmity, lunacy, under which his sister afterwards laboured, he penned a document professing to be his will, and 'wrote between 12 and 2 o'clock, Saturday, in the utmost distress of mind.' This will he enclosed in a letter to a Mr Clayfield, with information that the writer, by the time it should reach that gentleman, would 'be no more.' In some way or other this letter fell into Mr Lambert's hands, and a boy of seventeen, who could meditate suicide, was considered much too dangerous an individual to be retained in the house.

What object Chatterton had in composing this will, or whether, 'between 12 and 2 o'clock,' he was really in earnest about putting an end to his life, must remain an unsolved problem; but certainly a more singular document we never read. He satirises a few friends, in some fifty lines of verse; gives directions about his body and tombstone; furnishes inscriptions for the latter in French, Latin, and English; describes how his arms are to be quartered; leaves Mr Catcott his 'vigour and fire of youth;' the Rev. Mr Camplin his humility; his moderation 'to the politicians on both sides of the question;' and so on. Gleams of pathetic earnestness flash at intervals through the solemn banter:

'I give and bequeath to Mr Matthew Mease, a mourning-ring, with this motto—

Alas, poor Chatterton!

provided he pays for it himself.'

'I leave my mother and sister to the protection of my friends, if I have any.'

And one of his epitaphs, which, in fact, was afterwards adopted for his monument in Bristol, ran thus:

'To the Memory of
THOMAS CHATTERTON.
Reader, judge not; if thou art a Christian, believe that he shall be judged by a superior Power: to that Power alone is he now answerable.'

However, the end was not yet, for Chatterton went to London—with a friendly group, to see him start, let us mention, though it may seem somewhat of a reproach to his pride—and having found lodgings in Shoreditch—which he afterwards changed for No. 4 Brook Street, Holborn—proceeded with great assurance to look up his London correspondents—Dodsley and others. Chatterton's London career only extended over four months, and the records of his life during that period are obscure and untrustworthy. It is true that he sent glowing descriptions of his rising fame to friends in Bristol; it is true that he found money to purchase useless articles of finery for his mother and sister; and also that he did his utmost to form profitable connections; but that any large amount of success or remuneration encouraged his extraordinary efforts, is more than doubtful. He wrote political letters 'on both sides,' and numerous articles in prose and verse. At one time he seemed in a fair way to fame, for Beckford, lord mayor, received him with favour, and allowed him to dedicate an essay to him; but before the essay could appear, Beckford died. The accounts sent home to friends and relatives were probably chiefly intended to produce an impression that he could well afford to live without Bristol help. As an evidence of his scanty resources, we find

a small memorandum extracted from his pocket-book:

Received to May 23, of Mr Hamilton, for Middlesex, . .	£1	11	6
of B.	1	2	3
of Fell, for the Consuliad [some 250 lines], .		10	6
of Mr Hamilton, for Candedus and Foreign Journal, .		2	0
of Mr Fell, ...		10	6
Middlesex Journal, . .		8	6
Mr Hamilton, *for* 16 *songs* (!!),		10	6
	£4	15	9

There is tolerably clear proof that when he had sent home the finery for his mother and sister, and *the pipe for his grandmother*, Chatterton did not find himself many shillings in pocket. At length work failed him. Ere long he began to starve. He grew so sickly and famished in appearance, that his landlady, as also a neighbour, ventured, in spite of his pride, to offer him a meal. These ill-managed charities he indignantly refused. Once only, when the invitation must have been made with peculiar delicacy, did he sit down at another's table. Day after day he remained shut up in his room, and said he was not hungry; and, on the morning of the 25th of August 1770, he was found lying on his bed, stiff and cold, with remains of arsenic between his teeth. He was interred, after the inquest, in the paupers' burial-ground: at least so it was believed, but after-evidence went far to prove that his body was removed to Bristol, and secretly stowed away in the churchyard of St Mary Redcliffe. It will be remarked that the life of Chatterton, filled as it was with incident and a variety of works, extended to only seventeen years and three-quarters.

Pride will ruin angels, we are told, and pride destroyed Chatterton, who was not by any means an angel. He exhibited in his career extraordinary recklessness about the little niceties of literary morality. He could write, as we have seen, 'on either side' of a question; he could corrupt learned histories by forged documents; he could invent pedigrees; he could put his case in a letter, as he wished it to appear, without in the least being impeded by the stubborn facts; all which things, nevertheless, seem to us signs, not so much of a corrupt nature, as of a nature too rapidly developed in the midst of corruption, without adequate bias of moral training, joined to a pride of intellectual power, which led him to unloosen for himself all the ties of religion, and to despise his fellow-beings.

We say, to forge documents and invent pedigrees. We have traced the course of Chatterton's literary life without comment, and much controversy raged after his death as to the genuineness of the Rowley poems; but now the fact is universally admitted, that Chatterton himself was Thomas Rowley. It is indeed difficult to read the poems, with the least previous suspicion, without feeling the fact of their modernness take irresistible hold upon us. There is nothing ancient about them, except the spelling, and at times the phraseology. The great difficulty is, how did he write them? By moonlight, said his sister; in the Redcliffe meadows, says Masson; and both statements are true. Every man has two souls—an outer, which all men can read; an inner, which he hides. Every man lives two lives—a relative life, to suit his friends, his circumstances, his baser nature; and an essential life, which is his real life. The inner soul and essential life of Chatterton brooded purely and intensely over visions of noble truth and exquisite beauty, which he felt that he could share with none; and these, to keep them pure, he clothed in antique form; his outer and relative life led him to scatter round him, carelessly and recklessly, the lighter products of his pen, such as expressed the baser and evanescent passion or weakness of the moment, and which seemed to him good enough for those for whom they were intended.

THE MONTYON PRIZE FOR VIRTUE.

On the 25th of August 1823, took place one of those distributions of the Montyon prizes which form so pleasant a feature in the social condition of France. The Baron de Montyon, or Monthyon, was a wealthy man, who, during the second half of the last century, occupied a distinguished place in the estimation of his countrymen; chiefly in various judicial capacities, in which his probity and honour were universally admitted. He established, at various periods of his life, no less than eight prizes, to be awarded to worthy recipients by the Académie des Sciences, the Académie Française, and the Faculté de Médecine. They were briefly as follows: In 1780, he invested 12,000 francs, the interest to be spent as an annual prize for inventions and discoveries useful in the arts. In 1782, he invested an equal sum, for an annual prize for any literary work likely to be most useful to society; and a similar one for lessening the unhealthiness of trades and manufactures. In 1783, another of equal amount for the benefit of the poor of Poitou and Berri; one for assisting poor men of letters; one for simplifying certain special mechanical arts; and one for rewarding acts of virtue among the poor. In 1787, and subsequent years, he established other prizes—all for good and worthy objects. The revolution drove him to Switzerland, and then to England, whence he did not return to France till 1815. His prize for virtue had been suppressed by the revolutionists; but he took care, by his will, to remodel it on a permanent and enlarged basis. This good man died in 1820, at the advanced age of eighty-seven.

The distribution in 1823 will serve as well as any other, to shew the mode in which the Montyon prize for virtue is awarded. Five prizes were given to five persons—four women and one man. One of the women, although her husband earned but sixteenpence a day, had taken into her house and supported a poor destitute female neighbour. Another, a milliner, had for twelve years supported the mistress under whom she had served as an apprentice, and who was afflicted with an incurable malady. A third had, in a similar way, supported for seventeen years a mistress under whom she had acted as a servant, and who had fallen into abject poverty. A fourth, who was a portress, had shewn her charity in a somewhat similar way. These four persons received one thousand francs each. But the chief prize was awarded to an old clothesman, Joseph Bécard. During the French Revolution, one M. Chavilliac, of Arras, had first been imprisoned, and then put to death. Many years afterwards, in 1812, his widow came to Paris,

to obtain, if possible, some property which had belonged to her husband. In this she failed, and she was reduced to the lowest pitch of want. Bécard, when a servant to the Marquis de Steinfort, at Arras, had known the Chavilliacs as persons of some consideration in the place; and happening now to meet the poor lady in her adversity, he resolved to struggle for her as well as for himself, for grief had made her blind and helpless. He begged coarse food for himself, in order that he might buy better food for her out of his small incomings as an old clothesman. She became ill, and occupied the only bed he possessed; and he slept on a chair for three months—or rather kept resolutely awake during the greater part of the night, in order that he might attend upon the sick lady. Pain and suffering made her peevish and sour of temper; but he bore it all patiently, never once departing from his custom of treating her as a lady—higher in birth and natural condition than himself. This life continued for eleven years, she being the whole of the time entirely dependent on that noble-spirited but humble man. The lady died in May 1823. Bécard gave a small sum to a curé, to offer up prayers for her soul; he carved with his own hands a small wooden cross; and he placed it, together with an inscription, on her grave. Such was the man to whom the Académie Française, acting under the provisions of the Montyon bequest, awarded a prize of fifteen hundred francs, a gold medal, and honourable commendation in presence of the assembled academicians.

AUGUST 26.

St Zephyrinus, pope and martyr, 219. St Gelasinus, martyr, 297. St Genesius (a comedian), martyr, end of 3d century. St Genesius of Arles, martyr.

Born.—Sir Robert Walpole (Earl of Orford), eminent statesman, 1676, *Houghton, Norfolk;* Prince Albert, consort of Queen Victoria, 1819.

Died.—Lopez Felix de la Vega, Spanish poet and dramatist, 1635, *Madrid;* Lord George Sackville, commander and statesman, 1785; Christopher Christian Sturm, author of the *Reflections*, 1786; Elizabeth Chudleigh, Duchess of Kingston, 1788, *France;* Karl Theodor Körner, martial lyrist, killed, 1813; Dr Adam Clarke, eminent divine and author, 1832, *Haydon Hall, Middlesex;* Louis Philippe, ex-king of France, 1350, *Claremont, Surrey.*

LOPE DE VEGA'S EIGHTEEN HUNDRED PLAYS.

Lope de Vega, or more fully Lope Felix de Vega-Carpio, may be said to enjoy the distinction of having been the most fertile of all authors of imaginative literature. Born at Madrid in 1562, he was so precocious that, if we are to believe his disciple and biographer, Montalvan, he dictated poetry at five years old, before he could write. At seventeen, while in the university of Alcala, he wrote his dramatic romance of *Dorothea*, in which he depicted himself as one of the characters, leading a wild and dissolute life. Now a poet, now a soldier, now a courtier, now an adventurer, Lope appeared under various aspects—one of which was that of a subordinate officer in the far-famed Armada, which made a vain attempt to invade England. But wherever he was, and whatever other work he was engaged in, he always contrived to write poems and plays. After many more fluctuations in position, he became an ecclesiastic in 1609, and officiated in daily church-offices for the rest of his life. It will serve to illustrate the tone of moral and social life in Spain, at that time, that Lope de Vega not only continued to pour forth plays with amazing rapidity, but that some of them were very licentious in character. Poems, too, appeared in almost equal abundance: some sacred, some immoral; some based upon his own ideas, some in imitation of Dante, Petrarch, Tasso, or Boccaccio. The words seemed to flow almost spontaneously from his pen; for not only are his works almost incredibly numerous, but some of them are very long. One, called *Gatomachia, or the Battle of the Cats*—in which two cats quarrel and fight about a third—consists of no less than 2500 verses, 'rather long,' as one of his biographers admits, 'for a badinage.' If his chief productions had not been dramas, he would still have been one of the most prolific poets ever known; but his plays far outnumbered his poems, and were the means of giving something like nationality to the Spanish drama. In 1603, when forty-one years of age, he found that his dramatic compositions reached the number of 341; it swelled to 483 in 1609, about 800 in 1618, nearly 900 in 1619, 1070 in 1624, and 1800 at the time of his death (August 26, 1635). According to ordinary experience, this would be almost incredible; but we must believe that the dramas were mostly very short. Montalvan, one of the biographers of Lope de Vega, states that, while at Toledo, Lope wrote five dramas in a fortnight; and that half a morning was often enough for him to produce an entire act of a play. It is asserted that every one of these 1800 plays was acted in his lifetime. No less than 500 of them have been printed, and occupy a place among the literature of Spain. Some of them are interludes, or short farces in prose; but the greater number are comedies in verse, mostly in three portions or acts. Of no other writer can it be said that his printed plays fill twenty-six quarto volumes (published between 1609 and 1647); and yet that his *un*published plays were nearly thrice as many. Lope de Vega gave that tone to the Spanish drama, brilliant but immoral, which has been made so familiar to the public by the various forms of *Don Juan* and the *Barber of Seville.*

THE DUCHESS OF KINGSTON.

As an example of the *adventuress*, amid several notabilities of a like kind, in the earlier half of the reign of George III., Elizabeth Chudleigh, Duchess of Kingston, is prominently distinguished. She was the daughter of Colonel Chudleigh, a gentleman of good family in Devonshire, who, through his friendship with Mr Pulteney, obtained for his daughter the post of maid of honour to the Princess of Wales, mother of George III. Her natural talents and attractions were here cultivated and developed, and the charms of her manners and conversation soon surrounded her with a host of distinguished and enthusiastic admirers. One of the most conspicuous of these was the Duke of Hamilton, who made her an offer of his hand, and was

accepted. Circumstances, however, prevented their immediate union; the parties agreed to hold themselves as engaged, and the duke set out on a tour on the continent, from which he regularly corresponded with Miss Chudleigh. In the meantime, Captain Hervey, son of the Earl of Bristol, came forward as a suitor, under the auspices of Miss Chudleigh's aunt, Mrs Hanmer, who is said to have intercepted the Duke of Hamilton's letters, and otherwise exerted her influence to the utmost with her niece, to induce her to discard him for the captain. A volatile and impetuous disposition, guided apparently by no high or abiding principle, induced Miss Chudleigh, without much difficulty, to receive Hervey's addresses, and they were privately married at Lainston, near Winchester. This ill-advised step proved the foundation of all her subsequent perplexities. Fearing the effects of his father's anger, Captain Hervey dared not venture to acknowledge his marriage, and his wife had to endure all the inconveniences which a woman must submit to, who is placed in such a position. She seems almost immediately after the conclusion of the match, to have repented of her precipitancy. Indifference was followed by positive aversion, and though one son was born of the union, who soon quitted the world, as he had entered it, in secrecy and obscurity, a lasting estrangement took place between the parents. Captain Hervey, whose jealousy was violently excited by the attentions paid to his wife as Miss Chudleigh, gradually changed his line of conduct, and threatened to proclaim their marriage to the public, whilst she became only more determined to find some pretext for its legal dissolution. With this view, she is said to have gained access to the register in which her wedding was recorded, and destroyed the evidence of it, by tearing out the leaf. The officiating clergyman was now dead. But not long afterwards, her husband succeeded, by the death of his father, to the earldom of Bristol, upon which a revulsion took place in her crooked policy, and she contrived, by bribing the officiating clerk, to get her marriage reinserted in the same register from which she had previously torn the record. So far for the first acts of this singular drama.

From the aristocratic circles amid which Miss Chudleigh reigned as queen, the Duke of Kingston now stepped forth, and proffered her his hand. He appears to have possessed many good qualities, being mild and unassuming in his manners, the very reverse of his mistress, whose love of admiration had been the great occasion of her errors. There can be no doubt that an illicit intercourse had subsisted for some time betwixt them; but the duke's attachment to her seems to have been sincere. The Earl of Bristol had now himself become desirous of severing his nuptial ties, and he therefore was readily induced to concur in a process of jactitation of marriage in the ecclesiastical courts, which, by an adroit suppression of evidence, terminated in a decree of nullification. The path being thus, in their opinion, cleared, the union of the duke and Miss Chudleigh was publicly solemnised. For some years the duchess basked in all the sunshine of wealth and exalted position, when at last her husband died. By his will the duke was found to have devised his estates to one of his younger nephews, excluding the heir at law, and bequeathing to his wife the enjoyment of the rents of the property during her life. The duchess being aware of the contents of the will, and of certain restrictions which had been imposed on her marrying again, had endeavoured, though ineffectually, to procure before the duke's death the execution of a more favourable deed. The elder nephew, whose claims to the succession had been ignored, resolved to dispute the validity of his uncle's will. Through information received from a Mrs Cradock, who had been one of the witnesses to the marriage of Miss Chudleigh with Captain Hervey, and had afterwards, as she deemed, been rather shabbily treated by the duchess, he instituted against the latter an indictment for bigamy. She had previously to this quitted the kingdom for the continent, but on receiving intelligence of these proceedings, deemed it prudent to return to England, to avoid an outlawry. The trial commenced on 15th April 1776, before the House of Peers, in Westminster Hall, which was filled by a distinguished audience, including Queen Charlotte and several members of the royal family. The evidence of the marriage with Captain Hervey having been produced, and the whole matter carefully sifted, the peers unanimously found the duchess guilty of bigamy, with the exception of the Duke of Newcastle, who pronounced her guilty 'erroneously but not intentionally.' The consequences of this sentence would have been the issuing of a writ *Ne exeat regno* to prevent her quitting the country, but before it could be completed, she contrived to escape to Calais, from which she never returned. The heirs of the Duke of Kingston, having thus succeeded in nullifying his marriage, now endeavoured to get his will set aside; but in this they were thoroughly unsuccessful. The duchess was left to the undisturbed enjoyment of her large income, which she dissipated in the indulgence of all sorts of luxury. She had already purchased a house at Calais, but it was inadequate to her ideas of splendour, and she accordingly entered into terms for the purchase of another at Montmartre, in the suburbs of Paris. A dispute with the owner of this property gave rise to a litigation, during the dependence of which she made a journey to St Petersburg, and there entered into some speculations connected with the distilling of brandy. She subsequently returned to France, and became the purchaser of a fine domain in the neighbourhood of Paris, belonging to a brother of Louis XVI., the reigning sovereign The investment proved a good one, the immense number of rabbits on the property furnishing a most lucrative return. As much as 300 guineas is said to have been realised by her from this source alone in the first week of her possession. But the end was now approaching. In the midst of this temporal prosperity, intelligence was one day brought her, that judgment had been pronounced against her in the suit regarding the house at Montmartre. So great an agitation was produced on her by this news, that she ruptured a blood-vessel, and was obliged to confine herself to her bed. In the course of a few days she seemed to rally, and insisted on getting up and having herself dressed. Her attendant vainly endeavoured to dissuade her, and she then called for a glass of Madeira, which she drank, and insisted on a second being brought. This also she drank off, and then

said she should like to lie down. Having stretched herself on a couch, she soon appeared to fall asleep, and remained in this state for some time, when her servants felt an unusual coldness in her hands, and on examining more closely, found that she had passed away. Such was her end, to die among strangers in a foreign land—a fitting termination, perhaps, to her chequered and singular career.

One circumstance in connection with the Duchess of Kingston ought not to be passed over in silence. We allude to her well-known *fracas* with Mr Foote. That celebrated wit and dramatist, who derived a considerable portion of his fame from the personalities which he introduced into his literary lucubrations, produced a farce, entitled *A Trip to Calais*, in which he brought forward the duchess under the title of 'Lady Kitty Crocodile.' His procedure in this transaction reflects little credit either on his character as a man or policy as a schemer. The duchess would have willingly paid him a handsome sum to withdraw the piece; but, in the hopes of obtaining a larger consideration, he out-manœuvred himself; whilst she, by her interest with parties in power, contrived to have the representation of the play interdicted by the lord-chamberlain, and also its publication, for the time at least, prevented.

BATTLE OF CRECY—WERE CANNON FIRST EMPLOYED THERE?

This extraordinary conflict, to which the English for ages looked back as they have latterly looked back to Waterloo, was fought on the 26th of August 1346, in an angle of ground lying between the river Somme and the sea, in Picardy. Edward III. had invaded France, in pursuit of his imagined right to the throne, and for some weeks conducted his small army along the valley of the Seine, in considerable danger from the much larger one of Philip, the French king. At length he made a stand on a favourable piece of ground at the village of Crecy, and awaited in calmness and good order the precipitate and disorderly attack of the opposite host. By virtue of coolness and some hard fighting, he gained the battle, and was able to destroy an immense number of the enemy. The prowess shewn on the occasion by his son the Black Prince, and other particulars of the well-fought field, are generally familiar to the readers of English history.

It is said there is still to be seen upon the field a tower-like wind-mill, which existed at the time of the action, and marking the station of the English king.

There is a doubtful statement, to the effect that cannon were first used in military encounter at the Battle of Crecy. It must be considered as liable to great doubt. Our own chroniclers make no allusion to such a circumstance; neither is it mentioned in the ordinary copies of Froissart, although his account of the battle is remarkably ample and detailed. It has been surmised that only some comparatively recent French writers have introduced the assertion into their narratives, as a sort of excuse for the panic which the troops of King Philip exhibited on the occasion. On the other hand, there appears to be a manuscript copy of Froissart, preserved at Amiens, from which the present emperor of France has quoted the following passage in his work on artillery: 'Et li Angles descliquèrent aucuns canons qu'il avaient en la bataille pour esbahir les Genevois.' And it is alleged that Villani, a contemporary Italian writer, states that cannon were used by the English at Crecy.* If these statements are correct, we may consider it established that artillery—though probably of a very simple and portable kind—were first employed on this interesting occasion.

'THE MARRIAGE OF THE ARTS.'

On Sunday, the 26th of August 1621, a comedy, entitled *Technogamia, or the Marriage of the Arts*, written by Barton Holiday, M. A., of Christ's Church, Oxford, was performed by students of the same college, before James I. at Woodstock. As a typical specimen of the allegorical piece of the olden time, this drama is not unworthy of notice. The *dramatis personæ* consist of Polites, a magistrate; Physica, and her daughter Astronomia; Ethicus, with his wife Economa; Geographicus, a traveller, with his servant Phantastes; Logicus, and his servant Phlegmaticus; Grammaticus, a schoolmaster, and his usher Choler; Poeta, and his servant Melancholia; Medicus, and his servant Sanguis; Historia; Rhetorica; Geometres; Arithmetica; Musica; Causidicus; Magus, and his wife Astrologia; Physiognomus and Cheiromantes, two cheating gipsies. All these are attired in goodly and appropriate fashion. Astronomia, for instance, wearing 'white gloves and pumps, an azure gown, and a mantle seeded with stars; on her head a tiara, bearing on the front the seven stars, and behind stars promiscuously; on the right side, the sun; on the left, the moon.' Astronomia is the brilliant heroine of the play—the heaven to which Geographicus aspires to travel, of which Geometres endeavours to take the measure, in which Poeta desires to repose. On the other hand, Arithmetica has a more natural passion for Geometres, and Historia anxiously wishes to be united to Poeta. Grammaticus, in an amorous mood, solicits Rhetorica, whose flowers bloom only for Logicus. These conflicting attachments cause great confusion in the commonwealth of learning; each of the enamoured personages endeavouring to obtain the object of his or her affections. Polites assists Geographicus; Magus employs his occult art in favour of Geometres; while the Nine Muses, as in duty bound, assist Poeta. Polites can with difficulty keep the peace. The gipsies, Physiognomus and Cheiromantes, pick Poeta's pocket, but find nothing therein but a copy of Anacreon and a manuscript translation of Horace. Physiognomus is appropriately branded on the face, that all men may know him to be a rogue; and Cheiromantes receives the same punishment on the hand; and the two, with Magus and Astrologia, who had attempted to strangle Astronomia, are justly banished the commonwealth of the Sciences. Then Geographicus, discharging his servant Phantastes, marries Astronomia; Grammaticus espouses Rhetorica; Melancholia obtains the hand of Musica, and takes Phantastes into his service; Logicus, old and heartless, being left without a mate, becomes an assistant to Polites; and thus peace and harmony is restored among the Sciences. There is

* See *Notes and Queries*, x. 306, 412, 534.

considerable ingenuity displayed in the invention of this plot, the dialogue is witty, and the professors of the sciences represented are humorously satirised.

One would have supposed, that the pedantic spirit of James would have been delighted with this production, but such was not the case. Anthony à Wood tells us that the king 'offered several times to withdraw, but being persuaded by some of those that were near him to have patience till it were ended, lest the young men should be discouraged, [he] adventured it, though much against his will.' And the Cambridge students, pleased that the Oxford drama did not interest the king, produced the following epigram:

'At Christ-church marriage, played before the king,
Lest these learned mates should want an offering,
The king, himself, did offer—What, I pray?
He offered twice or thrice to go away.'

It is not difficult to perceive what it was that displeased the king. Phlegmaticus was dressed 'in a pale russet suit, on the back whereof was represented one filling a pipe of tobacco, his hat beset round about with tobacco-pipes, with a can of drink hanging at his girdle.' He entered, exclaiming: 'Fore Jove, most meteorological tobacco! Pure Indian! not a jot sophisticated; a tobacco-pipe is the chimney of perpetual hospitality. Fore Jove, most metropolitan tobacco.' And then, rather unphlegmatically, he broke out into the following song:

Tobacco's a Musician,
And in a pipe delighteth;
It descends in a close,
Through the organs of the nose,
With a relish that inviteth.
This makes me sing, So ho, so ho, boys,
Ho, boys, sound I loudly;
Earth ne'er did breed
Such a jovial weed,
Whereof to boast so proudly.

Tobacco is a Lawyer,
His pipes do love long cases;
When our brains it enters,
Our feet do make indentures;
While we seal with stamping paces,
This makes me sing, &c.

Tobacco's a Physician,
Good both for sound and sickly;
'Tis a hot perfume,
That expels cold rheum,
And makes it flow down quickly.
This makes me sing, &c.

Tobacco is a Traveller,
Come from the Indies hither;
It passed sea and land,
Ere it came to my hand,
And 'scaped the wind and weather,
This makes me sing, &c.

Tobacco is a Critic,
That still old paper turneth,
Whose labour and care,
Is as smoke in the air,
That ascends from a rag when it burneth.
This makes me sing, &c.

Tobacco 's an Ignis-fatuus,
A fat and fiery vapour,
That leads men about,
Till the fire be out,
Consuming like a taper.
This makes me sing, &c.

Tobacco is a Whiffler,*
And cries huff snuff with fury,
His pipe's his club and link,
He 's the wiser that does drink;†
Thus armed I fear not a fury.
This makes me sing, So ho, so ho, boys,
Ho, boys, sound I loudly;
Earth ne'er did breed
Such a jovial weed,
Whereof to boast so proudly.

The royal author of the *Counterblast to Tobacco* must have felt himself insulted by such a song. Ben Jonson was wiser, when, in his *Gipsies' Metamorphosis*, he abused 'the devil's own weed,' in language totally unpresentable at the present day; and the delighted monarch ordered the filthy, slangy, low play, to be performed three several times in his kingly presence.

THE LAST OF THE ARCTIC VOYAGERS.

The nation has given £20,000 in prizes to the gallant men who have solved (so far as it is yet solved) the problem of the North-West Passage—that is, a navigable channel from the Atlantic to the Pacific round the northern margin of America. There were twenty-two attempts made to discover such a passage in the sixteenth century, twenty in the seventeenth, and twenty-one in the eighteenth—nearly the whole of these sixty-three attempts being made by natives of this country, and most of them without any material aid from the government. In the present century, the regular arctic expeditions, planned and supported by the government, began in 1817; and during the next forty years, Parry, John Ross, James Ross, Back, Franklin, Lyons, Beecher, Austin, Kellett, Osborne, Collinson, M'Clure, Rae, Simpson, M'Clintock, and other gallant men, made those discoveries which cost the nation more than a million sterling, besides many valuable lives. Sir John Franklin headed one of the expeditions; and his stay being strangely protracted, ships were sent out in search of him year after year. Captain M'Clure did not obtain any information concerning poor Franklin's fate; but he made such discoveries as justify us in asserting that *a North-West Passage is found.* So far back as 1745, parliament offered a reward of £20,000 to the discoverer of the much-coveted passage; this reward was never paid or claimed, and its offer was withdrawn in 1828; but Parry and John Ross each received £5000, in recognition of what they had done—leaving to the country to reward other discoverers as it might choose.

The reasons why Captain (afterwards Sir Robert) M'Clure may be considered as having practically solved the problem, may be stated in a few words. In 1850, Captains M'Clure and Collinson were sent out in the *Investigation* and the *Enterprize*, to assist in searching for Sir John Franklin and his hapless companions. They proceeded by the Pacific to Behring's Strait, and thence worked their way eastward to the frozen regions. Collinson's labours were confined chiefly to such open water as could be found close to the American shores; but M'Clure pushed forward in a more northern route. What he endured during four

† The old phrase for smoking, was drinking tobacco.

years, mostly in regions where no civilised man had ever before been, his narrative must tell—so far as *any* narrative can do justice to such labour. He returned to England from Davis's Strait in the autumn of 1854. True, he had to leave his ship behind him, hopelessly locked in among mountains of ice; and he had to walk and sledge over hundreds of miles of ice to reach other ships which had entered the frozen regions in the opposite direction; but still he had *water under him* all the way; and he was thus the first commander of a vessel who really made the passage. A 'navigable' passage it certainly was not, in the proper meaning of the term, but still it solved the main problem. In 1855, a committee of the House of Commons investigated the matter, and decided that a grant of £10,000 should be made for this discovery—making, with the £5000 given to Parry, and a sum of equal amount to John Ross, a total of £20,000; equivalent to that which, more than a century earlier, had been offered for the discovery of this North-West Passage. Parliament and the government agreeing to this, the £10,000 was paid to the hardy explorers in August 1855—£5000 to Captain M'Clure himself, and £5000 to his officers and crew.

This was entirely distinct from the reward given—not for the discovery of the North-West Passage—but for any authentic tidings of the fate of Sir John Franklin. After an enormous sum had been spent in fitting out expeditions for the last-named purpose, the government offered £20,000 to any one who should 'discover and effectually relieve the crews of H. M. ships *Erebus* and *Terror*' (those which Franklin commanded); £10,000 to any one who 'should give such intelligence as might lead to the succour of the crews of those ships;' and £10,000 to any person who should, 'in the judgment of the Board of Admiralty, first succeed in ascertaining the fate of those crews.' The first and second of these prizes were never earned; but the third prize was given in 1856 to Dr Rae, who, by a daring overland journey from the Hudson Bay Company's Settlements, found circumstantial, though not unmistakable evidences of the deplorable deaths of Franklin and some of his companions. The investigation was continued by Captain M'Clintock in 1858 and 1859, and Dr Rae's discovery was certified. The researches of former expeditions were confirmed by Hall in 1869, and Lieutenant Schwatka in 1879. The latter found numerous relics of the Franklin expedition on the west coast of King William's Land. The bones of several of these heroes, who had died on the eve of the discovery of the North-West Passage, were carefully buried; the remains of Lieutenant Irving, third officer of the *Terror*, were transmitted to Edinburgh, and reinterred there, January 7, 1881.

AUGUST 27.

St Pœman or Pastor, abbot, about 451. St Cæsarius, archbishop of Arles, confessor, 542. St Syagrius, bishop of Autun, 600. St Malrubius, hermit and martyr in Scotland, about 1040. St Hugh of Lincoln, martyr, 1255. St Joseph Calasanctius, confessor, 1648.

Born.—William Woollett, engraver, 1735, *Maidstone.*

Died.—Pope Sixtus V., 1590; James Thomson, poet, 1748, *Richmond;* Dr John Jortin, critic, 1770; Countess Craven (*née* Louisa Brunton), once a favourite actress, 1860; J. H. Foley, R.A., eminent sculptor, 1874.

POPE SIXTUS V.

Many of the popes have been of the humblest extraction. Pope Sixtus V. was the son of a poor pig-dealer at Montalto—born there in 1521. It may fairly be said that no occupant of the Holy See has ever left a stronger mark upon his age. Elizabeth upon the throne of England, Henry IV. upon that of France, and Sixtus V. upon that of Rome, was a wonderful cluster of great sovereigns for one period. Having, as a cardinal, long appeared imbecile, he was elected by the concurrent voices of several who hoped to reign in his name, and knew they could not individually command a majority. It seemed, too, as if so feeble and sickly a man could not long postpone another election. When at length informed that he was pope, Sixtus threw by his staff, smoothed away his wrinkles, and joined the *Te Deum* with a voice so powerful as to make his electors tremble. He at the same time informed them that his age was seven years less than had been supposed. Immediately there commenced an administration of extraordinary vigour. The banditti perished and disappeared before the sternness of his justice. He entered upon wonderful measures for the decoration of Rome. He excommunicated several Protestant princes; yet afterwards, it is said, coming to know Henry of France, and Elizabeth of England, conceived a respect for them both, and actually won one over to the Romish Church. Of Elizabeth, he characteristically remarked: 'She is a *big-head*—that queen. Could I have espoused her, what a breed of great princes we might have had!'

His severity to the vicious had something eccentric in it. While making adultery a capital crime, he extended the same punishment to a husband who did not complain. It seemed, too, as if a cruel disposition made him take a positive pleasure in the infliction of death. 'I wish justice to be done before dinner,' he said to the governor of Rome; 'so make haste, for I am very hungry.' On one occasion, when some friends of a Spanish gentleman-criminal pleaded that, if he must die, it should be by decapitation: 'No,' said Sixtus, 'he shall be hanged, but I will ennoble his execution by attending it myself.' He looked on attentively, and declared the affair had given him a good appetite. It was to him a recommendation for a judgeship, if the candidate had a severe countenance. He was full of jokes about his own severity. Some people pleading for mercy to a criminal of sixteen—alleging that the execution of so young a person was not according to law—the holy father only replied: 'I will give him ten of my own years to make him subject to the law;' and, of course, the lad suffered.

On the whole, he was one of the greatest of the popes, and no one can visit Rome without becoming aware how much it owes to him.

LANDING OF CÆSAR IN BRITAIN.

Sunday, the 27th of August, 55 B.C., may, upon good grounds, be set down as the day on which Cæsar invaded the island of Britain. His own account of the event being vague and general, there has been room for discussion both as to the place where, and the day on which, the landing was effected. In a late volume, however, by a very

painstaking and ingenious inquirer,* both points are tolerably well determined, as it also is that the Roman commander embarked on his expedition at the port since called Boulogne, using the adjacent lesser harbour of Ambleteuse for shipping his cavalry.

The day is thus ascertained. Cæsar himself tells that he proceeded on his expedition when little of summer remained—when the people of the south of Britain were engaged in their harvest—and we learn that he returned three weeks after, *before the equinox*. Thus, the day must have been in August. He further tells us that the full moon occurred on the fourth day after his landing. The full moon of August in that year is ascertained from astronomical tables to have been at 3 A.M. of the 31st. Hence Cæsar landed on the 27th. He had set out from Boulogne at midnight, with 8000 men in 80 transports, besides a few swift-moving war-galleys or trirémes, and arrived at a point near the British coast about ten in the forenoon.

He found himself in front of a bold coast, covered by enemies who could throw their javelins from the higher ground to the shore. The description answers to the well-known high chalk-cliffs between Sandgate and the South Foreland. He necessarily made a lateral movement to find a more favourable place of landing, and wind and tide enabled him to do so. The question is, was it eastward to Deal, or westward towards Hythe. It has very generally been assumed that he took the former course, and landed at Deal. But Mr Lewin shews that the tide which enabled Cæsar to make this movement did not go in that direction. High water at Dover on the 27th of August, 55 B.C., was at 7.31 A.M. Four hours later, the tide would begin, as it now does, to move westward, and would so continue for seven hours. Cæsar, therefore, in his shift of place that afternoon, went westward—namely, towards Hythe. There we find in Romney Marsh precisely such a plain as that on which he describes himself as having landed. Mr Lewin conjectures that the name Romney may have been affixed to the place in commemoration of its having been the site of the first encampment made by the Romans on the British shore.

It is well known that Cæsar met with greater difficulty in landing and making good his first footing on the island than he expected. The truth is, although we, as well as he, are apt to forget or be ignorant of it, that the southern Britons were a people well advanced in a native civilisation at the time of Cæsar's invasion. 'In the first place,' says Mr Lewin, 'there was a crowded population, which is never found in a state of barbarism. Even in literary attainments the Britons were in advance of the Gauls, for the priests are universally the depositaries of learning, and the Gauls were in the habit of sending their youth to Britain, to perfect themselves in the knowledge of Druidism. Then there was great commercial intercourse carried on between Britain and Gaul, not to mention that a partial trade existed between Britain and more distant nations, as the Phœnicians. It was only about a century after this that London, by its present name, was a city crowded with merchants and of world-wide celebrity. The country also to the south had been cleared of its forests, and was under the plough. . . . . But I do not know a greater confirmation of British advancement than the circumstance mentioned by Cæsar, that when he made war upon the Veneti, to the west of Gaul, the Britains sent a fleet of ships to their assistance.'

BURNING OF MILTON'S BOOKS BY THE HANGMAN.

Milton was all his life a liberal, in the best sense of the word, resisting with his powerful pen the encroachments of unwarrantable power, whether political or ecclesiastical. When the restoration of Charles II. became imminent, Milton's position was perilous. Amongst other books, his *Iconoclastes* and his *Defensio pro Populo Anglicano*, contained sentiments which Charles and his court could not be expected to tolerate. In 1660, just before Charles's return, Milton added another to his many works against monarchy, in a letter addressed to General Monk, under the title of *The Ready and Easy Way to Establish a Free Commonwealth;* and he also combated the reasonings of one Dr Matthew Griffith, in *Brief Notes upon a Late Sermon, titled The Fear of God and the King.* All would not do, however; the people were wearied of the Commonwealth, and welcomed Charles home again. Milton felt that he could not safely appear in public at this crisis. He quitted his home in Petty France, and sought an asylum with a friend in Bartholomew Close. Many writers have said that his friends got up a mock-funeral for him, to keep him well out of sight; and that when this fact came to the ears of Charles, the 'Merry Monarch' laughed heartily, and 'applauded his policy in escaping the punishment of death by a seasonable show of dying.' Whether this were or were not the case, no very diligent search appears to have been made for him. 'There were among the royalists,' says Mr Keightley, 'men of humanity who could feel compassion for him, who was deprived of nature's prime blessing [Milton had then been quite blind about seven years], and men of taste who were capable of admiration for exalted genius.'* But, although Milton escaped, his books did not. On the 16th of June 1660, the House of Commons passed a resolution, that his majesty should be 'humbly moved to call in Milton's two books [the *Iconoclastes* and the *Defensio*], and that of John Goodwin [*The Obstructors of Justice*], written in justification of the murder of the late king, and order them to be burned by the common hangman; and that the attorney-general do proceed against them by indictment or otherwise.' On the 27th of August following, as many copies of the three offending books as could be met with, were publicly burned, in conformity with this resolution. During the intervening ten weeks a proclamation appeared, in which it was stated that 'the said John Milton and John Goodwin are so fled, or so obscure themselves, that no endeavours used for their apprehension can take effect, whereby they may be brought to legal tryal, and deservedly receive condign punishment for their treasons and offences.' As has just been said, however, there is reason to believe that the search

* *Life, Opinions, and Writings of Milton.*

was purposely allowed to slacken; and within three days after the burning of the books, an act of indemnity relieved the poet from any further necessity for concealment.

AUGUST 28.

St Hermes, martyr, about 132. St Julian, martyr at Brioude. St Augustine or Austin, bishop of Hippo, confessor, and doctor of the church, 430.

ST AUGUSTINE.

St Augustine, usually styled 'the greatest of the fathers,' is held in about equal reverence by Catholics and Protestants. Calvinists and Jansenists especially have resorted to his writings for sympathy and authority.

Augustine was an African, being born at Tagaste, a city of Numidia, in 354. His father was a pagan, and his mother, Monica, a Christian of earnest piety, who longed with exceeding desire for her son's conversion. In his boyhood, falling seriously ill, he desired to submit to the rite of baptism, but, the danger being averted, the rite was deferred. As he grew up, his morals became corrupted, and he lapsed into profligate habits. The perusal, in his nineteenth year, of Cicero's *Hortensius* (a work now lost), made a deep impression on his mind, and stirred within him aspirations after a nobler life. At this juncture he became a convert of the Manichæans, and for nine years an able advocate of their opinions. The Manichæans were a sect founded by one Manes about 261. He confounded the teaching of Christ with that of Zoroaster, and held that the government of the universe was shared by two powers, one good and the other bad: the first, which he called Light, did nothing but good; the second, which he called Darkness, did nothing but evil. Meanwhile, Augustine taught grammar at Tagaste, and then rhetoric at Carthage, but growing disgusted with the vicious character of his pupils, he determined to go to Rome, much against the will of his mother. In Rome he attracted many scholars, but finding them no better than on the other side of the Mediterranean, he removed to Milan, where he was elected professor of rhetoric. The intrepid Ambrose ruled at that time as archbishop in Milan, and by his ministry Augustine was delivered from the Manichæan heresy. The vacation of 386, he spent at the country-seat of his friend Verecundus, in the diligent study of the Scriptures; and, in the Easter of the following year, he, with his son Adeodatus, a youth of singular genius, was baptized by Ambrose. Shortly after, his faithful mother, rejoicing in the fulfilment of her prayers, visited Milan, and persuaded him to return to Africa, but on their way thither she fell sick, and died at Ostia. Augustine, associating himself with eleven pious men, retired to a villa outside the walls of Hippo, and passed three years in monastic seclusion, in fasting, prayer, study, and meditation. He entered the priesthood in 391; and at a church council he spoke with such vigour and learning that he was, with common consent, raised to the bishopric of Hippo in 396. In defence and illustration of the Christian faith, his tongue and pen during the remainder of his life were incessantly engaged. The composition of his great work, *De Civitate Dei*, is believed to have occupied him seventeen years. In 430, the Vandals, having overrun Africa, laid siege to Hippo, and Augustine, an old man of seventy-six, prayed for death ere the city was taken. In the third month of the siege, on the 28th of August, a fever cut him off. When the city, some months after his death, was captured and burned, the library was fortunately saved which contained his voluminous writings—two hundred and thirty-two separate books or treatises on theological subjects, besides a complete exposition of the psalter and the gospels, and a copious magazine of epistles and homilies. The best account of Augustine is found in his *Confessions*, in which, with unflinching and sorrowful courage, he records the excesses of his youth and the progress of his life in Christ.

RESISTANCE TO FIRE.

The Augustinian or Austin Friars took their name from the holy bishop of Hippo. Camerarius, in his *Horæ Subsecivæ*, tells a curious story, relating to the decision of a controversy, between this brotherhood and the Jesuits. It appears that, one day, the father-general of the Augustinians, with some of his friars, was receiving the hospitality of a Jesuits' college; on the cloth being removed, he entered into a formal discourse on the superexcellence of his order, in comparison with that of the Jesuits; insisting particularly on the surpassing discipline of the friars, caused by their more stringent and solemn vows of obedience. The Augustinian, being very eloquent, learned, and a skilled debater, had the best of the argument; but the superior of the Jesuits, foreseeing the discussion, had prepared to meet his opponent in another fashion. Words, he replied, were mere wind, but he could at once give a decided and practical, if not miraculous proof, of the more implicit obedience and greater sanctity of the Jesuits. 'I shall be very glad to witness such a proof,' sneeringly replied the unwary Augustinian. 'Then,' said the Jesuit to one of his inferiors, 'Brother Mark, my hands are cold, fetch me some fire from the kitchen to warm them. Do not wait to put the burning coals in a chafing-dish, but just carry them hither in your hands.' Mark gave a cheerful response, left the room, and immediately returned, to the surprise and dismay of the Augustinians, carrying burning coals of fire in his naked hands; which he held to his superior to warm himself at, and, when commanded, took them back to the kitchen-hearth. The superior of the Jesuits, then, without speaking, bestowed a peculiarly triumphant and inquiring look on the general of the Augustinians, as much as to say, will any of your inferiors do that for you? The Augustinian, in turn, looked wistfully on one of the most docile of his friars, as if he wished to command him to do the like. But the friar, perfectly understanding the look, and seeing there was no time for hesitation, hurriedly exclaimed: 'Reverend Father, forbear; do not command me to tempt God! I am ready to fetch you fire in a chafing-dish, but not in my bare hands.'

The art or trick of handling fire with impunity has been so often practised by jugglers and mountebanks, during the last fifty years, that it has now

lost its attraction as an exhibition; though at an earlier period it created great wonder, affording an ample remuneration to its professors. One Richardson, an Englishman, astonished the greater part of Europe by his tricks with fire; and, though a mere juggler, acquired a sort of semi-scientific position, by a notice of his feats in the *Journal des Scavans* for 1680. Evelyn saw this man, and gives the following account of his performances. Having called upon Lady Sutherland, he says: 'She made me stay dinner, and sent for Richardson, the famous fire-eater. He devoured brimstone on glowing coals before us, chewing and swallowing them; he melted a beer-glass, and eat it quite up; then taking a live coal on his tongue, he put on it a raw oyster, the coal was blown with bellows, till it flamed and sparkled in his mouth, and so remained till the oyster gaped and was quite boiled. Then he melted pitch and wax together with sulphur, which he drank down as it flamed. I saw it flaming in his mouth a good while; he also took up a thick piece of iron, such as laundresses use to put in their smoothing-boxes, when it was fiery hot, he held it between his teeth, then in his hand, and threw it about like a stone; but this, I observed, he cared not to hold very long.'

In ancient history, we find several examples of people, who possessed the art of touching fire without being burned. The priestesses of Diana, at Castabala, in Cappadocia, commanded public veneration, by walking over red-hot iron. The Hirpi, a people of Etruria, walked among glowing embers, at an annual festival held on Mount Soracte; and thus proving their sacred character, received certain privileges—among others, exemption from military service—from the Roman senate. One of the most astounding stories of antiquity is related in the *Zend-Avesta*, to the effect that Zoroaster, to confute his calumniators, allowed fluid lead to be poured over his body, without receiving any injury. Yet M. Boutigny, the discoverer of the science of bodies in a spheroidal state, has amply proved in his own person the extreme easiness of the feat.

The fiery ordeals of the middle ages, in which accused persons proved their innocence of the crimes imputed to them, by walking blindfold among red-hot ploughshares, or holding heated irons in their hands without receiving injury, were always conducted by the clergy; who, no doubt, had sufficient knowledge of the trick to turn the result as best accorded with their own views. Richardi, queen of Charles le Gros of France, Cunegonda, empress of Germany, and Emma, mother of Edward the Confessor, all proved their innocence by the ordeal of fire. Albertus Magnus, after trial by ordeal had been abolished, published the secret of the art; which merely consisted in rubbing the hands and feet with certain compositions.

A Signora Josephine Girardelli, attracted most fashionable metropolitan audiences, in the early part of the present century, by her feats with fire. She stood with her naked feet on a plate of red-hot iron, and subsequently drew the same plate over her hair and tongue. She washed her hands in boiling oil; and placing melting lead in her mouth, after a few moments, produced it again solidified, and bearing the impression of her teeth.

M. Boutigny, in his work on the spheroidal state of bodies, and Mr Pepper of the Polytechnic Institution, London, in an amusing lecture, have fully exemplified the principles on which these feats are performed. Some of them, however, being mere juggling tricks, are not for scientific explanation. For instance, the performer taking an iron spoon, holds it up to the spectators, to shew that it is empty; then, dipping it into a pot containing melted lead, he again shews it to the spectators full of the molten metal; then, after putting the spoon to his mouth, he once more shews it to be empty; and after compressing his lips, with a look expressive of pain, he, in a few moments, ejects from his mouth a piece of lead, impressed by the exact form of his teeth. Ask a spectator what he saw, and he will say that the performer took a spoonful of molten lead, placed it in his mouth, and soon afterwards shewed it in a solid state, bearing the exact form and impression of his teeth. If deception be insinuated, the spectator will say, 'No! having the evidence of my senses, I cannot be deceived; if it had been a matter of opinion I might, but seeing, you know, is believing.' Now, the piece of lead, cast from a plaster mould of the performer's teeth, has probably officiated in a thousand previous performances, and is placed in the mouth, between the gum and cheek, just before the trick commences. The spoon is made with a hollow handle containing quicksilver, which, by a simple motion, can be let run into the bowl, or back again into the handle at will. The spoon is first shewn with the quicksilver concealed in the handle, the bowl is then dipped just within the rim of the pot containing the molten lead, but not into the lead itself, and, at the same instant, the quicksilver is allowed to run into the bowl. The spoon is then shewn with the quicksilver (which the audience take to be melted lead) in the bowl, and when placed in the mouth, the quicksilver is again allowed to run into the handle. The performer, in fact, takes a spoonful of nothing, and soon after exhibits the lead.

Died.—Emperor Louis I. of Germany, 'the Pious,' 876, *Frankfort;* Sir Francis Vere, distinguished military commander and author, 1608, *Portsmouth;* Hugo Grotius, eminent jurist, 1645, *Rostock;* Count Axel Oxenstiern, Swedish chancellor under Gustavus Adolphus, 1654; Charles Boyle, Earl of Orrery, celebrated antagonist of Bentley, 1731; John Hutchinson, mystic theologian, 1737, *London;* Leigh Hunt, poet, critic, miscellaneous writer, 1859, *Putney;* William Lyon Mackenzie, leader in the Canadian Rebellion of 1837, 1861, *Toronto.*

LEIGH HUNT.

Among the numerous distinguished literary characters of the first half of the nineteenth century, no man more fully answered to the appellation of 'a man of letters' than Leigh Hunt. He exercised no inconsiderable influence on the literature of his day. As a political writer, he stood at one time almost alone in a resolute advocacy of an independent and enlightened spirit of journalism, as distinguished from mere party-scribbling; as a critic of poetry and art, he contributed much to the overthrow of the pedantry and narrow maxims of the Johnsonian era; and, as an entertaining and popular writer, he figures in the van of that illustrious army, which has since, with such singular success, fought the battle of the people, and

established the right of labouring-men to educational advantages.

Leigh Hunt was born on the 19th of October 1784. His father, Isaac Hunt, was descended from some of the earliest settlers in Barbadoes, and practised successfully as an advocate; but, espousing the cause of the king in the American struggle, he was seized and put in prison; and probably only saved himself from unpleasant handling by bribing the jailer. He made his escape to England, leaving his wife and family behind, and some time elapsed before they could join him. Mrs Isaac Hunt came of a Quaker stock, and would have done honour to any sect. Her husband became a clergyman and popular preacher, but behaving with too imprudent generosity on a certain occasion, in which royalty was implicated, he never secured the promotion which he confidently expected.

Leigh Hunt was sent to Christ Hospital, where he remained some years, but he did not proceed to the university from that foundation, because a habit of stammering which he had, as well as a laxness of orthodoxy, derived from changes in the views of both parents, led him honestly to refuse to promise to enter the ministry. For some time he did nothing, not knowing what profession to take up; then he entered the office of an attorney, his elder brother; in the next place, he became a clerk in the War-Office, through the patronage of Mr Addington; and, finally, he decided, and decided wisely, to become a man of letters.

In 1802, when Leigh Hunt was only eighteen, the Rev. Isaac Hunt was so pleased with his verses, that he published them, by subscription, under the title of *Juvenilia*. He ought to have known better, for the boy's vanity was by no means lessened by the notice that was taken of him.

Leigh Hunt made his first great advance towards celebrity as a dramatic critic. He diligently attended the theatres; resolutely refused to form any acquaintances with actors or managers, in order to preserve his independence; and bringing his extensive reading and liberal views to bear on the emptiness of dramatic productions, he made such a stir by his papers in the *Traveller*, that playgoers learned to accept his dictum without demur, and play-performers to hate him.

His next career was that of a journalist. He joined with his brother John in setting up a weekly paper, named the *Examiner*. The noble and independent, and, at the same time, liberal spirit in which the paper was conducted, drew all eyes upon it. It took no side; it stood alone. The Tories execrated it; and the Whigs, although, in the main, it advocated their views, were afraid to support it. Nevertheless, it succeeded in acquiring, by its honest plain-speaking, sufficient influence to make it troublesome, and at length the government of the day felt the necessity of punishing disinterestedness so glaring, and watched its opportunity. On three successive occasions the attempt was made, and on each the editors escaped. The *Examiner's* first offence was defending a certain Major Hogan, who accused the Duke of York, as commander-in-chief, of favouritism and corruption. The second was the following curious remark: 'Of all monarchs since the Revolution, the successor of George III. will have the finest opportunity of becoming nobly popular.' The third was an article against military flogging.

These three cases of prosecution were not carried out; but a fourth was to come. The government was exasperated by failure, and when it struck at last, the blow was severe. We cannot do better than record the affair in the words of Leigh Hunt's eldest son:

'The occurrence which prompted the article was a public dinner on St Patrick's Day, at which the chairman, Lord Moira, a generous man, made not the slightest allusion to the Prince Regent; and Mr Sheridan, who manfully stood up for his royal friend, declaring that he still sustained the principles of the Prince Regent, was saluted by angry shouts, and cries of "Change the subject!" The Whig *Morning Chronicle* moralised this theme; and the *Morning Post*, which then affected to be the organ of the court, replied to the *Chronicle*, partly in vapid prose railing, and partly in a wretched poem, graced with epithets, intending to be extravagantly flattering to the prince. To this reply the *Examiner* rejoined in a paper of considerable length, analysing the whole facts, and translating the language of adulation into that of truth. The close of the article shews its spirit and purpose, and is a fair specimen of Leigh Hunt's political writing at that time:

"What person, unacquainted with the true state of the case, would imagine, in reading these astounding eulogies, that this 'glory of the people' was the subject of millions of shrugs and reproaches?—that this 'protector of the arts' had named a wretched foreigner his historical painter, in disparagement or in ignorance of the merits of his own countrymen?—that this 'Mæcenas of the age' patronised not a single deserving writer?—that this 'breather of eloquence' could not say a few decent extempore words, if we are to judge, at least, from what he said to his regiment on its embarkation for Portugal?—that this 'conqueror of hearts' was the disappointer of hopes?—that this 'exciter of desire' [bravo! Messieurs of the *Post!*]—this 'Adonis in loveliness' was a corpulent man of fifty? in short, this *delightful*, *blissful*, *wise*, *pleasurable*, *honourable*, *virtuous*, *true*, and *immortal* prince, was a violator of his word, a libertine, over head and ears in disgrace, a despiser of domestic ties, the companion of gamblers and demireps, a man who has just closed half a century without one single claim on the gratitude of his country, or the respect of posterity?" . . . . .

'This article, no doubt,' says Leigh Hunt at a later period, 'was very bitter and contemptuous; therefore, in the legal sense of the term, very libellous; the more so, inasmuch as it was very true!' Admit that it was true, and that words of truth, however bitter and blasting, if the speaker can substantiate them, ought not to be held as a libel. One, nevertheless, cannot wonder that the authors of such language against a reigning prince received castigation. The punishment was cruel: the brothers were fined a thousand pounds, and imprisoned for two years in separate cells. It is a noble fact in their favour, that, being promised privately a remission of the punishment, if they would abstain for the future from unpleasant remarks, John and Leigh Hunt refused the offer. They also declined to allow a generous stranger to pay the fine in their stead.

Leigh Hunt's account of his prison-life is very interesting. He was ill when he entered on it, and

this illness, and want of exercise, permanently injured his constitution; but he passed the time pleasantly enough. He papered his prison-walls with roses, and painted the ceiling like a sky; he furnished his room with a piano, with bookshelves, with his wife and all his children, and turned a little yard into an arbour of summer loveliness by the help of flowers and paint. We should have been pleased to possess a fuller history of what was said and done in this noteworthy prison-cell. Charles Lamb was a daily visitor. Thomas Moore introduced Byron, who afterwards came frequently to dine or chat, and was very courteous to the prisoner. And many other worthies, whom Leigh Hunt had not previously known, on this occasion introduced themselves, among whom were Charles Cowden Clarke, William Hazlitt, and Jeremy Bentham. He lost no old friends, and made many new ones. Shelley, though almost a stranger to him, made him what he calls 'a princely offer,' and Keats penned a sonnet, which was all he could do:

'WRITTEN ON THE DAY THAT MR LEIGH HUNT LEFT PRISON.

What though, for shewing truth to flattered state,
Kind Hunt was shut in prison, yet has he,
In his immortal spirit, been as free
As the sky-searching lark, and as elate.
Minion of grandeur! think you he did wait?
Think you he nought but prison-walls did see,
Till, so unwilling, thou unturn'dst the key?
Ah, no! far happier, nobler was his fate!
In Spenser's halls he strayed, and bowers fair,
Culling enchanted flowers; and he flew
With daring Milton through the fields of air;
To regions of his own his genius true
Took happy flights. Who shall his fame impair,
When thou art dead, and all thy wretched crew?'

Leigh Hunt entered prison on the 3d of February 1813, and left it on the same day two years later. The next most noticeable event of his personal history is his friendship with Shelley. It was by Shelley's inducement that he undertook a journey to Italy, to co-operate with Shelley and Byron in a liberal periodical which they proposed to bring out. The voyage proved a troublesome one. He engaged to embark in September 1821, he actually embarked on November 16 of that year, and, after narrowly escaping shipwreck with his family, the whole of which he had on board, he was landed at Dartmouth. He embarked again in May 1822, and reached Italy in June. Before he had been many days in Italy, his friend was drowned, and Byron shewed signs of relenting in the matter of the periodical. It was but a short connection, as might have been expected. Byron went to Greece, and Leigh Hunt stayed in Italy till 1825, after which he returned to England.

The rest of his life was passed in literary projects, in getting into debt, and getting out of it, in pleasant communing with his numerous literary friends, among whom were Barry Cornwall, Thomas Carlyle, the Brownings, and many others, in attempts to live cheerfully under affliction, and, chief of all, in accumulating book-lore. His closing years were rendered more happy by an opportune pension of £200 a year, which Lord John Russell obtained for him. He died on the 28th of August 1859, and was buried, according to his wish, in Kensal Green Cemetery.

Leigh Hunt had a kind heart and a cheerful spirit; he was a man of simple tastes and no inclination to expense. If he could have gone through life as a child under tutelage, he might have smiled on to its close, and died as the gay insects do at the close of the season. As a man with responsibilities to his fellow-men, and to a wife and children, he failed in duty, and consequently lost in happiness. It was quite impossible, however, for any one with the most ordinary share of generosity to know him and not love him. In literature he might be said to take a high place among the *dii minores*. His poetry, though burdened with mannerism, charms by its sparkling vivacity; and of his many essays it would be possible to select at least a hundred which reach a degree of classic excellence.

THE EGLINTOUN TOURNAMENT.

It was an idea not unworthy of a young nobleman of ancient lineage and ample possessions, to set forth a living picture, as it were, of the medieval tournament before the eyes of a modern generation. When the public learned that such an idea had occurred to the Earl of Eglintoun, and that it was to be carried out in the beautiful park surrounding his castle in Ayrshire, it felt as if a new pleasure had been at length invented. And, undoubtedly, if only good weather could have been secured, the result could not have fallen short of the expectations which were formed.

Nearly two years were spent in making the necessary preparations, and on the 28th of August 1839, the proceedings commenced in the presence of an immense concourse of spectators, many of whom, in obedience to a hint previously given, had come in fancy-costumes. The spot chosen for the tourney was about a quarter of a mile eastward of the castle, surrounded by beautiful scenery; it comprised an arena of four acres, with a boarded fence all round. At convenient places, were galleries to hold 3000 persons, one for private friends of the earl and the knights who were to take part in the mimic contest, and the other for visitors of a less privileged kind. In the middle of the arena were barriers to regulate the jousts of the combatants. Each of the knights had a separate marquee or pavilion for himself and his attendants. The decorations everywhere were of the most costly character, being aided by many trappings which had recently been used at the Queen's coronation. Besides keeping 'open house' at the castle, the earl provided two temporary saloons, each 250 feet long, for banquets and balls. But the weather was unfavourable to the 'brave knights;' the rain fell heavily; spectators marred the medievalism of the scene by hoisting umbrellas; and the 'Queen of Beauty' and her ladies, who were to have ridden on elegantly-caparisoned palfreys, were forced to take refuge in carriages. A procession started from the castle in the midst of a drenching shower. It comprised men-at-arms clad in demi-suits of armour, musicians, trumpeters, banner-bearers, marshals, heralds, pursuivants, a 'judge of the peace,' retainers, halberdiers, a knight-marshal, a jester, archers, servitors, swordsmen, and chamberlains—all attired in the most splendid costumes that befitted their several characters. These were mostly subordinates. The chiefs were fifteen

knights, and about double as many esquires and pages—nearly all in magnificent armour, whole or demi. The knights were the Marquis of Waterford, the Earls of Eglintoun, Craven, and Cassilis; Viscounts Alford and Glenlyon; Captains Gage, Fairlie, and Beresford; Sirs Frederick Johnstone and Francis Hopkins; and Messrs Jerningham, Lamb, Boothby, and Lechmere. These knights all bore chivalric appellations—such as the Knights of the Dragon, the Griffin, the Black Lion, the Dolphin, the Crane, the Ram, the Swan, the Golden Lion, the White Rose, the Stag's Head, the Burning Tower, the Lion's Paw, &c.; these emblems and symbols being emblazoned on the trappings of the several knights and their retainers. Some of the dresses were exceedingly gorgeous. The Marquis of Londonderry, as 'King of the Tournament,' wore a magnificent train of green velvet, embroidered with gold, covered by a crimson-velvet cloak trimmed with gold and ermine, and having a crown covered in with crimson velvet; the Earl of Eglintoun, as 'Lord of the Tournament,' had a rich damasked suit of gilt armour, with a skirt of chain-mail; and Sir Charles Lamb, as 'Knight Marshal,' had a suit of black armour, embossed and gilt, and covered by a richly-emblazoned surcoat. The esquires and pages were all gentlemen of fortune and position. Lady Seymour, as 'Queen of Beauty,' wore a robe of crimson velvet, with the Seymour crest embroidered in silver on blue velvet, and a cloak of cerise velvet trimmed with gold and ermine. The ladies in the chief gallery were mostly attired in the costumes of the fourteenth and fifteenth centuries.

Under most discouraging circumstances the cavalcade set forth—the gaily-trimmed horses splashing in the dirt, the armour washed with pitiless rain, and the velvets and laces saturated with wet. The knights with their esquires entered their several pavilions, while the rest of the personages took up the posts allotted to them. The knights issued forth from their pavilions two and two, paid their devoirs to the fair ladies in the galleries, and then fought to the sound of trumpet. This fighting consisted in galloping against each other, and each striking his lance against the armour of the other; the lances were so made of wood as to be easily broken, and thus there was no great danger incurred. After several couples had thus jousted, the Earl of Eglintoun and the Marquis of Waterford (the 'Lord of the Tournament' and the 'Knight of the Dragon') came forward, most gorgeously arrayed and armed, and attended by no fewer than eight esquires and pages. After running at each other until two lances were broken, the earl was declared the best knight of the day, and was rewarded by the 'Queen of Beauty' with a crown of victory. But the incessant rain sadly marred the whole affair; and the day's jousting ended with a very unpicturesque broadsword combat between an actor and a soldier, engaged for the purpose. In every sense was the day's joyousness damped; for when the guests were quite ready for a grand banquet and ball in the evening, it was found that the two temporary pavilions, fitted up in the most splendid manner, were flooded with water from the heavy rains, and were quite useless for the purposes intended. On the 29th, the weather was nearly as bad; no jousting in the lists was attempted, but some mimic tilts took place under cover, in which one personage took part who was destined to fill an important place in the history of Europe—Prince Louis Napoleon, afterwards the Emperor Napoleon III. of France. On the 30th, the skies were more favourable; the joustings were renewed, and were wound up by a tourney of eight knights armed with swords—used in some inoffensive way against each other's armour. Measures had been taken to render the banqueting-hall and ball-room available, and the day ended with a banquet for 300 persons and a ball for 1000. The 31st came, and with it weather so stormy and ungenial that any further proceedings with the tournament were abandoned. And thus ended this most costly affair. The spot had been so selected that, outside the fence, an enormous number of spectators might witness the proceedings; and it was estimated that little under 200,000 persons availed themselves of this opportunity on one or other of the four days—coming from almost every county in Scotland, and from various parts of England and Ireland. The Ardrossan Railway Company trebled their fares; and whoever had a gig or other vehicle to let at Glasgow, could command extravagant terms for it.

AUGUST 29.

The Decollation of St John the Baptist. St Sabina, martyr, 2d century. St Sebbi or Sebba, king of Essex, 697. St Merri or Medericus, abbot of St Martin's, about 700.

Born.—John Locke, philosopher (*Essay on the Human Understanding*), 1632, *Wrington, Somersetshire;* John Henry Lambert, distinguished natural philosopher of Germany, 1728, *Mülhausen.*

Died.—St John the Baptist, beheaded, 30 A. D.; John Lilburne, zealous parliamentarian, 1657, *Eltham;* Edmund Hoyle, author of the book on Games, 1769, *London;* Joseph Wright, historical painter, 1797, *Derby;* Pope Pius VI., 1799; William Brockedon, painter, 1854.

LILBURNE THE PAMPHLETEER.

In the pamphleteering age of Charles I. and the Commonwealth, no man pamphleteered like John Lilburne. The British Museum contains at least a hundred and fifty *brochures* by him, all written in an exaggerated tone—besides many *fasciculi* which others wrote in his favour. Lilburne was impartial towards Cavaliers and Roundheads; his great aim was to advance his own opinions and defend himself from the comments which they excited.

In 1637, ere the troubles began, Lilburne was accused before the Star-Chamber of publishing and dispersing seditious pamphlets. He refused to take the usual oath in that court, to the effect that he would answer *all* interrogatories, even though they inculpated himself; and for this refusal he was condemned to be whipped, pilloried, and imprisoned. During the very processes of whipping and pillorying, he harangued the populace against the tyranny of the court-party, and scattered pamphlets from his pocket. The Star-Chamber, which was sitting at that very moment, ordered him to be gagged; but he still stamped and gesticulated, to shew that he would again have harangued the people if he could. The Star-Chamber, more and more provoked, condemned

him to be imprisoned in a dungeon and ironed. When the parliament gained ascendency over the king, Lilburne, as well as Prynne, Bastwick, and many other liberals, received their liberty, and were welcomed with joyful acclamations by the people. Then followed the downfall of the king, the Protectorate of Cromwell, and the gradual resuscitation of measures deemed almost as inimical to liberty as those of Charles had been. Lilburne was at his post as usual, fighting the cause of freedom by means of pamphlets, with unquestioned honesty of purpose, but with intemperate zeal. In 1649, he was again thrown into prison, but this time by order of the parliament instead of by that of the crown; even the women of London petitioned for his release, but the parliament was deaf to their arguments. When the case was brought on for regular trial, a London jury found him not guilty of the 'sedition' charged against him by the parliament. Again, after Cromwell had dissolved the Long Parliament, Lilburne was once more imprisoned for his outspoken pamphlets; again was he liberated when the voice of the people obtained expression through the verdict of a jury; and again was there great popular delight displayed at his liberation.

There is reason to doubt whether Lilburne was so steady and sagacious a liberal, as to be able to render real services to the cause which he so energetically advocated; but his public life well illustrated the pamphleteering tendencies of the age. One among the pamphlets published in 1653, when Lilburne was opposing the assumption of arbitrary power by Cromwell, was in the form of a pretended catalogue of books, to be sold in 'Little Britain.' First came about forty books, every one with some sarcastic political hit contained in the title. Then came a series of pretended 'Acts and Orders' of parliament, among which the following are samples: —'An act for the speedy suppressing all plays, the Fools being all termed commanders or parliamentmen.'—'An act for a speedy drawing up of a petition to Lucifer on behalf of Cromwell: that, seeing he hath done such eminent services for him in this world, he may not want a place of preferment in his dominions!'—'An act forbidding any to stamp the Lord General's [Cromwell's] image on gingerbread, lest the valour of it should bite the children by the tongue.'—'An act ordering that Vavasour Powell shall preach the devil out of hell, that there may be room for the members.'—'An act for the regulating of names, that the well-affected may not be abased by nicknames, but that every syllable may have its full pronunciation—as General Monke must hereafter be rightly called General Monkey.' And then follow a series of 'Cases of Conscience,' such as the following: 'Whether Whitehall may not properly be called a den of thieves.'—'Whether the countenances of Miles Corbet and Mr Gurden do not speak their mothers to be blackamoors and their fathers Jews.' —'Whether Alderman Atkins his imbecility had ever been found out, if Sir Walter Earl had not smelt it.'—'Whether Balaam's beating his own ass were a sufficient warrant for the footman's cudgelling Sir Henry Mildmay.'—'Whether Cromwell had not gotten a patent for brimstone, which makes his nose so fiery.'—'Whether there was not an ironmonger spoil'd when Harry Walker was made a priest; and whether he, being a priest, can tell what stands for pillory in Hebrew.'—'Whether our Saviour's riding into Jerusalem upon an ass's foal, were any more than a type of our deliverer Cromwell's riding into his throne, upon the backs of a hundred and twenty asses, elected out of the several counties for that purpose.'

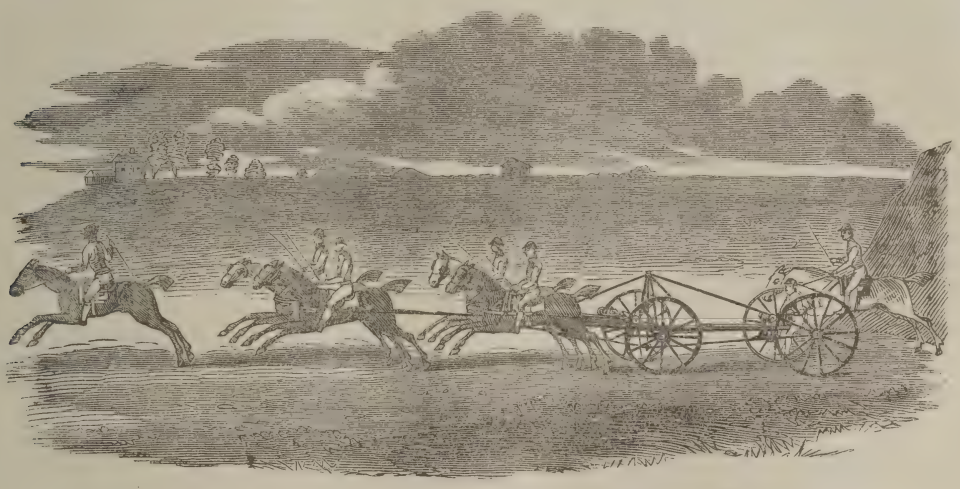
It is not stated that these audacious sarcasms were actually by Lilburne, for the pamphlet has neither author nor editor, neither printer nor publisher, named; but they will serve to illustrate the spirit of the times, when such pamphlets could be produced.

EDMUND HOYLE.

Of this celebrated writer of treatises on games of chance, including among others whist, piquet, quadrille, and backgammon, and whose name has become so familiar, as to be immortalised in the well-known proverb, 'According to Hoyle,' little more is known, than that he appears to have been born in 1672, and died in Cavendish Square, London, on 29th August 1769, at the advanced age of ninety-seven. In the *Gentleman's Magazine* of December 1742, we find among the list of promotions 'Edmund Hoyle, Esq., made by the Primate of Ireland, register of the Prerogative Court, there, worth £600 per annum.' From another source, we learn that he was a barrister by profession. His treatise on *Whist*, for which he received from the publisher the sum of £1000, was first published in 1743, and attained such a popularity that it ran through five editions in a year, besides being extensively pirated. He has even been called the inventor of the game of whist, but this is certainly a mistake, though there can be no doubt that it was indebted to him for being first treated of, and introduced to the public in a scientific manner. It first began to be popular in England about 1730, when it was particularly studied by a party of gentlemen, who used to assemble in the Crown Coffee House, in Bedford Row. Hoyle is said to have given instructions in the game, for which his charge was a guinea a lesson.

BEQUESTS FOR THE GUIDANCE OF TRAVELLERS.

Some of the old charitable bequests of England form striking memorials of times when travelling, especially at night, and even a night-walk in the streets of a large city, was attended with difficulties unknown to the present generation. For example —the corporation of Woodstock, Oxfordshire, pay ten shillings yearly, the bequest of one Carey, for the ringing of a bell at eight o'clock every evening, for the guide and direction of travellers. By the bequest of Richard Palmer, in 1664, the sexton of Wokingham, Berks, has a sum for ringing every evening at eight, and every morning at four, for this among other purposes, 'that strangers and others who should happen, in winter-nights, within hearing of the ringing of the said bell, to lose their way in the country, might be informed of the time of night, and receive some guidance into the right way.' There is also an endowment of land at Barton, Lincolnshire, and 'the common tradition of the parish is, that a worthy old lady, in ancient times, being accidentally benighted on the Wolds, was directed in her course by the sound of the evening-bell of St Peter's Church, where, after



much alarm, she found herself in safety, and out of gratitude she gave this land to the parish-clerk, on condition that he should ring one of the church bells from seven to eight o'clock every evening, except Sundays, commencing on the day of the carrying of the first load of barley in every year till Shrove Tuesday next ensuing inclusive.'*

By his will, dated 29th August 1656, John Wardall gave £4 yearly to the churchwardens of St Botolph's, Billingsgate, 'to provide a good and sufficient iron and glass lanthorn, with a candle, for the direction of passengers to go with more security to and from the water-side, all night long, to be fixed at the north-east corner of the parish church, from the feast-day of St Bartholomew to Lady-Day; out of which sum £1 was to be paid to the sexton for taking care of the lanthorn.' A similar bequest of John Cooke, in 1662, has provided a lamp—now of gas—at the corner of St Michael's Lane, next Thames Street.

The schoolmaster of the parish of Corstorphine, Edinburghshire, enjoys the profits of an acre of ground on the banks of the Water of Leith, near Coltbridge. This piece of ground is called the Lamp Acre, because it was formerly destined for the support of a lamp in the east end of the church of Corstorphine, believed to have served as 'a beacon to direct travellers going from Edinburgh along a road, which in those times was both difficult and dangerous.'*

EARL OF MARCH'S CARRIAGE RACE.

August 29, 1750, there was decided a bet of that original kind for which the noted Earl of March (subsequently fourth Duke of Queensberry) shewed such a genius. It came off at Newmarket at seven o'clock in the morning. The matter undertaken by the earl, in conjunction with the Earl of Eglintoun, on a wager for a thousand guineas against Mr Theobald Taafe, was to furnish a four-wheeled carriage, with four horses, to be driven by a man, nineteen miles within an hour. A contemporary authority thus describes the carriage: 'The pole was small, but lapped with fine wire;

THE EARL OF MARCH'S RACING CARRIAGE.

the perch had a plate underneath; two cords went on each side, from the back-carriage to the fore-carriage, fastened to springs. The harness was of fine leather covered with silk. The seat for the man to sit on was of leather straps, and covered with velvet. The boxes of the wheel were brass, and had tins of oil to drop slowly for an hour. The breechings for the horses were whalebone. The bars were small wood, strengthened with steel springs, as were most parts of the carriage, but all so light, that a man could carry the whole with the harness.' Before this carriage was decided on, several others had been tried. Several horses were killed in the course of the preliminary experiments, which cost in all about seven hundred pounds. The two earls, however, won their thousand guineas, for the carriage performed the distance in 53 minutes 27 seconds, leaving fully time enough to have achieved another mile.

LOSS OF THE 'ROYAL GEORGE.'

Cowper's lines on this disastrous event very well embody the painful feeling which occupied the public mind in reference to it. When Lord Howe's fleet returned to Portsmouth in 1782, after varied service in the Atlantic, it was found that the *Royal George*, 108 guns, commanded by Admiral Kempenfeldt, required cleaning on the exterior and some repairs near the keel. In order to get at this portion of the hull, the ship was 'heeled over'—that is, thrown so much on one side as to expose a good deal of the other side above the surface of the water. In recent times, the examination is made in a less perilous way; but in those days heeling was always adopted, if the defects were not so serious as to require the ship to go into dock. On the 29th of August, the workmen proceeded to deal with the *Royal George* in this fashion; but

* Edwards's *Remarkable Charities*, 99, 203, 223.

* Sinclair's *Statistical Acc. Scotland*, xiv. 449.

they heeled it over too much, water entered the port-holes, the ship filled, and down she went with all on board—the admiral, captain, officers, crew, about three hundred women and children who were temporarily on board, guns, ammunition, provisions, water, and stores. So sudden was the terrible calamity, that a smaller vessel lying alongside the *Royal George* was swallowed up in the gulf thus occasioned, and other vessels were placed in imminent danger. Of the total number of eleven hundred souls on board, very nearly nine hundred at once found a watery grave; the rest were saved. The ship had carried the loftiest masts, the heaviest metal, and the greatest number of admirals' flags, of any in the navy; it had been commanded by some of the best officers in the service; and Admiral Kempenfeldt, who was among those drowned, was a general favourite. A court-martial on Captain Waghorn (who had escaped with his life), for negligence in the careening operation, resulted in his acquittal: a liberal subscription for the widows and children of those who had perished; and a monument in Portsea Churchyard to Kempenfeldt and his hapless companions—quickly followed. Cowper mourned over the event in a short poem, monody, or elegy:

'ON THE LOSS OF THE ROYAL GEORGE.

(*To the March in Scipio.*)

WRITTEN WHEN THE NEWS ARRIVED.

Toll for the brave!
The brave that are no more!
All sunk beneath the wave,
Fast by their native shore!

Eight hundred of the brave,
Whose courage well was tried,
Had made the vessel heel,
And laid her on her side;

A land-breeze shook the shrouds,
And she was overset;
Down went the *Royal George*,
With all her crew complete.

Toll for the brave!
Brave Kempenfeldt is gone;
His last sea-fight is fought;
His work of glory done.

It was not in the battle;
No tempest gave the shock;
She sprang no fatal leak;
She ran upon no rock;

His sword was in his sheath;
His fingers held the pen,
When Kempenfeldt went down
With twice four hundred men.

Weigh the vessel up,
Once dreaded by our foes!
And mingle with our cup
The tear that England owes.

Her timbers yet are sound,
And she may float again,
Full charged with England's thunder,
And plough the distant main.

But Kempenfeldt is gone;
His victories are o'er;
And he and his eight hundred men
Shall plough the wave no more.'

Cowper also gave a Latin translation of these stanzas, beginning:

'Plangimus fortes. Periere fortes,
Patrium propter periere littus
Bis quater centum; subito sub alto
Æquore mersi.'

The hapless *Royal George* has been the subject of many interesting submarine operations. During the three months which immediately followed the disaster, several divers succeeded in fishing up sixteen guns out of the ship, by the aid of a diving-bell. In the next year, a projector brought forward a scheme for raising the ship itself, but it failed. In 1817, after the ship had been submerged thirty-five years, it underwent a thorough examination by men who descended in a diving-bell. It was found to be little other than a pile of ruinous timber-work—the guns, anchors, spars, and masts having fallen into a confused mass among the timbers. She was too dilapidated to be raised in a body, by any arrangement however ingenious. Twenty-two years afterwards, in 1839, General (then Colonel) Pasley devised a mode of discharging enormous masses of gunpowder, by means of electricity, against the submerged hull, so as to shatter it utterly, to let all the timbers float that would float, and to afford opportunity for divers to bring up the heavier valuables. This plan succeeded completely. Enormous submarine charges of powder, in metal cases containing 2000 lbs. each, were fired, and the anchorage was gradually cleared of an obstruction which had lain there nearly sixty years. The value of the brass guns fished up was equal to the whole cost of the operations.

AUGUST 30.

Saints Felix and Adauctus, martyrs, about 303. St Pammachius, confessor, 410. St Agilus or Aile, abbot of Rebais, about 650. St Fiaker, Fiacre, or Fefre, anchoret and confessor, about 670. St Rose of Lima, virgin, 1617.

Born.—Giovanni Battista Nani, flower and foliage painter, 1616, *Venice;* Dr David Hartley, moral philosopher, author of *Observations on Man*, 1705, *Armley, Yorkshire;* Johann Christoph Adelung, grammarian and linguist, 1734, *Spantekow, in Pomerania;* Archdeacon William Paley, author of *Natural Theology*, *Evidences of Christianity*, &c., 1743, *Peterborough.*

Died.—Queen Cleopatra of Egypt, committed suicide, 30 B. C., *Alexandria;* Theodoric the Great, king of the Goths, 526, *Ravenna;* Pope Alexander III., 1181; Louis XI., king of France, 1483, *Plessis-les-Tours;* Sultan Soliman II., the Magnificent, 1566; Francis Baily, astronomer, 1844, *London;* Sir John Ross, Arctic navigator, 1856, *London;* Sir Richard Westmacott, sculptor, *London;* John Francis, sculptor, 1861, *London.*

ARCHDEACON PALEY.

The character of Dr Paley is strikingly illustrative of the province to which he belonged: strong shrewd sense, great economy, and much persevering industry, without the graces of refinement, are still the prevailing features of the inhabitants of the north of Yorkshire. Though born at Peterborough, where his father was a minor canon, he was, at the age of one year, carried to Giggleswick, in Craven, on his mother's lap, she being seated on a pillion behind her husband. The primitive habits

of the family were strictly kept up by this clever woman, who taught her son to knit his own stockings, a practice he continued after he was archdeacon of Carlisle. His father being the head-master of the grammar-school of Giggleswick, he received his education there; and to prevent his being made a baker, as Mrs Paley wished, he was carried by his father to Cambridge, and entered on the books at the early age of fifteen. His falling from his pony no less than seven times on the road there, and the parental carelessness in not even turning his head to see if his son were hurt, merely remarking: 'Take care of thy money, lad,' confirm the opening remarks. His uncouth awkwardness created the greatest mirth among the undergraduates, who dignified him with the sobriquet of 'Tommy Potts.' Idle and extravagant during the first two years, lying in bed until noon, and frequenting fairs, strolling-players, and puppet-shows, he was roused from these habits by the remonstrance of one of his gay companions, who at four o'clock one morning came to him in bed, and shewed how much better his talents might be employed. In consequence of that word spoken in season, he entirely reformed; began a practice of rising at five, and in a year came out senior-wrangler. In 1766, he was elected fellow of Christ's College, and became one of the tutors, giving lectures on moral philosophy, the substance of which he embodied afterwards in his book on that subject. His friendship with the son of the bishop of Carlisle procured him the living of Musgrave, worth but eighty pounds a year, upon which he married: happily, preferment of various kinds flowed in, and in 1782 he was made archdeacon of Carlisle. Soon after he began his celebrated works; but the first, *Principles of Moral Philosophy*, had to wait some time until the author was rich enough to publish it, no one in the trade being willing to run the risk: the sale from the first was so great that Faulder, the publisher, to whom it had been offered for one hundred pounds, was willing to give two hundred and fifty. Whilst the negotiation was pending, another offer came of a thousand pounds, and Paley's distress lest his friend should have concluded the bargain for the lesser sum was sufficiently ludicrous. *Horæ Paulinæ* and some smaller works followed; but the highest commendations were reserved for his *View of the Evidences of Christianity*, which was greeted by all ranks, from George III. downwards, as an antidote to the infidelity which then prevailed. He was immediately made prebend of St Paul's, and subdean of Lincoln, with the valuable living of Bishop-Wearmouth, raising his income to more than two thousand a year. After eleven years spent in the enjoyment of these good things, and in the society of the distinguished men of the day, among whom were Ellenborough and Mackintosh, he died on the 25th of May 1805.

AN OBSTINATE PRISONER.

When the system of imprisonment for debt was in full force, instances were frequent in which men were incarcerated for a long series of years—either because they were too poor to work out their deliverance, or because they disputed the justice of the claim under which they had been captured. A singular case of the latter kind occurred towards the close of the last century. Mr Benjamin Pope, a tanner in Southwark, made £70,000 by success in trade, and then became a money-lender, discounter, and mortgagee. When his fortune reached £100,000, he was familiarly known as 'Plum Pope.' His good-fortune gradually deserted him, however. His grasping disposition led him to offend against the usury laws, and he was frequently before the courts. In one serious case he was cast in £10,000 damages. He never ceased throughout the remainder of his life from complaining of this sentence; he went to France for a time, with his property and effects; and when he returned to England in 1782, he voluntarily went to prison rather than pay the above-named damages. In the King's Bench Prison he remained for the last twelve years of his life. At one time he might have got off by paying £1000 instead of £10,000; but this he refused to do, as 'this would be acknowledging the justice of the debt, which he would die sooner than do'—and he kept his word. While in prison he carried on his avocation of a money-lender, on a more limited and cautious scale than before. Always penurious and eccentric, he had become still more so. A pint of small-beer lasted him two days, and he always looked at the fulness of the measure before he paid for it. He would drink strong-beer with any one who would give it to him; but he never bought any. If he bought his three-farthing candle at eight to the pound, he would always select the *heaviest* of the eight, to obtain the most tallow he could for his money. He never had a joint of meat on his table during the whole twelve years of his voluntary imprisonment; a fourpenny-plate from a cook's shop served him for two meals. His friends, though living at a distance, knowing of his penurious habits, often sent him articles of food which he refused to buy for himself. When he died, at the end of August 1794, Mr Pope still owed the debt which had embittered so many years of his strange life.

JOHN CAMDEN NEILD.

In the autumn of 1852, general curiosity was excited by an announcement in the newspapers that an eccentric gentleman, who had died on the 30th of August in that year, had bequeathed an immense legacy to the Queen. This gentleman was John Camden Neild, whose name had hitherto been all unknown to the public; but now reports respecting his eccentricities and the vast amount of his bequest were everywhere rife, and were eagerly devoured. Many of these reports, however, were contradictory, and instead of satisfying, only perplexed and mortified sober inquirers. Nor has any authentic memoir of Mr Neild since been published. It is therefore hoped that the following biographical sketch, compiled from credible sources, and containing many unpublished anecdotes, will be read with interest.

His father, James Neild, was a native of Knutsford, in Cheshire, and becoming a goldsmith in London, amassed considerable wealth, and purchased estates in the counties of Buckingham, Middlesex, Kent, and Surrey. In these several counties he held the office of magistrate for many years, and in 1804, he was appointed high-sheriff of Buckinghamshire. He was eminently benevolent,

especially in his efforts for the improvement of prisons, and originated a society for the relief of persons imprisoned for small debts. He married Elizabeth, daughter of John Camden, Esq., of Battersea, in Surrey, a direct descendant of the renowned antiquary of the same name. He died in 1814, and was buried at Chelsea.

John Camden Neild, the only surviving son of the above, was born in 1780, and after receiving a good classical and general education, was entered at Trinity College, Cambridge, where he took the degree of B.A. in 1801, and M.A. in 1804. He afterwards became a student at Lincoln's Inn, and in 1808 was called to the bar. Succeeding in 1814 to the whole of his father's property, estimated at £250,000, it was at first hoped that he would walk in the paternal footsteps, and prove a benevolent and public-spirited country gentleman. Soon, however, it began to appear that avarice was his ruling passion. His parsimonious spirit increased till he became a confirmed miser, and for the last thirty years of his life, it may be said that he was entirely given over to the accumulation of wealth. His habits and appearance became very peculiar. He lived in a large house in Cheyne Walk, Chelsea; but it was meanly and scantily furnished. At one time, it is said, he slept on a bare board, but latterly on an old stump-bedstead, on which he died. His favourite companion was a large black cat, which was present in his chamber when he breathed his last. He kept two female servants, one as housekeeper, whom he placed on low board-wages when he left home, and it was on such occasions that he gave the fullest scope to his penurious inclinations.

He had considerable property at North Marston, in Buckinghamshire, and here he often stayed for days together, besides his half-yearly visits to receive rents. As lessee of the rectory, it was incumbent on him to repair the chancel of the church, and this he did in a very original manner. On one occasion, the leaded roof having become full of chinks and fissures, he had them covered with strips of painted calico, to the number of forty, saying, 'they would last his time.' While these repairs were in progress, he sat all day on the roof, to keep the workmen employed, and even ate his dinner there, which consisted of hard eggs, dry bread, and butter-milk. It may be remarked that he seldom paid his workmen or trades-people without disputing their account, and protesting that they would ruin him with their high charges.

His dress, which was extremely old-fashioned and shabby, consisted of a blue 'swallow-tailed' coat, with gilt buttons, brown trousers, short gaiters, and shoes which were patched and generally down at the heels. He never allowed his clothes to be brushed, because, he said, it destroyed the nap, and made them wear out faster. His stockings and linen were generally full of holes; but when he stayed a night at a tenant's, the mistress often mended them while he was in bed. On one occasion a night-shirt, which he accidentally left at a tenant's house, was found to be so tattered and rotten, that the mistress, finding repair impossible, burned it. His personal appearance was unprepossessing. He was short and punchy, scarcely above five feet in height, with a large round head, and short neck. He always carried with him an old green cotton umbrella, but never, even in the coldest or wettest weather, wore a greatcoat, considering such a luxury far too extravagant for his slender means. Often has he been seen, in a piercingly cold winter's evening, entering Aylesbury on the outside of a coach without the slightest addition to his ordinary clothing; while a poor labourer, sitting by his side, appeared warmly clad in a thick greatcoat. His appearance on such occasions often excited the compassion of his fellow-travellers, who mistook him for a decayed gentleman in extreme poverty. Just before the introduction of railway-travelling, he had been visiting some of his Kentish property, when, as he was returning to London, the coach stopped at Farningham. It was a bitterly cold day, and, with the exception of Mr Neild, all the outside passengers, though well wrapped in greatcoats and rugs, entered the inn 'to take something to warm them.' As they sat in the comfortable parlour drinking their brandy and water, they saw with pity their thinly-clad companion still sitting on the coach. Thinking he only remained there in the cold because he was ashamed to enter the inn when he had no money to spend, they subscribed for a good glass of brandy and water, and sent it to the 'poor gentleman,' who drank it off, and thanked his benefactors for their kindness. He often took rather long journeys on foot, especially in Buckinghamshire, where he had estates in different parts, which he could not visit by any public conveyance.

In these walking-journeys he never scrupled to avail himself of any proffered 'lift,' even in the dirtiest farm-cart, and he has been known to sit on a load of coal, to enable him to proceed a little further without expense; though, after all, he would probably give the driver a penny or two for the accommodation; for it is a fact that, miser as he was, he never liked to receive anything without paying for it, though his ideas of remuneration were certainly on a very restricted scale. When he called on the clergymen of the parishes where his estates lay, he always refused to partake of a meal or any refreshment; giving his declinature in a hasty, sharp tone, as if he had been annoyed or surprised at the invitation. With his tenants, especially those of a lower grade, the case was different. With one tenant, whose condition was scarcely above that of a labourer, he remained some days, sharing with the family their coarse meals and lodging. When business required his presence at North Marston, he used to reside with his tenant on the rectory-farm. While staying here about the year 1828, he attempted self-destruction by cutting his throat, and his life was saved chiefly by the prompt assistance of his tenant's wife, a Mrs Neal. This rash act was supposed to have been caused by a sudden declension in the stocks, in which he had just made a large investment.

During the year 1848, an enclosure was taking place in another parish in which he had a farm, and he often visited it to attend meetings on the subject. On these occasions he generally slept at Tring, or at the railway station, but ate his dinner at his tenant's. Before entering the house, he was often observed to walk up to the dairy-window, and stand on tip-toe to see what was within. He would then enter the house, and say to his tenant's

wife: 'Could you let me have a basin of your nice milk?' As he sipped it up, he would keep repeating: 'O how good, how rich! Have you any eggs?' 'No, sir, but I can easily get some.' 'How do they sell now?' 'Eighteen for sixpence, sir.' 'Then that will be three for a penny. Will you get me three?' The eggs were procured, and he had two boiled very hard, and began to eat them, asking for another basin of milk. The third egg he put in his pocket for his breakfast next morning. Sometimes he used to take out of his pocket some sandwiches or bread and butter, and ask leave to place them in a cupboard. Having deposited them there, he would examine if they were safe every time he returned to the house after an absence of even half an hour. His Sundays he often spent in walking over the farm with his tenant, who, by Mr Neild's desire, used to carry a pickaxe for examining the quality of the soil at different places. He used to investigate very minutely the nature of his land, and the manner of its cultivation, and keep an account of the number of trees on his estates. He has been known to walk from twelve to fifteen miles to a small portion of his property, and, after counting over the few trees on it, to return the same distance, with no other apparent object for his journey. An idea of Mr Neild's extreme caution in purchasing land, may be gathered from the following extracts from his letters: 'Lot 3 is described as "exceedingly rich grazing-land." Does the tenant stock it with oxen or with cows—and if with oxen, are they large or small beasts? or does he dairy the land, and feed one half and mow the other half? .... I have never seen the close .... but I feel assured that if Mr —— had an idea that I was desirous of purchasing it, he would put such a price upon it as to render all treaty for it nugatory; and therefore, until I can see my way a little more in the matter than I do at present, and until the mortgagees shall feel themselves under an absolute necessity of selling the estate, which they have a power to do, what I have here written should not be suffered to transpire, but be kept within ourselves.... Six hundred pounds for little more than nine acres of land, and of land, perhaps, not of first-rate quality, and subject to a corn-rent of ——— in lieu of tithes, is a long price; and the offer, suppose you feel inclined to make it, can only at first be of a conditional nature, for I must see the close (although you need not tell Mr —— so) before anything can be concluded.'

Some misers have occasional feasts, though, like angels' visits, short and far between. Such was the case with Mr Neild. Having some business with a clergyman (perhaps to his own advantage), he invited him to dine with him at an inn where he was staying in Buckinghamshire. On this occasion, he was both courteous and hospitable, having provided for their dinner a leg of lamb, a tart, cheese, beer, and a bottle of sherry. He also *once* invited another clergyman, with two or three other persons connected with his property, to dine with him at an inn in another Buckinghamshire town, and provided for the occasion quite a generous entertainment. But when the same clergymen applied to him for some charitable assistance for their parishes, to one he gave a very uncourteous refusal, and to the other he sent the following characteristic letter:

'Chelsea, *April* 24, 1852.

Rev. and dear Sir—When you last saw me, I was very infirm, and that infirmity has been increasing ever since, and still is upon the increase, until I am at last arrived at almost the last stage of decrepitude. I am confined to my bedroom, and cannot stir from my chair, except in exquisite pain. Without the summer shall work, I may say, on me a miraculous change, I do not expect ever to be at —— again.

'All that is wanting at ——, and, indeed, in all parishes purely agricultural, is a Sunday-school. Mr P—— tried to establish a daily school there, but did not succeed. I don't know that you are aware that where a daily school is established, it generally brings about with it a heavy pecuniary burden upon the clergyman; subscriptions, although ample at first, yearly fall off, are badly paid, and by degrees discontinued, until the whole charge, or nearly so, falls upon the minister; and then the school is necessarily discontinued. Such has been the fate of many of the parish schools in Bucks; and such, very recently, of one in Kent, the rector of the parish declining, on account of the charge upon him (as by letters he informs me), to superintend it any longer.

'You may suppose that, in the state in which I am, I do not see any one except upon business of a most urgent nature.—Your most obedient servant,

J. Camden Neild.'

Mr Neild's ordinary answer to all applications for charitable contributions was a refusal; but in some few instances it was otherwise. He once, but only once, gave a pound for the Sunday-school at North Marston; he contributed £5 or £10 towards building a school at Aton Clinton, Bucks; he sent £50 to the Culham Training College; he was an annual subscriber to the London Asylum for the Blind; and he promised £300 towards the building of an infirmary for Buckinghamshire, but withheld it from an objection to the site. Thus it appears that Mr Neild, as a miser, did not quite reach the perfection of the character which we see displayed in Dancer, Elwes, and other examples of this deplorable kind of eccentricity. Neither was it true of him, as said in various obituary notices, that his mind had no intellectuality—that nature had no beauty or endearments for him—that he was 'a frigid, spiritless specimen of humanity.' Mr Neild, in reality, possessed considerable knowledge of legal and general literature; and, despite his narrow-mindedness on the subject of money, he retained to the last a love for the ancient classics, and enjoyed poetical pathos and elegant phraseology, both in ancient and modern authors. So late as the year 1849, the writer of this notice received from him a letter containing a Latin inscription, with his own comments on it, fully evincing his knowledge of the language, and his taste for refined and elegant diction, and even pointing out the exquisite tenderness of one idea, and the well-chosen words used to express it. Although he might not duly appreciate works of art or the beauties of nature, yet he was not blind to their charms, nor altogether devoid of a certain regard for them. There is one anecdote which, if true, as there is reason to believe it is, presents a pleasing contrast to his general character. It is said that, finding the son of one of his tenants an exceedingly clever boy, he persuaded his father to bring him up for one of the learned professions, and paid himself, either wholly or in part, the expenses of his school and college education. That boy became a

distinguished scholar, and a dignitary in the Church of England.

In February 1850, Mr Neild became subject to a very painful disorder, from which he suffered more or less to the end of his life. After that event, among those who were aware of his wealth, his will necessarily came to light, and great was the sensation which it occasioned. After bequeathing a few trifling legacies to different persons, he left the whole of his vast property, which was sworn to as under £250,000, to 'Her Most Gracious Majesty, Queen Victoria, begging Her Majesty's most gracious acceptance of the same, for her sole use and benefit, and her heirs, &c.' The executors were the Keeper of the Privy Purse, for the time being; Dr Henry Tattam, archdeacon of Bedford; and Mr Stevens, of Willesborough; to each of whom he bequeathed £100. He was buried, on 16th September, in the chancel of North Marston Church—in that very chancel which he had so elaborately repaired with strips of calico. His will had excited such curiosity that, though his life had passed almost unnoticed, a large concourse of persons assembled at Chelsea to witness the removal of his body, and the church and churchyard at North Marston were crowded with wondering—not lamenting—spectators. Among them were many of his tenants, of his workmen, and of the poor of the parish in which he possessed so much property; but not a tear was shed, not a regret uttered, as his body was committed to its last resting-place. He had done nothing to excite their gratitude, to win their sympathy, or to lay them under the slightest obligation. His property had passed into other hands, and they felt it was almost impossible they could suffer by the change. The only remark heard was: 'Poor creature! had he known so much would have been spent on his funeral, he would have come down here to die to save the expense!'

After the death of Mr Neild, his will was duly proved, and the Queen was left to take undisputed possession of his property. She immediately increased Mr Neild's bequest to his executors to £1000 each; she provided for his old housekeeper, for whom he had made no provision, though she had lived with him twenty-six years; and she secured an annuity on Mrs Neal, who had frustrated Mr Neild's attempt at suicide. Her Majesty has since, in 1855, thoroughly and judiciously restored the chancel of North Marston Church, and inserted an east window of beautifully stained glass, beneath which is a reredos sculptured in Caen stone, and bearing this inscription: 'This Reredos, and the stained-glass window above it, were erected by Her Majesty Victoria (D. G. B. R. F. D.) in the eighteenth year of her reign, in memory of John Camden Neild, Esq., of this parish, who died August 30, 1852, aged 72.' The chancel, which was built by the offerings made at the shrine of Sir John Schorne, a sainted rector of the parish in the thirteenth century, is a fine specimen of the perpendicular style, at its best period. It contains sedilia, piscina, niches, &c.—all richly ornamented with elaborate sculpture, so that now, with these all carefully restored, and the addition of its elegant memorial-window, there is perhaps not a more handsome chancel to be found in any village church. The rest of the church, however, is of an earlier and a plainer style of architecture.

AUGUST 31.

St Aidan or Aedan, bishop of Lindisfarne, confessor, 651. St Cuthburge, queen of Northumbria, virgin and abbess, beginning of 8th century. St Raymund Nonnatus, confessor, 1240. St Isabel, virgin, 1270.

Born.—Caius Cæsar Caligula, Roman emperor, 12 A. D., *Antium.*

Died.—Henry V., king of England, 1422, *Vincennes, near Paris;* Etienne Pasquier, French jurist and historian, 1615, *Paris;* John Bunyan, author of the *Pilgrim's Progress*, 1688, *Snowhill, London;* Dr William Borlase, antiquary, 1772, *Ludgran, Cornwall;* F. A. Danican (Phillidor), noted for his skill in chess-playing, 1795; Dr James Currie, biographer of Burns, 1805, *Sidmouth;* Admiral Sir John Thomas Duckworth, 1817, *Devonport.*

JOHN BUNYAN.

Everybody has heard of his birth at Elstow, about a mile from Bedford, in 1628; that he was bred a tinker; that his childhood was afflicted with remorse and dreams of fiends flying away with him; that, as he grew up, he 'danced, rang church-bells, played at tip-cat, and read *Sir Bevis of Southampton*,' for which he suffered many stings of conscience; that his indulgence in profanity was such, that a woman of loose character told him 'he was the ungodliest fellow for swearing she had ever heard in all her life,' and that 'he made her tremble to hear him;' that he entered the Parliamentary army, and served against the king in the decisive campaign of 1645; that, after terrible mental conflicts, he became converted, a Baptist, and a preacher; that at the Restoration in 1660 he was cast into Bedford jail, where, with intervals of precarious liberty, he remained for twelve years, refusing to be set at large on the condition of silence, with the brave answer: 'If you let me out to-day, I'll preach again to-morrow;' that, on his release, the fame of his writings, and his ability as a speaker, drew about him large audiences in London and elsewhere, and that, a few months before the Revolution of 1688, he caught a fever in consequence of a long ride from Reading in the rain, and died at the house of his friend, Mr Strudwick, a grocer at the sign of the Star, on Snowhill, London.

Bunyan was buried in Bunhill Fields, called by Southey, 'the Campo Santo of the Dissenters.' There sleep Dr John Owen and Dr Thomas Goodwin, Cromwell's preachers; George Fox, the Quaker; Daniel Defoe, Dr Isaac Watts, Susannah Wesley, the mother of the Wesleys; Ritson, the antiquary; William Blake, the visionary poet and painter; Thomas Stothard, and a host of others of greater or lesser fame in their separate sects. A monument, with a recumbent statue of Bunyan, was erected over his grave in 1862.

'It is a significant fact,' observes Macaulay, 'that, till a recent period, all the numerous editions of the *Pilgrim's Progress* were evidently meant for the cottage and the servants' hall. The paper, the printing, the plates were of the meanest description. In general, when the educated minority differs [with the uneducated majority] about the merit of a book, the opinion of the educated minority finally prevails. The *Pilgrim's Progress* is perhaps the only book about which, after the lapse of a

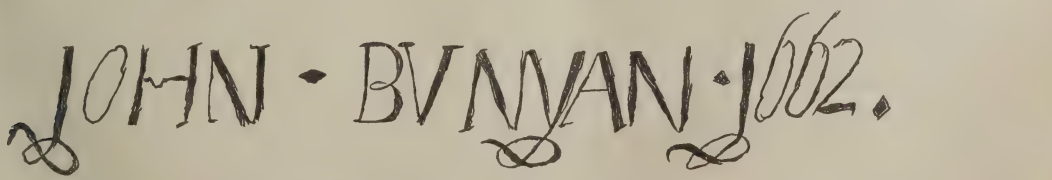
hundred years, the educated minority has come over to the opinion of the common people.'

The literary history of the *Pilgrim's Progress* is indeed remarkable. It attained quick popularity. The first edition was 'Printed for Nath. Ponder, at the Peacock in the Poultry, 1678,' and before the year closed a second edition was called for. In the four following years it was reprinted six times. The eighth edition, which contains the last improvements made by the author, was published in 1682, the ninth in 1684, the tenth in 1685. In Scotland and the colonies, it was even more popular than in England. Bunyan tells that in New England his dream was the daily subject of conversation of thousands, and was thought worthy to appear in the most superb binding. It had numerous admirers, too, in Holland and among the Huguenots in France. Envy started the rumour that Bunyan did not, or could not have written the book, to which, 'with scorn to tell a lie,' he answered:

'It came from mine own heart, so to my head,
And thence into my fingers trickled;
Then to my pen, from whence immediately
On paper I did dribble it daintily.
Manner and matter too was all mine own,
Nor was it unto any mortal known,
Till I had done it. Nor did any then
By books, by wits, by tongues, or hand, or pen,
Add five words to it, or write half a line
Thereof: the whole and every whit is mine.'

Yet the favour and enormous circulation of the *Pilgrim's Progress* was limited to those who read for religious edification and made no pretence to critical tastes. When the *literati* spoke of the book, it was usually with contempt. Swift observes in his *Letter to a Young Divine:* 'I have been better entertained and more informed by a few pages in the *Pilgrim's Progress* than by a long discourse upon the will and intellect, and simple and complex ideas;' but we apprehend the remark was designed rather to depreciate metaphysics than to exalt Bunyan. Young, of the *Night Thoughts*, coupled Bunyan's prose with D'Urfey's doggerel, and in the *Spiritual Quixote* the adventures of Christian are classed with those of Jack the Giant Killer and John Hickathrift. But the most curious evidence of the rank assigned to Bunyan in the eighteenth century appears in Cowper's couplet, written so late as 1782:

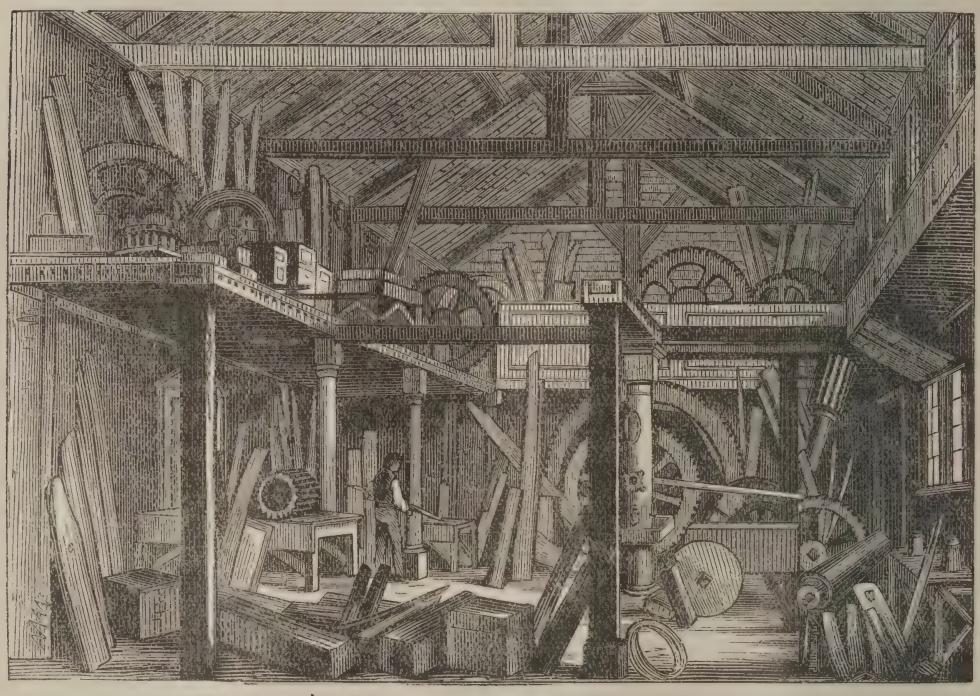
'I name thee not, lest so despised a name
Should move a sneer at thy deserved fame.'



It was only with the growth of purer and more Catholic principles of criticism towards the close of the last century and the beginning of the present, that the popular verdict was affirmed and the *Pilgrim's Progress* registered among the choicest English classics. Almost every year there now appears one or more beautiful editions of the *Pilgrim*. Ancient editions are sought for with eager rivalry by collectors; but, until 1886, only one perfect copy of the first edition of 1678 was known to be extant. Originally published for a shilling, this rare edition was bought in its old sheep-skin cover, for twenty guineas. Two copies changed hands in 1886; one was added to the Library of the British Museum at the price of £65; the other was sold for £25. A fac-simile reprint of the first edition was published in 1875, and a statue to its author was unveiled at Bedford in 1874.

A curious anecdote of Bunyan appeared in the *Morning Advertiser* a few years ago. To pass away the gloomy hours in prison, Bunyan took a rail out of the stool belonging to his cell, and, with his knife, fashioned it into a flute. The keeper, hearing music, followed the sound to Bunyan's cell; but, while they were unlocking the door, the ingenious prisoner replaced the rail in the stool, so that the searchers were unable to solve the mystery; nor, during the remainder of Bunyan's residence in the jail, did they ever discover how the music had been produced.

In an old account of Bedford, there is an equally good anecdote, to the effect that a Quaker called upon Bunyan in jail one day, with what he professed to be a message from the Lord. 'After searching for thee,' said he, 'in half the jails of England, I am glad to have found thee at last.'



'If the Lord sent thee,' said Bunyan sarcastically, 'you would not have needed to take so much trouble to find me out, for He knows that I have been in Bedford jail these seven years past.'

AUTOGRAPH OF BUNYAN, FROM A BOOK.

The portrait of Bunyan represents a robust man, with a large well-formed head, of massive but not unhandsome features, and a profusion of dark hair falling in curls upon his shoulders. The head is well carried, and the expression of the face open and manly—altogether a prepossessing, honest-looking man.

In an obscure part of the borough of Southwark —in Zoar Street, Gravel Lane—there is an old dissenting meeting-house, now used as a carpenter's shop, which tradition affirms to have been occupied by John Bunyan for worship. It is known to have been erected a short while before the Revolution, by a few earnest Protestant Christians, as a means of counteracting a Catholic school which had been established in the neighbourhood under the auspices of James II. But Bunyan may have once or twice

BUNYAN'S MEETING-HOUSE, ZOAR STREET, SOUTHWARK.

or occasionally preached in it during the year preceding his death. From respect for the name of the illustrious Nonconformist, we have had a view taken of the interior of the chapel in its present state.

PHILLIDOR. THE CHESS-PLAYER.

Phillidor is known, in the present day, not under his real name, but under one voluntarily assumed; and not for the studies to which he devoted most time and thought, but for a special and exceptional talent. François André Danican, born at Dreux, in France, in 1726, was in his youth one of the pages to Louis XIV., and was educated as a court-musician. He composed a motet for the Royal Chapel at the early age of fifteen. Having by some means lost the sunshine of regal favour, he earned a living chiefly by teaching music, filling up vacant time as a music-copyist for the theatres and concerts, and occasionally as a composer. He composed music to Dryden's *Alexander's Feast;* in 1754, he composed a *Lauda Jerusalem* for the chapel at Versailles; in 1759, an operetta called *Blaise le Savetier;* and then followed, in subsequent years, *Le Maréchal-ferrant*, *Le Sorcier*, *Ernelinde*, *Persée*, *Thémistoclée*, *Alceste*, and many other operas—the whole of which are now forgotten.

Danican, or—to give the name by which he was generally known—Phillidor, lives in fame through his chess-playing, not his music. When quite a young man, an intense love of chess seized him; and at one time he entertained a hope of adding to his income by exhibiting his chess-playing powers, and giving instructions in the game. With this view he visited Holland, Germany, and England. While in England, in 1749, he published his *Analyse des Echecs*—a work which has taken its place among the classics of chess. During five or six years of residence in London, his remarkable play attracted much attention. Forty years passed over his head, marked by many vicissitudes as a chess-player as well as a composer, when the French Revolution drove him again to England, where he died on the 31st August 1795. The art of playing chess *blindfold* was one by which Phillidor greatly astonished his contemporaries, though he was not the first to do it. Buzecca, in 1266, played three games at once, looking at one board, but not at the other two; all three of his competitors were skilful players; and his winning of two games, and drawing a third, naturally excited much astonishment. Ruy Lopez, Mangiolini, Terone, Medrano, Leonardi da Cutis, Paoli Boi, Salvio, and others who lived between the thirteenth and the seventeenth centuries, were also able to play at chess without seeing the board. Father Sacchieri, who was professor of mathematics at Pavia early in the last century, could play three games at once against three players, without seeing any of the boards. Many of these exploits were not well known until recently; and, on that account, Phillidor was

regarded as a prodigy. While yet a youth, he used to play imaginary games of chess as he lay awake in bed. His first real game of this kind he won of a French abbé. He afterwards became so skilful in this special knack, that he could play nearly as well without as with seeing the board, even when playing two games at once. Forty years of wear and tear did not deprive him of this faculty; for when in England, in 1783, he competed blindfold against three of the best players then living, Count Bruhl, Baron Maseres, and Mr Bowdler: winning two of the games and drawing the third. On another occasion he did the same thing, even giving the odds of 'the pawn and move' (as it is called) to one of his antagonists. What surprised the lookers-on most was, that Phillidor could keep up a lively conversation during these severe labours. Phillidor's achievement has been far outdone in recent years by Morphy, Paulsen, and Blackburne, in respect to the number of games played at once; but the lively Frenchman carried off the palm as a gossip and a player at the same time.

DREAD OF SCOTCH COMPETITION :

SCOTCH NON-TRADING LEAGUE AGAINST ENGLAND.

On this day, in 1527, is dated the 'ordinary' of the corporation of weavers in Newcastle, in which, amongst other regulations, there is a strict one that no member should take a Scotsman to apprentice, or set any of that nation to work, under a penalty of forty shillings. To call a brother, 'Scot' or 'mansworn,' inferred a forfeit of 6*s.* 8*d.*, 'without any forgiveness.'—Brand's *Hist. of Newcastle.*

The superior ability of the Scottish nation, in the competitions of life, seems to have made an unusual impression on their Newcastle neighbours. To be serious—we can fortunately shew our freedom from national partiality by following up the above with an example of the like illiberality on the part of Scotland towards England. It consists of a sort of covenant entered into in the year 1752 by the drapers, mercers, milliners, &c., of Edinburgh, to cease dealing with commercial travellers from England—what were then called English Riders. 'Considering'—so runs the language of this document—'that the giving orders or commissions to English Riders (or clerks to English merchants), when they come to this city, tends greatly to the destruction of the wonted wholesale trade thereof, from which most of the towns in Scotland used to be furnished with goods, and that some of these English Riders not only enhances the said wholesale trade, but also corresponds with, and sells goods to private families and persons, at the same prices and rates as if to us in a wholesale way, and that their frequent journeys to this place are attended with high charges, which consequently must be laid on the cost of those goods we buy from them, and that we can be as well served in goods by a written commission by post (as little or no regard is had by them to the patterns or colours of goods which we order them to send when they are here), therefore, and *for the promoting of trade,* we hereby voluntarily bind and oblige ourselves that, in no time coming, we shall give any personal order or commission for any goods we deal in to any English dealer, clerk, or rider whatever who shall come to Scotland.' They add an obligation to have no dealings 'with any people in England who shall make a practice of coming themselves or sending clerks or riders into Scotland.' The penalty was to be two pounds two shillings for every breach of the obligations.

This covenant was drawn out on a good sheet of vellum bearing a stamp, and which was to be duly registered, in order to give it validity at law against the obligants in case of infraction. It bears one hundred and fifty-four signatures, partly of men, generally in good and partly of women in bad holograph.* It is endorsed, 'Resolution and Agreement of the Merchants of Edinburgh for Discouraging English Riders from Coming into Scotland.'

This strange covenant, as it appears to us, seems to have made some noise, for, several months after its date, the following paragraph regarding it appeared in an English newspaper: 'We hear from Scotland, that the trading people throughout that kingdom have agreed, by a general association, not to give any orders for the future to any English riders that may be sent among them by the English tradesmen. This resolution is owing to the unfair behaviour of the itinerants, whose constant practice it is to undermine and undersell each other, without procuring any benefit to the trading interest of the nation in general, by such behaviour; which, on the contrary, only tends to unsettle the course of business and destroy that connection and good understanding between people, who had better not deal together at all, than not do it with spirit and mutual confidence. It is said also that several towns in England have already copied this example.'—*London Daily Advertiser,* January 27, 1753.

* Amongst the male signatures are those of James Lindsay, Cleghorn and Livingston, David Inglis, Edward Caithness, Patrick Inglis, Hugh Hamilton, Adam Anderson, Murray and Lindsay, George Dunsmure, George Pitcairne, James Beveridge, Bertram and Williamson, Alexander Hepburn, Arbuthnott and Scott, James Stirling, Thomas Trotter, Junr., William Clapperton, Archibald Bowie, James Allan, William Burn, Nicol Swan, Archibald M'Coull, John Hope, Stuart and Wallace, Walter Hamilton, John Grieve, Oliver Tod. Several of these were wealthy citizens; some became magistrates. Amongst the female names are those of Katherine Ramsay and sisters, Peg Bowie, Betty Murray, Christy Balfour, and many others thus familiarly expressed. The Misses Ramsay were milliners of great business, who ultimately realised some wealth, and built a handsome suburban villa, in which to spend their latter days.

Next him September marched eke on foot,
  Yet was he hoary, laden with the spoil
Of harvest riches, which he made his boot,
  And him enriched with bounty of the soil;
  In his one hand, as fit for harvest's toil,
He held a knife-hook; and in th' other hand
  A pair of weights, with which he did assoil
Both more and less, where it in doubt did stand,
And equal gave to each as justice duly scanned.

SPENSER.

(DESCRIPTIVE.)

SEPTEMBER FAR inland, within sight of our wave-washed shores, along the margins of our pleasant rivers, in level meadows and sinking valleys, on gentle uplands and sloping hill-sides, there is now a busy movement, for men and maidens are out, with their bended sickles, to gather in the golden harvest. The village streets are comparatively silent. Scores of cottages are shut up—one old woman perhaps only left to look after the whole row—for even the children have gone to glean, and many of the village artizans find it pleasant to quit their usual employment for a few days, and go out to reap the corn. There will be no getting a coat mended or a shoe cobbled for days to come. If there is a stir of life in the village street, those who move along are either coming from or going to the reapers, bringing back empty bottles and baskets, or carrying them filled with ale and provisions. A delicate Cockney, who can only eat the lean of his overdone mutton-chop, with the aid of pickles, would stand aghast at the great cold dinner spread

out for the farmer and his house-servants—men, each with the appetite of three, and maidens who can eat meat that is all fat. Pounds of fat beef, bacon, and ham, great wedges of cheese, cold apple-pies, with crusts two inches thick, huge brown loaves, lumps of butter, and a continually gurgling ale, are the viands which a well-to-do farmer places before his servants, and shares with them, for he argues, he cannot expect to get the proper quantity of work out of them unless they live well. To get his harvest in quick, while the weather is fine, is the study of the great corn-grower; and such a far-seeing man scarcely gives the cost a consideration, for he knows that those who delay will, if the weather changes, be ready to pay almost any price for reapers; so he gets in his corn 'while the sun shines.' If well got in, what a price it will fetch in the market, compared with that which was left out in the rain, until it became discoloured and sprouted! And as he points to his ricks with pride, he asks what's the value of the extra bullock, the pig or two, and the few barrels of ale the reapers consumed, compared to such a crop as that; and he is right. It is an anxious time for the farmer. He is continually looking at his weather-glass, and watching those out-of-door signs which denote a change in the weather, and which none are better acquainted with than those who pass so much of their life in the fields. Unlike the manufacturer, who carries on his business indoors whatever the changes of the season may be, the farmer is dependent on the weather for the safety of his crop, and can never say what that will be, no matter how beautiful it may look while standing, until it is safely garnered. Somehow he seems to live nearer to God than the busy indwellers of cities, for he puts his trust in Him who has promised that He will always send 'seed-time and harvest.'

How gracefully a good reaper handles his sickle, and clutches the corn—one sweep, and the whole armful is down, and laid so neat and level, that when the band is put round the sheaf, the bottom of almost every straw touches the ground when it is reared up, and the ears look as level as they did while growing! It is a nice art to make those corn-bands well, which bind the sheaves—to twist the ears of corn so that they shall all cluster together without shaking out the grain, and then to tie up the sheaves, so round and plump, that they may be rolled over, when stacking or loading, without hardly a head becoming loose. There are rich morsels of colour about the cornfield where the reapers are at work. The handkerchiefs which they bind around their foreheads, to keep off the sun—the white of their shirt-sleeves, making spots of light amid the yellow corn—the gleaners in costumes of every hue, blue, red, and gray, stooping or standing here and there, near the overhanging trees in the hedgerows—make such a diversity of colour as please the eye, while the great blue heaven spans over all, and a few loose silver clouds float gently over the scene. In such a light, the white horses seem cut out of silver, the chestnuts of ruddy gold, while the black horses stand out against the sky, as if cut in black marble. What great gaps half-a-dozen reapers soon make in the standing corn! Half-an-hour ago, where the eye dwelt on a broad furrow of upstanding ears, there is now a low road of stubble, where trails of the ground-convolvulus may be seen, and the cyanus of every hue, which the country children call corn-flowers. Pretty is it, too, to see the little children gleaning, each with a rough bag or pocket before it, and a pair of old scissors dangling by its side, to cut off the straw, for only the ears are to be placed in the gleaner's little bag. Then there is the large poke, under the hedge, into which their mother empties the tiny glean-bags, and that by night will be filled, and a heavy load it is for the poor woman to carry home on her head, for a mile or two, while the little ones trot along by her side, the largest perhaps carrying a small sheaf, which she has gleaned, and from which the straw has not been cut, while the ears hang down and mingle with her flowing hair. A good, kind-hearted farmer will, like Boaz of old, when he spoke kindly to pretty Ruth, let his poor neighbours glean 'even amongst the sheaves.' The dry hard stubble, amid which they glean, cuts the bare legs and naked arms of the poor children like wires, making them as rough at times as fresh-plucked geese. Rare gleaning there is where the 'stooks' have stood, when the wagons come to 'lead' the corn out of the field. The men stick the sheaves on their forks as fast as you can count them, throw them into the wagon, then move on to the next 'stook'—each of which consists of eight or ten sheaves—then there is a rush and scramble to the spot that is just cleared, for there the great ears of loose and fallen corn lie thick and close together, and that is the richest gleaning harvest yields.

Who has not paused to see the high-piled wagons come rocking over the furrowed fields, and sweeping through the green lanes, at the leading-home of harvest? All the village turns out to see the last load carried into the rick-yard; the toothless old grandmother, in spectacles, stands at her cottage-door; the poor old labourer, who has been long ailing, and who will never more help to reap the harvest, leans on his stick in the sunshine; while the feeble huzzas of the children mingle with the deep-chested cheers of the men, and the silvery ring of maiden-voices—all welcoming home the last load with cheery voices, especially where the farmer is respected, and has allowed his poor neighbours to glean. Some are mounted on the sheaves, and one sheaf is often decorated with flowers and ribbons, the last that was in the field; and sometime a pretty girl sits sideways on one of the great fat horses, her straw-hat ornamented with flowers and ears of corn. Right proud she is when hailed by the rustics as the Harvest Queen! Then there are the farmer, his wife, and daughters, all standing and smiling at the open gate of the stack-yard; and proud is the driver as he cocks his hat aside, and giving the horses a slight touch, sends the last load with a sweep into the yard, that almost makes you feel afraid it will topple over, so much does it rock coming in at this grand finish. Rare gleaning is there, too, for the birds, and many a little animal, in the long lanes through which the wagons have passed during the harvest, for almost every overhanging branch has taken toll from the loads, while the hawthorn-hedges have swept over them like rakes. The long-tailed field-mouse will carry off many an ear to add to his winter-store, and stow away in his snug nest under the embankment. What grand subjects, mellowed by the setting suns of departed centuries, do these harvest-fields bring before a picture-loving eye!

Abraham among his reapers—Isaac musing in the fields at even-tide—Jacob labouring to win Rachel—Joseph and the great granaries of Egypt—Ruth

'Standing in tears among the alien corn'—

and the harvests of Palestine, amid which our Saviour walked by the side of His disciples. All these scenes pass before a meditative mind while gazing over the harvest-field, filled with busy reapers and gleaners, and we think how, thousands of years ago, the same picture was seen by the patriarchs, and that Ruth herself may have led David by the hand, while yet a child, through the very fields in which she herself had gleaned. But the frames in which these old pictures were placed were not carved into such beautiful park-like scenery and green pastoral spots as we see in England, for there the harvest-fields were hemmed in by rocky hills, and engirded with deserts, where few trees waved, and the villages lay far and wide apart. And, instead of the sound of the thrasher's flail, oxen went treading their weary round to trample out the corn, which in spring shot up in green circles where they had trodden.

Winged seeds now ride upon the air, like insects, many of them balanced like balloons, the broad top uppermost, and armed with hooked grapnels, which take fast hold of whatever they alight upon. We see the net-work of the spider suspended from leaf to branch, which in the early morning is hung with rounded crystals, for such seem the glittering dew-drops as they catch the light of the rising sun. The hawthorn-berries begin to shew red in the hedges, and we see scarlet heps where, a few weeks ago, the clustering wild-roses bloomed. Here and there, in sunny places, the bramble-berries have began to blacken, though many yet wear a crude red, while some are green, nor is it unusual, in a mild September, to see a few of the satin-like bramble blossoms, putting out here and there, amid a profusion of berries. The bee seems to move wearily from flower to flower, for they lie wider asunder now than they did a month ago, and the little hillocks covered with wild-thyme, which he scarcely deigned to notice then, he now gladly alights upon, and revels amid the tiny sprigs of lavender-coloured bloom. The spotted wood-leopard moth may still be seen, and the goat-moth, whose larva is called the oak-piercer, and sometimes the splendid tiger-moth comes sailing by on Tyrian wings, that fairly dazzle the eye with their beauty. But at no season of the year are the sunsets so beautiful as now; and many who have travelled far say, that nowhere in the world do the clouds hang in such gaudy colours of ruby and gold, about the western sky, as they do in England during autumn, and that these rich effects are produced through our being surrounded by the sea. Nor is sunrise less beautiful een from the summit of some hill, while the valleys are still covered with a white mist. The tops of the trees seem at first to rise above a country that is flooded, while the church-spire appears like some sea-mark, heaving out of the mist. Then comes a great wedge-like beam of gold, cutting deep down into the hollows, shewing the stems of the trees, and the roofs of cottages, gilding barn and outhouse, making a golden road through a land of white mist, which seems to rise on either hand, like the sea which Moses divided for the people of Israel to pass through dryshod. The dew-drops on the sun-lighted summit the feet rest upon are coloured like precious stones of every dye, and every blade of grass is beaded with these gorgeous gems. Sometimes the autumnal mists do not rise more than four or five feet above the earth, revealing only the heads of horse and rider, who seem to move up as if breasting a river, while the shepherd and milkmaid shew like floating busts. The following word-painting was made in the early sunrise, while we were wanderers, many long years ago:

On the far sky leans the old ruined mill;
Through its rent sails the broken sunbeams glow;
Gilding the trees that belt the lower hill,
And the old oaks which on its summit grow;
Only the reedy marsh that sleeps below,
With its dwarf bushes is concealed from view;
And now a straggling thorn its head doth shew,
Another half shakes off the misty blue
Just where the smoky gold streams through the heavy dew.

And there the hidden river lingering dreams,
You scarce can see the banks that round it lie;
That withered trunk, a tree, or shepherd seems,
Just as the light or fancy strikes the eye.
Even the very sheep which graze hard by,
So blend their fleeces with the misty haze,
They look like clouds shook from the cold gray sky
Ere morning o'er the unsunned hill did blaze—
The vision fades as they move further off to graze.

We have often fancied that deer never look so beautiful, as when in autumn they move about, or couch amid the rich russet-coloured fern—when there is a blue atmosphere in the distance, and the trees scattered around are of many changing hues. There is a majesty in the movements of these graceful animals, both in the manner of their walk, and the way they carry their heads, crowned with picturesque antlers. Then they are so particular in their choice of pasture, refusing to eat where the verdure is rank or trampled down, also feeding very slowly, and when satisfied, lying down to chew the cud at their ease. Their eyes are also very beautiful, having a sparkling softness about them like the eyes of a woman, while the senses of sight, smelling, and hearing are more perfect than that of the generality of quadrupeds. Watch their attitude while listening! that raised head, and those erect ears, catch sounds so distant that they would not be within our own hearing, were we half a mile nearer the sound from the spot where the herd is feeding.

Beautiful are the fern and heath covered wastes in September—with their bushes bearing wild-fruits, sloe, and bullace, and crab; and where one may lie hidden for hours, watching how beast, bird, and insect pass their time away, and what they do in these solitudes. In such spots, we have seen great gorse-bushes in bloom, high as the head of a mounted horseman; impenetrable places where the bramble and the sloe had become entangled with the furze and the branches of stunted hawthorns, that had never been able to grow clear of the wild waste of underwood—spots where the boldest hunter is compelled to draw in his rein, and leave the hounds to work their way through the tangled maze. Many of these hawthorns were old and gray, and looked as if some giant hand had twisted a dozen iron stems into one, and left them to grow and harden

together in ridges, and knots, and coils, that looked like the relics of some older world—peopled with other creations than those the eye now dwells upon. Some few such spots we yet know in England, of which no record can be found that they were ever cultivated. And over these bowery hollows, and this dense underwood, giant oaks threw their arms so far out, that we marvelled how the hoary trunks, which were often hollow, could bear such weights without other support than the bole from which they sprang—shewing a strength which the builder man, with all his devices, is unable to imitate. Others there were—gnarled, hoary trunks—which, undated centuries ago, the bolt had blackened, and the lightning burned, so monstrous that they took several men, joined hand-to-hand, to girth them, yet still they sent out a few green leaves from their branchless tops, like aged ruins whose summits the ivy often covers. And in these haunts the red fox sheltered, and the gray badger had its home, and there the wild-cat might sometimes be seen glaring like a tiger, through the branches, on the invader of its solitude. It seemed like a spot in which vegetation had struggled for the mastery for ages, and where the tall trees having overtopped the assailing underwood, were hemmed in every way, and besieged until they perished from the rank growth below. But every here and there were sunny spots, and open glades, where the turf rose elastic from the tread, and great green walls of hazel shot up more like trees than shrubs. There were no such nuts to be found anywhere as on these aged hazels, which, when ripe, we could shake out of their husks, or cups—nothing to be found in our planted Nutteries so firm and sweet as those grown in this wildwood, and Nutting-Day is still kept up as a rural holiday in September in many parts of England, in the neighbourhood of merry greenwoods. Towards the end of the month, old and young, maidens and their sweethearts, generally accompanied by a troop of happy boys and girls, sally out with bags and crooks, bottles and baskets, containing drink and food, pipes and tobacco for the old people, and all that is required for a rough rustic repast 'all under the greenwood tree.' One great feature of this old rural merry-making, is their going out in their very homeliest attire, and many there were who had worn the same nutting-dress for years. Old Royster's leather-shorts had been the heirloom of two generations, and when last we heard of them, were still able to bid defiance to brake or brier. A fashionable picnic is shorn of all that heart-happiness which is enjoyed by homely country-people, for, in the former, people are afraid of appearing natural. Pretty country girls were not called 'young ladies' at these rural holidays, but by their sweet-sounding Christian names; and oh what music there is in Mary' compared with 'Miss!' What merry laughter have we heard ringing through those old woods, as some pretty maiden was uplifted by her sweetheart to reach the ripe cluster of nuts which hung on the topmost bough, where they had been browned by the sun, when, overbalancing himself, they came down among the soft wood-grass, to the great merriment of every beholder! Some were sure to get lost, and there was such shouting and hallooing as awakened every echo, and sent the white owls sailing half asleep in search of some quieter nook, where they could finish their nap in peace.

Then what a beautiful banquet-hall they find in some open sunny spot, surrounded with hazels, and overtopped by tall trees, where the golden rays, shining through the leaves, throw a warm mellow light on all around! Nothing throws out smoother or more beautifully coloured branches than the hazel, the bark of which shines as if it had been polished. And who has not admired its graceful catkins in spring, that droop and wave like elegant laburnums, and are seen long before its leaves appear? Nor does autumn, amid all its rich coloured foliage, shew a more beautiful object than a golden hued hazel-copse, which remains in leaf later than many of the trees. When this clear yellow tint of the leaves is seen, the nuts are ripe, and never before—one shake at a branch, and down they come rattling out of their cups by scores—real 'brown sheelers,' as they are called by country-people. Wood-nuts gathered at the end of September or the beginning of October, have the true 'nutty' flavour, which is never tasted if they are gathered before. These wild-nuts are seldom found 'hollow'—so they are called when the kernel is eaten by the white grub, the egg of which was laid while the nut was in a soft state early in summer. And unless this grub has eaten its way out, and left visible the hole by which it escaped, we have never yet been able to discover what part of the shell the fly pierced when depositing its egg. This grub is still a puzzle, nor do we remember to have ever seen its re-appearance as a perfect weevil in spring, though we have often looked on while letting itself down from the nut by the thread it had spun after escaping from the shell. How long it remains in the earth is not at present known; nor is there a certainty that the grub buries itself in the earth at all while in a state of pupa, though it must find something to feed on somewhere before reaching a state of imago, some imagine, unless it obtain nourishment enough in the kernel it had eaten, prior to undergoing this later change. This, we believe, is a nut which none of our many clever naturalists have yet cracked to their own satisfaction.

(HISTORICAL.)

When the year began in March, this was the seventh of its months; consequently, was properly termed September. By the commencement of the year two months earlier, the name is now become inappropriate, as is likewise the case with its three followers—October, November, and December. When Julius Cæsar reformed the calendar, he gave this month a 31st day, which Augustus subsequently took from it; and so it has since remained. Our Saxon ancestors called it *Gerst monat*, or barley-month, because they then realised this crop; one of unusual importance to them, on account of the favourite beverage which they brewed from it.

On the 23d, the sun enters the constellation *Libra*, and passes to the southward of the equator, thus producing the autumnal equinox; a period usually followed by a course of stormy weather. September, however, is often with us a month of steady and pleasant weather, notwithstanding that in the mornings and evenings the first chills of winter begin to be felt. On the 1st of the month, at London, the sun is up 12h 28m, and on the 30th, 11h 38m.

First of September.

Saints Felix, Donatus, Arontius, Honoratus, Fortunatus, Sabinianus, Septimius, Januarius, Felix, Vitalis, Satyrus, and Repositus, twelve brothers, martyrs at Benevento, in Italy. St Firminus II. bishop and confessor, 4th century. St Lupus or Lew, archbishop of Sens, confessor, about 623. St Giles, abbot, about 700.

ST GILES.

Giles or Ægidius, a very eminent saint of the seventh century, is believed to have been a Greek who migrated to France under the influence of a desire of greater retirement than he could enjoy in his own country. Settling in a hermitage, first in one of the deserts near the mouth of the Rhone, finally in a forest in the diocese of Nismes, he gave himself to solitude and heavenly contemplation with such entire devotion of spirit as raised him to the highest reputation. There is a romantic story of his being partly indebted for his subsistence to a Heaven-directed hind, which came daily to give him its milk; and it is added that his retirement was discovered by the king of the country, who, starting this animal in the chase, followed it till it took refuge at the feet of the holy anchorite. In time, admitting disciples, St Giles became, almost against his own will, the head of a little monastic establishment, which in time grew to be a regular Benedictine monastery, and was surrounded by a town taking its name from the saint.

Veneration for St Giles caused many churches to be dedicated to him in various countries. In reference to a legend of his having once refused to be cured of lameness, the better to mortify in him all fleshly appetites, he became, as it were, the patron saint of cripples. It was customary that Giles's Church should be on the outskirts of a town, on one of the great thoroughfares leading into it, in order that cripples might the more conveniently come to and cluster around it. We have a memorial of this association of facts in the interesting old church of *St Giles, Cripplegate*, in the eastern part of the city of London. So early as 1101, Matilda, the queen of Henry I., founded a hospital for lepers at another inlet of the metropolis, where now exists the modern church of St Giles-in-the-Fields. From an early, but unascertained time, the parish church of Edinburgh was dedicated to this French saint. After it had been undergoing gradual extension and improvement for ages, one William Preston of Gorton, travelling in France, succeeded, with great pains and expense, in obtaining a most holy relic—an arm-bone of St Giles—and brought it home to Scotland, to be placed for perpetuity in St Giles's Church. The municipality, in gratitude, allowed him to raise an aisle in the church, and granted that he and his successors should have the privilege of carrying the bone in all processions. It is curious to trace such past matters amidst a state of things now so different. So lately as 1556, the Dean of Guild of Edinburgh expended 12*d.* in 'mending and polishing Saint Geles arme.' A great change was at that very time impending. When the time for the annual procession of St Giles came about in 1558 (1st September), the populace were found to have stolen the wooden image of the saint, usually carried on those occasions, and to have ignominiously burned it. An attempt was made to effect the procession in the usual style with a borrowed image; but the proceedings were interrupted by a riot, and after that time we hear no more of any religious rites connected with St Giles in Scotland. How difficult it is, however, altogether to eradicate anything religious that has ever once taken root in a country! There, to this day, on one side of the coat-armorial of the city of Edinburgh, you see figuring as a supporter, the hind which ancient legend represents as nurturing the holy anchorite in the forests of Languedoc twelve hundred years ago.

Born.—Edward Alleyn, founder of Dulwich College, 1566, *London;* Margaret, Countess of Blessington, novelist, 1789, *Knockbrit, near Clonmel.*

Died.—Pope Adrian IV., 1159; Dr Henry More, theologian and philosopher, 1687, *Cambridge;* Louis XIV. of France, 1715, *Versailles;* Eusebius Renaudot, oriental scholar, 1720, *Paris;* Sir Richard Steele, essayist and dramatist, 1729, *Llangunnor, near Caermarthen;* Dr Maurice Greene, ecclesiastical composer, 1755; John Ireland, dean of Westminster, theological writer, 1842; William Yarrell, distinguished naturalist, 1856, *Yarmouth.*

LAST MOMENTS OF A GREAT KING.

Louis XIV. had reigned over France for seventy-two years. He had been allowed to assume power beyond his predecessors; he had been idolised to a degree unknown to any other European sovereign. His wars, though latterly unfortunate, had greatly contributed to raise him in the eyes of his subjects. He had enlarged his dominions, and planted a grandson on the throne of Spain. As specially *Le Grand Monarque* amongst all contemporary sovereigns, he was viewed even by neighbouring nations as a being somewhat superior to common humanity. It becomes curious to see how such a demi-god could die.

Up to the 23d of August 1715, Louis was able to attend council and transact business; for two days more, he could listen to music and converse with his courtiers. About seven in the evening of the 25th, the musicians came as usual to entertain him; but he felt himself too unwell to receive them, and his medical advisers were called instead. It was seen that his hour was approaching, and the last offices of religion were that night administered to him.

Next day, after mass, he called to his bedside the cardinals De Rohan and De Billi, in presence of Madame de Maintenon (his wife), the Father

Tellier, the chancellor, and other officers, and said to them: 'I die in the faith and submission of the church. I am not instructed in the matters which trouble her, but have followed your counsels, and uniformly done what you desired. If I have done amiss, you will be answerable before God, who is now my witness.' [What awfully wrong things *were* done!] The two cardinals made no other answer than by eulogiums on his conduct: he was destined to be flattered to the last moment of his life.

Immediately after, the king said: 'I again take God to witness that I have never borne hatred to the Cardinal de Noailles; I have always been distressed by what I have done against him; but it was what they told me I ought to do.' Thereupon, Blouin, Fagon, and Mareschal asked in elevated tones: 'Will they not allow the king to see his archbishop, to mark the reconciliation?' The king, who understood them, declared that, far from having any objection, he desired it, and ordered the chancellor to make the archbishop come to him—'If these gentlemen,' he said, looking to the two cardinals, 'do not find it inconvenient.' It was a critical moment for them. To leave the conqueror of heresy to die in the arms of a heretic was a great scandal in their eyes. They withdrew into the recess of a window to deliberate with the confessor, the chancellor, and Madame de Maintenon. Tellier and Billi judged the interview too dangerous, and induced Madame de Maintenon to think so likewise; Rohan and the chancellor, having the future in view, neither opposed nor approved; all, once more approaching the bed, renewed their praises of the delicacy of the royal conscience, and told him that such a step could not but subject the good cause to the triumph of its enemies—nevertheless, they were willing to see the archbishop come, if he would give the king his promise to accept the constitution. The timid prince submitted to their advice, and the chancellor wrote in consequence to the archbishop. Noailles felt keenly this last stroke of his enemies, answered with respect, but did not accept the conditions, and could not see the king. From that time he was nothing but an ingrate and a rebel, and they spoke of him no more, in order that the king might die in peace.

The same morning, the king had the infant dauphin (his great-grandchild, subsequently Louis XV.) brought to him by the Duchess de Ventadour, and addressed him in these words: 'My child, you will soon be the sovereign of a great kingdom: what I most strongly recommend to you, is that you never forget your obligations to God; remember you owe Him all that you are. Endeavour to preserve peace with your neighbours. I have loved war too much. Do not imitate me in that, nor in my too great expenditure. Take counsel in all things; seek to know the best, that you may follow it. Relieve your people as much as you can, and do for them that which I have had the misfortune not to be able to do for them myself. Do not forget the great obligations you are under to Madame de Ventadour. For me, madam,' turning to her, 'I am sorry not to be in a condition more emphatically to mark my gratitude to you.' He ended by saying to the dauphin: 'My dear child, I give you my blessing with all my heart;' and he then embraced him twice with the greatest marks of tenderness.

The Duchess de Ventadour, seeing the king so moved, took away the dauphin. The king then received, in succession, the princes and princesses of the blood, and spoke to them all, but separately to the Duc d'Orleans and the legitimate children, whom he had made come first. He rewarded all his domestics for the services they had rendered him, and recommended them to shew the same attachment to the dauphin.

After dinner, the king addressed those about him. 'Gentlemen, I ask your pardon for the bad example I have given you. I would wish to shew my sense of the manner in which you have always served me, my sense of your invariable attachment and fidelity. I am extremely vexed not to have been able to do for you all I wished to do. I ask you for my great-grandson the same attachment and fidelity you have shewn to me. I hope you will all stand unitedly round him, and that, if any one breaks away, you will aid in bringing him back. I feel that I am giving way too much, and making you give way too—pray, pardon me. Adieu, gentlemen; I reckon upon your occasionally remembering me.'

On Tuesday the 27th, when the king had no one beside him but Madame de Maintenon and the chancellor, he caused to be brought to him two caskets, from which he directed numerous papers to be taken out and burned, and gave orders to the chancellor regarding the remainder. Subsequently to this, he ordered his confessor to be called, and after speaking to him in a low voice, made the Count of Pouchartrain approach, and instructed him to carry out his commands relative to conveying his heart to the Jesuits' convent, and depositing it there opposite that of his father, Louis XIII.

With the same composure, Louis caused the plan of the castle of Vincennes to be taken from a casket, and sent to the grand marshal of the household, to enable him to make preparations for the residence of the court, and conducting thither *the young king*—such were the words used. He employed also occasionally the expression, *In the time that I was king;* and then, addressing himself to Madame de Maintenon, said: 'I have always heard that it is a difficult thing to die; I am now on the verge of this predicament, and I do not find the process of dissolution so painful a one.' Madame de Maintenon replied, that such a moment was terrible when we still cherished an attachment to the world and had restitutions to make. 'As an individual,' rejoined the king, 'I owe restitution to no one; and as regards what I owe the kingdom, I trust in the mercy of God. I have duly confessed myself; my confessor declares that I have a great reliance in God; I have it with all my heart.' How indubitable a security was Father Tellier for the conscience of a king! The following day (Wednesday) Louis, as he was conversing with his confessor, beheld in the glass two of his servants who were weeping at the foot of his bed. 'Why do you weep,' said he, 'did you think I was immortal? My age should have prepared you for my death.' Then looking to Madame de Maintenon, 'What consoles me in quitting you, is the hope that we shall soon be reunited in eternity.' She made no reply to this farewell, which did not appear at all agreeable to her. 'Bolduc, the first apothecary, assured me,' says Duclos, 'that Madame

de Maintenon said, as she left the room: "See the appointment which he makes with me! this man has never loved any one but himself." Such an expression, the authenticity of which I would not guarantee, as the principal domestics bore her no good-will, is more suitable to the widow of Scarron than to a queen.' However this may be, Madame de Maintenon departed immediately for Saint-Cyr, with the intention of remaining there.

A Marseille empiric, named Lebrun, made his appearance with an elixir, which he announced as a remedy for the gangrene which was advancing so rapidly in the king's leg. The physicians, having abandoned all hope, allowed the king to take a few drops of this liquid, which seemed to revive him, but he speedily relapsed; a second dose was presented, his attendants telling him at the same time that it was to recall him to life. 'To life or to death,' said the king, taking the glass, 'whatever pleases God.' He then asked his confessor for a general absolution.

Since the king had taken to his bed, the court had gathered in a marked manner around the Duke of Orleans [the future regent]; but the king having apparently rallied on Thursday, this favourable symptom was so exaggerated, that the duke found himself alone.

The king having noticed the absence of Madame de Maintenon, exhibited some chagrin, and asked for her several times. She returned speedily, and said that she had gone to unite her prayers with those of her daughters, the virgins of Saint-Cyr. Throughout the following day, the 30th, she remained beside the king till the evening, and then seeing his faculties becoming confused, she went to her own room, divided her furniture among her servants, and returned to Saint-Cyr, from which she no more emerged.

From this time, Louis had but slight intervals of consciousness, and thus was spent Saturday the 31st. About eleven o'clock at night, the curé, the Cardinal de Rohan, and the ecclesiastics of the palace came to repeat the prayers appointed for those in the agonies of death. The ceremony recalled the dying monarch to himself; he uttered the responses to the prayers with a loud voice, and still recognising the Cardinal de Rohan, said to him: 'These are the last benefits of the church.' Several times he repeated: 'My God, come to my aid; haste to succour me!' and thereupon fell into an agony, which terminated in death on Sunday the 1st September, at eight o'clock in the morning.

'Although,' remarks Voltaire, 'the life and death of Louis XIV. were glorious, he was not so deeply regretted as he deserved. The love of novelty, the approach of a minority in which each one anticipated to make his fortune, the *constitution* dispute which soured men's minds, all made the intelligence of his death be received with a feeling which went further than indifference. We have seen the same people, which, in 1686, had besought from Heaven with tears the recovery of its sick king, follow his funeral procession with very different demonstrations . . . . Notwithstanding his being blamed for littleness, for severities in his zeal against Jansenism, an overweening degree of arrogance in success towards foreigners, a weakness in female relationships, too much rigour in personal matters, wars lightly entered upon, the Palatinate given over to the flames, and the persecution of the adherents of the reformed doctrines, still his great qualities and actions, when placed in the balance, outweigh his defects. Time, which ripens the opinions of men, has set its seal on his reputation; and in despite of all that has been written against him, his name will never be pronounced without respect, and without conjuring up the idea of an epoch memorable through all ages. If we regard this prince in his private life, we see him, it is true, too full of his exalted position, but withal affable, refusing to his mother any share in the government, but fulfilling towards her all the duties of a son, and observing towards his wife all the externals of good-breeding; a good father, a good master, always decorous in public, hard-working in council, exact in business, just in thought, eloquent in speech, and amiable with dignity.'*

SPORTSMEN'S SHOOTING-SEASON.

The customary usages in England concerning the dates for commencing the shooting of game in each year, doubtless had their origin in the habits of the birds themselves: each kind of bird being, in reference to its qualities for the table, and still more for the degree of pleasure which it affords to the sportsman, best fitted for attention at certain seasons of the year. There are, nevertheless, other reasons why shooting is especially welcome as a sport in connection with the mode of apportioning time among the wealthy classes in this country. A writer in the *Encyclopædia Britannica* (art. 'Shooting'), while alluding to the commencement of grouse-shooting in August, says: 'Many circumstances contribute to the popularity of grouse-shooting; among which may be enumerated the following. It commences during the parliamentary recess and long vacation—the legislator's, lawyer's, and collegian's holiday; and it is no wonder that, after being cooped up all the summer, these or any other classes of society should seek relaxation in the sports of the field. August is the season when every one, from the peer to the shopkeeper, who can afford the indulgence, either rusticates or travels. In that month the casual tourist, the laker, and the angler, are often in the north, where the temptation to draw a trigger is irresistible.' It remains not the less true, however, that the precise days for beginning and ending each kind of game-shooting is determined by the legislature. The seasons fixed are—August 12 to December 10 for *grouse;* August 20 to December 10 for *black-cock;* September 1 to February 1 for *partridge;* September 1 to March 1 for *bustard;* October 1 to February 1 for *pheasant.* One further restriction is made in regard to black-cock shooting; that, in Somerset, Devon, and the New Forest, instead of commencing on August 20, the opening day must not be earlier than September 1. This last-named date is an important one, therefore, in connection with shooting; seeing that it concerns the fate of partridges, bustards, and (in some parts of the kingdom) black-cock. The game-laws, in determining these dates, were possibly made to bear some relation to the convenience of farmers, as well as to the habits of the game. A landowner

* This article is translated from a French work, *Ephémérides, Politiques, Littéraires, et Religieuses.* Paris, 1812.

has certain rights in *letting* out the 'shooting' on his estate. A game-certificate empowers a sportsman to *shoot* game; a game-licence enables a dealer to *buy* game from the sportsman; none may shoot or buy but those who hold these documents, for which duties or fees are paid; and as farmers are often much troubled by the proceedings of these sportsmen, it is necessary that the legislature (if such statutes as game-laws are needed at all) should define the season *before* which and *after* which the field-ramblings for game shall not be allowed. The reader, by noticing the civil suits and the criminal trials reported in the public journals, will see how frequently there are collisions between sportsmen, gamekeepers, farmers, and poachers, arising in various ways out of these matters. Definite days certainly must be fixed, as the subject now stands; but there is evidently no natural necessity that the days should actually be those which have been selected. Colonel Hawker, a great authority on these matters, recommends that, except in relation to black-game, moor-game, and ptarmigan, shooting should not be allowed until the month of October. His reasons are as follow: 'By such an arrangement, thousands of very young partridges, that are not fair game, would escape being shot by the gentlemen-poachers, or falling a prey, when in hedges and hassocks, to the dogs of the pot-hunter. There would be avoided many disputes between farmers and eager young sportsmen (perhaps the sons of their landlords), who sometimes cannot resist following their game into the corn. There would be an end of destroying a whole *nide* of young pheasants in standing barley, which is so frequently and so easily done in September. The hot month of September was never meant for hard fagging. September is a month that the agriculturist should devote to his harvest, and the man of pleasure to sailing, sea-bathing, fishing, and other summer pursuits. But when October arrives, the farmer has leisure to enjoy a little sport after all his hard labour, without neglecting his business; and the gentleman, by a day's shooting at that time, becomes refreshed and invigorated, instead of wearing out himself and his dogs by slaving after partridges under the broiling sun of the preceding month. The evenings begin to close; and he then enjoys his home and his fireside, after a day's shooting of sufficient duration to brace his nerves and make everything agreeable.'* It appears, therefore, that though the 'First of September' is an important day in the laws of game, those laws do not *necessarily* partake of the inflexibility of the oft-quoted laws of the Medes and Persians.

SEPTEMBER 2.

St Justus, archbishop of Lyon, confessor, about 390. St Stephen, king of Hungary, confessor, 1038. St William, bishop of Roschild, confessor, 1067. Blessed Margaret, virgin and martyr, 13th century.

Born.—John Howard, philanthropist, 1726, *Hackney.*

Died.—Alice Lisle, executed for sheltering a rebel, 1685; Marie Therese, Princesse de Lamballe, murdered by a revolutionary mob, 1792, *Paris;* General Jean Victor Moreau, mortally wounded at battle of Dresden, 1813.

LADY HERVEY—DREAD OF HAPPINESS.

September 2, 1768, died Mary Lepell, Lady Hervey, celebrated for her beauty, wit, and good sense at the court of the second George.

In one of her letters, dated April 5, 1750, after expressing her pity for the Countess of Dalkeith in losing her husband, she says: 'I dread to see people I care for quite easy and happy. I always wish them some little disappointment or rub, for fear of a greater; for I look upon felicity in this world not to be a natural state, and consequently what cannot subsist: the further, therefore, we are put out of our natural position, with the more violence we return to it.'*

It is worthy of note, that Sir Humphry Davy entertained a similar view of human happiness. He enters in his journal, in the midst of the most triumphant period of his life: 'Beware of too much prosperity and popularity. Life is made up of mixed passages—dark and bright, sunshine and gloom. The unnatural and excessive greatness of fortune of Alexander, Cæsar, and Napoleon—the first died after divine honours were paid him; the second gained empire, the consummation of his ambition, and lost his life immediately; the third, from a private individual, became master of continental Europe, and allied to the oldest dynasty, and after his elevation, his fortune immediately began to fall. Even in private life too much prosperity either injures the moral man and occasions conduct which ends in suffering, or is accompanied by the workings of envy, calumny, and malevolence of others.'†

JOHN HOWARD.

To the service of a heart of the tenderest pity, John Howard united consummate skill in business, and a conscientiousness which no danger nor tedium could baffle. Burke's summary of his labours, happily spoken in parliament whilst Howard lived to hear them recognised, has never been superseded in grace and faithfulness: 'He has visited all Europe—not to survey the sumptuousness of palaces, or the stateliness of temples; not to make accurate measurements of the remains of ancient grandeur, nor to form a scale of the curiosities of modern art; not to collect medals or to collate manuscripts; but, to dive into the depths of dungeons, to plunge into the infection of hospitals, to survey the mansions of sorrow and pain; to take the gauge and dimensions of misery, depression, and contempt; to remember the forgotten, to attend to the neglected, to visit the forsaken, and to compare and collate the distresses of all men in all countries. His plan is original: it is as full of genius as of humanity. It was a voyage of discovery; a circumnavigation of charity.'

Howard came of a mercantile stock, and his commercial training was not the least element in his usefulness. His father was a retired London merchant, who, when his son's schooling was over, bound him apprentice to Newnham and Shipley, wholesale grocers of Watling Street, City, paying down

£700 as premium. In the warehouse and counting-room, Howard continued until his father's death, in 1742, placed fortune in his hands. From a child he had been delicate, he had lost his mother in infancy, and city air and hard work had reduced his strength almost to prostration. He, therefore, purchased the remnant of his apprenticeship, and, in order to recruit his vigour, set out on a French and Italian tour.

On his return to London, he retired to lodgings in the suburban village of Stoke Newington. He was an invalid, weak, low-spirited, and restless, and falling seriously ill, was confined to bed for several weeks. His landlady, Mrs Sarah Lardeau, a widow, eked out a narrow income by letting apartments. To Howard, in his sickness, she behaved with all the tenderness of a mother, and the young man, on his recovery, questioned with himself how he should reward her. Overcome with gratitude, he decided to offer her his hand and fortune in marriage. He was twenty-five, she was fifty-two. She was a good and prudent woman, and refused him with all natural and obvious reasons. He, however, was determined, asserted that he felt it his duty to make her his wife, and that yield she must. In the end she consented, and, strange to say, the odd union proved a happy one. For three years they dwelt together in perfect amity, until her death made him a widower so miserable, that Stoke Newington became unendurable, and for change of scene and relief, he set sail for Lisbon, with the design of relieving the sufferers by the terrible earthquake of that year, 1755; but Lisbon he never reached. England and France were at war, and on the voyage thither, his vessel was captured, and the crew and passengers carried into the port of Brest, where they were treated with the utmost barbarity, and Howard experienced the horrors of prison-life for the first time in his own person.

On his release and return to England, he settled on a small patrimonial estate at Cardington, near Bedford, and, in 1758, contracted his second marriage with Henrietta Leeds, the daughter of a lawyer, with whom he made the stipulation, that, in all matters in which there should be a difference of opinion between them, his voice should rule. She appears to have made him an admirable wife, and to have entered heartily into the charitable schemes whereby he blessed his neighbourhood and expended a large portion of his income. They built improved cottages, established schools, administered to the sick, and relieved the necessitous. Howard likewise dabbled in science, and was elected a member of the Royal Society. Medicine he was compelled to study in his care of the poor, but astronomy and meteorology were his favourite pursuits. As an illustration of the rigorous and methodical spirit he brought to every undertaking, it is related that, at the bottom of his garden, he had placed a thermometer, and, as soon as the frosty weather set in, he used to leave his warm bed at two o'clock every morning, walk in the bitter air to his thermometer, examine it by his lamp, and write down its register—which done to his satisfaction, he would coolly betake himself again to bed.

The quiet usefulness of his life at Cardington came to a melancholy termination by the death of his beloved wife in 1765, after giving birth to their only child, a son. Weak health and a heavy heart again induced him to seek relief in continental travel. On his renewed settlement at Cardington, he was, in 1773, elected sheriff of Bedford, and though ineligible, being a dissenter, he accepted, and was permitted to retain the office. Such a position to a man of Howard's temper could not possibly remain a sinecure, but at once drove him into active contact with the prisons of his county. Their inspection outraged alike his benevolence and justice. The cells were frequently damp, wet, dark, and ill ventilated, so that the phrase, 'to rot in prison,' was anything but a metaphor. In such noisome holes, innocence, misfortune, and vice were huddled together, and it was hard to say whether the physical or moral corruption was greater. Over these holds of wretchedness a jailer sat as extortioner of bribes and fees, and under him turnkeys, cruel and vicious, operated on their own account. From Bedford, Howard passed into the adjoining counties, and from thence into more distant parts, until he effected the tour of England, discovering everywhere abuses and horrors of which few had any conception. Howard's vocation was now fixed; the inspection and reformation of prisons became his business, and to the work he gave all his energies with a singleness of purpose and an assiduity which have placed his name in the first line of philanthropists. England alone was insufficient to exhaust his zeal; Europe he tracked from east to west, from north to south, and through the lazarettos of the Levant he passed as a ministering angel. The age was ripe for Howard. Kings and statesmen listened to his complaints and suggestions, and promised amendment. The revelations he was enabled to make stirred the feelings of the good and enlightened to the uttermost, and provided material for philosophers like Bentham, and stimulus and direction for the kind-hearted, like Mrs Fry.

Howard printed his work, on the *State of Prisons*, at Warrington. He was attracted thither by the skill of Mr Eyre, a printer, and the promise of literary assistance from Dr Aiken, the brother of Mrs Barbauld, then practising as surgeon in that town; and of Howard's habits, Dr Aiken has recorded some interesting particulars. Every morning—though it was then in the depth of a severe winter—he rose at two o'clock precisely, washed, said his prayers, and then worked at his papers until seven, when he breakfasted and dressed for the day. Punctually at eight he repaired to the printing-office, to inspect the progress of his sheets through the press. There he remained until one, when the compositors went to dinner. While they were absent, he would walk to his lodgings, and, putting some bread and dried fruit into his pocket, sally out for a stroll in the outskirts of the town, eating his hermit-fare as he trudged along, and drinking a glass of water begged at some cottage-door. This was his only dinner. By the time that the printers returned to the office, he had usually, but not always, wandered back. Sometimes he would call upon a friend on his way, and spend an hour or two in pleasant chat, for though severe with himself, the social instincts were largely developed in his nature. At the press, he remained until the men left off their day's toil, and then retired to his lodgings to tea or coffee, went through his religious exercises, and retired to rest at an early hour. Such was the usual course of a day at

Warrington. Sometimes a doubt would suggest itself as to the precise truth of some statement, and though it might cost a journey of some hundreds of miles, off Howard would set, and the result would appear in a note of some insignificant modification of the text. Truth, Howard thought cheap at any price.

Like Wesley, he ate no flesh and drank no wine or spirits. He bathed in cold water daily, ate little and at fixed intervals, went to bed early and rose early. Of this asceticism he made no show. After fair trial, he found that it suited his delicate constitution, and he persevered in it with unvarying resolution. Innkeepers would not welcome such a guest, but Howard was no niggard, and paid them as if he had fared on their meat and wine. He used to say, that in the expenses of a journey which must necessarily cost three or four hundred pounds, twenty or thirty pounds extra was not worth a thought.

Beyond the safeguard of his simple regimen, the precautions Howard took to repel contagious diseases were no more than smelling at a phial of vinegar while in the infected cell, and washing and changing his apparel afterwards; but even these, in process of time, he abandoned as unnecessary. He was often pressed for his secret means of escaping infection, and usually replied: 'Next to the free goodness and mercy of the Author of my being, temperance and cleanliness are my preservatives. Trusting in divine Providence, and believing myself in the way of my duty, I visit the most noxious cells, and while thus employed, I fear no evil.'

Howard died on the 20th of January 1790, at Kherson, in South Russia.

THE GREAT FIRE OF LONDON.

London was only a few months freed from a desolating pestilence, it was suffering, with the country generally, under a most imprudent and ill-conducted war with Holland, when, on the evening of the 2d of September 1666, a fire commenced by which about two-thirds of it were burned down, including the cathedral, the Royal Exchange, about a hundred parish churches, and a vast number of other public buildings. The conflagration commenced in the house of a baker named Farryner, at Pudding Lane, near the Tower, and, being favoured by a high wind, it continued for three nights and days, spreading gradually eastward, till it ended at a spot called Pye Corner, in Giltspur Street. Mr John Evelyn has left us a very interesting description of the event, from his own observation, as follows:

'*Sept.* 2, 1666.—This fatal night, about ten, began that deplorable fire near Fish Streete in London.

'*Sept.* 3.—The fire continuing, after dinner I took coach with my wife and sonn, and went to the Bankside in Southwark, where we beheld that dismal spectacle, the whole Citty in dreadful flames neare ye water side; all the houses from the Bridge, all Thames Street, and upwards towards Cheapeside downe to the Three Cranes, were now consum'd.

'The fire having continu'd all this night (if I may call that night which was as light as day for ten miles round about, after a dreadful manner) when conspiring with a fierce eastern wind in a very drie season; I went on foote to the same place, and saw the whole South part of ye Citty burning from Cheapeside to ye Thames, and all along Cornehill (for it kindl'd back against ye wind as well as forward), Tower Streete, Fenchurch Streete, Gracious Streete, and so along to Bainard's Castle, and was now taking hold of St Paule's Church, to which the scaffolds contributed exceedingly. The conflagration was so universal, and the people so astonish'd, that from the beginning, I know not by what despondency or fate, they hardly stirr'd to quench it, so that there was nothing heard or seene but crying out and lamentation, running about like distracted creatures, without at all attempting to save even their goods, such a strange consternation there was upon them, so as it burned both in breadth and length, the Churches, Publiq Halls, Exchange, Hospitals, Monuments, and ornaments, leaping after a prodigious manner from house to house and streete to streete, at greate distances one from ye other; for ye heate with a long set of faire and warme weather, had even ignited the air, and prepar'd the materials to conceive the fire, which devour'd after an incredible manner, houses, furniture, and every thing. Here we saw the Thames cover'd with goods floating, all the barges and boates laden with what some had time and courage to save, as, on ye other, ye carts, &c., carrying out to the fields, which for many miles were strew'd with moveables of all sorts, and tents erecting to shelter both people and what goods they could get away. Oh the miserable and calamitous spectacle! such as haply the world had not seene the like since the foundation of it, nor to be outdone till the universal conflagration. All the skie was of a fiery aspect, like the top of a burning oven, the light seene above forty miles round about for many nights God grant my eyes may never behold the like, now seeing above 10,000 houses all in one flame; the noise and cracking and thunder of the impetuous flames, ye shrieking of women and children, the hurry of people, the fall of Towers, Houses, and Churches, was like an hideous storme, and the aire all about so hot and inflam'd that at last one was not able to approach it, so that they were forc'd to stand still and let ye flames burn on, wch they did for neere two miles in length and one in bredth. The clouds of smoke were dismall, and reach'd upon computation neer fifty miles in length. Thus I left it this afternoone burning, a resemblance of Sodom, or the last day. London was, but is no more!

'*Sept.* 4.—The burning still rages, and it was now gotten as far as the Inner Temple, all Fleet Streete, the Old Bailey, Ludgate Hill, Warwick Lane, Newgate, Paul's Chain, Watling Streete, now flaming, and most of it reduc'd to ashes; the stones of Paules flew like granados, ye melting lead running downe the streetes in a streame, and the very pavements glowing with fiery rednesse, so as no horse nor man was able to tread on them, and the demolition had stopp'd all the passages, so that no help could be applied. The Eastern wind still more impetuously drove the flames forward. Nothing but ye Almighty power of God was able to stop them, for vaine was ye help of man.

'*Sept.* 5.—It crossed towards Whitehall; Oh the confusion there was then at that Court! It pleas'd

his Maty* to command me among ye rest to looke after the quenching of Fetter Lane, and to preserve if possible that part of Holborn, while the rest of ye gentlemen tooke their several posts (for now they began to bestir themselves, and not till now, who hitherto had stood as men intoxicated, with their hands acrosse), and began to consider that nothing was likely to put a stop but the blowing up of so many houses as might make a wider gap than any had yet ben made by the ordinary method of pulling them down with engines; this some stout seamen propos'd early enough to have sav'd neare ye whole Citty, but this some tenacious and avaritious men, aldermen, &c., would not permit, because their houses must have ben of the first. It was therefore now commanded to be practic'd, and my concern being particularly for the hospital of St Bartholomew neere Smithfield, where I had many wounded and sick men, made me the more diligent to promote

LONDON, AS IT APPEARED FROM BANKSIDE, SOUTHWARK, DURING THE GREAT FIRE.—FROM A PRINT OF THE PERIOD BY VISSCHER.

it, nor was my care for the Savoy lesse. It now pleas'd God by abating the wind, and by the industry of ye people, infusing a new spirit into them, that the fury of it began sensibly to abate about noone, so as it came no farther than ye Temple Westward, nor than ye entrance of Smithfield North; but continu'd all this day and night so impetuous towards Cripplegate and the Tower, as made us all despaire: it also broke out againe in the Temple, but the courage of the multitude persisting, and many houses being blown up, such gaps and desolations were soone made, as with the former three days' consumption, the back fire did not so vehemently urge upon the rest as formerly. There was yet no standing neere the burning and glowing ruines by neere a furlong's space.

'The poore inhabitants were dispers'd about St George's Fields, and Moorefields, as far as Highgate, and severall miles in circle, some under tents, some under miserable hutts and hovells, many without a rag or any necessary utensills, bed or board, who from delicatenesse, riches, and easy accommodations in stately and well-furnish'd houses, were now reduc'd to extreamest misery and poverty.

'In this calamitous condition I return'd with a sad heart to my house, blessing and adoring the mercy of God to me and mine, who in the midst of all this ruine was like Lot, in my little Zoar, safe and sound.

'*Sept.* 7.—I went this morning on foote from Whitehall as far as London Bridge, thro' the late Fleete Streete, Ludgate Hill, by St Paules, Cheapeside, Exchange, Bishopsgate, Aldersgate, and out to Moorefields, thence thro' Cornehille, &c., with extraordinary difficulty, clambering over heaps of yet smoking rubbish, and frequently mistaking where I was. The ground under my feete was so hot, that it even burnt the soles of my shoes. In the mean time his Maty got to the Tower by water, to demolish ye houses about the graff, which being built intirely about it, had they taken fire and attack'd the White Tower where the magazine of powder lay, would undoubtedly not only have beaten downe and destroy'd all ye bridge, but sunke and torne the vessells in ye river, and render'd ye demolition beyond all expression for several miles about the countrey.

'At my return I was infinitely concern'd to find that goodly Church St Paules now a sad ruine, and that beautifull portico (for structure comparable to any in Europe, as not long before repair'd by the King) now rent in pieces, flakes of vast stone split asunder, and nothing remaining intire but the inscription in the architrave, shewing by whom it was built, which had not one letter of it defac'd. It was astonishing to see what immense stones the heat had in a manner calcin'd, so that all ye ornaments, columns, freezes, and projectures of massie Portland stone flew off, even to ye very

* An abbreviation for his majesty.

roofe, where a sheet of lead covering a great space was totally mealted; the ruines of the vaulted roofe falling broke into St Faith's, which being fill'd with the magazines of bookes belonging to ye stationers, and carried thither for safety, they were all consum'd, burning for a weeke following. It is also observable that ye lead over ye altar at ye East end was untouch'd, and among the divers monuments, the body of one Bishop remain'd intire. Thus lay in ashes that most venerable Church, one of the most antient pieces of early piety in ye Christian world, besides neere 100 more. The lead, yron worke, bells, plate, &c. mealted; the exquisitely wrought Mercers Chapell, the sumptuous Exchange, ye august fabriq of Christ Church, all ye rest of the Companies Halls, sumptuous buildings, arches, all in dust; the fountaines dried up and ruin'd whilst the very waters remain'd boiling; the vorrago's of subterranean cellars, wells, and dungeons, formerly warehouses, still burning in stench and dark clouds of smoke, so that in five or six miles traversing about I did not see one load of timber unconsum'd, nor many stones but what were calcin'd white as snow. The people who now walk'd about ye ruines appear'd like men in a dismal desart, or rather in some greate citty laid waste by a cruel enemy; to which was added the stench that came from some poore creatures bodies, beds, &c. Sir Tho. Gresham's statue, tho' fallen from its nich in the Royal Exchange, remain'd intire, when all those of ye Kings since ye Conquest were broken to pieces, also the standard in Cornehill, and Q. Elizabeth's effigies, with some armes on Ludgate, continued with but little detriment, whilst the vast yron chaines of the Cittie streetes, hinges, bars and gates of prisons, were many of them mealted and reduced to cinders by ye vehement heate. I was not able to passe through any of the narrow streetes, but kept the widest, the ground and aire, smoake and fiery vapour, continu'd so intense that my haire was almost sing'd, and my feete unsufferably surheated. The bie lanes and narrower streetes were quite fill'd up with rubbish, nor could one have knowne where he was, but by ye ruines of some Church or Hall, that had some remarkable tower or pinnacle remaining. I then went towards Islington and Highgate, where one might have seene 200,000 people of all ranks and degrees dispers'd and lying along by their heapes of what they could save from the fire, deploring their losse, and tho' ready to perish for hunger and destitution, yet not asking one penny for relief, which to me appear'd a stranger sight than any I had yet beheld.'

RELICS OF LONDON SURVIVING THE FIRE.

At the time of the Great Fire, the walls of the City enfolded the larger number of its inhabitants. Densely packed they were in fetid lanes, overhung by old wooden houses, where pestilence had committed the most fearful ravages, and may be said to have always remained in a subdued form ready to burst forth. Suburban houses straggled along the great highways to the north; but the greater quantity lined the bank of the Thames toward Westminster, where court and parliament continually drew strangers. George Wither, the Puritan poet, speaks of this in his *Britain's Remembrancer*, 1628:

> 'The Strand, that goodly thorow-fare betweene
> The Court and City; and where I have seene
> Well-nigh a million passing in one day.'

That industrious and accurate artist, Wenceslaus Hollar, busied himself from his old point of view, the tower of St Mary Overies, or, as it is now called, St Saviour's, Southwark, in delineating the appearance of the city as it lay in ruins. He afterwards engraved this, contrasting it with its appearance before the fire. From its contemplation, the awful character of the visitation can be fully felt. Within the City walls, and stretching beyond them to Fetter Lane westwardly, little but ruins remain; a few walls of public buildings, and a few church towers, mark certain great points for the eye to detect where busy streets once were. The whole of the City was burned to the walls, except a small portion to the north-east. We have, consequently, lost in London all those ancient edifices of historic interest—churches crowded with memorials of its inhabitants, and buildings consecrated by their associations—that give so great a charm to many old cities. The few relics of these left by the fire have become fewer, as changes have been made in our streets, or general alterations demanded by modern taste. It will be, however, a curious and not unworthy labour to briefly examine what still remains of Old London edifices erected before the fire, by which we may gain some idea of the general character of the old city.

Of its grand centre—the Cathedral of St Paul—we can now form a mental photograph when contemplating the excellent views of interior and exterior, as executed by Hollar for Dugdale's noble history of the sacred edifice.* It was the pride of the citizens, although they permitted its 'long-drawn aisles' to be degraded into a public promenade, a general rendezvous for the idle and the dissolute. The authors, particularly the dramatic, of the Elizabethan and Jacobean eras, abound with allusions to 'the walks in Paul's;' and Dekker, in his *Gull's Hornbook*, devotes due space to the instruction of a young gallant, new upon town, how he is to behave in this test of London dandyism. The poor hangers-on of these new-fledged gulls, the Captains Bobadil, *et hoc genus omne*, hung about the aisles all day if they found no one to sponge upon. Hence came the phrase, to 'dine with Duke Humphrey,' as the tomb of that nobleman was the chief feature of the middle aisle; despite, however, of its general appropriation to him, it was in reality the tomb of Sir John Beauchamp, son to the Earl of Warwick, who died in 1538—having lived at Baynard's Castle, a palatial residence on the banks of the Thames, also destroyed in the fire. The next important monument in the Old Cathedral was that of Sir Christopher Hatton, the famous 'dancing chancellor' of Queen Elizabeth; and of this some few fragments remain, and are still preserved in the crypt of the present building. Along with them are placed other portions of monuments, to Sir Nicholas, the father of the great Lord Bacon; of Dean Colet, the founder of St Paul's School; and of the poet,

* See a picture of Old St Paul's in our first volume, p. 423.

Dr John Donne. The reflective eye will rest with much interest on these relics of the past, but especially on that of Donne, which has wonderfully withstood the action of the fire, and exactly agrees with Walton's description, in his memoir of the poet-dean, who lapped himself in his shroud, and so stood as a model to Nicholas Stone as he sculptured the work.

Near St Paul's, on the south side of Basing Lane, there existed, until a very few years since, the pillared vaults of an old Norman house, known as Gerrard's Hall; it is mentioned by Stow as the residence of John Gisors, mayor of London, 1245. It was an interesting and beautiful fragment; but after having withstood the changes of centuries, and the great fire in all its fury, it succumbed to the city improvements, and New Cannon Street now passes over its site.

The old Guildhall, a favourable specimen of the architecture of the fifteenth century, withstood the fire bravely; portions of the old walls were incorporated with the restorations, and from a window in the library may still be seen one of the ancient south windows of the hall; it is a fair example of the perpendicular style, measuring 21 feet in height by 7 in width. The crypt beneath the hall is worth inspection, and so is the eastern side of the building.*

Such are the few fragments left us of all that the devouring element passed over. We shall, however, still find much of interest in that small eastern side of the city which escaped its ravages. At the angle where Mark Lane meets Fenchurch

CHURCH OF ALL-HALLOWS STAINING.

Street, behind the houses, is the picturesque church of All-hallows Staining, in the midst of a quaint old square of houses, with a churchyard and a few trees, giving it a singularly old-world look. The tower and a portion of the west end alone are ancient; the church escaped the fire, but the body of the building fell in, 1671 A. D. In this church, the Princess (afterwards Queen) Elizabeth performed her devotions, May 19, 1554, on her release from the Tower.* The churchwarden's accounts contain some curious entries of rejoicings by bell-ringing on great public events.†

The church of All-hallows, Barking, at the end of Tower Street, presents many features of interest, and helps us best to understand what we have lost by the Great Fire. One of the finest Flemish brasses in England is still upon its floor; it is most elaborately engraved and enamelled, and is to the memory of one Andrew Evyngar and his wife (circa 1535). Another, to that of William Thynne, calls up a grateful remembrance, that to him we owe, in 1532, the first edition of the works of that 'well of English undefiled'—Geoffrey Chaucer. Other brasses and quaint old tombs cover floor and walls.

Here the poetic Earl of Surrey was hurriedly buried after his execution; so was Bishop Fisher, the friend of More; and Archbishop Laud ignominiously in the churchyard, but afterwards removed to honourable sepulture in St John's College, Oxford.

Keeping northward, across Tower Hill, we enter Crutched-friars, where stand the alms-houses erected by Sir John Milborn in 1535. He built them 'in honor of God, and of the Virgin;' and it is a somewhat remarkable thing, that a bas-relief representing the Assumption of the Virgin, in the conventional style of the middle ages, still remains over the entrance-gate. St Olave, Hart Street, is the next nearest old church. Seen from the churchyard, it is a quaint and curious bit of Old London, with its churchyard-path and trees. Here lies Samuel Pepys, the diarist, to whom we all are so much indebted for the striking picture of the days of Charles II. he has left to us. He lived in the parish, and often mentions 'our own church' in his diary. Upon the walls, we still see the tablet he placed to the memory of his wife. There are also tablets to William Turner, who published the first English Herbal in 1568; and to the witty and poetic comptroller of the navy, Sir John Mennys, who wrote some of the best poems in the *Musarum Deliciæ*, 1656.

St Catherine Cree, on the north side of Leadenhall Street, was rebuilt in 1629, and is chiefly remarkable for its consecration by Archbishop Laud, with an amount of ceremonial observance, particularly as regarded the communion, which led to an idea of his belief in transubstantiation, and was made one of the principal charges against him. The church contains a good recumbent effigy of Queen Elizabeth's chief butler, Sir Nicholas Throgmorton; and an inscription to R. Spencer, Turkey

* The crypt of Bow Church is of early work, so early as to have been called Roman—but it is very probably Saxon—and has been carefully drawn and published by the Society of Antiquaries in their *Vetusta Monumenta*. Wren chose it for the substructure of this church when he re-erected it after the fire; and when the security of his famous steeple was mooted, declared there was no safer place he wished to be in during any hurricane.

* It is an old London tradition, that she dined at the King's Head Tavern, in Fenchurch Street, after the service, 'off pork and peas;' an ancient metal dish and cover is still preserved in the tavern, and shewn as that used by her.

† Among them are payments for peals 'for joye of y^e^ execution of y^e^ Queene of Scots;' for the return to London from Feversham of King James II.; and only two days afterwards, with ready subservience, another peal as merrily announced the arrival of the Prince of Orange. This church was one of the four London churches in which James's unpopular 'Declaration of Indulgence' was read.

merchant, recording his death in 1667, after he had 'seen the prodigious changes in the state, the dreadful triumphs of death by pestilence, and the astonishing conflagration of the city by fire.'*

A little to the west, stands St Andrew Undershaft, abounding with quaint old associations. It takes its name from the high shaft of the May-pole, which the citizens used to set up before it, on every May-day, and which overtopped its tower. John Stow, who narrates this, lies buried within; and his monument, representing him at his literary labours, is one of the most interesting of its kind in London.† It is not the only quaint mortuary memorial here worth looking on; there is among them the curious tomb of Sir Hugh Hammersley, with armed figures on each side. Opposite this church is a very fine Elizabethan house, from the windows of which the old inhabitants may have seen the setting-up of the old May-pole, and laughed at the tricks of the hobby-horse and fool, as they capered among the dancers. Passing up St Mary Axe, we shall notice many good old mansions of the resident merchantmen of the last two centuries; and at the corner of Bevis Marks, a very old public-house, rejoicing in the sign of 'the Blue Pig.'‡ The parish of St Helen's, Bishopsgate, is the most interesting in London for its many old houses. The area and courts known as Great St Helen's are particularly rich in fine examples, ranging from the time of Elizabeth to James II. No. 2 has a good doorway and staircase of the time of Charles I.; Nos. 3 and 4 are of Elizabethan date, with characteristic corbels; while Nos. 8 and 9 are modern subdivisions of a very fine brick mansion, dated 1646, and most probably the work of Inigo Jones. No. 9 still possesses a very fine chimney-piece and staircase of carved oak. Crosby Hall is of course the great feature of this district, and is one of the finest architectural relics of the fifteenth century left in London; yet, after escaping the great fire, and the many vicissitudes every building in the heart of London is subjected to, it had a very narrow escape in 1831 of being ruthlessly destroyed; and had it not been for the public spirit of a lady, Miss Hackett, who lived beside it, and who by her munificence shamed others into aiding her, this historic mansion would have passed away from sight. It is now used as a lecture-hall or for public meetings; and an excellently designed modern house, in antique taste, leads into it from Bishopsgate Street. The timber roof, with its elegant open tracery, and enriched octagonal corbels hanging therefrom, cannot be exceeded by any architectural relic of its age; the Oriel window is also of great beauty. It was built by Sir John Crosby, a rich merchant, between 1466–1475, and his widow parted with it to Richard Plantagenet, Duke of Gloucester, afterwards Richard III. Its contiguity to the Tower, where the king, Henry VI., was confined, and the unfortunate princes after him, rendered this a peculiarly convenient residence for the unscrupulous duke. Shakspeare has immortalised the place by laying one of the scenes of his great historical drama there. Gloucester, after directing the assassins to murder Clarence, adds:

'When you have done, repair to Crosby Place.'

Here, indeed, were the guilty plots hatched and consummated that led Richard through blood to the crown; and Shakspeare must have pondered over this old place, then more perfect and beautiful than now, for we know from the parish assessments, that he was a resident in St Helen's in 1598, and must have lived in a house of importance from the sum levied. The tomb of Sir John Crosby is in the adjoining church of St Helen's, and is one of the finest remaining in any London church; it has upon it the recumbent figures of himself and wife. The knight is fully armed, but wears over all his mantle as alderman, and round his neck a collar of suns and roses, the badge of the House of York. In this church also lies Sir Thomas Gresham, another of our noblest old merchantmen; and 'the rich' Sir John Spencer, from whom the Marquises of Northampton have derived—by marriage—so large a portion of their revenues.

Passing up Bishopsgate Street, we may note many old houses, and a few inns, as well as the quaint church of St Ethelburgha. In the house known as Crosby Hall Chambers, is a very fine chimney-piece, dated 1635. Many houses in this district are old, but have been new fronted and modernised. There is an Elizabethan house at the north corner of Houndsditch, and another at the corner of Devonshire Street, which has over one of its fireplaces the arms of Henry Wriothesley, Earl of Southampton, the friend of Shakspeare. But the glory of the neighbourhood is the house of Sir Paul Pinder, nearly opposite; the finest old private house remaining in London. The quaint beauty of the *façade* is enhanced by an abundance of rich ornamental details, and the ceiling of the first-floor is a wonder of elaboration and beauty. Sir Paul was a Turkey merchant of great wealth, resident ambassador at Constantinople for upwards of nine years, in the early part of the reign of James I. He died in 1650, 'a worthie benefactor to the poore.'

Returning a few hundred yards, we get again within the Old-London boundary; and crossing Broad Street, the small church of Allhallows-on-the-Wall marks the site of a still smaller one of very ancient date; the wall beside it is upon the foundation of the old wall that encircled London, and which may be still traced at various parts of its course round the city, and is always met with in deep excavations.* Passing the church, we see to

* There is a curious old gate to what was once the watch-house, at the east end of the church. It bears the inscription, 'This gate was built at the cost and charges of William Avenon, Citizen and Gouldsmith of London, who died December, anno dni 1631.' Above it is sculptured a representation of the donor, as a skeleton in a shroud lying on a mattress.

† Stow lived in Aldgate; the district still retains a few old houses near the famous pump, and the remains of the once celebrated Saracen's Head Inn. Some of the butchers' shops just past the Minories are very old, and one bears the badges of the French ambassador, temp. Eliz.

‡ This is evidently a vulgar corruption of 'the Blue Boar,' the badge of King Richard III., who resided in the immediate neighbourhood when Duke of Gloucester. This is a curious instance of the long endurance of an old party-memorial, transformed into a London vulgarism.

* In digging for the foundations of the railway arches across Haydon Square, in the Minories, a very perfect portion of the old Roman Wall was exhumed; and a still more interesting fragment remained on Tower Hill but a very few years since. It has now been converted into a party-wall for enormous factories. In digging for their

our left Great Winchester Street, which, in spite of some recent modernisation, is the most curious old street remaining within the city boundary, inasmuch as all its houses are old on both sides of

GREAT WINCHESTER STREET.

the way; about forty years ago, when the above sketch was made, it gave a perfect idea of a better-class street before the great fire. In the angle of this street, leading into Broad Street, are some fine old brick mansions of the Jacobean era; and to the west lies Carpenter's Hall, with curious paintings of the sixteenth century on its walls, ancient records and plate in its muniment-room, and a large garden; joining on to the still larger Drapers' Garden, interesting examples of 'town-gardens' existing untouched from the middle ages. Austin Friars is contiguous: the old church here is a portion of the monastic building erected in 1354; the window-tracery is extremely elegant. Unfortunately, it is now a roofless ruin, injured by a fire last year, and no steps yet taken for its reparation; and thus another of our few historic monuments may soon pass away from the City. Keeping again to the line of the Old-London wall westward, we pass Coleman Street, and note some few good Elizabethan houses. Then comes Sion College, which was seriously injured, and one-third of the library consumed by the great fire. Aldermanbury Postern, nearly opposite, marks the site of a small gate, or 'postern' in the City wall leading to Finsbury Fields; the favourite resort of the Londoners in the summer evenings.

'And Hogsdone, Islington, and Tothnam-court,
For cakes and creame, had then no small resort.'

So says George Wither, writing in 1628. To the eagerness of those in 'populous city pent,' to get out of its bounds, he testifies from his own observation:

'Some coached were, some horsed, and some walked,
Here citizens, there students, many a one;
Here two together; and, yon, one alone.
Of Nymphes and Ladies, I have often ey'd
A thousand walking at one evening-tide;
As many gentlemen; and young and old
Of meaner sort, as many ten times told.'

The alms-houses of the Clothworkers' Company occupy the angle of the City wall at Cripplegate; beneath the small chapel is a fine crypt in the Norman style, built of Caen stone, the groining decorated with zigzag moulding and spiral ornament. It is a fragment of the old 'Hermitage of St James on the Wall,' and is a graceful and interesting close to our survey, for the fire travelled thus far to the north-west, and left the City no other early relics.

Passing outside the City bounds, and into the churchyard of St Giles's, Cripplegate, a very fine piece of the old wall may be seen, with a circular bastion at the angle, the upper part now converted into a garden for the alms-houses just spoken of. Another bastion, to the south, was converted by Inigo Jones into an apsidal termination of Barber-Surgeon's Hall. The church tower is a stone erection, the body of the church of brick, inside are monuments, second in interest to none. Here lies Fox, the martyrologist; Frobisher, the traveller; Speed, the historian; and one of England's greatest poets and noblest men—John Milton. The church-register records the marriage here of Oliver Cromwell. The range of houses in the main street, and the quaint old church-gate, were built in the year 1660; so short a time before the fire, that we may study in them the 'latest fashions' of London-street architecture at that period.

As there are some quaint and interesting buildings in the suburbs of this side of London, we may bestow a brief notice upon them, more particularly as they help us to comprehend its past state. There are still some Elizabethan houses leading toward Barbican; a few years ago, there were very many in this district. In Golden Lane, opposite, is the front of the old theatre, by some London topographers considered to be 'The Fortune,' by which Edward Alleyn, the founder of Dulwich College, made his estate; others say it is Killigrew's playhouse, called 'The Nursery,' intended to be used as a school for young actors. Pepys records a visit there, in his quaint style, when 'he found the musique better than we looked for, and the acting not much worse, because I expected as bad as could be.' There is a very old stucco representation of the Royal Arms and supporters over the door.

Aldersgate Street preserves the remains of a noble town-house, erected by Inigo Jones for the Earls of Thanet; its name soon changed to Shaftesbury House, by which it is best known. On the opposite side, higher up the street, 'the City Auction-rooms' are in a fine old mansion, with some pleasing enrichments of Elizabethan character. A short street beyond Barbican leads into a quiet square, and the entrance to Sutton's noble foundation—the Charter House. It still preserves much of its monastic look. The entrance-gate is of the fifteenth century, and over it was once placed the mangled

foundation, the workmen came down to virgin soil, and exposed the Roman substructure, supporting the medieval work. It was founded on enormous blocks, projecting beyond its face; the rows of bounding tiles, and the original facing-stones of the wall, were perfect to the height of fifteen feet, and above that the additions rose as high again.

limbs of its last prior, who was executed at Tyburn by command of Henry VIII. The chapel, hall, and governor's room have fine old original enrichments. At the Smithfield end of Long Lane, are some old houses, but the best are in Cloth-fair and St Bartholomew's Close. The churchyard entrance, with the old edifice, and row of ancient houses looking down upon it, seems not to belong to the present day, but to carry the visitor entirely back to the seventeenth century. There is a back-alley encroaching on the chancel, with tumble-down old houses supported on wooden pillars, which gives so perfect an idea of the crowded and filthy passages, once common in Old London, that we here engrave it. The houses are part of those

BACK-ALLEY, ST BARTHOLOMEW'S.

erected by the Lord Rich, one of the most wicked and unscrupulous of the favourites of Henry VIII., and to whom the priory and precinct was given with great privileges. The church is one of the most ancient and interesting in London, with many fine fragments of its original Norman architecture; the houses of the neighbourhood are built over the conventual buildings, and include portions of them, such as the cloisters and refectory.

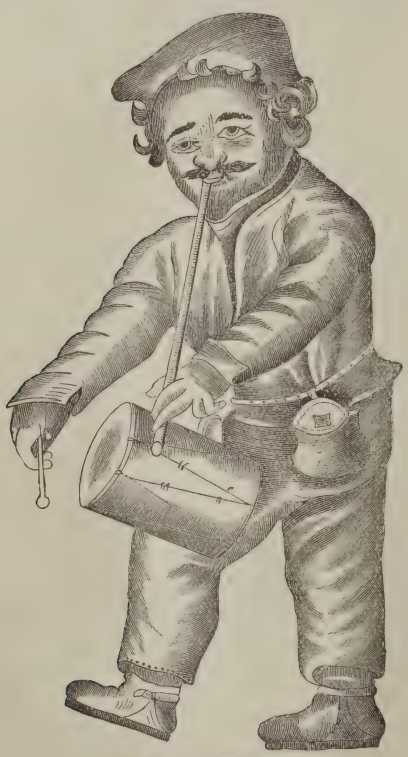
Ascending Holborn Hill, we see in Ely Place the remains of the old chapel of the mansion once there, with a very fine decorated window. This was the town residence of the bishops of Ely from 1388. It was a pleasantly situated spot in the olden time, with its large orchards and gardens sloping toward the river Fleet. Shakspeare, on the authority of Holinshed, makes the crafty Duke of Gloucester (afterwards Richard III.) pleasantly allude to its produce:

> 'My Lord of Ely, when I was last in Holborn,
> I saw good strawberries in your garden there;
> I do beseech you send for some of them.'

Saffron Hill, in the immediate neighbourhood, carries in its name the memory of its past floral glories; and Gerard, whose *Great Herbal* was published in the latter days of Elizabeth, dates his preface 'from my house in Holborn, in the suburbs of London.' We may walk as far as Staples Inn, opposite Gray's Inn Lane, to see the finest row of old houses of the early part of the seventeenth century remaining in London. The quaint old hall behind them, with its garden and fig-trees, preserves still a most antique air. In Chancery Lane, the fine old gate-house bears the date of 1518, and the brick-houses beside it have an extra interest in consequence of Fuller's assertion that Ben Jonson, when a young man, 'helped in the building, when having a trowel in one hand, he had a book in his pocket.' Passing toward Fleet Street, we meet with no old vestige, where, a few years since, they abounded. Beside the Temple Gate, is a good old Elizabethan house, with a fine plaster ceiling, with the initials and badges of Henry, Prince of Wales, son of James I. The Temple, with its round church and unique series of fine monumental effigies, brings us to the margin of the Thames, and is a noble conclusion to our survey, which the chances and changes of busy London may alter every forthcoming year.

SEPTEMBER 3.

St Mansuet, first bishop of Toul, in Lorraine, about 375. St Macnisius, first bishop of Connor, in Ireland, 513. St Simeon Stylites, the Younger, 592. St Remaclus, bishop of Maestricht, confessor, about 664.



Born.—Matthew Boulton, partner of James Watt, 1728, *Birmingham;* Sir John Soane, architect, 1753, *Reading;* Prince Eugene de Beauharnois, step-son of Napoleon Bonaparte, 1781, *Paris.*

Died.—Richard Tarleton, celebrated comedian, 1588; Sir Edward Coke, eminent lawyer, 1634, *Stoke Pogeis;* Claudius Salmasius, author of a Defence of Charles I., 1653; Oliver Cromwell, Protector of England, 1658, *Whitehall, London;* David Ancillon, eminent Protestant divine, 1692, *Berlin;* George Lillo, dramatist, 1739; Joseph Ritson, antiquary, 1803, *Hoxton;* Clara Reeve, novelist, 1807, *Ipswich;* George Richardson Porter, statist, 1852, *Tunbridge Wells.*

DICK TARLETON.

In the morning of the English stage, just before Shakspeare gave it form and finish, the most favourite comic actor was Richard Tarleton. Of peasant origin in Shropshire, this quaint person seems to have spent most of his early life in the business of tavern-keeping, first in the country, afterwards in London. He had, at one time, an hostelry in Gracechurch Street; at another time, an ordinary in Paternoster Row—it has been surmised that the latter establishment has come down to more recent times, under the well-known name of Dolly's Chop-house. Dick could write ballads for the streets; he could make witty answers in rhyme; his aspect—which included a flattened nose—was provocative of mirth wherever it shewed itself; he was full of the mimetic gift. After living some years in London by tavern-keeping, he was adopted into the service of Queen Elizabeth, that he might enliven her at supper-time by his jests and his gossip. We must imagine this grand old woman, at the very time when she was perhaps

counter-conspiring against Mary and Babington, or giving orders for meeting the Armada, or devising plans for preserving her rule in Ireland, prone to listen to the 'quips, and cranks, and wanton wiles' of this poor fellow: a wise thing, too, for even the life of a sovereign will be the better of occasional condescensions to simple natural merriment and outbreaks of laughter. Latterly, Dick was a performer at the Curtain Theatre, in Shoreditch—a favourite one in low comedy, as we should now call it, though in plain truth there was then no other. His face was half his fortune in professional respects. It was so droll, that the moment he appeared—before he had said a word—it took the audience with laughter that scarcely subsided for an hour. He could regale them with dexterous fencing, an accomplishment in which he had attained some fame; but his most popular single performance was the playing of what was in those days called a *Jig*. This was not simply a merry dance, as it still is, but also a song or ballad. In came the irresistible Dick, quaintly attired, playing a little tabor with one hand, and ready to finger a pipe with the other: curveting, skipping,

DICK TARLETON.

shuffling round and round before the bewitched audience, he would then chant forth a long string of verses, referring in comic or satiric terms to some persons or things of the day, all with such droll expression as was in itself charm enough. We have fortunately preserved to us one of Tarleton's jigs, entitled *A Horseload of Fools*, in which he takes off a great variety of persons, as the Puritan, the Courtier, the Poet, the Lover, and at length comes to the corporation dignitary—a class which made itself odious to the players by constant efforts to repress theatricals in the city.

'This fool comes of the citizens,
Nay, prithee, do not frown;
I know him as well as you
By his livery gown:
Of a rare horn-mad family.

He is a fool by 'prenticeship
And servitude, he says;
And hates all kinds of wisdom,
But most of all in plays:
Of a very obstinate family.

You have him in his livery gown,
But presently he can
Qualify for a mule or mare,
Or for an alderman:
With a gold chain in his family.

Being born and bred for a fool,
Why should he be wise?
It should make him not fit to sit
With his brethren of Ass-ize:
Of a very long-eared family,' &c.

The contemporary portrait of Tarleton, here copied, represents him in the act of performing one of his jigs; and one can readily see in the face that homely comicality which made him the delight of the Shoreditch groundlings of his day, and enabled him to cure his queen of melancholy 'better,' as old Fuller tells us, 'than all her physicians.'

Poor Tarleton is supposed to have been cut off suddenly by the plague, for he made his will, died, and was buried all on one day. His remains were deposited in the churchyard of St Leonard's, Shoreditch. He could not have reached any considerable age, for from his will it appears that his mother was still alive, and the son to whom he left his property is spoken of as under tutelage. His wife Kate, who is often alluded to in his jests, and who appears to have been of loose life, is not adverted to in the will. She had probably by that time departed from this sublunary sphere.

Dick is alluded to by several contemporary writers, always in kindly terms. It is pleasant to think of one who made so many laugh, that he passed through life unoffendingly. The London populace are said to have kept his memory alive for a century; they named game-cocks after him; they had an ale-house in Southwark adorned with his portrait. Tarleton's jests were collected and published after his death, and have been reproduced with much illustrative matter by the Shakspeare Society. In vain, however, do we look in them for any very brilliant wit or profound humour. We must presume that the droll countenance, voice, and manner of the man were mainly what his contemporaries enjoyed.

OLIVER CROMWELL—HIS DEATH—A QUEER PECULIARITY OF HIS CHARACTER.

The 3d of September had become a day very memorable to Cromwell. In his expedition to reduce the Scotch Presbyterians, who had taken up the son of the late king as their sovereign, he gained his first great success in the battle of Dunbar, fought on the 3d of September 1650. The affair was closed triumphantly for him at Worcester on the 3d of September 1651. In

an age when individuals were believed to have days specially connected with their destiny, the 3d of September might well appear auspicious to the Protector. A strange turn, however, was given to these superstitious ideas in his case, when, on the 3d of September 1658, the Protector died. It is usually stated that his decease took place amidst a storm of singular violence, which was tearing and flooding the whole country, and which fittingly marked the occasion; but the storm, in reality, happened on Monday the 30th of August, and must have been pretty well spent before the Friday afternoon, when Oliver breathed his last.

M. Guizot, in his *Life of Cromwell*, describes the Protectoral court as confined within rather narrow limits, and having his own family as its 'centre and chief element.' His wife, Elizabeth Bouchier, was a simple and timid woman, anxious about her children, and a little jealous (not without cause) of himself. Two or three ladies of rank—one in particular, the Lady Dysart, subsequently Duchess of Lauderdale—were now and then seen at court. The other principal figures were the Protector's children. 'He summoned his son Richard to London, and obtained his election as a member of parliament, a privy-councillor, and chancellor of the university of Oxford. His son-in-law, John Claypole, was a man of elegant tastes, and, like Richard Cromwell, was on friendly terms with a great many Cavaliers. After the marriage of his two younger daughters with Lord Falconbridge and Mr Rich, Cromwell had about him four young and wealthy families, desirous to enjoy life, and to share their enjoyments with all who came near them in rank and fortune. The Protector himself was fond of social amusements and brilliant assemblies; he was also passionately fond of music, and took delight in surrounding himself with musicians, and in listening to their performances. His court became, under the direction of his daughters, numerous and gay. One of them, the widow of Ireton and wife of Fleetwood, was a zealous and austere republican, and took but little part in their festivities, and deplored the monarchical and worldly tendencies which prevailed in the household as well as in the policy of the Protector. In the midst of his public labours, Cromwell exulted in the enjoyment of this domestic prosperity.'

After making full allowance for the verity of what M. Guizot states, it is necessary to look at a certain fact considerably derogating from the dignity of the Protector's court. He was, in reality, a man of a coarse humour, fond of playing off jokes equally rough and childish. It will scarcely be believed, but it is well authenticated, that, at the marriage of his daughter Frances to Mr Rich, November 1657, not a twelvemonth before his death, he amused himself by throwing about sack-posset among the ladies, to soil their rich clothes; flung wet sweetmeats about, and with the same article daubed the stools on which the ladies were to sit. He also pulled off the bridegroom's peruke, and made as if he would have thrown it in the fire, but did not: he only sat upon it. These pranks appear to have been viewed by the company with the usual complaisance shewn to even the *mauvaises plaisanteries* of the great, for we are told that the ladies took their share of the sack-posset sent them in so irregular a manner as 'a favour.'

Dr Bates, in his book on the Troubles in England, records an anecdote of Cromwell's youth, which we might have set down as a royalist fiction but for the pranks above described. It is to the effect that, when Sir Oliver Cromwell was holding Christmas in the old English fashion at Hitchenbrook, his nephew and namesake, the future Protector, mingled amongst the dancers, with gloves and leggings befouled in the most horrible manner, that he might spread contamination amongst the company, thus spoiling innocent mirth, and rendering the house itself insufferable. A writer in the *Gentleman's Magazine*,* who brought forward this unpleasant story, adds the observation: 'I have noticed this itch in certain boys at school, who were invariably tyrants in their nature.'

COCKER'S ARITHMETIC.

The 3d of September 1677 is the date of the licensing (by Sir Roger L'Estrange) of *Cocker's Arithmetick*. The fifty-first edition was published in 1745 by 'R. Ware, at the Bible and Sun, Amen Corner;' marking the extraordinary success which attended the book during the first seventy years of its existence. There had been manuals of arithmetic before; but Cocker's had a superior completeness, which threw all others into the shade. In his original 'proeme or preface,' the author, who described himself as a 'practitioner in the arts of writing, arithmetick, and engraving' (to which he had been directed by 'the secret influence of Divine Providence'), says: 'For you, the pretended Numerists of this vapouring age, who are more disingeniously witty to propound unnecessary questions, than ingeniously judicious to resolve such as are necessary; for you was this book composed and published, if you will deny yourselves so much as not to invert the streams of your ingenuity, but by studiously conferring with the Notes, Names, Orders, Progress, Species, Properties, Proprieties, Proportions, Powers, Affections and Applications of Numbers delivered herein, become such Artists indeed, as you now only seem to be.' He further assured the world that all the rules in his book are 'grounded on Verity and delivered with Sincerity; the Examples built up gradually from the smallest Consideration to the greatest—

> 'Zoilus and Momus, lie you down and die,
> For these inventions your whole force defy.'

Cocker, however, was not destined to see anything of the success which has since made his name proverbial in England in connection with arithmetical subjects. The little book was edited from a manuscript he had left, by 'Mr John Hawkins, writing-master, near St George's Church, in Southwark;' bearing, nevertheless, a wood-cut portrait of the author, with the following inscription below:

> 'Ingenious Cocker, now to rest thou 'rt gone,
> No art can shew thee fully, but thine own;
> Thy rare *Arithmetick* alone can shew
> Th' vast sum of thanks we for thy labours owe.'

It appears that Cocker died in the year of the publication of his book, and was buried in St George's Church, Southwark, 'in the passage at the west end, within the church.' He was rather a caligrapher, a writer and engraver of 'letters,

* *Gentleman's Magazine*, November 1840.

knots, and flourishes,' than an arithmetician, and valued himself chiefly on the former accomplishments. His life seems to have been one of struggle: there is extant a petition sent by him, some years before his death, to the Treasurer, Earl of Southampton, entreating payment of £150, granted to him by the king for his encouragement in the arts of writing and engraving, as he was hindered in his operations 'by reason of extreme want and necessity.'* He probably could have gone through a second life in handsome style on the profits of his *Arithmetick*.

AN EXCHEQUER TALLY.

Connected with the life of Cocker, it may be allowable to introduce a set of remarks, by the great novelist of our age, upon an ancient mode of keeping accounts which was kept up in the British Exchequer long after better modes were in use everywhere else.

'Ages ago, a savage mode of keeping accounts on notched sticks was introduced into the Court of Exchequer, and the accounts were kept much as Robinson Crusoe kept his calendar on the desert island. In the course of considerable revolutions of time, the celebrated Cocker was born, and died. Walkinghame of the *Tutor's Assistant*, well versed in figures, was also born, and died—a multitude of accountants, book-keepers, and actuaries were born, and died. Still official routine inclined to these notched sticks, as if they were the pillars of the constitution, and still the Exchequer accounts continued to be kept on certain splints of elm-wood called "tallies." In the reign of George III. an inquiry was made by some revolutionary spirit whether—pens, ink, and paper, and slates and pencils being in existence—this obstinate adherence to an obsolete custom ought to be continued, and whether a change ought not to be effected. All the red tape in the country grew redder at the bare mention of this bold and original conception, and it took till 1826 to get these sticks abolished. In 1834, it was found that there was a considerable accumulation of them, and the question then arose, what was to be done with such worn-out, wormeaten, rotten old bits of wood? I daresay there was a vast amount of minuting, memoranduming, and despatch-boxing on this mighty subject. The sticks were housed at Westminster, and it would naturally occur to any intelligent person that nothing could be easier than to allow them to be carried away for firewood by the miserable people who live in that neighbourhood. However, they never had been useful, and official routine required that they never should be, and so the order went forth that they were to be privately and confidentially burned. It came to pass that they were to be burned in a stove in the House of Lords. The stove, overgorged with these preposterous sticks, set fire to the panelling; the panelling set fire to the House of Lords; the House of Lords set fire to the House of Commons; the two houses were reduced to ashes; architects were called in to build others; we are now in the second million of the cost thereof; the national pig is not nearly over the stile yet, and the little old woman, Britannia, hasn't got home to-night. Now, I think we may reasonably remark, in conclusion, that all obstinate adherence to rubbish which the time has long outlived, is certain to have in the soul of it more or less that is pernicious and destructive, and that will some day set fire to something or other, which, if given boldly to the winds, would have been harmless, but which, obstinately retained, is ruinous.'

An example of the Exchequer notched sticks is here depicted for the amusement of the reader. It contains a half-intelligible legend in Latin, indicating that it is the record of an East Indian loan. Of course the reader will understand that there is, after all, a sort of rationality in the system, the one stick being for the creditor, the other for the lender, and the tallying of the notches a proof that both are genuine. In Scotland, till the early days of the editor, it was customary for the baker's lad to bring the *Nick-sticks* with his bread, a notch being made for each loaf he left. While the notches on his stick corresponded with those on the one left with the family, both parties were satisfied that the account was justly kept.

* *Gentleman's Magazine*, May 1840.

'STRANGE FISH.'

When Trinculo (in Shakspeare's *Tempest*) mistakes Caliban for 'a strange fish,' he at once exclaims: 'Were I in England now, and had but this fish painted, not a holiday fool there but would give a piece of silver: there would this monster make a man; any strange beast there makes a man: when they will not give a doit to relieve a lame beggar, they will lay out ten to see a dead Indian. This love of the English populace for strange sights is frequently alluded to by other writers of the Elizabethan era; a time fertile of travel, and abounding in discoveries which required very little exaggeration to carry them into the marvellous. This taste for the wonderful was well supplied—shows, ballads, and broadsides fostered and fed the public appetite. Occasionally, the 'monster' was a very mild form of monster indeed! A shark or a polypus was, by dint of rhetorical flourishes, converted into a very alarming monster, of which instances occur in Halliwell's folio edition of Shakspeare. The continental artists and authors went far beyond all this; the inland people particularly, from their inexperience of the sea, appear to have been thought capable of believing anything. Gesner, Rondeletius, and other authors of the sixteenth century, narrate the capture of marine monsters of a very 'strange' order, and among them one that was 'taken in Polonia in 1531,' which bore a general resemblance to a bishop! In the rare and curious little volume on *Costume*, by Johannes Sluper, published at Antwerp in 1572,

is a picture of this fish, here reproduced in facsimile. The *quatrain* appended to this cut assures us that bishops are not confined to land alone, but

THE SEA-BISHOP.

that the sea has the full advantage of their presence; and that though they may not speak, they wear a mitre. This 'monster,' we are told, was brought to the king, 'and after a while seemed very much to express to him, that his mind was to return to his own element again: which, the king perceiving, commanded that it should be

THE SEA-MONK.

so; and the bishop was carried back to the sea, and cast himself into it immediately.' The bishop once established in the popular mind, the clergy might follow of course, the more particularly as it would seem to countenance a sort of divine creation of monkery in the sea. So accordingly we find in the same work, this equally extraordinary representation of 'The Sea-Monk,' to which the following stanza is appended:

'La Mer poissons en abondance apporte,
Par dons devins que devous estimer.
Mais fert estrange est le Moyne de Mer,
Qui est ainsè que ce pourtrait le porte.'

In the office-book of the master of the revels, Sir Henry Herbert, is the entry of 'a licence to James Leale to shew a strange fish for half a yeare, the 3d of September 1632.' The records of London exhibitions, and the chronicles of Bartholomew, and other fairs, supply a constant succession of these favourite shows. A most amusing underplot in Jasper Mayne's comedy, *The City Match*, 1659, is founded on this popular weakness. A silly young Cockney is intoxicated by revellers, upon whom he forces his company for the sake of learning fashionable follies, and is dressed up and exhibited at a tavern, as 'a strange fish,' to wondering sight-seers at a shilling a head. One asks, if it is a whale, that the charge is so high; and another declares, 'We gave but a groat to see the last fish;' the showman replies with quiet dignity:

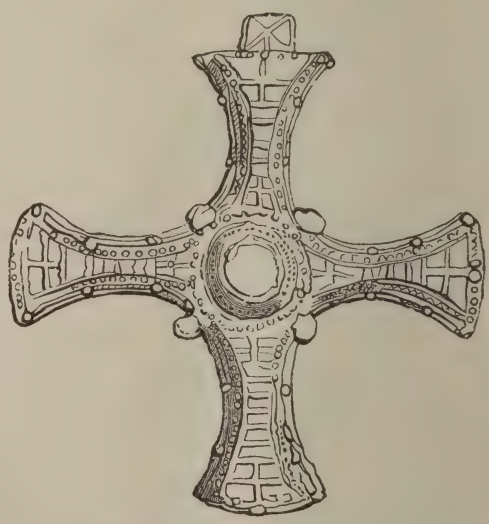
'Gentlewoman, that was but an Irish Sturgeon!
This came from the Indies; and eats five crowns a day,
In fry, ox-livers, and brown paste!'

But we must not laugh too freely at our ancestors. It is not more than three years since a 'talking fish' was profitably exhibited in London, and the principal provincial towns, at a shilling a head. The fish was a species of seal, and the 'talking' consisted of a free translation of its natural cry into the words *ma-ma* or *pa-pa*, according to the fancy of the showman or spectator.

SEPTEMBER 4.

Saints Marcellus and Valerian, martyrs, 179. St Ultan, first bishop of Ardbraccan, in Meath, 656. St Ida, widow, 9th century. The Translation of St Cuthbert, about 995. St Rosalia, virgin, 1160. St Rosa of Viterbo, virgin, about 1252.

TRANSLATION OF ST CUTHBERT.



Cuthbert—originally a shepherd-boy in Lauderdale, afterwards a monk at Old Melrose on the Tweed, finally bishop of the Northumbrian island of Lindisfarne, in which capacity he died in the year 688—is remarkable for the thousand-years' long history which he had, after experiencing that which brings most men their quietus. Fearing future incursions of the Danes, he charged his little religious community that, in case any such event should take place, they would quit the island, taking his bones along with them. Eleven years after his death, having raised his body to give it a more honourable place, they were amazed to find it had undergone not the slightest decay. In consequence of this miraculous circumstance, it

became, in its new shrine, an object of great popular veneration, and the cause of many other miracles; and so it continued till the year 875, when at length, to escape the Danes, the monks had to carry it away, and commence a wandering life on the mainland. After seven years of constant movement, the body of St Cuthbert found rest at Chester-le-Street; but it was, in a sense, only temporary, for in 995, a new incursion of the Danes sent it off once more upon its travels. It was kept some time at Rippon, in Yorkshire, and when the danger was past, the monks set out on their return to Chester-le-Street. They were miraculously arrested, however, at a spot called Duirholm (the deer's meadow), on the river Wear, and there finally settled with the precious corpse of their holy patron, giving rise to what has since been one of the grandest religious establishments of the British empire, the cathedral of Durham. This is the event which was for some ages celebrated as the Translation of St Cuthbert.

For upwards of a hundred years, the tomb of St Cuthbert, with his uncorrupted body, continued to be visited by devout pilgrims, and in 1104, on the erection of the present cathedral of Durham, it was determined to remove his remains to a shrine within the new structure. Some doubts had been expressed as to the permanence of his incorruptibility, and to silence all such misgivings, the clergy of the church, having met in conclave beside the saint's coffin the night before its intended removal, resolved to satisfy themselves by an actual inspection. After preparing themselves for the task by prayer, they removed, with trembling hands, the external fastenings, and opened the first coffin, within which a second was found, covered with rough hides, and enclosing a third coffin, enveloped in several folds of linen. On removing the lid of this last receptacle, a second lid appeared, which on being raised with much fear and agitation, the swathed body of the saint lay before them 'in a perfect state.' According to the narrative, the monks were appalled as if by some fearful interposition of Heaven; but after a short interval, they all fell flat on the ground, repeated amid a deluge of tears the seven penitential psalms, and prayed the Lord not to correct them in his anger, nor chasten them in his displeasure. The next day the miraculous body was shewn to the multitude, though it is honestly stated by the chronicler that the whole of it, including the face, was covered with linen, the only flesh visible being through a chink left in the cerecloths at the neck. Thereafter it was placed in the shrine destined for it behind the great altar, where it remained undisturbed for the ensuing *four hundred and twenty-six years*, and proved the source of immense revenues to the cathedral. No shrine in England was more lavishly adorned or maintained than that of St Cuthbert; it literally blazed with ornaments of gold, silver, and precious stones, and to enrich the possessions of the holy man, and his representative the bishop of Durham, many a fair estate was impoverished or diverted from the natural heirs. The *corporax cloth*, which the saint had used to cover the chalice when he said mass, was enclosed in a silk banner, and employed in gaining victories for the Plantagenet kings of England. It turned the fate of the day at the battle of Neville's Cross, in 1346, when David of Scotland was defeated; and it soon after witnessed the taking of Berwick by Edward III. But all the glories of St Cuthbert were to be extinguished at the Reformation, when his tomb was irreverently disturbed. It had, however, a better fate than many other holy places at this eventful epoch, as the coffin, instead of being ignominiously broken up, and its contents dispersed, was carefully closed, a new exterior coffin added, and the whole buried underneath the defaced shrine.

For the greater part of *three centuries more*, the body of St Cuthbert lay here undisturbed. He was not forgotten during this time, but a legend prevailed that the site of his tomb was known only to the Catholic clergy, three of whom, it was alleged, and no more, were intrusted with the secret at a time, one being admitted to a knowledge of it as another died—all this being in the hope of a time arriving when the shrine might be re-erected, and the incorrupt body presented once more to the veneration of the people. It is hardly necessary to observe, that this story of a secret was pure fiction, as the exact site of the tomb could be easily ascertained.

The next appearance of St Cuthbert was in May 1827, when, in presence of a distinguished assemblage, including the dignitaries of Durham Cathedral, his remains were again exhumed from their triple encasement of coffins. After the larger fragments of the lid, sides, and ends of the last coffin had been removed, there appeared below a dark substance of the length of a human body, which proved to be a skeleton, lying with its feet to the east, swathed apparently in one or more shrouds of linen or silk, through which there projected the brow of the skull and the lower part of the leg bones. On the breast lay a small golden cross, of which a representation is here given. The

GOLDEN CROSS.—WORN BY ST CUTHBERT, AND FOUND ON HIS BODY AT THE OPENING OF HIS TOMB IN 1827.

whole body was perfectly dry, and no offensive smell was perceptible. From all the appearances, it was plain that the swathings had been wrapped round a dry skeleton, and not round a complete body, for not only was there no space

left between the swathing and the bones, but not the least trace of the decomposition of flesh was to be found. It was thus clear that a fraud had been practised, and a skeleton dressed up in the habiliments of the grave, for the purpose of imposing on popular credulity, and benefiting thereby the influence and temporal interests of the church. In charity, however, to the monks of Durham, it may be surmised that the perpetration of the fraud was originally the work of a few, but having been successful in the first instance, the belief in the incorruptibility of St Cuthbert's body came soon to be universally acquiesced in, by clergy as well as laity. Perhaps the history of the saint is not yet finished, and after the lapse of another cycle of years, a similar curiosity may lead to a re-examination of his relics, and Macaulay's New Zealander, after sketching the ruins of St Paul's from a broken arch of London Bridge, may travel northwards to Durham, to witness the disinterment from the battered and grass-grown precincts of its cathedral, of the bones of the Lauderdale shepherd of the seventh century.

ST CUTHBERT'S BEADS.

On a rock, by Lindisfarne,
Saint Cuthbert sits, and toils to frame
The sea-born beads that bear his name:
Such tales had Whitby's fishers told,
And said they might his shape behold,
And hear his anvil sound;
A deadened clang—a huge dim form,
Seen but, and heard, when gathering storm,
And night were closing round.
Marmion.

There is a Northumbrian legend, to the effect that, on dark nights, when the sea was running high, and the winds roaring fitfully, the spirit of St Cuthbert was heard on the recurring lulls forging beads for the faithful. He used to sit in the stormmist, among the spray and sea-weeds, on a fragment of rock on the shore of the island of Lindisfarne, and solemnly hammer away, using another fragment of rock as his anvil. A remarkable circumstance connected with the legend is, that after a storm the shore was found strewed with the beads St Cuthbert was said to have so forged. And a still more remarkable circumstance connected with the legend consists in the fact that, although St Cuthbert is, now, neither seen nor heard at work, the shore is still found strewed with the beads after a storm. The objects which are called beads are, in fact, certain portions of the fossilised remains of animals, called crinoids, which once inhabited the deep in myriads. Whole specimens of a crinoid are rare, but several parts of it are common enough. It consisted of a long stem supporting a cup or head; and out of the head grew five arms or branches. The stem and the branches were flexible, and waved to and fro in the waters; but the base was firmly attached to the sea-bottom. The flexibility of the stems and branches was gained by peculiar formation; they were made of a series of flat plates or ossicula, like thick wafers piled one above another, and all strung together by a cord of animal matter, which passed through the entire animal. These plates, in their fossilised form detached from one another, are the beads in question. The absence of the animal matter leaves a hole in the centre of each piece, through which they can be strung together, rosary-fashion. They vary in size; some are about the diameter of a pea, others of a sixpence. They are most frequently found in fragments of the stems, an inch or two long, each inch containing about a dozen joints or beads. Crinoids

ST CUTHBERT'S BEADS.

are classed by modern naturalists with the order *echinodermata*—that is to say, among the sea-stars and sea-urchins. The entrochal marble of Derbyshire, used for chimney-pieces and ornamental purposes, includes a vast quantity of the fragments of crinoids. Those found at Lindisfarne have been embedded in shale, out of which they have been washed by the sea, and cast ashore.

Born.—Pindar, lyric poet, 518 B.C., *Thebes;* Alexander III. of Scotland, 1241, *Roxburgh;* Gian Galeazzo Visconti, celebrated Duke of Milan, founder of the cathedral, 1402; François Réné, Vicomte de Chateaubriand, moral and romantic writer, 1768, *St Malo.*

Died.—John Corvinus Huniades, Hungarian general, 1456, *Zemlin;* Robert Dudley, Earl of Leicester, favourite of Queen Elizabeth, 1588; John James Heidegger, Master of the Revels to George II., 1749; Charles Townshend, orator and statesman, 1767.

A MASTER OF THE REVELS.

John James Heidegger, a native of Switzerland, after wandering, in various capacities, through the greater part of Europe, came to England early in the eighteenth century; and by his witty conversation and consummate address, soon gained the good graces of the gay and fashionable, who gave him the appellation of the Swiss Count. His first achievement was to bring out an opera (*Thomyres*), then a novel and not very popular kind of entertainment in England. By his excellent arrangements, and judicious improvements on all previous performances, Heidegger may be said to have established the opera in public favour. Becoming manager of the Opera House in the Haymarket, he acquired the favour of George II.; and introducing the then novel amusement of masquerades, he was appointed master of the revels, and superintendent of masquerades and operas to the royal household. Heidegger now became the fashion; the first nobility in the land vied in bestowing their caresses upon him. From a favourite, he became an autocrat; no public or private festival, ball, assembly, or concert was considered complete, if not submitted to the superintendence of the Swiss adventurer. Installed by common consent as *arbiter elegantiarum*, Heidegger, for a long period, realised an income of £5000 per annum, which he freely squandered in a most luxurious style of life, and in the exercise of a most liberal charity.

Though tall and well made, Heidegger was characterised by a surpassing ugliness of face. He had the good sense to joke on his own peculiar hardness of countenance, and one day laid a wager

with the Earl of Chesterfield, that the latter could not produce, in all London, an uglier face than his own. The earl, after a strict search, found a woman in St Giles's, whose features were, at first sight, thought to be as ill-favoured as those of the master of the revels; but when Heidegger put on the woman's head-dress, it was unanimously admitted that he had won the wager.

Jolly, a fashionable tailor of the period, is said to have also been rather conspicuous by a Caravaggio style of countenance. One day, when pressingly and inconveniently dunning a noble duke, his Grace exclaimed: 'I will not pay you, till you shew me an uglier man than yourself.' Jolly bowed, retired, went home, and wrote a polite note to Heidegger, stating that the duke particularly wished to see him, at a certain hour, on the following morning. Heidegger duly attended; the duke denied having sent for him; but the mystery was unravelled by Jolly making his appearance. The duke then saw the joke, and with laughter acknowledging the condition he stipulated was fulfilled, paid the bill.

As might be supposed, Heidegger was the constant butt of the satirists and caricaturists of his time. Hogarth introduces him into several of his works, and a well-known sketch of 'Heidegger in a Rage,' attributed to Hogarth, illustrates a remarkable practical joke played upon the master of the revels. The Duke of Montague gave a dinner at the 'Devil Tavern' to several of the nobility and gentry, who were all in the plot, and to which Heidegger was invited. As previously arranged, the bottle was passed round with such celerity, that the Swiss became helplessly intoxicated, and was removed to another room, and placed upon a bed, where he soon fell into a profound sleep. A modeller, who was in readiness, then took a mould of his face, from which a wax mask was made. An expert mimic and actor, resembling Heidegger in height and figure, was instructed in the part he had to perform, and a suit of clothes, exactly similar to that worn by the master of the revels on public occasions, being procured, everything was in readiness for the next masquerade. The eventful evening having arrived, George II., who was in the secret, being present, Heidegger, as soon as his majesty was seated, ordered the orchestra to play *God Save the King;* but his back was no sooner turned, than his counterfeit commanded the musicians to play *Over the Water to Charlie.* The mask, the dress, the imitation of voice and attitude, were so perfect, that no one suspected a trick, and all the astonished courtiers, not in the plot, were thrown into a state of stupid consternation. Heidegger hearing the change of music, ran to the music-gallery, stamped and raved at the musicians, accusing them of drunkenness, or of a design to ruin him, while the king and royal party laughed immoderately. While Heidegger stood in the gallery, *God Save the King* was played, but when he went among the dancers, to see if proper decorum were kept by the company, the counterfeit stepped forward, swore at the musicians, and asked: had he not just told them to play *Over the Water to Charlie?* A pause ensued, the musicians believing Heidegger to be either drunk or mad, but as the mimic continued his vociferations, *Charlie* was played again. The company was by this time in complete confusion. Several officers of the guards, who were present, believing a studied insult was intended to the king, and that worse was to follow, drew their swords, and cries of shame and treason resounded from all sides. Heidegger, in a violent rage, rushed towards the orchestra, but he was stayed by the Duke of Montague, who artfully whispered that the king was enraged, and his best plan was first to apologise to the monarch, and then discharge the drunken musicians. Heidegger went, accordingly, to the circle immediately before the king, and made a humble apology for the unaccountable insolence of the musicians; but he had scarcely spoken ere the counterfeit approaching, said in a plaintive voice: 'Indeed, sire, it is not my fault, but,' pointing to the real Heidegger, 'that devil in my likeness.' The master of the revels, turning round and seeing his counterpart, stared, staggered, turned pale, and nearly swooned from fright. The joke having gone far enough, the king ordered the counterfeit to unmask; and then Heidegger's fear turning into rage, he retired to his private apartment, and seating himself in an arm-chair, ordered the lights to be extinguished, vowing he would never conduct another masquerade unless the surreptitiously-obtained mask were immediately broken in his presence. The mask was delivered up, and Hogarth's sketch represents Heidegger in his chair, attended by his porter, carpenter, and candle-snuffer, the obnoxious mask lying at his feet.

Heidegger gave grand entertainments to his friends; the king even condescended to visit him in his house at Barn-Elms. One day, a discussion took place at his table as to which nation in Europe had the best-founded claim to ingenuity. After various opinions had been given, Heidegger claimed that character for the Swiss, appealing to himself as a case in point. 'I was,' said he, 'born a Swiss, in a country where, had I continued to tread in the steps of my simple but honest forefathers, twenty pounds a year would have been the utmost that art or industry could have procured me. With an empty purse, a solitary coat on my back, and *almost* two shirts, I arrived in England, and by the munificence of a generous prince, and the liberality of a wealthy nation, am now at the head of a table, covered with the delicacies of the season, and wines from different quarters of the globe; I am honoured with the company, and enjoy the approbation, of the first characters of the age, in rank, learning, arms, and arts, with an income of five thousand pounds a year. Now, I defy any Englishman or native of any other country in Europe, how highly soever he may be gifted, to go to Switzerland, and raise such a sum there, or even to spend it.'

Although an epicure and a wine-bibber, Heidegger lived to the age of ninety years. He died on the 4th of September 1749, and was buried in the church of Richmond, in Surrey. With all his faults, it must not be forgotten that he gave away large sums in charity. And in spite of his proverbial ugliness—

> 'With a hundred deep wrinkles impressed on his front,
> Like a map with a great many rivers upon 't'—

an engraving of his face, taken from a mask after death, and inserted in Lavater's *Physiognomy,*

exhibits strong marks of a benevolent character, and features by no means displeasing or disagreeable.

SEPTEMBER 5.

St Alto, abbot. St Bertin, abbot, 709. St Laurence Justinian, confessor, first patriarch of Venice, 1455.

Born.—Tommaso Campanella, philosophical writer, 1568, *Stilo in Calabria;* Cardinal Richelieu, celebrated French statesman, 1585, *Paris;* Louis XIV. of France, 1638, *St Germains;* Jean Benjamin Laborde, musician and historical writer, 1734, *Paris;* Robert Fergusson, Scottish poet, 1750, *Edinburgh;* Dr John Dalton, eminent chemist, 1766, *Eaglesfield, Cumberland.*

Died.—Catharine Parr, queen of Henry VIII., 1548; Edmund Bonner, persecuting bishop, 1569, *Marshalsea Prison;* Matthew Stuart, Earl of Lennox, regent of Scotland, shot at Stirling, 1571; Cardinal du Perron, statesman and man of letters, 1618; Jean François Regnard, comic poet, 1710, *near Paris;* John Home, author of *Douglas*, 1808; James Wyatt, architect, 1813; Dr Patrick Neill, author of works on natural history, &c., 1851, *Edinburgh;* Dr William Macgillivray, distinguished naturalist, 1852, *Aberdeen.*

JOHN HOME.

The public has been made pretty well acquainted with the history of the author of *Douglas*—how the bringing out of his play in Edinburgh, in the year 1756, exposed him to censure among his brethren in the Scotch Church—how he finally retired from clerical duty upon a pension granted him by Lord Bute—how he failed in every other literary undertaking, but spent, on the whole, a happy, as well as a long life, in the enjoyment of the friendship of all the eminent men of his day. Home's tragedy is not now looked upon as the marvel of genius which it once was; and yet, one would think, there must be some peculiar merit in a play of which so many portions remain so strongly impressed upon so many memories. The author was acknowledged, in his lifetime, to be vain up to the full average of poets; yet it was equally admitted regarding him, that he loved his friends as warmly as he loved himself, and was untiring in his exertions for their good. His vanity seems to have been of a very inoffensive kind.

Sir Adam Ferguson, the son of Home's friend, Dr Ferguson, used to relate an anecdote of the venerable dramatist with great comic effect. It cannot be set forth in print with nearly the same force, but it may, nevertheless, be worthy of a place in this miscellany. Mrs Siddons, on visiting the Edinburgh theatre, always spent an afternoon with her worthy friends, Mr and Mrs Home, at their neat house in North Hanover Street (latterly, Robertson's upholstery wareroom). On one occasion, they were seated at an early dinner, attended by Mr Home's old man-servant John, and a little 'lassie,' whose usual place was the kitchen, and who did not as yet know much about waiting at table.

'And what will you take to drink, Mrs Siddons?' inquired the host.

'A little porter,' answered the tragedy queen in her impressive voice.

John, unobservant of the lady's wishes, was ordered by his master to get a little porter for Mrs Siddons, and immediately left the room, apparently to obtain the desired beverage. Two or three minutes having elapsed, Mr Home was heard complaining to his wife of John's absence. 'My dear, John is getting very stupid—I think we shall have to part with him. There he has been out of the room for some minutes, and we are all at a stand.' A few more minutes passed, and Mr Home's patience was rapidly ebbing, notwithstanding that Mrs Siddons did all in her power to put him at his ease. The absence of John, however, had become the subject of concentrated thought to the company, when all at once the outer-door was heard to open, hasty steps crossed the lobby, and John presented himself in the dining-room, with a flushed face, crying: 'I've found ane, ma'am! he's the least I could get!' Then emerged into view a short, thick-set Highlander, whose band of ropes and leaden badge betokened his profession, but who seemed greatly bewildered on finding himself in a gentleman's dining-room, surveyed by the curious eyes of one of the grandest women that ever walked the earth. The truth flashed first upon Mrs Siddons, who, unwonted to laugh, was for once overcome by a sense of the ludicrous, and broke forth into something like shouts of mirth, while as yet Mr Home was but beginning to apprehend what his servant meant, and Mrs Home had evidently not the least chance of ever understanding it—for this lady was by no means a bright specimen of her sex, as the second of Sir Adam's anecdotes will help to make more clear to the reader.

Fallen, as *Douglas* is now, to the rank of a second-rate play, it is scarce possible for modern men to imagine that it was once the subject of enthusiastic admiration, even beyond the limits of the author's country. A middle-aged Englishman came to Edinburgh in the summer of 1802, mainly for the purpose of seeing the author of this, his favourite tragedy. He found his way to a modest tenement in a court off the principal street called Canongate, and tremulously knocked at the door. A 'lassie' came.

'Is Mr Home within?'

'Na, sir.'

'Will he be at home soon?'

'Oh, na, sir; he's in the Hielands.'

This was true—Mr Home, attended by his man John, generally spent some weeks in the Highlands every summer.

'And when will he be at home?'

'I canna tell, sir; and John's awa' too—I suppose you had better come in and see Mrs Home.'

'Oh, then, Mrs Home is not gone? I should be glad to see her for a few minutes.' He reflected that, next to seeing a poet, was seeing a poet's love. She must doubtless be a very interesting woman. So he sent in his card, with a message stating that he had come to Edinburgh almost on purpose to see Mr Home—and would the lady be so obliging as allow him a few minutes' conversation? He was presently ushered in, when he beheld a withered old lady, with her head wrapped up in flannel, and looking in the last stage of stupidity and decrepitude. She had a little hot wine and water in a tumbler beside her, and was engaged in grating into it a few grains of nutmeg, such being her ordinary solacement after an early dinner. The heart of the

ardent Douglassomaniac sank within him, but he mustered strength to engage in conversation with the old lady, whom he found sadly deficient in knowledge regarding matters of the day, and, indeed, hardly able to converse at all, time having made havoc of the few faculties she once possessed. After trying her with various topics, he came upon one which had lately been in great vogue—the peace concluded with France.

'Oh, yes, I've heard o' the peace. Ay, it's come at last.'

'It must make a great change in many things,' said the Englishman; 'we may all be thankful for it. England will be able to breathe again, madam.' The old lady paused—she had not a single idea in her head, but she naturally felt the necessity of saying something. So she asked, in the slow deliberate manner of old paralytic people: '*Do you think, sir, it will mak' ony difference in the price o' nitmugs?*' Hereupon, the lion-hunting Englishman, it is said, uttered a hasty expression unsuitable for print, bade the lady a hasty adieu, and made the best of his way back to his hotel, whence he next day set out for England.

BANBURY AND ITS REMARKABLES.

The *Tatler* for September 5, 1710, gives a jocular account of an *Ecclesiastical Thermometer*, which had been invented for testing the degrees of zeal of particular places in behalf of the church. The writer states that the town of Banbury, Oxfordshire, which had been singled out by Dr Fuller a century before for its *cakes* and *zeal*, proved itself by 'the glass,' i. e., the above-mentioned thermometer, to be still characterised in a marked manner by the latter peculiarity. It may be suspected that Banbury at that time equally maintained its ancient distinction in respect of cakes, for the town is still noted for this article, insomuch that they are exported to the most distant parts of the world, one baker alone in 1839 disposing of 139,500 twopenny ones. However this may be, we find that, in the days of Fuller, the material things which the town was remarkable for were—*veal, cheese*, and *cakes;* while it is not less certain, that in the abstract article *zeal*, Banbury was also notable. Thereby hangs a jest. When Philemon Holland was printing his English edition of Camden's *Britannia*, he added to the author's statement of Banbury being famous for cheese, the words 'cakes and ale;' and so it was passing through the press, when, Mr Camden coming in, and seeing the change, thinking 'ale' a somewhat disrespectful reference, substituted for it the word 'zeal,' very unluckily, as it proved, for the Puritans, who abounded in the town, were greatly offended by the allusion, and so more was lost than gained by the change.

Modern research has not failed to discover the early traces of the extreme Puritanism of Banbury.

The advent of Queen Elizabeth to power brought evil days to the Roman Catholics; and in 1571, Mr Anthony Cope, of Hanwell, a zealous Puritan, was chosen parliamentary representative for the borough by its eighteen electors, an office which he filled for upwards of thirty years. The Rev. Thomas Bracebridge, an eminent Puritan divine, was also at this time vicar of Banbury, and was suspended by the bishop in 1590, for denouncing that usurpation of power in ecclesiastical matters which most of the Tudors were so fond of taking on themselves. There can be no doubt that he laid the foundation of those principles of Puritanism which displayed themselves in Banbury, towards the close of the reign in question, and which Mr Johnson describes as follows:

'From the date of the execution of the Earl of Essex—the last and best-beloved favourite of the queen—an event which took place in 1601, the active mind of Elizabeth became seriously impaired, and the transaction of public business was disagreeable and irksome. The oppressed and consequently dissatisfied adherents of the church of Rome, taking advantage of this altered state of things, began to wax bolder in the expression of their opinions. Under the strict rule of the Puritans, the shows and pageants had been suppressed, and an attempt was now made by the Catholics to revive them. The dresses were procured, the characters rehearsed, and a day fixed for the performance in Banbury. The procession of the performers had reached the high cross, and the actors were engaged in the prologue of the play, when a counter-demonstration issued from High Street, and a collision ensued between the excited partisans of the conflicting creeds. A regular mêlée is described as having taken place; but the supporters of the reformed doctrines, having both numbers and the law upon their side, seem eventually to have had the best of the fray. Having succeeded in driving their antagonists out of the town, the rage of the populace took a new direction. Hammers and pickaxes were procured, and the "goodly cross," the symbol of the faith of the Roman-Catholic world, was strewed in ruins through the Horse Fair. . . . So thorough was the work of destruction, that a writer of the time compares the state in which the crosses were left—for there were at least four of them—to the stumps of trees when the trunks are cut down, or to the conveniences by a roadside inn, to aid a lazy horseman in mounting to the saddle. To the church the crowd repaired next, and worked their frantic will upon the stately temple. The magnificent windows of stained glass were shivered to atoms, as savouring too strongly of idolatry, and the statuary and sculpture mutilated and defaced by the hands of those insensible to forms of beauty. Corbet charges the rioters with not having left the leg or arm of an apostle, and says that the names of the churchwardens were the only inscriptions to be seen upon the walls.

'The reputed sanctity of manners drew upon the town the cutting sarcasms of the wits of the age. The "rare Ben Jonson," in his comedy of *Bartholomew Fair*, represents one of his characters, "Zeal-o'-the-Land Busy," as a Banbury baker, who had abandoned the dough-tub and oven for the more lucrative avocation of "seeing visions and dreaming dreams." Braithwaite, in his *Drunken Barnaby's Four Journeys*, refers to the town in the well-known strain:

> "To Banbury came I, O profane one!
> There I saw a Puritane one
> Hanging of his cat on Monday,
> For killing of a mouse on Sunday."

The same writer, in his *Strappado for the Devil*, calls Bradford in Yorkshire, the "Banbury of the

North," and says that it also is famous for its "twanging ale, zeal, cakes, and cheese." Richard Corbet, subsequently bishop of Oxford, in his *Iter Boreale* thus refers to the walks in and around Banbury church:

> "If not for God's, for Mr Whateley's sake,
> Level the walks; suppose these pitfalls make
> Him sprain a lecture, or displace a joint
> In his long prayer, or in his fifteenth point."'

This William Whateley was an eminent Puritan divine, of the Richard-Baxter school, who succeeded to the vicarage in 1610, and held the office for about thirty years. The Rev. Samuel Wells, another clergyman holding similar views, was inducted to the vicarage in 1648, and held the office until 1662, when, on 'Black Bartholomew,' he threw the emoluments of his living to the winds, and preached his farewell sermon from the words, 'And now, behold, I go bound in the spirit to Jerusalem, not knowing the things which shall befall me there.'

Sir William Davenant, in his comedy *The Wits*, in speaking of a certain lady, says:

> 'She is more devout
> Than a weaver of Banbury, that hopes
> To entice heaven, by singing, to make him lord
> Of twenty looms.'

The following lines of Thomas Jordan, in his *Royal Arbor of Loyal Poesie*, may have had some reference to the doings already mentioned:

> 'They pluckt communion-tables down,
> And broke our painted glasses;
> They threw our altars to the ground,
> And tumbled down the crosses.
>
> They set up Cromwell and his heir—
> The Lord and Lady Claypole—
> Because they hated common-prayer,
> The organ, and the May-pole.'

Most persons who have a feeling for the literature of their early years, will lament the destruction of the cross of Banbury, the locality of the famous nursery rhyme:

> 'Ride a cock-horse to Banbury Cross,
> To see a black lady ride on a white horse,
> Rings on her fingers and bells on her toes,
> That she may have music wherever she goes.'

SEPTEMBER 6.

St Pambo of Nitria, abbot, 385. St Macculindus, bishop of Lusk, 497. St Eleutherius, abbot, about 585. St Bega or Bees, virgin, 7th century.

Born.—Dr Robert Whytt, eminent medical writer, 1714, *Edinburgh.*

Died.—Pope John XIII., 972; Jean Baptiste Colbert, celebrated minister of finance to Louis XIV., 1683; Bishop Edmund Gibson, 1748, *Bath;* Sir John Fielding, notable police magistrate, 1780, *Brompton, London;* George Alexander Stevens, song and burlesque writer, 1784; Louis Peter Anquetil, historical writer, 1808; Dr Vicesimus Knox, miscellaneous writer, 1821, *Tunbridge;* John Bird Sumner, archbishop of Canterbury, author of *Records of Creation*, and other works, 1862.

THE STRATFORD JUBILEE, OR SHAKSPEARE COMMEMORATION FESTIVAL IN 1769.

On Wednesday, the 6th of September 1769, and two following days, Stratford-upon-Avon, in Warwickshire, witnessed a succession of festivities such as seldom befall in an English country town. The object of these remarkable doings was the commemoration of the great Shakspeare, whose remains, upwards of a hundred and fifty years before, had been deposited in the chancel of the parish church of this his native place. To the scarcely less famous exponent of the national dramatist, the celebrated actor, David Garrick, belongs the credit, such as it is, of having devised this festive ceremonial, which, from the novelty as well as popularity of the scheme, created an immense sensation throughout the kingdom. The idea had been suggested to him by a request conveyed from the corporation of Stratford, that he would honour them by becoming a burgess, and accepting of the freedom of the town. Having intimated his willingness to do so, the freedom of the borough was, in May of this year, presented to him in an elegant box, made out of the famous mulberry-tree which Shakspeare himself had planted, but which, a short time previously, had been cut down by its proprietor, a splenetic clergyman, who, in addition to this act of Vandalism, had also pulled down the house in which Shakspeare lived. Vanity and enthusiasm alike stimulating Garrick, he now set himself arduously to work in the carrying out of the idea which he had conceived, and in its accomplishment he was aided by the zealous co-operation both of the authorities of the town of Stratford, and the most influential personages in point of rank and distinction in the realm. The most extensive preparations were made for the proper celebration of the festival; crowds of persons from all parts of England pressed forward to be present on the occasion, and the eventful morning at length dawned. The newspapers and magazines of the day have detailed at considerable length the events which took place, and from these we have compiled the following narrative.

On the morning of Wednesday, at five o'clock, the proceedings were inaugurated by a serenade performed through the streets by a band of musicians and singers from Drury Lane Theatre. Several guns were then fired, and the magistrates assembled about eight o'clock in one of the principal streets. A public breakfast was prepared in the new town-hall at nine, presided over by Mr Garrick as steward, who, previous to the reception of the general company, was formally waited on by the mayor and corporation of Stratford, and presented with a medallion of Shakspeare, carved on a piece of the famous mulberry-tree, and richly set in gold. At breakfast, favours in honour of the great dramatist were universally worn by ladies as well as gentlemen, and the assemblage numbered the most distinguished of the aristocracy amid its guests. This entertainment having been concluded, the company proceeded to the church, where the oratorio of *Judith* was performed under the superintendence of Dr Arne. A procession, with music, led by Mr Garrick, was then formed from the church to the amphitheatre, a wooden building

erected for the occasion on the bank of the Avon, constructed after the manner of the Rotunda at Ranelagh, in the form of an octagon, with a roof supported by eight pillars, and elegantly painted and gilded. Here dinner was served up at three o'clock, and a suitable interval having elapsed, a musical performance took place, at which several songs, chiefly written by Garrick, were received

THE AMPHITHEATRE: STRATFORD JUBILEE, 1769.

with the greatest applause by the audience. One of these, which was greatly commended for its liveliness and spirit, is here inserted:

THE WARWICKSHIRE LAD.

Ye Warwickshire lads, and ye lasses,
See what at our jubilee passes;
Come, revel away, rejoice, and be glad,
For the lad of all lads, was a Warwickshire lad,
Warwickshire lad,
All be glad,
For the lad of all lads, was a Warwickshire lad.

Be proud of the charms of your county,
Where nature has lavished her bounty,
Where much she has given, and some to be spar'd,
For the bard of all bards, was a Warwickshire bard,
Warwickshire bard,
Never pair'd,
For the bard of all bards, was a Warwickshire bard.

Each shire has its different pleasures,
Each shire has its different treasures,
But to rare Warwickshire, all must submit,
For the wit of all wits, was a Warwickshire wit,
Warwickshire wit,
How he writ!
For the wit of all wits, was a Warwickshire wit.

Old Ben, Thomas Otway, John Dryden,
And half a score more we take pride in,
Of famous Will Congreve we boast too the skill,
But the Will of all Wills, was a Warwickshire Will,
Warwickshire Will,
Matchless still,
For the Will of all Wills, was a Warwickshire Will.

Our Shakspeare compared is to no man,
Nor Frenchman, nor Grecian, nor Roman,
Their swans are all geese, to the Avon's sweet swan,
And the man of all men, was a Warwickshire man,
Warwickshire man,
Avon's swan,
And the man of all men, was a Warwickshire man.

As ven'son is very inviting,
To steal it our bard took delight in,
To make his friends merry, he never was lag,
For the wag of all wags, was a Warwickshire wag,
Warwickshire wag,
Ever brag,
For the wag of all wags, was a Warwickshire wag.

There never was seen such a creature,
Of all she was worth he robbed Nature;
He took all her smiles, and he took all her grief,
And the thief of all thieves, was a Warwickshire thief,
Warwickshire thief,
He 's the chief,
For the thief of all thieves, was a Warwickshire thief.

A grand ball commenced in the amphitheatre in the evening, and was kept up till three o'clock next morning. In front of the building, an ambitious transparency was exhibited, representing Time leading Shakspeare to immortality, with Tragedy on one side, and Comedy on the other. A general illumination took place in the town, along with a brilliant display of fireworks, under the management of Mr Angelo. The next morning was ushered in like the former by firing of cannon, serenading, and ringing of bells. A public breakfast was again served in the town-hall, and at eleven o'clock the company repaired to the amphitheatre, to hear performed Garrick's *Shakspeare Ode*, which he had composed for the dedication of the town-hall, and placing there a statue of the great bard presented by Garrick to the corporation. We quote the grandiloquent language of Boswell, the biographer of Johnson, regarding this production.

'The performance of the Dedication Ode was noble and affecting: it was like an exhibition in Athens or Rome. The whole audience were fixed in the most earnest attention; and I do believe, that if one had attempted to disturb the performance, he would have been in danger of his life. Garrick, in the front of the orchestra, filled with the first musicians of the nation, with Dr Arne at their head, and inspired with an awful elevation of soul, while he looked from time to time at the venerable statue of Shakspeare, appeared more than himself. While he repeated the ode, and saw the various passions and feelings which it contains fully transfused into all around him, he seemed in ecstasy, and gave us the idea of a mortal transformed into a demigod, as we read in the pagan mythology.'

The statue of Shakspeare, above referred to, was raised in a conspicuous position above the

assembled company, and Garrick, we are told, was stationed in the centre of the orchestra, dressed in a brown suit, richly embroidered with gold lace, with his steward's wand of the mulberry-wood in his hand, and the medallion, presented him by the corporation, suspended from his breast. Our space does not permit us to transcribe here the Dedication Ode, which is a piece of considerable length. Declaimed by Garrick, with the airs and choruses set to music by Arne, and performed under the personal direction of that gifted composer, it must have formed the most attractive part of the jubilee festivities. On its completion, its author stood up and delivered a eulogium on Shakspeare, in which the enemies of the dramatist (if he had any) were called on to state anything which they knew to his prejudice. Upon this, King, the celebrated comedian, ascended to the orchestra, and in the character of a *macaroni*, the reigning type of fop of the day, commenced a denunciatory attack on Shakspeare, as an ill-bred uncultivated fellow, who made people laugh or cry as *he* thought proper—in short, quite unsuited for the refinement of the present age. It is said to have been a highly-amusing exhibition, though many of the audience, unable to understand a joke, and believing it a real onslaught upon Shakspeare, testified visibly their dissatisfaction. An epilogue addressed to the ladies, and delivered by Garrick, closed this part of the ceremonial, which did not terminate without a mishap—the composure of the meeting being unexpectedly disturbed by the giving way of a number of the benches on which the audience sat, with a terrible crash. A nobleman was at the same time hurt by the falling of a door, but fortunately no one received any serious detriment.

The remainder of Thursday was, like the previous day, spent in dining, listening to a concert, and witnessing illuminations and fireworks. At midnight commenced a grand masquerade, said to have been one of the finest entertainments of the kind ever witnessed in Britain. Three ladies, we are informed, who personated Macbeth's witches, and another, who appeared as Dame Quickly, excited universal admiration. An Oxford gentleman assumed, with great effect, the character of Lord Ogleby; but a person dressed as the Devil gave inexpressible offence! One individual, whose costume attracted special attention, was James Boswell, already referred to, whom the accompanying engraving represents as he appeared at the Stratford jubilee masquerade, in the character of an armed chief of Corsica, an island of which he had published an account, and regarding which he had, as his countrymen in the north would say, 'a bee in his bonnet.' The dress consisted of a short, dark-coloured coat of coarse cloth, scarlet waistcoat and breeches, and black spatterdashes, and a cap of black cloth, bearing on its front, embroidered in gold letters, VIVA LA LIBERTA, and on its side a blue feather and cockade. The device was in allusion to the struggles of the Corsicans for national independence under General Paoli, Boswell's friend. On the breast of the coat was sewed a Moor's head, the crest of Corsica, surrounded with branches of laurel. Mr Boswell wore also a cartridge-pouch, into which was stuck a stiletto, and on his left side a pistol. A musket was slung across his shoulder, and his hair, which was unpowdered, hung plaited down his neck, ending in a knot of blue ribbons. In his right hand he carried a long vine staff, with a bird curiously carved at the upper end, as 'emblematical of the sweet bard of Avon.' He wore no mask, saying that it was not proper for a gallant Corsican. In this character he also delivered a

JAMES BOSWELL, AT THE STRATFORD JUBILEE, 1769. FROM THE LONDON MAGAZINE.

poetical address, sufficiently grandiose and Cambysean, on the united subjects of Corsica and the Stratford jubilee. There can be no doubt, as Mr Croker remarks, that poor Bozzy made a sad fool of himself, both on this and other occasions during the jubilee, and would have done well to have followed the advice of his blunt-spoken Mentor, 'to clear his head of Corsica.' During his stay at Stratford, he is said to have gone about with the words CORSICA BOSWELL printed in large letters outside his hat, that no one might remain in ignorance of the presence of so illustrious a personage.

On the masquerade revellers awaking from their slumbers on the following day (Friday), they found a deluge of rain, which had continued unintermittedly from the previous night, descending on the town of Stratford. All prospect, therefore, of carrying out the proposed Shakspeare pageant, in which the principal characters in his plays were to have been represented in a triumphal procession, *al fresco*, with chariots, banners, and all proper adjuncts, was rendered hopeless. There was, however, a jubilee horse-race, which was well attended, though the animals were up to their knees in

water. In the evening another grand ball took place in the town-hall, in which the graceful minuet-dancing of Mrs Garrick, who in her youth had been a distinguished Terpsichorean performer on the London stage, won the highest encomiums. The assembly broke up at four o'clock on Saturday morning, and so ended the Stratford jubilee.

As might have been expected, this festive celebration did not escape satire and animadversion, both before and after the event; the jealousy felt against its author, Garrick, being sufficient to call forth many pungent attacks. In the *Devil on Two Sticks*, Foote introduced the following sarcastic description: 'A jubilee, as it hath lately appeared, is a public invitation, circulated and urged by puffing, to go post without horses, to an obscure borough without representatives, governed by a mayor and aldermen who are no magistrates, to celebrate a great poet, whose own works have made him immortal, by an ode without poetry, music without melody, dinners without victuals, and lodgings without beds; a masquerade where half the people appeared barefaced, a horse-race up to the knees in water, fireworks extinguished as soon as they were lighted, and a gingerbread amphitheatre, which, like a house of cards, tumbled to pieces as soon as it was finished.' Other squibs appeared in the form of parodies and epigrams; and also a farce, entitled *The Stratford Jubilee*, intended to have been performed at Foote's theatre, in the Haymarket, but which, though printed and published, seems to have never been placed on the boards. Strictures of a different description were passed on the whole festival by certain of the inhabitants of Stratford, who imputed the violent rains which fell during the jubilee to the judgment of Heaven on such impious demonstrations. This circumstance may recall to some of our readers the worthy minister of Leith, recorded by Hugh Miller in his *Schools and Schoolmasters*, who ascribed the great fire in Edinburgh in 1824, to the Musical Festival which had a short time previously been celebrated there!

In the month of October following the Stratford jubilee, the Shakspeare pageant devised by Garrick, but the representation of which had been prevented by the unfavourable weather, was brought out by him with great magnificence and success at Drury Lane Theatre, and had a run of nearly a hundred nights. On the 6th of September in the ensuing year, the anniversary of the ceremonial was celebrated at Stratford with great festivity; but the custom seems afterwards to have fallen into desuetude, and no further public commemoration of our great national poet was attempted in the place of his birth for upwards of fifty years. At last, in 1824, the Shakspeare Club was established, and an annual celebration in his honour appointed to be held on the 23d of April, the (erroneously) assumed day of his birth,* and which we know, upon good evidence, to have been that of his death. Under the auspices of this association, a splendid gala, after the manner of the jubilee of 1769, was conducted in Stratford, on 23d April 1827 and two following days. A similarly magnificent commemoration took place in 1830, when, among other festive ceremonies, an ode, written for the occasion by Mr Alaric A. Watts, was recited, and a series of dramatic performances exhibited, in which the principal characters were sustained by Mr Charles Kean. At the celebration in 1836, an oration was delivered in the theatre by Mr George Jones, the American tragedian, and in 1837 by Mr Sheridan Knowles. A memorial theatre, including a library and picture gallery, the foundation stone of which was laid in 1877, has been erected at Stratford for the occasional celebration of the poet's birthday, and for the representation of his plays.

The Shakspeare jubilee was the first of those commemorative festivals which have since become so familiar to all of us. In 1785, a grand musical celebration took place in Westminster Abbey in honour of Handel. Centenary festivities were performed in nearly every part of the world, in honour of Robert Burns, in January 1859. Although the 15th August was Sir Walter Scott's real birthday, for various reasons his centenary was celebrated on 9th August 1871, with great enthusiasm in Edinburgh, Glasgow, Dundee, and Dumfries.

SEPTEMBER 7.

St Regina or Reine, virgin and martyr, 3d century. St Evurtius, bishop of Orleans, confessor, about 340. St Grimonia or Germana, virgin and martyr. St Eunan, first bishop of Raphoe, in Ireland. St Cloud, confessor, 560. St Madelberte, virgin, about 705. Saints Alchmund and Tilberht, confessors, 8th century.

Born.—Queen Elizabeth of England, 1533, *Greenwich;* Thomas Erpenius, celebrated orientalist, 1584, *Gorcum, Holland;* Louis de Bourbon, Prince de Condé, great commander, 1621, *Paris;* George Louis, Count de Buffon, distinguished naturalist, 1707, *Montbard, Burgundy;* Dr Samuel Johnson, lexicographer and author, 1709, *Lichfield;* Arthur Young, agricultural writer, 1741.

Died.—Emperor Frederick IV. of Germany, 1493, *Vienna;* Cardinal Guido Bentivoglio, historical writer, 1644, *Rome;* Captain Porteous, murdered by the Edinburgh mob, 1736; Dr John Armstrong, author of *The Art of Preserving Health*, 1779, *London;* Leonard Euler, eminent mathematician, 1783, *St Petersburg;* Mrs Hannah More, religious and moral writer, 1833, *Clifton.*

ARTHUR YOUNG.

The most popular and prolific of writers on rural affairs was Arthur Young. No great discovery or improvement in agriculture bears his name: his merit consists in the fact, that he was an agitator. He had a passion for novelties, and such was the vigour of his mind, that he succeeded in affecting the most stolid and conservative of classes with something of his own enthusiasm. He set landlords thinking, enticed and drove them into experiments, and persuaded farmers everywhere to break from the dull routine of centuries. More than any man, England owes to Arthur Young that impulse which, within the last hundred years, has transformed her wastes into rich pastures and fruitful fields, and multiplied the produce of her harvests by many fold.

Young was the son of a Suffolk clergyman, and was born in 1741. He was apprenticed to a merchant in Lynn, but an inordinate taste for reading and scribbling interfered sadly with his

mercantile progress. At the age of seventeen, he wrote a pamphlet on the war against the French in America, for which a publisher gave him ten pounds' worth of books. He next started a periodical, called the *Universal Museum*, which, by the advice of Dr Johnson, he discontinued at the sixth number. Four novels, about the same time, flowed from his facile pen. At his father's death, in 1769, he wished to enter the army, but at his mother's entreaty refrained, and turned farmer instead, without any practical knowledge of husbandry, and, as he afterwards confessed, with his head bursting with wild notions of improvements. Farming supplied matter and direction for his literary activity, and in 1770 he published, in two thick volumes quarto, *A Course of Experimental Agriculture, containing an exact Register of the Business transacted during five years on near* 300 *acres of various Soils.* A few years before, he had printed *A Tour through the Southern Counties of England*, which proved so popular that he was led to undertake similar surveys in the east, west, and north, and Ireland. These tours excited the liveliest interest in all connected with agriculture: soils, methods of culture, crops, farm-buildings, cattle, plantations, roads, were all discussed in a most vivacious style, and praised or blamed with bluff honesty. Between 1766 and 1775, he relates that he realised £3000 by his agricultural writings, a large sum for works of that order in those times. His own farming was far from profitable, and the terms in which he describes a hundred acres he rented in Hertfordshire, may be taken as a fair specimen of his outspoken manner: 'I know not what epithet to give this soil; sterility falls short of the idea; a hungry vitriolic gravel—I occupied for nine years the jaws of a wolf. A nabob's fortune would sink in the attempt to raise good arable crops in such a country: my experience and knowledge had increased from travelling and practice; but all was lost when exerted on such a spot. I hardly wonder at a losing account, after fate had fixed me on land calculated to swallow, without return, all that folly or imprudence could bestow upon it.' Finding that his income was barely sufficient to meet his expenditure, he engaged to report the parliamentary debates for the *Morning Post.* This he continued to perform for several years; and after the labours of the week, he walked every Saturday evening to his wretched farm, a distance of seventeen miles from London, from which he as regularly returned every Monday morning. This was the most anxious and laborious part of his life. 'I worked,' he writes, 'like a coal-heaver, though without his reward.'

In 1784, he commenced a periodical work under the title of the *Annals of Agriculture*, which he continued through forty-five volumes. He admitted no papers unless signed by the author, a regulation which added alike to the interest and authority of the publication. The rule was relaxed, however, in the case of the king, George III., who contributed to the seventh volume a description of the farm of Mr Ducket at Petersham, under the signature of 'Ralph Robinson of Windsor.'

Young's English *Tours* possess considerable historic interest, which will increase with the lapse of years; but their present, and probably future, value in that respect is thrown into the shade by his *Agricultural Survey of France*, made on horseback, in 1788. The French admit that Young was the first who opened their eyes to the very low condition of their husbandry, but his observations on the social and political state of the peasantry, their poverty and hardships, are of peculiar and unique importance, as made on the very verge of the revolution; and no student of the circumstances which led up to that tremendous catastrophe, will ever neglect Arthur Young's *Survey.* In his French travel he displays a liberal and reforming spirit, but the excesses and atrocities of the revolutionists drove Young, as it did Burke and a host of others, into Toryism, and a pamphlet he published in 1793, entitled *The Example of France a Warning to Britain*, had a great sale, and attests the depth of his horror and disgust.

The fame of Young as an agriculturist was greater even abroad than at home, and many were the tokens of admiration he received. The French Directory, in 1801, ordered the translation of all his agricultural writings, and in twenty volumes they were published in Paris, under the title of *Le Cultivateur Anglais.* The Empress Catherine sent three young Russians to be instructed by him, and made him the present of a gold snuff-box, with rich ermine cloaks for his wife and daughter. His son, too, was employed by the Czar Alexander, in 1805, to make an agricultural survey around Moscow, and was rewarded with a sum which enabled him to purchase an estate of 10,000 acres of very fertile land in the Crimea, where he settled. Pupils flocked to Arthur Young from all parts of the world. The Duke of Bedford one morning, at his breakfast-table, counted representatives from France, Poland, Austria, Russia, Italy, Portugal, and America.

Sir John Sinclair, in 1793, persuaded the government to establish a Board of Agriculture, of which Young was appointed secretary, with a free house and a salary of £400 a year. It was a post for which he was admirably suited, and was the means of preserving him from a very hazardous speculation—a tract of Yorkshire moorland he purposed cultivating. 'What a change in the destination of a man's life!' he exclaims. 'Instead of entering, as I proposed, the solitary lord of 4000 acres, in the keen atmosphere of lofty rocks and mountain torrents, with a little creation rising gradually around me, making the desert smile with cultivation, and grouse give way to industrious population, active and energetic, though remote and tranquil, and every instant of my existence *making two blades of grass to grow where not one was found before*—behold me at a desk in the fog, the smoke, the din of Whitehall!'

About 1808, his sight grew dim, terminating in blindness, but his busy career did not close until the 12th of April 1820, when he had nearly reached his eightieth year.

OLD SAYINGS AS TO CLOTHES.

It is lucky to put on any article of dress, particularly stockings, inside out: but if you wish the omen to hold good, you must continue to wear the reversed portion of your attire in that condition, till the regular time comes for putting it off—that is, either bedtime or 'cleaning yourself.' If you set it right, you will 'change the luck.' It will be of no use to put on anything with the wrong side out *on purpose.*

It is worthy of remark, in connection with this superstition, that when William the Conqueror, in arming himself for the battle of Hastings, happened to put on his shirt of mail with the hind-side before, the bystanders seem to have been shocked by it, as by an ill omen, till William claimed it as a good one, betokening that he was to be changed from a duke to a king. The phenomenon of the 'hind-side before' is so closely related to that of 'inside out,' that one can hardly understand their being taken for contrary omens.

The clothes of the dead will never wear long.

When a person dies, and his or her clothes are given away to the poor, it is frequently remarked: 'Ah, they may look very well, but they won't wear; they belong to the dead.'

If a mother gives away *all* the baby's clothes she has (or the cradle), she will be sure to have another baby, though she may have thought herself above such vanities.

If a girl's petticoats are longer than her frock, that is a sign that her father loves her better than her mother does—perhaps because it is plain that her mother does not attend so much to her dress as she ought to do, whereas her father may love her as much as you please, and at the same time be very ignorant or unobservant of the rights and wrongs of female attire.

If you would have good-luck, you must wear something new on 'Whitsun-Sunday' (pronounced Wissun-Sunday). More generally, Easter Day is the one thus honoured, but a glance round a church or Sunday-school in Suffolk, on Whitsunday, shews very plainly that it is the one chosen for beginning to wear new 'things.'

While upon the subject of clothes, I may mention a ludicrous Suffolk phrase descriptive of a person not quite so sharp as he might be: he is spoken of as 'short of buttons,' being, I suppose, considered an unfinished article.

MISCELLANEOUS SAYINGS.

It is unlucky to enter a house, which you are going to occupy, by the *back*-door.

I knew of a family who had hired a house, and went to look over it, accompanied by an old Scotch servant. The family, innocently enough, finding the front-door 'done up,' went in at the back-door, which was open; but great was their surprise to see the servant burst into tears, and sit down on a stone outside, refusing to go in with them. If I recollect rightly (the circumstance happened several years ago), she had the front-door opened, and went in at that herself, hoping, I suppose, that the spell would be dissolved, if *all* the family did not go in at the back-door.

The Cross was made of elder-wood.

Speaking to some little children one day about the danger of taking shelter under trees during a thunder-storm, one of them said that it was not so with all trees, 'For,' said he, 'you will be quite safe under an *eldern*-tree, because the cross was made of that, and so the lightning never strikes it.'

With this may be contrasted a superstition mentioned by Dean Trench in one of the notes to his *Sacred Latin Poetry*, and accounting for the trembling of the leaves of the aspen-tree, by saying that the cross was made of its wood, and that, since then, the tree has never ceased to shudder.

Hot cross-buns, if properly made, will never get mouldy.

To make them properly, you must do the whole of the business on the Good-Friday itself; the materials must be mixed, the dough made, and the buns baked on that day, and this, I think, before a certain hour; but whether this hour is sunrise or church-time, I cannot say. Perhaps the spice which enters into the composition of hot cross-buns, has as much to do with the result as anything, but, *experto crede*, you may keep them for years without their getting mouldy.

In the appendix to Forby's *Vocabulary of East Anglia*, are given several local superstitions. One of them, regarding the cutting of the nails, is such a very elaborate one, that I give entire the formula in which it is embodied. The version that I have heard is nearly word for word the same as that which he has printed, and is as follows:

'Cut 'em on Monday, you cut 'em for health;
Cut 'em on Tuesday, you cut 'em for wealth;
Cut 'em on Wednesday, you cut 'em for news;
Cut 'em on Thursday, a new pair of shoes;
Cut 'em on Friday, you cut 'em for sorrow;
Cut 'em on Saturday, you 'll see your true love to-morrow;
Cut 'em on Sunday, and you 'll have the devil with you all the week.'

I must confess that I cannot divine the origin of any of these notions, but of the last two. Sunday is, of course, the chief day for courting among the labouring-classes, and what can be more natural than that the cutting of the nails on a Saturday, should be followed by the meeting of true-lovers on the next day? the most likely one for such an event, whether the nails had been cut or not.

The last, again, seems to have arisen from considering the cutting of nails to be a kind of *work*, and so to be a sin, which would render the breaker of the Sabbath more liable to the attacks of the devil. This view is strengthened by the fact of the Sunday being placed not at the *beginning*, but at the *end* of the week, and thus identified with the Jewish Sabbath. Indeed, I have found that among poor people generally, it is reckoned as the seventh day, and that on the Sunday, they speak of the remainder of the week as the *next* week.

Superstitions with respect to the cutting of the nails are of very ancient date. We find one in Hesiod's *Works and Day* (742–3), where he tells you: 'Not to cut from the five-branched with glittering iron the dry from the quick in the rich feast of the gods,' a direction which may be compared with the warning against Sunday nail-cutting in the East-Anglian saw given above.

Mushrooms will not grow after they have been seen. Very naturally, the first person that sees them, gathers them.

The price of corn rises and falls with Barton Mere—an eccentric piece of water, which varies in size from twelve or fourteen acres to a small pond, and is sometimes entirely dried up. It lies about four miles from Bury St Edmunds, and a worthy old farmer, now deceased, used frequently to ride to Barton Mere to observe the state of the water there, before proceeding to Bury market. I do not know of any one who does this now, but it is an observed fact that the price of corn, and the height of the water, frequently *do* vary together: for instance, corn is now (October 1862) very low, and the mere is nearly dry. Probably the character of the weather may affect both in common, and in this manner the notion can be explained, as the saying that: 'If the rain-drops hang on the window, more will come to join them,' may be accounted for by the fact, that it is a sign of slow evaporation, of the presence of abundant moisture, which will be likely to precipitate itself in the form of more rain.

If, when you are fishing, you count what you have taken, you will not catch any more.

This may be paralleled with the prejudice against counting lambs, mentioned in a former paper. It is a western superstition, and was communicated to me by a gentleman, who, when out with professional

fishermen, has been prevented by them from counting the fish caught till the day's sport was over.

The same gentleman also told me a method which he had seen practised in the same locality to discover the body of a person who had been drowned in a river. An apple was sent down the stream from above the spot where the body was supposed to be, and it was expected that the apple would stop above the place where the corpse lay. He could not, however, take upon himself to say that the expedient was a successful one.

Suffolk. C. W. J.

SEPTEMBER 8.

The Nativity of the blessed Virgin. St Adrian, martyr. St Sidronius, martyr, 3d century. Saints Eusebius, Nestablus, Zeno, and Nestor, martyrs, 4th century. St Disen or Disibode, bishop and confessor, about 700. St Corbinian, bishop of Frisingen, confessor, 730. The Holy Name of the Blessed Virgin Mary.

Born.—Lodovico Ariosto, Italian poet, 1474, *Reggio, in Lombardy;* John Leyden, poet, 1775, *Denholm, Roxburghshire.*

Died.—Thomas, Duke of Gloucester, murdered at Calais, 1397; Amy Robsart, wife of the Earl of Leicester, 1560, *Cumnor;* Francis Quarles, poet, 1644; Princess Elizabeth, daughter of Charles I., 1650, *Carisbrooke Castle;* Bishop Joseph Hall, author of the *Contemplations* and *Satires*, 1656, *Higham, near Norwich.*

LODOVICO ARIOSTO.

The author of *Orlando Furioso* was born at the castle of Reggio, in Lombardy, on the 8th of September 1474. Of all the Italian poets, he is considered to be the most eminent, and his name is held in the same veneration in his native country as that of Shakspeare is in England. Preferring comfort and independence to splendour and servility, he refused several invitations to live at the courts of crowned heads, and built a commodious, but small house, for his own residence, at Ferrara. Being asked how he, who had described so many magnificent palaces in his poems, could be satisfied with so small a house, he replied that it was much easier to put words and sentences together than stones and mortar. Then leading the inquirer to the front of his house, he pointed out the following inscription on the lintel below the windows, extending along the whole front of the house.

'Parva sed apta mihi, sed nulli obnoxia, sed non
Sordida, parta meo sed tamen ære domus.'

Which may be translated—

Small is my humble roof, but well designed
To suit the temper of the master's mind;
Hurtful to none, it boasts a decent pride,
That my poor purse the modest cost supplied.

Ferrara derives its principal celebrity from the house of Ariosto, which is maintained in good condition at the public expense. The first edition of the *Orlando* was published in that city in 1516, and there, too, the poet died and was buried in the Benedictine Church, in 1533. Some time in the last century, the tomb of Ariosto was struck by lightning, and the iron laurels that wreathed the brows of the poet's bust were melted by the electric fluid. And so Byron tells us:

'The lightning rent from Ariosto's bust
The iron crown of laurels' mimick'd leaves;
Nor was the ominous element unjust,
For the true laurel wreath, which glory weaves,
Is of the tree no bolt of thunder cleaves,
And the false semblance but disgraced his brow;
Yet still, if fondly superstition grieves,
Know that the lightning sanctifies below,
Whate'er it strikes—Yon head is doubly sacred now.'

In 1801, the French general, Miollis, removed Ariosto's tomb and remains to the gallery of the public library of Ferrara; and there, too, are preserved his chair, ink-stand, and an imperfect copy of the *Orlando* in his own handwriting.

THE DEATH OF THOMAS, DUKE OF GLOUCESTER, 1397.

The arrest and murder of Thomas of Woodstock, Duke of Gloucester, is one of the most tragical episodes of English history. However guilty he might be, the proceedings against him were executed with such treachery and cruelty, as to render them revolting to humanity. He was the seventh and youngest son of Edward III., and consequently the uncle of Richard II. Being himself a resolute and warlike man, he was dissatisfied with what he considered the unprincipled and pusillanimous conduct of his nephew, and, either from a spirit of patriotism or ambition, or, more probably, a combination of both, he promoted two or three measures against the king, more by mere words than by acts. On confessing this to the king, and expressing his sorrow for it, he was promised forgiveness, and restored to the royal favour. Trusting to this reconciliation, he was residing peaceably in his castle at Pleshy, near London, where he received a visit from the king, not only without suspicion, but with the fullest confidence of his friendly intentions. The incident is thus touchingly related by Froissart, a contemporary chronicler:

'The king went after dinner, with part of his retinue, to Pleshy, about five o'clock. The Duke of Gloucester had already supped; for he was very sober, and sat but a short time at table, either at dinner or supper. He came to meet the king, and honoured him as we ought to honour our lord, so did the duchess and her children, who were there. The king entered the hall, and thence into the chamber. A table was spread for the king, and he supped a little. He said to the duke: "Fair uncle! have your horses saddled: but not all; only five or six; you must accompany me to London; we shall find there my uncles Lancaster and York, and I mean to be governed by your advice on a request they intend making to me. Bid your maître-d'hotel follow you with your people to London." The duke, who thought no ill from it, assented to it pleasantly enough. As soon as the king had supped, and all were ready, the king took leave of the duchess and her children, and mounted his horse. So did the duke, who left Pleshy with only three esquires and four varlets. They avoided the high-road to London, but rode with speed, conversing on various topics, till they came to Stratford. The king then pushed on before him, and the earl

marshal came suddenly behind him, with a great body of horsemen, and springing on the duke, said: "I arrest you in the king's name!" The duke, astonished, saw that he was betrayed, and cried with a loud voice after the king. I do not know if the king heard him or not, but he did not return, but rode away.'

The duke was then hurried off to Calais, where he was placed in the hands of some of the king's minions, under the Duke of Norfolk. Two of these ruffians, Serle, a valet of the king's, and Franceys, a valet of the Duke of Albemarle, then told the Duke of Gloucester, that 'it was the king's will that he should die. He answered, that if it was his will, it must be so. They asked him to have a chaplain, he agreed, and confessed. They then made him lie down on a bed; the two valets threw a feather-bed upon him; three other persons held down the sides of it, while Serle and Franceys pressed on the mouth of the duke till he expired, three others of the assistants all the while on their knees weeping and praying for his soul, and Halle keeping guard at the door. When he was dead, the Duke of Norfolk came to them, and saw the dead body.'* The body of the Duke of Gloucester was conveyed with great pomp to England, and first buried in the abbey of Pleshy, his own foundation, in a tomb which he himself had provided for the purpose. Subsequently, his remains were removed to Westminster, and deposited in the king's chapel, under a marble slab inlaid with brass. Immediately after his murder, his widow, who was the daughter of Humphry de Bohun, Earl of Hereford, became a nun in the abbey of Barking; at her death she was buried beside her husband in Westminster Abbey. Gower, in his work entitled *Vox Clamantis*, has a Latin poem on the Duke of Gloucester, in which occur the following lines respecting the manner of his death:

'Heu quam tortorum quidam de sorte malorum,
Sic Ducis electi plumarum pondere lecti,
Corpus quassatum jugulantque necant jugulatum.'†

QUARLES AND HIS EMBLEMS.

Francis Quarles, who, at one time, enjoyed the post of 'chronologer to the city of London,' and is supposed to have had a pension from Charles I., has a sort of side-place in English literature in consequence of his writing a book of *Emblems*, delighted in by the common people, but despised by the learned and the refined. The Protestantism of the first hundred and fifty years following upon the Reformation took a strong turn in favour of hour-glasses, cross-bones, and all other things which tended to make humanity sensible of its miserable defects, and its deplorable destinies. There was quite a tribe of churchyard poets, who only professed to be great in dismal things, and of whom we must presume that they never smiled or joked, or condescended to be in any degree happy, but spent their whole lives in conscientiously making other people miserable. The emblematists were of this order. It was their business to get up little allegorical pictures, founded on some of the distressing characteristics of mortality, carved on wood blocks in the most unlovely style, and accompanied by verses of such harshness as to set the moral teeth on edge, and leave a bitter ideal taste in the mouth for some hours after. An extract of a letter from Pope to Bishop Atterbury, in which he refers to Quarles's work, will give some idea of the system practised by this grim class of preachers: '"*Tinnit, inane est*" [It rings, and is empty], with the picture of one ringing on the globe with his finger, is the best thing that I have the luck to remember in that great poet Quarles (not that I forget the Devil at Bowls, which I know to be your lordship's favourite cut, as well as favourite diversion). But the greatest part of them are of a very different character from these: one of them, on, "O wretched man that I am, who shall deliver me from the body of this death?" represents a man sitting in a melancholy posture, in a large skeleton. Another, on, "O that my head were waters, and mine eyes a fountain of tears!" exhibits a human figure, with several spouts gushing from it, like the spouts of a fountain.' Mr Grainger, quoting this from Pope, adds: 'This reminds me of an emblem, which I have seen in a German author, on Matt. vii. 3, in which are two men, one of whom has a beam almost as big as himself with a peaked end sticking in his left eye; and the other has only a small hole sticking in his right. Hence it appears that metaphor and allegory, however beautiful in themselves, will not always admit of a sensible representation.'*

There is just this to be said of Quarles, that he had a vein of real poetry in him, and so far was not rightly qualified for the duty of depressing the spirits of his fellow-creatures. One is struck, too, by hearing of him a fact so like natural and happy life, as that he was the father of eighteen children by one wife. A vine would be *her* proper emblem, we may presume. His end, again, was duly sad. A false accusation, of a political nature, was brought against him, and he took it so much to heart, that he said it would be his death, which proved true. He died at the age of fifty-two.

Quarles's *Emblems* was frequently printed in the seventeenth century, for the use of the vulgar, who generally rather like things which remind them that, in some essential respects, the great and the cultured are upon their own level. After more than a century of utter neglect, it was reprinted about fifty years ago; and this reprint has also now become scarce.

THE PRINCESS ELIZABETH STUART.

Elizabeth, the second of the ill-fated daughters of the ill-fated Charles I., was born in 1635, in the palace of St James. The states of Holland, as a congratulatory gift to her father, sent ambergris, rare porcelain, and choice pictures. Scarcely was the child six years old, when the horrors of civil war separated her from her parents, and the remaining nine years of her short life were passed in the custody of strangers. A few interviews with her father cheered those dreary years, and then the last sad meeting of all took place, the day preceding the ever-memorable 30th of January. With attempts at self-control far beyond her tender years, she listened to the last words she ever was to hear from parental lips. The king, we are told, took

* From the deposition of Halle, who was afterwards hanged and quartered for the murder.

* *Biographical History of England*, iii. 135.

her in his arms, embraced her, and placing her on his knees, soothed her by his caresses, requesting her to listen to his last instructions, as he had that to confide to her ears which he could tell no one else, and it was important she should hear and remember his words. Among other things, he told her to tell her mother that his thoughts never strayed from her, and that his love should be the same to the last. This message of undying love remained undelivered, for the gentle girl never again saw her mother.

How the wretched child passed the day of her father's execution in the ancient house of Sion, at Brentford, God, who tempers the wind to the shorn lamb, alone knows. From Sion, she was removed to the classic shades of Penshurst, and from thence her jealous custodians sent her to Carisbrooke Castle. About eighteen months after her father's death, she accidentally got wet in the bowling-green of the castle; fever and cold ensued, and the frail form succumbed to death. Supposing her to have fallen asleep, her attendants left the apartment for a short time; on their return, she was dead, her hands clasped in the attitude of prayer, and her face resting on an open Bible, her father's last and cherished gift.

A statement has found its way into Hume's and other histories, to the effect that the parliament designed to apprentice this poor child to a button-maker at Newport. But it is believed that such an idea never went beyond a joke in the mouth of Cromwell; in point of fact, the conduct of the parliament towards the little princess was humane and liberal, excepting in the matter of personal restraint. At the time of her death, she had an allowance of £1000 per annum for her maintenance; and she was treated with almost all the ceremonious attendance due to her rank.

Her remains were embalmed, and buried with considerable pomp, in the church of St Thomas, at Newport. The letters E. S., on an adjacent wall, alone pointing out the spot. In time, the obscure resting-place of a king's daughter was forgotten; and it came upon people like a discovery, when, in 1793, while a grave was being prepared for a son of Lord de la Warr, a leaden coffin, in excellent preservation, was found, bearing the inscription:

Elizabeth, 2d daughter
of the late King Charles.
Deceased September 8th MDCL.

Clarendon says that the princess was a 'lady of excellent parts, great observation, and an early understanding.' Fuller, speaking of her in his quaint style, says: 'The hawks of Norway, where a winter's day is hardly an hour of clear light, are the swiftest of wing of any fowl under the firmament, nature teaching them to bestir themselves to lengthen the shortness of the time with their swiftness. Such was the active piety of this lady, improving the little life allotted to her, in running the way of God's commandments.'

The church at Newport becoming ruinous, it was found necessary to rebuild it a few years ago; and her Majesty the Queen, with the sympathy of a woman and a princess, took the opportunity of erecting a monument to the unhappy Elizabeth. Baron Marochetti was commissioned to execute the work, and well has he performed his task. It represents the princess, lying on a mattress, her cheek resting on an open page of the sacred volume, bearing the words, 'Come unto me, all ye that labour and are heavy laden, and I will give you rest.' From the Gothic arch, beneath which the figure reposes, hangs an iron grating with its bars broken asunder, emblematising the prisoner's release by death. Two side-windows, with stained glass to temper the light falling on the monument, have been added by her Majesty's desire. And the inscription thus gracefully records a graceful act: 'To the Memory of the Princess Elizabeth, Daughter of Charles I., who died at Carisbrooke Castle on Sunday, September 8, 1650, and is interred beneath the Chancel of this Church. This Monument is erected, a token of respect for her Virtues, and of sympathy for her Misfortunes, by Victoria R., 1856.'

PATRICK COTTER:
ANCIENT AND MODERN GIANTS.

Henrion, a learned French academician, published a work in 1718, with the object of shewing the very great decrease, in height, of the human race, between the periods of the creation and Christian era. Adam, he tells us, was one hundred and twenty-three feet nine inches, and Eve one hundred and eighteen feet nine inches and nine lines in height. The degeneration, however, was rapid. Noah reached only twenty-seven, while Abraham did not measure more than twenty, and Moses was but thirteen feet in height. Still, in comparison with those, Alexander was misnamed the Great, for he was no more than six feet; and Julius Cæsar reached only to five. According to this erudite French dreamer, the Christian dispensation stopped all further decrease; if it had not, mankind by this time would have been mere microscopic objects. So much for the giants of high antiquity: those of the medieval period may be passed over with almost as slight a notice. Funnam, a Scotsman, who lived in the time of Eugene II., is said to have been more than eleven feet high. The remains of that puissant lord, the Chevalier Rincon, were discovered at Rouen in 1509; the skull held a bushel of wheat, the shin-bone was four feet long, and the others in proportion. The skeleton of a hero, named Bucart, found at Valence in 1705, was twenty-two feet long, and we read of others reaching from thirty to thirty-six feet. But even these last, when in the flesh, were, to use a homely expression, not fit to hold a candle to the proprietor of a skeleton, said to be found in Sicily, which measured three hundred feet in length! Relaters of strange stories not unfrequently throw discredit on their own assertions. With this last skeleton was found his walking-stick, thirty feet in length, and thick as the main-mast of a first-rate. But a walking-stick only thirty feet in length for a man who measured three hundred, would be as ridiculously short, as one of seven inches for a person of ordinary stature.

Sir Hans Sloane was one of the first who expressed an opinion, that these skeletons of giants were not human remains. This was, at the time, considered rank heresy, and the philosopher was asked if he would dare to contradict the sacred Scriptures. But Cuvier, since then, has fully proved that these so-termed bones of giants were in reality fossil remains of mammoths, megatheriums,

mastodons, and similar extinct brutes ; and that the 'giant's teeth' found in many museums, had once graced the jaw-bones of spermaceti whales.

Of the ancient giants, it is said that they were mighty men of valour, their strength being commensurate with their proportions. But the modern giants are generally a sickly, knock-kneed, splay-footed, shambling race, feeble in both mental and bodily organisation. Such was Patrick Cotter, who died at Clifton on the 8th September 1804. He was exhibited as being eight feet seven inches in height, but this was simply a showman's exaggeration. A memorial-tablet in the Roman Catholic Chapel, Trenchard Street, Bristol, informs us that :

'Here lie the remains of Mr Patrick Cotter O'Brien, a native of Kinsale, in the kingdom of Ireland. He was a man of gigantic stature, exceeding eight feet three inches in height, and proportionably large.'

Cotter was born in 1761, of poor parents, whose stature was not above the common size. When eighteen years of age, a speculative showman bought him from his father, for three years, at £50 per annum. On arriving at Bristol with his proprietor, Cotter demurred to being exhibited, without some remuneration for himself, besides the mere food, clothing, and lodging stipulated in the contract with his father. The showman, taking advantage of the iniquitous law of the period, flung his recalcitrant giant into a debtor's prison, thinking that the latter would soon be terrified into submission. But the circumstances coming to the ears of a benevolent man, he at once proved the contract to be illegal ; and Cotter, being liberated, began to exhibit himself for his own profit, with such success that he earned £30 in three days.

Showmen well know the value of fine names and specious assertions. So the plebeian name of Cotter was soon changed to the regal appellation of O'Brien. The alleged descendants of Irish monarchs have figured in many capacities ; the following copy of a hand-bill records the appearance of one in the guise of a giant :

'Just arrived in Town, and to be seen in a commodious room, at No. 11 Haymarket, nearly opposite the Opera House, the celebrated Irish Giant, Mr O'Brien, of the kingdom of Ireland, indisputably the tallest man ever shewn ; he is a lineal descendant of the old puissant King Brien Boreau, and has in person and appearance all the similitude of that great and grand potentate. It is remarkable of this family, that, however various the revolutions in point of fortune and alliance, the lineal descendants thereof have been favoured by Providence with the original size and stature which have been so peculiar to their family. The gentleman alluded to measures near nine feet high. Admittance, one shilling.'

Cotter, *alias* O'Brien, conducted himself with prudence, and having realised a small competence by exhibiting himself, retired to Clifton, where he died at the very advanced age, for a giant, of forty-seven years. He seems to have had less imbecility of mind than the generality of overgrown persons, but all the weakness of body by which they are characterised. He walked with difficulty, and felt considerable pain when rising up or sitting down. Previous to his death, he expressed great anxiety lest his body should fall into the hands of the anatomists, and gave particular directions for securing his remains with brickwork and strong iron bars in the grave. A few years ago, when some alterations were being made in the chapel where he was buried, it was found that his grave had not been disturbed.

PATRICK COTTER O'BRIEN.

Cotter probably adopted the name of O'Brien, from a giant of a somewhat similar appellation, who attracted a good deal of attention, and died about the time the former commenced to exhibit. This person's death is thus recorded in the *British Magazine* for 1783.

'In Cockspur Street, Charing Cross, aged only twenty-two, Mr Charles Byrne, the famous Irish Giant, whose death is said to have been precipitated by excessive drinking, to which he was always addicted, but more particularly since his late loss of almost all his property, which he had simply invested in a single bank-note of £700. In his last moments, he requested that his remains might be thrown into the sea, in order that his bones might be removed far out of the reach of the chirurgical fraternity ; in consequence of which the body was put on board a vessel, conveyed to the Downs, and sunk in twenty fathoms water. Mr Byrne, about the month of August 1780, measured exactly eight feet ; in 1782, his stature had gained two inches ; and when dead, his full length was eight feet four inches.'

Another account states that Byrne, apprehensive of being robbed, concealed his bank-note in the

fireplace on going to bed, and a servant lighting a fire in the morning, the valuable document was consumed. There is no truth in the statement that his remains were thrown into the sea, for his skeleton, measuring seven feet eight inches, is now in the museum of the College of Surgeons. And the tradition of the college is, that the indefatigable anatomist, William Hunter, gave no less a sum than five hundred pounds for Byrne's body. The skeleton shews that the man was very 'knock-kneed,' and the arms are relatively shorter than the legs. Byrne certainly created considerable sensation during the short period he was exhibited in London. In 1782, the summer pantomime, at the Haymarket Theatre—for there were summer pantomimes in those days—was entitled, in reference to Byrne, *Harlequin Teague, or The Giant's Causeway!*

In the museum of Trinity College, Dubiin, there is preserved the skeleton of one Magrath, who is said to have attained the height of seven feet eight inches. A most absurd story is related of this person in a *Philosophical Survey of Ireland*, written by a Dr Campbell, who gravely states that Magrath's overgrowth was the result of a course of experimental feeding from infancy, carried out by the celebrated philosopher Berkeley, bishop of Cloyne. The truth of the matter is, Magrath, at the age of sixteen, being then more than six feet in height, had, probably by his abnormal growth, lost the use of his limbs, and the charitable prelate, concluding that a change from the wretched food of an Irish peasant would be beneficial to the overgrown lad, caused him to be well fed for the space of one month, a proceeding which had the desired effect of literally placing the helpless creature on his legs again. This is the sole foundation for the ridiculous and often-repeated story of Bishop Berkeley's experimental giant.

It is a remarkable, little-known, but well-established fact, that while giants are almost invariably characterised by mental and bodily weakness, the opposite anomaly of humanity, the dwarfs, are generally active, intelligent, healthy, and long-lived persons. Guy Patin, a celebrated French surgeon, relates that, in the seventeenth century, to gratify a whim of the empress of Austria, all the giants and dwarfs in the Germanic empire were assembled at Vienna. As circumstances required that all should be housed in one extensive building, it was feared lest the imposing proportions of the giants would terrify the dwarfs, and means were taken to assure the latter of their perfect freedom and safety. But the result was very different to that contemplated. The dwarfs teased, insulted, and even robbed the giants to such an extent, that the overgrown mortals, with tears in their eyes, complained of their stunted persecutors; and, as a consequence, sentinels had to be stationed in the building, to protect the giants from the dwarfs!

SEPTEMBER 9.

Saints Gorgonius, Dorotheus, and Companions, martyrs, 304. St Kiaran, abbot in Ireland, 549. St Omer, bishop and confessor, 670. St Osmanna, virgin, about 7th century. St Bettelin, hermit and confessor.

Born.—Richard Chenevix Trench, dean of Westminster, etymologist, 1807.

Died.—James IV. of Scotland, killed at Flodden, 1513; Charles de St Evremond, wit and letter-writer, 1703, *London;* Bernard Siegfried Albinus, eminent anatomist, 1770, *Leyden;* Robert Wood ('Palmyra' Wood), traveller and archæologist, 1771, *Putney;* Rev. Gilbert Wakefield, theological and political writer, 1801; John Brand, author of *Observations on Popular Antiquities*, 1806.

BATTLE OF FLODDEN.

On the 9th of September 1513, was fought the battle of Flodden, resulting in the defeat and death of the Scottish king, James IV., the slaughter of nearly thirty of his nobles and chiefs, and the loss of about 10,000 men. It was an overthrow which spread sorrow and dismay through Scotland, and was long remembered as one of the greatest calamities ever sustained by the nation. With all tenderness for romantic impulse and chivalric principle, a modern man, even of the Scottish nation, is forced to admit that the Flodden enterprise of James IV. was an example of gigantic folly, righteously punished. The king of Scots had no just occasion for going to war with England. The war he entered upon he conducted like an imbecile, only going three or four miles into the English territory, and there dallying till the opportunity of striking an effective blow was lost. When the English army, under the Earl of Surrey, came against him, he, from a foolish sentiment of chivalry, or mere vanity, would not allow his troops to take the fair advantages of the ground. So he fought at a disadvantage, and lost all, including his own life. It is pitiable, even at this distance of time, to think of a people having their interests committed to the care of one so ill qualified for the trust; the Many suffering so much through the infatuation of One.

LYDFORD LAW.

An old English proverb says: 'First hang and draw, then hear the cause by Lydford Law.' A Devonshire poet, anxious for the reputation of his county, attempts to shew that this summary method of procedure originated from merciful motives:

'I oft have heard of Lydford Law,
How in the morn they hang and draw,
And sit in judgment after:
At first I wondered at it much;
But since, I find the reason such,
As it deserves no laughter.

They have a castle on a hill;
I took it for an old wind-mill,
The vanes blown off by weather.
To lie therein one night, 'tis guessed
'Twere better to be stoned and pressed,
Or hanged, now chose you whether.

Ten men less room within this cave,
Than five mice in a lantern have,
The keepers they are sly ones.
If any could devise by art
To get it up into a cart,
'Twere fit to carry lions.

When I beheld it, Lord! thought I,
What justice and what clemency
Hath Lydford when I saw all!
I know none gladly there would stay,
But rather hang out of the way,
Than tarry for a trial!

This curious vindication of Devonshire justice is ascribed to Browne, the author of *Britannia's*

Pastorals. Lydford itself is the chief town of the Stannaries, and the proverb probably was levelled at the summary decisions of the Stannary Courts which, under a charter of Edward I., had sole jurisdiction over all cases in which the natives were concerned, that did not affect land, life, or limb.

SEPTEMBER 10.

Saints Nemesianus, Felix, Lucius, another Felix, Litteus, Polianus, Victor, Jader, and Dativus, bishops, and their companions, part martyrs, and part confessors, 3d century. St Pulcheria, virgin and empress, 453. St Finian or Winin, bishop and confessor, 6th century. St Salvius, bishop of Albi, 6th century. St Nicholas of Tolentino, confessor, 1306.

Born.—Mungo Park, African traveller, 1771, *Fowlshields, Selkirkshire.*

Died.—Louis d'Outremer, king of France, killed, 954; William the Conqueror, 1087, *Rouen;* John, Duke of Burgundy, murdered at Montereau, 1419; Dr Edward Pococke, traveller and oriental scholar, 1691, *Oxford;* Dr Thomas Sheridan, Irish scholar, translator of *Persius,* 1738; Mrs Godwin (Mary Wollstonecraft), authoress of *Rights of Woman,* 1797, *London;* Ugo Foscolo, Italian republican and writer, 1827, *London;* Grace Aguilar, Jewish authoress, 1847, *Frankfort.*

THE END OF THE CONQUEROR.

During his reign of twenty years subsequent to the Conquest, William had succeeded in planting his Norman followers and adherents upon the property of England. They might be described as an armed militia occupying the country, and owning a devoted allegiance to their sovereign for the lands they severally possessed. It was a grand position for a man to have achieved in a short lifetime; but it had been attained by pure violence, and was only upheld by force against the will of a noble though subjugated people. The Conqueror was, accordingly, not a happy man. He never felt any confidence in the continuance of the system of things which he had organised. He probably felt that he had been only a successful robber, and perhaps often envied the serener feelings of those whom he oppressed.

While sojourning in Normandy, early in 1087, he addressed himself to the recovery from King Philip I. of France of a piece of territory which had been appropriated by that sovereign some years before. He was at the same time submitting to medical regimen for the reduction of the extreme corpulence to which he had become subject. Philip put off his demand for the territory, and made a jest of the Conqueror's obesity. 'It is a long lying-in,' said he; 'there will doubtless be a ceremonious churching.' William, hearing of this speech, swore he would hold his churching at Notre Dame, in Paris, with ten thousand lances for tapers. He got up, and led an expedition of fire and sword into the French territory, feasting his eyes with the havoc and destruction which his soldiers spread around. It was while so engaged that his horse, chancing to plant his feet on some burning timber concealed by ashes, plunged and fell, causing a rupture in the belly of the overgrown king. He languished under this hurt for some weeks at Rouen, and fearing death, made some efforts to repair the cruel wrongs he had inflicted in the course of his life. He also made some arrangements regarding the fortunes of his children. On the 10th of September 1087, the great king breathed his last, in the sixty-first year of his age.

William had only been feared, never loved. Now that he was no more, his servants and great officers thought only of their own interests. His body was left almost naked on the floor, and was buried by monks, without the presence of any relative, or any one who cared for the deceased. There being no coffin, and the body proving too large for the grave of masonry designed for it, it was necessary to force it down; in doing which it burst. Incense and perfumes failed to drown the stench thus diffused through the church, and the people dispersed in horror and disgust. Such was the end of one of the greatest potentates who ever lived—one who had driven human beings before him like cattle, but never induced any one to love him, not even one of his own children.

LEGEND OF THE SONS OF THE CONQUEROR.

One day, it being observed that William was absorbed in deep thought, his courtiers ventured to inquire the cause of such profound abstraction. 'I am speculating,' said the monarch, 'on what may be the fate of my sons after my death.' 'Your majesty,' replied the wise men of the court, 'the fate of your sons will depend upon their conduct, and their conduct will depend upon their respective characters; permit us to make a few inquiries, and we shall soon be able to tell you that which you wish to know.' The king signifying his approbation, the wise men consulted together, and agreed to put questions separately to the three princes, who were then young. The first who entered the room was Robert, afterwards known by the surname of Courthose. 'Fair sir,' said one of the wise men, 'answer me a question—If God had made you a bird, what bird would you wish to have been?' Robert answered: 'A hawk, because it resembles most a courteous and gallant knight.' William Rufus next entered, and his answer to the same question was: 'I would be an eagle, because it is a strong and powerful bird, and feared by all other birds, and therefore it is king over them all.' Lastly, came the younger brother Henry, who had received a learned education, and was on that account known by the surname of Beauclerc. His choice was a starling, 'Because it is a debonnaire and simple bird, and gains its living without injury to any one, and never seeks to rob or grieve its neighbour.' The wise men returned immediately to the king. Robert, they said, would be bold and valiant, and would gain renown and honour, but he would finally be overcome by violence, and die in prison. William would be powerful and strong as the eagle, but feared and hated for his cruelty and violence, until he ended a wicked life by a bad death. But Henry would be wise, prudent, and peaceful, unless when actually compelled to engage in war, and would die in peace after gaining wide possessions. So when King William lay on his death-bed, he remembered the saying of his wise men, and bequeathed Normandy to Robert, England to William, and his own treasures, without land, to his younger son Henry, who eventually

became king of both countries, and reigned long and prosperously.

This story, which most probably is of Eastern origin, is frequently told under various circumstances by medieval writers. A Latin manuscript, of the thirteenth century, relates it in the following form:

A wealthy English baron, whose broad lands extended over a large extent of England and Wales, had three sons; when lying on his deathbed, he called them to him, and said: 'If you were compelled to become birds, tell me what bird each of you would choose to resemble?' The eldest said: 'I would be a hawk, because it is a noble bird, and lives by rapine.' The second said: 'I would be a starling, because it is a social bird, and flies in coveys.' The youngest said: 'I would be a swan, because it has a long neck, so that if I had anything in my heart to say, I should have plenty of time for reflection before it came to my mouth.' When the father had heard them, he said to the first: 'Thou, my son, as I perceive, desirest to live by rapine; I will therefore bequeath thee my possessions in England, because it is a land of peace and justice, and thou canst not rob in it with impunity.' To the second, he said: 'Because thou lovest society, I will bequeath thee my lands in Wales, which is a land of discord and war, in order that thy courtesy may soften down the malice of the natives.' And then turning to the youngest, he said: 'To thee I bequeath no land at all, because thou art wise, and will gain enough by thy wisdom.' And as he foretold, the youngest son profited by his wisdom, and became Lord Chief-Justice of England, which in those times was the next dignity to that of king.

DR THOMAS SHERIDAN.

On the 10th of September 1738, Dr Sheridan was sitting, after dinner, in the house of a friend. The conversation happening to turn on the force and direction of the wind, Sheridan said: 'Let the wind blow east, west, north, or south, the immortal soul will take its flight to the destined point;' and leaning back in his chair, instantly expired. Dr Sheridan was the intimate friend and choice companion of Jonathan Swift; the father of 'Manager Tom,' as his son was termed in Ireland; and the grandfather of the Right Honourable Richard Brinsley Sheridan. He was born in the county of Cavan, about 1684, and, having completed his education at Trinity College, set up a classical school in Dublin. Entering into orders, he received the degree of D.D., and was appointed to a church-living in the south of Ireland. But by a singular act of inadvertence, he lost all chance of further preferment, by preaching a sermon on the anniversary of George I.'s birthday, from the text: '*Sufficient for the day is the evil thereof.*' On this becoming known, he was struck off the list of the Lord-Lieutenant's chaplains; parents hastened to take their children from his school; and, in short, as Swift said: 'He had killed his own fortunes by a chance-shot from an unlucky text.'

No reverse of fortune, however, could damp or discourage the high spirits of Dr Sheridan. Such, it is said, was his perpetual flow of ready wit and humour, that it was impossible for the most splenetic man to be unhappy in his company. When Swift, in a morbid state of disappointment, was condemned to live, as he considered it, an exile in Ireland, the companionship of Sheridan formed the great solace of his life. For one whole year they carried on a daily correspondence, and, according to previous stipulation, each letter was the unpremeditated effusion of five minutes' writing. Some of the funny nonsense thus composed, is preserved in Swift's miscellaneous works, though the greater part has fallen into merited oblivion.

Dr Sheridan was an excellent classical scholar, and wrote a prose translation of *Persius*, which was published after his death. Though indolent, good-natured, careless, and not particularly strict in his own conduct, he took good care of the morals of his scholars, whom he sent to the university well grounded in classical lore, and not ill instructed in the social duties of life. He was slovenly, indigent, and cheerful, knowing books better than men, and totally ignorant of the value of money. Ill-starred, improvident, but not unhappy, he was a fiddler, punster, quibbler, and wit; and his pen and fiddle-stick were in continual motion. As might be supposed, Sheridan's house, at Quilca, was such as Swift has described it in the following lines; and the writer may add, that, in his youth, he often saw the *ménage* of an Irish gentleman and scholar, to which the same description would be as justly applicable.

QUILCA.

'Let me thy properties explain:
A rotten cabin dropping rain;
Chimneys with scorn rejecting smoke;
Stools, tables, chairs, and bedsteads broke.
Here elements have lost their uses,
Air ripens not, nor earth produces;
In vain, we make poor Shela toil,
Fire will not roast, nor water boil;
Through all the valleys, hills, and plains,
The goddess Want, in triumph reigns,
And her chief officers of state,
Sloth, Dirt, and Theft, around her wait.'

UGO FOSCOLO.

Early in this century, the name of Ugo Foscolo enjoyed as extensive a reputation as that of the most enthusiastic champion of Italian independence, and one of the greatest and brightest ornaments of modern Italian literature. What he actually effected, however, in the first of these characters, was but trifling, and in the second, he has left little, not even excepting his celebrated *Letters of Jacopo Ortis*, which can commend itself to the tastes of this practical and unsentimental age. He was descended from a noble Venetian family, and was himself born on board a frigate, lying off the island of Zante, of which his father was governor for the republic of Venice. Entering life as a young man, just when the French Revolution was stirring the social life of Europe from its very depths, young Foscolo ardently embraced the new doctrines, and became so conspicuous a maintainer of them, that he was arrested and carried before the terrible inquisition of state, as a partisan in a conspiracy for overthrowing the government. No proof, however, appeared against him, and he was acquitted. It is related that his mother, a Greek lady, on seeing him led off as a prisoner, exclaimed to him, in a spirit worthy of a Spartan matron of old:

'Die; but do not dishonour thyself by betraying thy friends!' After gaining considerable renown by the representation of his tragedy of *Tieste*, when he was yet little more than twenty, he received the appointment of secretary to Battaglia, the Venetian ambassador to Bonaparte. The treacherous manner in which the latter transferred the republic to Austria, disgusted him for a time with political life, and he retired into Lombardy, then styled the 'Cisalpine Republic,' and penned there his celebrated romance, entitled *Ultime Lettere di Jacopo Ortis*. This created nearly as great a sensation as Goethe's *Sorrows of Werther*, to which, in point of subject-matter and style, it is very similar, though differing from it in the amount of political allusion by which Foscolo's work is throughout characterised. It has been translated into various languages, and contains much beautiful and pathetic writing, but imbued with an extremely morbid spirit.

Emerging from his retreat, Foscolo again sought the busy world, and served for some years in Bonaparte's army; but finding himself obnoxious to the authorities, on account of his republican principles, he resigned his commission, and returned once more to private life. Various literary works, including his edition of the writings of General Montecuccoli, and a translation of the first book of the *Iliad*, now occupied his leisure, and about 1809, he was appointed professor of literature in the university of Pavia, where the spirited style of his lectures to the young men so alarmed the sensitive absolutism of Bonaparte, that, in two months afterwards, the three Italian universities, Pavia, Padua, and Bologna, were closed. On the restoration of the Austrian government, Foscolo was suspected of being accessory to a conspiracy for its overthrow, and found it expedient to retire, first to Switzerland, and then to England, where he took up his abode for the remainder of his days.

Such are the leading events in the history of the Mazzini and Victor Hugo of his day. While in England, he enjoyed ready access to the first society in the metropolis, being both a man of great classical attainments, and most brilliant conversational powers. He built for himself a cottage in the neighbourhood of the Regent's Park, which, in allusion to the controversy on the use of the digamma in Greek, and his own large share in the dispute, he christened 'Digamma Cottage.' The furniture and decorations of his habitation were of the most magnificent order, including casts of the most celebrated works of sculpture, which were scattered through every apartment, and were contemplated by their owner with an enthusiasm little short of adoration. In excuse for this lavishness, he would observe, in reference to his costly articles of furniture: 'They encompass me with an air of respectability, and they give me the illusion of not having fallen into the lowest circumstances. I must also declare, that I will die like a gentleman, on a clean bed, surrounded by the Venuses, Apollos, and the Graces, and the busts of great men; nay, even among flowers, and if possible, while music is breathing around me.' It is easy to infer from this that Foscolo had much of the Epicurean in his composition. He is said, however, to have been remarkably abstemious in his habits, and laid claim himself to vying with Pythagoras for sobriety, and Scipio for purity of morals. Unfortunately, his means, eked out as they were by writing for the various reviews, and publishing essays on Petrarch, and a commentary on Dante, proved wholly inadequate to the maintenance of the luxurious style of living which he affected; and, after a brief period, the temple which he had reared to the Graces, with its gorgeous appliances, was brought to the hammer. His latter years were sorely disturbed by pecuniary embarrassment, a source of vexation which was greatly aggravated by a violent and fretful temper. He seems, indeed, to have been both true and generous hearted; but, as even an intimate friend admitted, his virtues were those of a savage nature. When in good-humour and spirits, nothing could be more entertaining than his conversation, though he displayed great peevishness if any irrelevant question were asked. He used to say: 'I have three miseries—smoke, flies, and to be asked a foolish question.'

MARY WOLLSTONECRAFT.

It is impossible for human laws to do more than minister to the greatest good of the greatest number; no skill can avert their oppressive action in singular cases. The law decrees that the contract of marriage shall only terminate with the decease of either partner, and few will dispute, that the law decrees wisely. But there are cases—and we do not allude to those in which divorce is the permitted remedy—where life-long marriage is life-long misery; yet, for the relief of such sufferers no thoughtful legislator advocates the abrogation of a law which, in its broad sweep, affords assured protection and security to the weaker half of humanity—to wives and children. Again, the law consigns children to the absolute government of their parents, and though there are many who neglect and abuse their trust, yet we feel that it is better to tolerate partial wrong, than invade an order which, on the whole, coincides with the greatest good of the greatest number. So, again, we permit the spendthrift to waste and the miser to hoard rather than infringe on that sense of independence and ownership, which more than doubles the joy of possession and gives spur and purpose to enterprise. Similar illustrations of exceptional sufferings and mischiefs might be multiplied indefinitely, for wherever there is a just and kind law, there is, at the same time, a possible shelter for injustice and cruelty. Whoever, therefore, will defend the best law, must be content to prove its general, not its universal excellence. This truth is continually forgotten by enthusiastic and generous natures. They encounter some case of hardship under the law, and at once raise a cry for its modification or abolition, never considering, whether if the cord were relaxed on one side it might not cut deeper and more dangerously on the other; and sometimes not satisfied with their verbal protest, they enter into actual rebellion, and in their own persons endure social obloquy and outlawry, in the vain endeavour to compass a universal, a Utopian justice. Among the boldest and noblest of such mistaken innovators must be ranked Mary Wollstonecraft.

She was born on the 27th of April 1759, but whether in London or Epping Forest, she could never ascertain. Her father was the son of a Spitalfields manufacturer, from whom he inherited about £10,000: her mother was an Irishwoman,

a Miss Dixon of Ballyshannon. Mr Wollstonecraft was a rolling stone which not only gathered no moss, but wore away its substance in rolling. He moved from London to Yorkshire, and from Yorkshire to London, and thence to Wales, sometimes farming and sometimes trading, and always losing. His temper was abominable; when in a rage, he would strike his wife, flog his children, and kick his dogs, finishing up with a fit of maudlin affection. Mary had frequently to throw herself between her father and mother to save her from his blows. Regular education was out of the question under these circumstances, and the young Wollstonecrafts were left to pick up what learning they could at a variety of day-schools. Mary was a handsome girl, lively and intelligent, with a proud spirit and ardent affections. For dolls and needle-work she had a thorough contempt, preferring to join in the sports of her brothers.

Among the wanderings of the family, they settled for a while at Queen's Row, Hoxton, in the neighbourhood of which William Godwin was a student at the Dissenters' College. Reflecting, in after-years, on his unconscious proximity to Mary, he observes: 'It is perhaps a question of curious speculation to inquire, what would have been the amount of difference in the pursuits and enjoyments of each party had they met, and considered each other with the same distinguishing regard in 1776, as they were afterwards impressed with in the year 1796.'

While at Queen's Row, Mary made the friendship of Frances Blood, a young lady of many accomplishments, who inspired her with a fervent desire for intellectual improvement. Tired of her wretched home, she became companion to Mrs Dawson, a lady of Bath, who was reputed to have such a temper that no one could abide with her. Mary forewarned was forearmed; she stayed with the virago two years, taught her better manners, and only left her side to nurse her mother in a mortal illness. Her next important step in life was to open a school in Islington, in company with her sisters and Frances Blood. Mary proved an excellent teacher; the school flourished, and was removed to Newington Green. Near by lived Dr Price, who became a visitor, and Mary's cordial friend. She was introduced to Dr Johnson, but his death prevented further acquaintance. Just as life was growing prosperous, Miss Blood fell into a decline, and was ordered to Portugal. Hearing that there was no hope of her recovery, Mary, in the strength of her affection, left the school to its fate, and sailed for Lisbon that she might be near her dear companion in her last hours. On her return, she went to Ireland as governess in the family of Lord Kingsborough, and there won golden opinions for her intelligence and amiability. One of her pupils, Countess Mount Cashel, remained Mary's friend through good and evil report till death divided them.

Conscious of powers which as yet had found no outlet, Miss Wollstonecraft came to London in August 1787, with the daring hope of acquiring a livelihood by authorship. The year before, she had made her advent in the world of letters by the publication of *Thoughts on the Education of Daughters*, for which her publisher, Mr Johnson, had given her ten guineas. She took humble lodgings in George Street, Blackfriars Bridge, and set to work. She contributed largely to the *Analytical Review;* abridged Lavater's *Physiognomy;* translated from the German Salzmann's *Elements of Morality;* from the French, Necker's *Importance of Religious Opinions;* and from the Dutch, *Young Grandison;* wrote tales for children, and executed a variety of other literary business: and not only did she earn her own living, but was able to assist her father, find situations for her brothers and sisters, and adopt an orphan girl of seven.

In such labours she might have spent many years in comparative obscurity, had not Burke's *Reflections on the Revolution in France*, published in November 1790, stirred in her such indignation, that she determined to answer the recreant Whig. She brought out a *Vindication of the Rights of Man*, in which she trounced her adversary with no little vehemence and much natural eloquence. It was among the first of the many replies to which Burke was treated, and it had a very large sale. Miss Wollstonecraft from that hour was a marked woman. By one set she was regarded with horror as a sort of monster, and by another was extolled as a divinity. Unhappily, her admirers stimulated her worst tendencies, and provoked her to issue a *Vindication of the Rights of Women*, wherein much that was true and excellent was nullified by extravagant sentiment and language. Her increased income allowed her, in 1791, to remove to better apartments in Store Street, Tottenham Court Road, where she was visited by the most distinguished republicans and freethinkers of that sanguine age. Godwin then met her for the first time at a dinner-party where Thomas Paine was present, and disliked her. Paine was not much of a talker, and the little he had to say Godwin was anxious to catch, but Mary interrupted his purpose by her almost incessant conversation.

Along with Godwin she had begun to entertain the opinion that marriage was an unjust monopoly; that marriage ought only to exist as long as there was heartfelt sympathy between a husband and wife; and that wherever that sympathy sprung up, the licence of marriage should be allowed. Poor Mary was doomed, in her own person, to illustrate the peril to women that lay in such a creed.

Her first attachment was to Fuseli, the painter. A lively affection developed between them, but Mrs Fuseli, like a dragon, lay in the way, and Mary, as a diversion to her feelings, made a trip to Paris, which extended into a residence of two years. By Paine she was introduced to the principal revolutionary leaders, and found a congenial spirit in Helen Maria Williams. From her window she saw Louis XVI. pass in a hackney-coach to execution, 'with more dignity,' she wrote, 'than I expected from his character.' Whilst in the spring of her enjoyment in Paris, she met Gilbert Imlay, an American merchant, and put in practice her theory by living with him as his wife without the legal forms of matrimony. All for a time went on smoothly. In a pleasant retreat at Neuilly she worked industriously on her most finished work, *A Historical and Moral View of the French Revolution.* Imlay left her nominally for a few weeks to look after some business at Havre. One day, on entering Paris, she passed the guillotine, whilst the blood streamed over the pavement. She burst at once into loud exclamations of horror and indignation. A kind bystander checked and implored

her to hasten and hide herself from all who had heard her words. The agony she experienced on being informed of the death of Brissot, Vergniaud, and the twenty deputies, she vowed was greater than any pain she had ever felt. Meanwhile Imlay did not return. She followed him to Havre, and there gave birth to a daughter, named Frances, in memory of her old friend, Miss Blood. Imlay then went to London, persuading his wife to return to Paris, with the promise that he would rejoin her shortly. Half a year elapsed, but no Imlay made his appearance. Anxious and suspicious, Mary crossed to England, and arrived in London to find her worst fears realised, and the father of her child in the arms of another mistress. She prayed that he would return to her, and was only prevented committing suicide by his timely arrival. By renewed seductions he induced her to start for Norway, and there transact some business for him. He made an assignation at Hamburg, which he did not keep, and on her return to London, it became at last apparent that she was betrayed and befooled. Distracted with anguish, she took a boat to Putney, and walking about in the rain till her clothes were drenched through, she leaped over the bridge into the Thames. Happily, she was observed and rescued. Again she saw Imlay, and made the extraordinary proposal that she and his paramour should live together. 'I think it important,' she wrote to him, 'that you should learn habitually to feel for your child the affection of a father.' Imlay, who seems to have been an irresolute scoundrel, at first assented and afterwards refused, and Mary then summoned up resolution, and dismissed him from her thoughts for ever.

Well-nigh broken-hearted, she went to live in Pentonville, and renewed her acquaintance with Godwin. Acquaintance melted into friendship, and friendship into love, and again she ventured to become a wife without the ceremonies of marriage. Finding, however, the pains and penalties attached to such a relation unendurable, they yielded to what they thought popular prejudice, and were married. Godwin's account of the method of their conjugal life is worth reading. He writes: 'Ours was not an idle happiness, a paradise of selfish and transitory pleasures. It is perhaps scarcely necessary to mention, that, influenced by the ideas I had long entertained on the subject of cohabitation, I engaged an apartment about twenty doors from our house in the Polygon, Somers Town, which I designed for the purpose of my study and literary occupations. Trifles, however, will be interesting to some readers, when they relate to the last period of the life of such a person as Mary. I will add, therefore, that we were both of us of opinion, that it was possible for two persons to be too uniformly in each other's society. Influenced by that opinion, it was my practice to repair to the apartment I have mentioned as soon as I rose, and frequently not to make my appearance in the Polygon till the hour of dinner. We agreed in condemning the notion, prevalent in many situations in life, that a man and his wife cannot visit in mixed society but in company with each other, and we rather sought occasions of deviating from, than of complying with, this rule. By these means, though for the most part we spent the latter half of each day in one another's society, yet we were in no danger of satiety. We seemed to combine, in a considerable degree, the novelty and lively sensation of a visit, with the more delicious and heartfelt pleasures of domestic life.'

This philosophic union, to Godwin's inexpressible affliction, did not extend over more than eighteen months. Mrs Godwin died in childbed, on the 10th of September 1797, at the age of thirty-eight. Her infant grew to womanhood, and became the wife of the poet Shelley, and the author of *Frankenstein*.

The errors of Mary Wollstonecraft's life lie on the surface, and many will be quick to supply the ready commentary of condemnation. If, however, we are more careful to be just than vindictive, we shall not leave her without many allowances, some admiration, and much pity. Considering the unhappy circumstances of her childhood, and her imperfect education, we shall regard with wonder and respect the energy and self-control by which she transformed herself into the successful schoolmistress, the governess, the writer for the press, the antagonist of Burke, and the esteemed associate of politicians and philosophers. Nor shall we forget her generosity, almost wild in its excess; her free sacrifice of money and opportunity to her family and friends. Nor shall we fail to observe that the painful eccentricities of her career were confined within seven years, 1790-1797; a time of abnormal excitement, when the mind of Europe broke loose from the moorings of ages, and every maxim of law and morals was put to inquisition. Mary Wollstonecraft found herself in this mælström of revolution, and determined to realise that new moral world about which so many were content to theorise. Godwin himself bears witness that she did not reason, but darted to conclusions. In the matter of her cohabitation with Imlay and Godwin, she must receive the full benefit which charity accords to those who do wrong believing they do right. In her conduct there was nothing clandestine; indeed, she took superfluous pains to inform her acquaintance that she was not legally married, and thus drove from her presence many who were very willing to enjoy the charm of her society, if only she would condescend to subterfuge.

INCIDENTAL TO A JOURNEY TO PARIS IN 1723.

On the 10th of September 1723, three English gentlemen, named Sebright, Davis, and Mompesson, set out from Calais for Boulogne, on their way to Paris. Sebright and Davis travelled in one coach, Mompesson and a servant in another: another servant rode on horseback. Before leaving the *Lion d'Argent* hotel in Calais, Mr Sebright changed twenty-five guineas into French silver money, for the use of the party on the road. Hence, it was supposed, the sad accident which overtook them in their journey.

About seven miles from Calais, they were beset by six mounted highwaymen, who demanded the money they were believed to have in their possession. The English gentlemen, having no arms but their swords, made no resistance. All the money they possessed, being about one hundred and twenty

pounds, was surrendered, as also their swords, watches, and other trinkets. They were commanded to come out of the chaises, and lie down with their faces to the ground, and when their persons had in these circumstances been more effectually searched, the word to kill was given, and the whole five were then shot and hacked in the most cruel manner. Another English gentleman, named Locke, coming up at the moment on his way from Paris, was shot in his vehicle, and with difficulty his Swiss valet was enabled to beg his life. When the murderous work appeared to be complete, the six banditti rode off with their booty. It then appeared that Mr Mompesson, notwithstanding his throat had been cut, was still alive; and so was Mr Sebright's servant, Richard Spendelow. But the unfortunate gentleman survived only a few hours. Six persons in all lost their lives on this occasion. It was supposed that the incident of the changing of the twenty-five guineas was what attracted the attention of the predatory party to the travellers. We do not learn that more than one person was ever brought to justice for this horrid outrage, notwithstanding that the Regent d'Orleans offered large rewards for their apprehension.*

The Curfew.

The lengthening evenings bring naturally to our minds their discomforts in the olden times, and the various customs and observations connected with them. Among these was the curfew-bell, which has been made well known to all ears by the frequent allusions to it in our poets, but which has been the subject of not a few 'vulgar errors.' In those old times, people, in general, possessed nothing like clocks or watches; they learned, by the practice of observation, to judge roughly of the time of the day, but in cases where it was necessary to know the exact hour, they were entirely at a loss. Any implement for measuring time was rare, and belonged only to a public body, or institution, or to some very remarkable individual, and the only means of imparting to the public the knowledge gained from it, was by ringing a bell, or blowing a horn, at certain hours of the day. This practice was first introduced in the monastic establishments, where the inmates required to know the hours for celebrating the various services. It was probably adopted also in the great houses of the aristocracy, and in towns. There were, in fact, many customs to be observed at stated hours, besides the religious services, and some of these were required by public safety.

In the middle ages there was a very much larger proportion of society which lived by cheating, plundering, and ill treating the rest, than in modern times. Owing to the want of any effective police, there was no safety out of doors at night; and even people who, by daylight, appeared to live honestly, sallied forth after dark to rob and assassinate. It was attempted, in towns especially, to meet this evil, by making it criminal to be found out of doors after a certain hour; and, as otherwise offenders might plead ignorance, it was ordered that the hour should be publicly sounded, generally by the town-bell, and when that was heard, all people were compelled to shut the doors of their houses, put out their fires, and retire to bed, those who were out of bed after the sounding of the bell being liable to severe punishment. It was an efficacious way of clearing the streets. The bell sounded for this purpose was, in France, called popularly the *couvre-feu*, or cover-fire, which, in the Latin documents in which it was alluded to, was translated by *ignitegium*. Something of the same kind, probably, existed in the Anglo-Saxon times, but the name just mentioned was, of course, introduced by the Normans, and we have no express allusion to the practice in this country before the Anglo-Norman period. Hence, no doubt, has arisen the erroneous notion that the *couvre-feu* bell, corrupted into the *curfew*-bell, was invented by William the Conqueror as an instrument of tyranny. It was, apparently, a municipal and not a state institution, and the utility of a general covering of fires at a reasonable hour is obvious. In those days, most houses were constructed wholly or mostly of wood, and were extremely liable to take fire when fire was used carelessly. To cover up the fire was an important regulation for safety, and a utensil was employed for the purpose—here represented.

CURFEW.

The curfew-bell was used in the monastic establishments as well as in the towns. In the great abbey of St Alban's, it was ordered that the monks should not remain assembled in conversation after the ringing of the curfew-bell. In Lichfield Cathedral, according to the statutes of that church, quoted in Ducange, the curfew-bell was sounded at seven o'clock in the evening, and this appears to have been the usual hour at the earlier period, for ordinary people went to bed very early, and rose before daybreak; but in course of time, seven o'clock seems to have been thought too early, and it was moved onwards an hour to eight o'clock, which seems, down to a very late period, to have been the most common hour of the curfew in England, though in many places it was still further advanced to nine o'clock. The curfew is still rung in many towns and parishes in England, in some at eight o'clock, and in others at nine. At the end of the last century, as we learn from the *Gentleman's Magazine* for 1790, the curfew was announced at the latter hour at Ripon, in Yorkshire, by a man with a horn, which he blew, first at the market-cross, and then at the mayor's door. In Scotland, the hour of curfew was similarly retarded, until it

* *Hearne's Diaries*, ii. 507. Newspapers of the time.

was fixed, not at nine, but at ten o'clock, and that seems to have been, in later times, the usual hour of the Scottish curfew.

It is quite a mistake to suppose that the curfew-bell was peculiar to this island—it was a natural expedient for serving a generally useful purpose, and was adopted in France, Italy, and Spain, and probably in all parts of continental Europe. Moreover, a corresponding bell was rung in the morning, to inform people of the hour at which it was customary to rise. In some instances, this is merely said to have taken place at daybreak, but a more usual hour appears to have been four o'clock in the morning. At Ludlow, in Shropshire, this bell still rings at six o'clock, and the evening-curfew at nine. It is kept up merely because it has been customary, and because there is provision for it in the old corporation or parish orders. At London, as we learn from records of the end of the fifteenth century, the curfew was sounded at the same time from the three churches of Bow in Cheapside, St Bride's, and St Giles's without Cripplegate, and the clerks of all the other parish churches in the metropolis were obliged to begin ringing the moment they heard one of these, or, for neglect, were to be presented to the quest of wardmote. At Oxford, the curfew was rung at Carfax at eight o'clock, and there was a foolish tradition that it was established, not by William the Conqueror, but by King Alfred. Here, a refinement of the ordinary curfew had been introduced, for, after the bell of Carfax had sounded the curfew, it rung deliberately the day of the month.

SEPTEMBER 11.

Saints Protus and Hyacinthus, martyrs. St Paphnutius, bishop and confessor, 4th century. St Patiens, archbishop of Lyon, confessor, about 480.

Born.—Ulysses Aldrovandus, distinguished naturalist, 1522, *Bologna;* Henri, Vicomte de Turenne, great French commander, 1611, *Sedan Castle on the Meuse;* William Lowth, divine and commentator, 1661; James Thomson, poet, 1700, *Ednam, Roxburghshire.*

Died.—Treasurer Cressingham, slain at battle of Stirling, 1297; James Harrington, author of *Oceana,* 1677, *London;* John Augustus Ernesti, classical editor, 1781, *Leipsic;* David Ricardo, political economist, 1823, *Gatcombe Park, Gloucestershire;* Captain Basil Hall, author of books of voyages and travels, 1844, *Portsmouth.*

THE TAKING OF DROGHEDA, SEPTEMBER 11, 1649.

In the summer following on the death of Charles I., Cromwell was sent into Ireland to bring it under obedience to the English parliament. The country was composed of factions—Catholics, Episcopalians, Presbyterians, &c.—agreeing in hardly anything but their opposition to the new Commonwealth. It was the policy of Cromwell to strike terror into these various parties by one thunderbolt of vigorous action; and his assault upon the town of Drogheda afforded him the opportunity. There were here about 3000 royalists assembled under Sir Arthur Ashton. The town had some tolerably strong defences. Cromwell, on the 10th of September, summoned the town, but was answered only with a defiance. He set his cannon a-playing on the walls, and, having made some breaches, sent in a large armed force next day, who, however, were for that time repulsed. Renewing the assault, they drove the garrison into confined places, where the whole were that evening put to the sword, with merely a trifling exception. Cromwell, in his dispatch to Lenthall, describes this affair as a 'righteous judgment' and a 'great mercy,' and with equal coolness relates how any that he spared from death were immediately shipped off for Barbadoes—that is, deported as slaves. The policy of the English Attila was successful. It cut through the heart of the national resistance, and laid Ireland at the feet of the English parliment.

ROGER CRAB.

Among the many crazy sectaries produced from the yeasty froth of the fermenting caldron of the great civil war, there was not one more oddly crazy than Roger Crab. This man had served for seven years in the Parliamentary army, and though he had his 'skull cloven' by a royalist trooper, yet, for some breach of discipline, Cromwell sentenced him to death, a punishment subsequently commuted to two years' imprisonment. After his release from jail, Crab set up in business as 'a haberdasher of hats' at Chesham,

ROGER CRAB.

in Buckinghamshire. His wandering mind, probably not improved by the skull-cleaving operation, then imbibed the idea, that it was sinful to eat any kind of animal food, or to drink anything stronger than water. Determined to follow, literally, the injunctions given to the young man in the gospel, he sold off his stock in trade, distributing the proceeds among the poor, and took up his residence in a hut, situated on a rood of ground near Ickenham, where for some time he lived on the small sum of three-farthings a week. His food consisted of bran, dock-leaves, mallows, and grass; and how it

agreed with him we learn from a rare pamphlet, principally written by himself, entitled *The English Hermit, or the Wonder of the Age.* 'Instead of strong drinks and wines,' says the eccentric Roger, 'I give the old man a cup of water; and instead of roast mutton and rabbit, and other dainty dishes, I give him broth thickened with bran, and pudding made with bran and turnip-leaves chopped together, at which the old man (meaning my body) being moved, would know what he had done, that I used him so hardly. Then I shewed him his transgressions, and so the wars began. The law of the old man in my fleshly members rebelled against the law of my mind, and had a shrewd skirmish; but the mind, being well enlightened, held it so that the old man grew sick and weak with the flux, like to fall to the dust. But the wonderful love of God, well pleased with the battle, raised him up again, and filled him full of love, peace, and content of mind, and he is now become more humble, for now he will eat dock-leaves, mallows, or grass.'

The persecutions the poor man inflicted on himself, caused him to be persecuted by others. Though he states that he was neither a Quaker, a Shaker, nor a Ranter, he was cudgelled and put in the stocks; the wretched sackcloth frock he wore was torn from his back, and he was mercilessly whipped. He was four times arrested on suspicion of being a wizard, and he was sent from prison to prison; yet still he would persist in his course of life, not hesitating to term all those whose opinion differed from his by the most opprobrious names. He published another pamphlet, entitled *Dagon's Downfall; or the great Idol digged up Root and Branch; The English Hermit's Spade at the Ground and Root of Idolatry.* This work shews that the man was simply insane. We last hear of him residing in Bethnal Green. He died on the 11th of September 1680, and was buried in Stepney Churchyard, where his tombstone exhibits the following quaint epitaph:

'Tread gently, reader, near the dust
Committed to this tomb-stone's trust:
For while 'twas flesh, it held a guest
With universal love possest:
A soul that stemmed opinion's tide,
Did over sects in triumph ride;
Yet separate from the giddy crowd,
And paths tradition had allowed.
Through good and ill reports he past,
Oft censured, yet approved at last.
Wouldst thou his religion know?
In brief 'twas this: to all to do
Just as he would be done unto.
So in kind Nature's law he stood,
A temple, undefiled with blood,
A friend to everything that 's good.
The rest angels alone can fitly tell;
Haste then to them and him; and so farewell!'

SEPTEMBER 12.

St Albeus, bishop and confessor, 525. St Eanswide, virgin and abbess, 7th century. St Guy, confessor, 11th century.

Born.—Francis I. of France, 1494; Sir William Dugdale, antiquary, 1605, *Shustoke, Warwickshire;* Jean-Philippe Rameau, writer of operas, 1683, *Dijon.*

Died.—Pope Innocent VI., 1362; Cinq-Mars, favourite of Louis XIII., executed at Lyon, along with De Thou, on charge of conspiracy, 1642; Griffith Jones, miscellaneous writer, 1786, *London;* Edward, Lord Thurlow, chancellor of England, 1806, *Brighton;* Lebrecht von Blücher, field-marshal of Prussia, 1819, *Kriblowitz, Silesia;* Lord Metcalfe, statesman, 1846, *Basingstoke;* William Cooke Taylor, miscellaneous writer, 1849, *Dublin;* James Fillans, sculptor, 1852, *Glasgow;* Sir James Stephen, historical and miscellaneous writer, 1859, *Coblentz.*

CINQ-MARS.

Youth and comeliness of person not unfrequently serve as palliations of serious delinquencies, and what in the case of an ordinary criminal would have been looked on as simply a fitting punishment for his misdeeds, is apt to be regarded as harsh and oppressive, when the penalties of the law come to be inflicted on a young and handsome transgressor. A feeling of this sort has thrown a romantic interest around the fate of the Marquis de Cinq-Mars, the favourite of Louis XIII., though it is but justice to his memory to admit that, in putting him to death, the principles both of law and equity were grossly violated.

It is well known that the weak and irresolute Louis XIII. was entirely subject to his prime minister, the crafty and ambitious Cardinal Richelieu. Yet in the opinion of the latter, it was necessary to watch the sovereign closely, lest some stranger should gain such a sway over his heart, as to render nugatory the influence wielded by himself. It was necessary to provide him with some favourite, who might act as a spy on his actions, and duly report all his proceedings. A fitting instrument for such an employment, the cardinal believed he had discovered in M. de Cinq-Mars, a young gentleman of Auvergne, who joined the most unique graces of personal appearance to the most brilliant wit and captivating manners. Having been introduced at court by Richelieu, he rapidly gained the favour of the king, who had him appointed, when only nineteen, to the offices of grand equerry and master of the robes. Never was a favourite's advancement more speedy, nor the sunshine of royal friendship more liberally dispensed. Yet the gay and volatile Cinq-Mars chafed under the restraints to which the constant attention claimed by an invalid monarch subjected him, and he not unfrequently involved himself in disgrace by transgressing the rules of court. A mistress of his, the beautiful Marion de Lorme, occupied a large share of his thoughts to the exclusion of the king; and Louis was often irritated in the mornings, on sending for his equerry, by the announcement, that he had not yet risen, the real fact being, that he had just lain down to sleep after a night spent in visiting Mademoiselle de Lorme. Cinq-Mars was at first gently reprimanded for his indolence, but the truth at last came out, and a most uncourtly altercation ensued between him and the king. High words passed on both sides, and at last Louis ordered him from his presence. After a short absence from court, he made a humble submission to Richelieu, and through his influence was reinstated in royal favour. But the relation between these two men soon assumed a different phase. Cinq-Mars was beginning to insinuate himself too intimately into the king's good graces, and by aiming at freeing himself from dependence on Richelieu, rendered himself an object of suspicion and hatred to the jealous priest.

Then the latter mortally offended the favourite, by interposing to prevent his marriage with the Princess Gonzaga, to whose hand Cinq-Mars had ventured to aspire. The result of all these counter-agencies was a rancorous and deadly feud, which nothing but blood could appease. The assassination of Richelieu was meditated by Cinq-Mars, and suggested by him to the king, who certainly did not manifest any decided aversion to a scheme which would have rid him of a minister who exercised over him so thorough a control. But the project was never carried out. In the meantime, some of the leading French nobles, including among others the Duke of Orleans, Louis's brother, and the Duke de Bouillon, had entered into a conspiracy for the overthrow of Cardinal Richelieu, and the securing to the first-named duke the regency of the kingdom, in the event of the king's death, an occurrence which the state of his health rendered probable at no distant date. Into this confederacy Cinq-Mars readily entered along with a friend of his, the councillor De Thou, a son of the celebrated historian. The real mover, however, in the plot was Louis, Duke of Orleans. With the view of strengthening their cause, the conspirators entered into a secret treaty with the Spanish court, and everything was looking favourable for the success of their design. The cardinal, however, had his spies and informers everywhere, and having received intelligence of what was going on, refrained from taking any active steps till he could strike the final blow. At last he contrived to get possession of a copy of the Spanish treaty, and laid it before the king, who thereupon granted a warrant for the arrest of the parties implicated. The real ringleader, Louis of Orleans, a man aged forty-six, had the baseness to throw the entire guilt of the transaction upon Cinq-Mars, a youth of twenty-two, and by burning, as is said, the original treaty, managed to destroy the legal proof of his treason. The Duke de Bouillon escaped by forfeiting his principality of Sedan. But Richelieu was bent on having the lives of Cinq-Mars and De Thou, the demerits of the latter consisting in the circumstance of his father, the historian, having made in his work some unpleasant revelations regarding one of the cardinal's ancestors. The two friends were arrested at Narbonne, conveyed to Perpignan, and from thence up the Rhone towards Lyon. It is said Richelieu preceded them in a triumphal progress as far as Valence, having his two victims placed in a barge, which was attached to the stern of his own as he sailed up the river. On reaching Lyon, the prisoners were brought to trial, and after a mockery of the forms of justice, the evidence against both, more especially De Thou, being very incomplete, they were condemned to lose their heads as traitors. To gratify Richelieu, who dreaded the effect of the intercession of their friends and relatives with the king, the proceedings were hurried through as rapidly as possible, and the execution took place on the same day that sentence was pronounced. Both Cinq-Mars and De Thou behaved with great courage, though the decapitation of the latter was accomplished in a most bungling and repulsive manner, the proper executioner having broken his leg a few days before, and his place being supplied by a novice to the business, who was rewarded with a hundred crowns for his work. Such was the history of Cinq-Mars, whose fate has supplied materials both to the romance-writer and dramatist. That he was illegally condemned, is certainly true; but it is no less so, that he had plotted Richelieu's overthrow, and at one period meditated his death, so that he could scarcely complain of being entangled in the same net which he had already spread for another. The cardinal did not long survive the gratification of his vengeance, and, broken down by disease and bodily suffering, followed his victims in a few months to that unseen world where the forgiveness, which he had so inexorably withheld from them, would have to be solicited, it is to be hoped successfully, by himself, from a higher and more merciful Power.

GRIFFITH JONES.

The readers of the *Vicar of Wakefield*—and who has not read it?—must remember how poor Primrose, when sick and penniless at a little alehouse seventy miles from home, was rescued from his distressing situation by 'the philanthropic bookseller of St Paul's Churchyard, who has written so many little books for children'—who called himself the friend of children, 'but was the friend of all mankind'— then engaged in a journey of importance, namely, to gather 'materials for the history of one Mr Thomas Trip.' The person here meant was Mr John Newbery, who carried on business as a publisher in the last house of Ludgate Hill, adjoining to St Paul's Churchyard, and who was one of the chief bibliopolic patrons of Goldsmith himself. It was, indeed, he to whom Dr Johnson sold for sixty pounds the manuscript of the *Vicar of Wakefield*, thereby redeeming its author from a position of difficulty with which Boswell has made the public sufficiently familiar.

The little books for children published by Mr Newbery are now entirely unknown. We remember them still in great favour about fifty years ago. Rather plain in respect of paper they were; the embellishments were somewhat rude; and perhaps the variant-hued paper-covers, with a slight gold lackering, would be sneered at by the juveniles of the present age. Nevertheless, we cannot look back upon them without respect. The *History of Goody Two-shoes*, the *History of Giles Gingerbread*, and the *Travels of Tommy Trip*, were all charming narrations.

If it was worth while to advert to M. Perrault as the author of the *Contes des Fées*, it seems equally proper, in a book of this kind, to put into some prominence the writers of this English literature for the young. Let it be observed, then, that the chief of these was a Welshman of considerable learning and talent, Mr Griffith Jones, who had been reared as a printer under Mr Bowyer, but advanced to be a journalist of repute, and a notable contributor to periodical works supported by Johnson, Smollett, Goldsmith, and other eminent men. He was many years editor of the *Daily Advertiser*, the paper in which the letters of Junius appeared. He resided at one time in Bolt Court, Fleet Street, and thus was a near neighbour of Johnson. A small work of his, entitled *Great Events from Little Causes*, is said to have had an extensive sale. Being, however, a modest man, he was content to publish anonymously, and thus it has happened that his name is hardly known in our literary history. His

brother, Giles Jones, was another worker in the humble field wherein Mr Newbery acquired his fame, and his son, Stephen Jones, was the editor of the *Biographia Dramatica*, 1812.

RAISING OF THE SIEGE OF VIENNA.

SEPTEMBER 12, 1683.

Depressed as the Turks now are, it is difficult to imagine how formidable they were two hundred years ago. The Hungarians, threatened by their sovereign, the Emperor Leopold, with the loss of their privileges, revolted against him, and called in the Turks to their aid. An Ottoman army, about two hundred thousand strong, augmented by a body of Hungarian troops, consequently advanced into Austria, and, finding no adequate resistance, laid siege to Vienna.

The emperor, quitting his capital with precipitation, retired first to Lintz, afterwards to Passau, leaving the Duke of Lorraine at the head of a little army to sustain, as he best might, the fortunes of the empire. All Europe was at gaze at this singular conjuncture, none doubting that the Austrian capital would speedily be in the hands of the Turks, for it had hardly any defence beyond what was furnished by a weak garrison of citizens and students. The avarice of the grand vizier, Kara-Mustapha, the commander of the Turks, saved Vienna. He had calculated that the emperor's capital ought to contain immense treasures, and he hesitated to order a general assault, lest these should be appropriated by the soldiery. This allowed time for John Sobieski, king of Poland, to bring up his army, and for the princes of the empire to gather their troops. The Janissaries murmured. Discouragement followed upon indignation. They wrote, 'Come, infidels; the mere sight of your hats will put us to flight!'

In effect, when the king of Poland and the Duke of Lorraine descended the Colemberg mountain with their troops, the Turks retired without fighting. The vizier, who had expected to obtain so much treasure in Vienna, left his own in the hands of Sobieski, and went to surrender his head to the sultan. The retreat of his army was so precipitate, that they left behind them the grand standard of the Prophet, which Sobieski, with practical wit, sent to the pope.

SEPTEMBER 13.

St Maurilius, bishop of Angers, confessor, 5th century. St Eulogius, confessor and patriarch of Alexandria, 608. St Amatus, abbot and confessor, about 627. Another St Amatus, bishop and confessor, about 690.

Born.—Sir William Cecil, Lord Burleigh, 1520, *Bourn, Leicestershire.*

Died.—Titus, Roman emperor, 81 A.D.; Sir John Cheke, eminent Greek scholar, 1557, *London;* William Farel, coadjutor of Calvin, 1565, *Neufchatel;* Michael de Montaigne, celebrated essayist, 1592, *Montaigne, near Bordeaux;* Philip II. of Spain, 1598; John Buxtorf the Elder, eminent Hebrew scholar, 1629, *Basel;* General James Wolfe, killed at capture of Quebec, 1759; Charles James Fox, eminent statesman, 1806, *Chiswick House;* Saverio Bettinelli, Italian writer (Risorgimento d'Italia), 1808, *Mantua.*

MONTAIGNE.

Montaigne was born in 1533, and died in 1592, his life of sixty years coinciding with one of the gloomiest eras in French history—a time of widespread and implacable dissensions, of civil war, massacre and murder. Yet, as the name of Izaak Walton suggests little or nothing of the strife between Cavalier and Roundhead, so neither does that of Montaigne recall the merciless antagonism of Catholic and Huguenot. Walton and Montaigne alike sought refuge from public broils in rural quiet, and in their solitude produced writings which have been a joy to the contemplative of many generations; but here the likeness between the London linen-draper and the Gascon lawyer ends: they were men of very different characters.

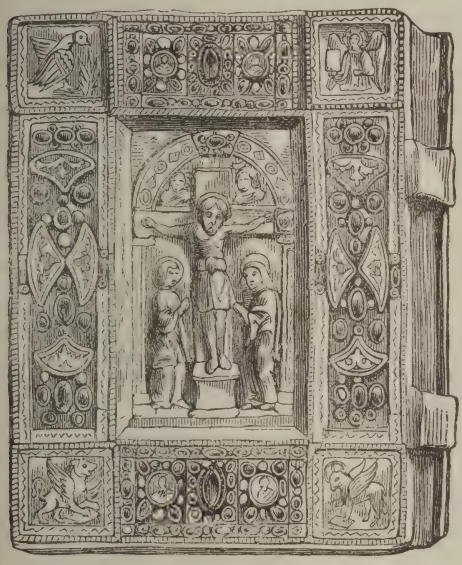
The father of Montaigne was a baron of Perigord. Having found Latin a dreary and difficult study in his youth, he determined to make it an easy one for his son. He procured a tutor from Germany, ignorant of French, and gave orders that he should converse with the boy in nothing but Latin, and directed, moreover, that none of the household should address him otherwise than in that tongue. 'They all became Latinised,' says Montaigne; 'and even the villagers in the neighbourhood learned words in that language, some of which took root in the country, and became of common use among the people.' Greek he was taught by similar artifice, feeling it a pastime rather than a task. At the age of six, he was sent to the college of Guyenne, then reputed the best in France, and, strange as it seems, his biographers relate, that at thirteen he had run through the prescribed course of studies, and completed his education. He next turned his attention to law, and at twenty-one was made *conseiller*, or judge, in the parliament of Bordeaux. He visited Paris, of which he wrote: 'I love it for itself; I love it tenderly, even to its warts and blemishes. I am not a Frenchman, but by this great city—great in people, great in the felicity of her situation, but above all, great and incomparable in variety and diversity of commodities; the glory of France, and one of the most noble ornaments of the world.' He was received at court, enjoyed the favour of Henri II., saw Mary Stuart, Queen of Scots, and entered fully into the delights and dissipations of gay society. At thirty-three he was married—though had he been left free to his choice, he 'would not have wedded with Wisdom herself had she been willing. But 'tis not much to the purpose,' he writes, 'to resist custom, for the common usance of life will be so. Most of my actions are guided by example, not choice.' Of women, indeed, he seldom speaks save in terms of easy contempt, and for the hardships of married life he has frequent jeers.

In 1571, in his thirty-eighth year, the death of his father enabled Montaigne to retire from the practice of law, and to settle on the patrimonial estate. It was predicted he would soon exhaust his fortune, but, on the contrary, he proved a good economist, and turned his farms to excellent account. His good sense, his probity, and liberal soul, won for him the esteem of his province; and though the civil wars of the League converted every house into a fort, he kept his gates open, and the neighbouring gentry brought him their

jewels and papers to hold in safe-keeping. He placed his library in a tower overlooking the entrance to his court-yard, and there spent his leisure in reading, meditation, and writing. On the central rafter he inscribed: *I do not understand; I pause; I examine.* He took to writing for want of something to do, and having nothing else to write about, he began to write about himself, jotting down what came into his head when not too lazy. He found paper a patient listener, and excused his egotism by the consideration, that if his grandchildren were of the same mind as himself, they would be glad to know what sort of man he was. 'What should I give to listen to some one who could tell me the ways, the look, the bearing, the commonest words of my ancestors!' If the world should complain that he talked too much about himself, he would answer the world that it talked and thought of everything but itself.

A volume of these egotistic gossips he published at Bordeaux in 1580, and the book quickly passed into circulation. About this time he was attacked with stone, a disease he had held in dread from childhood, and the pleasure of the remainder of his life was broken with paroxysms of severe pain. 'When they suppose me to be most cast down,' he writes, 'and spare me, I often try my strength, and start subjects of conversation quite foreign to my state. I can do everything by a sudden effort, but, oh! take away duration. I am tried severely, for I have suddenly passed from a very sweet and happy condition of life, to the most painful that can be imagined.' Abhorring doctors and drugs, he sought diversion and relief in a journey through Germany, Switzerland, and Italy. At Rome he was kindly received by the pope and cardinals, and invested with the freedom of the city, an honour of which he was very proud. He kept a journal of this tour, which, after lying concealed in an old chest in his chateau for nearly two hundred years, was brought to light and published in 1774; and, as may be supposed, it contains a stock of curious and original information. While he was travelling, he was elected mayor of Bordeaux, an office for which he had no inclination, but Henri III. insisted that he should accept it, and at the end of two years he was re-elected for the same period. During a visit to Paris, he became acquainted with Mademoiselle de Gournay, a young lady who had conceived an ardent friendship for him through reading his *Essays*. She visited him, accompanied by her mother, and he reciprocated her attachment by treating her as his daughter. Meanwhile, his health grew worse, and feeling his end was drawing near, and sick of the intolerance and bloodshed which devastated France, he kept at home, correcting and retouching his writings. A quinsy terminated his life. He gathered his friends round his bedside, and bade them farewell. A priest said mass, and at the elevation of the host he raised himself in bed, and with hands clasped in prayer, expired. Mademoiselle de Gournay and her mother crossed half France, risking the perils of the roads, that they might condole with his widow and daughter.

It is superfluous to praise Montaigne's *Essays;* they have long passed the ordeal of time into assured immortality. He was one of the earliest discoverers of the power and genius of the French language, and may be said to have been the inventor of that charming form of literature—the essay. At a time when authorship was stiff, solemn, and exhaustive, confined to Latin and the learned, he broke into the vernacular, and wrote for everybody with the ease and nonchalance of conversation. The *Essays* furnish a rambling autobiography of their author, and not even Rousseau turned himself inside out with more completeness. He gives, with inimitable candour, an account of his likes and dislikes, his habits, foibles, and virtues. He pretends to most of the vices; and if there be any goodness in him, he says he got it by stealth. In his opinion, there is no man who has not deserved hanging five or six times, and he claims no exception in his own behalf. 'Five or six as ridiculous stories,' he says, 'may be told of me as of any man living.' This very frankness has caused some to question his sincerity, but his dissection of his own inconsistent self is too consistent with flesh and blood to be anything but natural. Bit by bit the reader of the *Essays* grows familiar with Montaigne; and he must have a dull imagination indeed who fails to conceive a distinct picture of the thick-set, square-built, clumsy little man, so undersized that he did not like walking, because the mud of the streets bespattered him to the middle, and the rude crowd jostled and elbowed him. He disliked Protestantism, but his mind was wholly averse to bigotry and persecution. Gibbon, indeed, reckons Montaigne and Henri IV. as the only two men of liberality in the France of the sixteenth century. Nothing more distinguishes Montaigne than his deep sense of the uncertainty and provisional character of human knowledge; and Mr Emerson has well chosen him for a type of the sceptic. Montaigne's device—a pair of scales evenly balanced, with the motto, *Que scais-je?* (What do I know?)—perfectly symbolises the man.



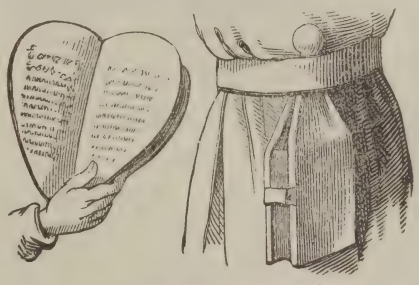
The only book we have which we certainly know was handled by Shakspeare, is a copy of Florio's translation of Montaigne's *Essays*. It contains the poet's autograph, and was purchased by the British Museum for one hundred and twenty guineas. A second copy of the same translation in the Museum has Ben Jonson's name on the fly-leaf.

ANCIENT BOOKS.

Before the invention of printing, the labour requisite for the production of a manuscript volume was so great, that such volume, when completed, became a treasured heir-loom. Half-a-dozen such books made a remarkable library for a nobleman to possess; and a score of them would furnish a monastery. Many years must have been occupied in writing the large folio volumes that are still the most valued books in the great public libraries of Europe; vast as is the labour of the literary portion, the artistic decoration of these elaborate pages of elegantly-formed letters, is equally wonderful. Richly-painted and gilt letters are at the head of chapters and paragraphs, from which vignette decoration flows down the sides, and about the margins, often enclosing grotesque figures of men and animals, exhibiting the fertile fancies of these old artists. Miniature drawings, frequently of the greatest beauty, illustrating the subject of each page, are sometimes spread with a lavish hand through these old volumes, and often furnish us with the only contemporary pictures we possess

of the everyday-life of the men of the middle ages.

When the vellum leaves completing the book had been written and decorated, the binder then commenced his work; and he occasionally displayed a costly taste and manipulative ability of a kind no moderns attempt. A valued volume was literally encased in gold and gems. The monks of the ninth and tenth centuries were clever adepts in working the precious metals; and one of the number—St Dunstan—became sufficiently celebrated for his ability this way, to be chosen the patron-saint of the goldsmiths. Our engraving will convey some idea of one of the finest existing

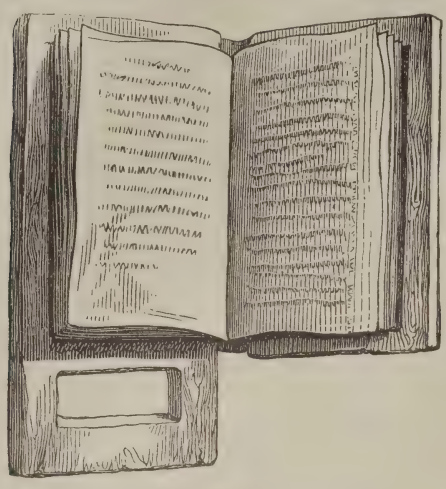


ANTIQUE BOOKBINDING.

specimens of antique bookbinding in the national collection, Paris. It is a work of the eleventh century, and encases a book of prayers in a mass of gold, jewels, and enamels. The central subject is sunk like a framed picture, and represents the Crucifixion, the Virgin and St John on each side the cross, and above it the veiled busts of Apollo and Diana; thus exhibiting the influence of the older Byzantine school, which is, indeed, visible throughout the entire design. This subject is executed on a thin sheet of gold, beaten up from behind into high relief, and chased upon its surface. A rich frame of jewelled ornament surrounds this subject, portions of the decoration being further enriched with coloured enamels; the angles are filled with enamelled emblems of the evangelists; the ground of the whole design enriched by threads and foliations of delicate gold wire.

Such books were jealously guarded. They represented a considerable sum of money in a merely mercantile sense; but they often had additional value impressed by some individual skill. Loans of such volumes, even to royalty, were rare, and never accorded without the strictest regard to their safety and sure return. Gifts of such books were the noblest presents a monastery could offer to a prince; and such gifts were often made the subject of the first picture on the opening page of the volume. Thus the volume of romances, known as *The Shrewsbury Book*, in the British Museum, has upon its first page an elaborate drawing, representing the famed Talbot, Earl of Shrewsbury, presenting this book to King Henry VI., seated on his throne, and surrounded by his courtiers. Many instances might readily be cited of similar scenes in other manuscripts preserved in the same collection.

Smaller and less ambitious volumes, intended for the use of the student, or for church-services, were more simply bound; but they frequently were enriched by an ivory carving let into the cover—a practice that seems to have ceased in the sixteenth century, when leather of different kinds was used, generally enriched by ornament stamped in relief. A quaint fancy was sometimes indulged



ANCIENT BOOK.

in the form of books, such as is seen in the first figure of the cut just given. The original occurs in a portrait of a nobleman of that era, engaged in devotion, his book of prayers taking the conventional form of a heart, when the volume is opened. For the use of the religious, books of prayers were bound, in the fifteenth century, in a very peculiar way, which will be best understood by a glance at the second figure in our cut. The leathern covering of the volume was lengthened beyond the margin of the boards, and then gathered (a loose flap of skin) into a large knot at the end. When the book was closed and secured by the clasp, this leathern flap was passed under the owner's girdle, and the knot brought over it, to prevent its slipping. Thus a volume of prayers might be conveniently carried, and such books were very constantly seen at a monk's girdle.

There is another class of books for which great durability, during rough usage, was desired. These were volumes of accounts, registers, and law records. Strong boards sometimes formed their only covering, or the boards were covered with hog-skins, and strengthened by bosses of metal. The town of Southampton still possesses a volume containing a complete code of naval legislation, written in Norman-French, on vellum, in a hand apparently of the earlier half of the fourteenth century. It is preserved in its original binding, consisting of two oak boards, about half an inch thick, one of them being much longer than the other, the latter having a square hole in the lower part, to put the hand through, in order to hold it up while citing the laws in court. These boards are held together by the strong cords upon which the back of the book is stitched, and which pass through holes in the wooden covers. These are again secured by

bands of leather and rows of nails. Paper-books, intended for ordinary use, were sometimes simply

ANCIENT BOOK.

covered with thick hog-skin, stitched at the back with strong thongs of leather. Binding, as a fine art, seems to have declined just before the invention of printing: after that, libraries became common, and collectors prided themselves on good book-binding; but into this more modern history of the art we do not propose to enter.

SEPTEMBER 14.

The Exaltation of the Holy Cross, 629. St Cormac, bishop of Cashel, 908. St Catherine of Genoa, widow, 1510.

EXALTATION OF THE HOLY CROSS.

The discovery of the cross on which Christ was supposed to have suffered, by the Empress Helena (see under May 3), led to the sacred relic being raised or exalted in view of the people, in a magnificent church built by her son the Emperor Constantine, at Jerusalem; and this ceremony of the exaltation of the holy cross, which took place on the 14th September 335, was commemorated in a festival held on every recurrence of that day, by both the Greek and Latin churches. The cross was afterwards (*anno* 614) carried away by Chosroes, king of Persia, but recovered by the Emperor Heraclius, and replaced amidst circumstances of great pomp and expressions of the highest devotion.

Many churches in Britain were dedicated to the Holy Rood or Cross. One at Edinburgh became the nucleus of the palace of the Scottish kings. Holyrood Day was one of much sacred observance all through the middle ages. The same feeling led to a custom of framing, between the nave and choir of churches, what was called a rood-screen or rood-loft, presenting centrally a large crucifix, with images of the Holy Virgin and St John on each side. A winding stair led up to it, and the epistle and gospel were often read from it. Some of these screens still remain, models of architectural beauty; but numbers were destroyed with reckless fanaticism at the Reformation, the people not distinguishing between the objects which had caused what they deemed idolatry and the beautifully carved work which was free from such a charge.

One of the most famous of these roods or crucifixes was that at the abbey of Boxley, in Kent, which was entitled the *Rood of Grace*. The legend is, that an English carpenter, having been taken prisoner in the French wars, and wishing to employ his leisure as well as obtain his ransom, made a very skilful piece of workmanship of wood, wire, paste, and paper, in the form of a cross of exquisite proportion, on which hung the figure of our Saviour, which, by means of springs, could bow down, lift itself up, shake its hands and feet, nod the head, roll its eyes, and smile or frown. The carpenter, getting permission to return and sell his work, put it on a horse, and drove it before him; but stopping near Rochester at an alehouse for refreshment, the animal passed on, and missing the straight road, galloped south to Boxley, and being driven by some 'divine furie,' never stopped until it reached the church-door, when it kicked so loudly with its heels, that the monks ran out to see the wonder. No sooner was the door opened, than the horse rushed in, and stood still by a pillar. The monks were proceeding to unload, when the owner appeared, and claimed his property; but in vain did he try to lead the horse from the sanctuary; it seemed nailed to the spot. He next attempted to remove the rood, but was equally unsuccessful; so that in the end, through sheer weariness and the entreaties of the monks to have the image left with them, he consented to sell it to them for a piece of money.

The accounts transmitted to us by the Reformers—although to be taken as one-sided—leave us little room to doubt that, in the corrupt age preceding the great change in the sixteenth century, many deceptious practices had come to be connected with the images on the rood-galleries. 'If you were to benefit by the Rood of Grace, the first visit to be paid was to one of the priests, who would hear your confession and give you shrift, in return for a piece of money. You must next do honour to another image of St Rumwald or Grumbald, a little picture of a boy-saint, which, by means of a pin of wood put through a pillar behind, made certain contortions, by which the monks could tell whether all sins had been atoned for in the previous confession. Those who stretched their purse-strings, and made liberal offerings, gained St Rumwald to their side, and were pronounced to be living a pure life. If the poor pilgrim had done all this with sufficient honour to himself and the saints, he was prepared to go to the holy rood and gain plenary absolution.'

At the dissolution of the abbeys, Cromwell and his associates laid their ruthless hands on Boxley; and Nicholas Partridge, suspecting some cheat in the Rood of Grace, made an examination, and soon discovered the spring which turned the mechanism. It was taken to Maidstone, and there exposed to the people; from thence to London, where the king and his court laughed at the object they had once deemed holy; and, finally, it was brought before an immense multitude at St Paul's Cross, by Hilsey, bishop of Rochester, on Sunday, the

24th of February 1538, when it was broken to pieces and buried, the bishop preaching a sermon on the subject.

AN ANTIQUARY OF THE OLDEN TYPE.

In the early part of the eighteenth century, when few were paying any attention to antiquities, and ancient remains were consequently exposed to reckless damage and neglect, there arose in England a quaint, uncouth sort of country gentleman, who, to the scorn of his neighbours, devoted himself, with an Old-Mortality-like zeal, to the study and care-taking of old churches. Browne Willis, so was he hight, inherited a competent fortune from his grandfather, Dr Thomas Willis, the celebrated physician. While a boy at Westminster School, by frequently walking in the adjacent abbey, he acquired a taste for ecclesiastical and architectural antiquities, which formed the sole pursuit and pleasure of his blameless life. For many years, he constantly employed himself in making pilgrimages to the various cathedrals and churches in England and Wales; always endeavouring, if possible, to visit each on the festival-day of the saint to which it was dedicated. As an amusing instance of his veneration for saints' days, it may be mentioned that he dedicated to St Martin a chapel, which he gratefully erected, at Fenny-Stratford, in honour of his grandfather, who was born in St Martin's Lane, upon St Martin's Day, placing the following inscription on a conspicuous part of the building:

> 'In honour to thy memory, blessed shade!
> Were the foundations of this chapel laid.
> Purchased by thee, thy son and present heir
> Owes these three manors to thy sacred care.
> For this may all thy race thanks ever pay,
> And yearly celebrate St Martin's Day.'

Though succeeding to an income of £4000 per annum, our amiable antiquary almost impoverished himself, by the extreme ardour with which he gave himself to his favourite pursuits. He expended large sums in beautifying and restoring ancient edifices of an ecclesiastical character, sometimes, indeed, with greater enthusiasm than good taste. He erected an ornamental tower on Buckingham Church, without first correctly estimating the supporting capabilities of the substructure; and, not long after, the tower fell, utterly demolishing the sacred edifice which it was intended to decorate. A curious instance of the not uncommon insensibility to danger, which arises from habit, is told of the downfall of this tower. A person who worshipped in the church, and whose architectural knowledge enabled him to foresee the impending fall, being asked if he had ever taken any precautions, or notified to his neighbours the probability of such a catastrophe, replied that he always had desired his family and friends to shut their pew-doors as softly as possible!

The personal appearance of Mr Willis has been described as resembling that of a beggar more than a country gentleman of fortune. He wore three, sometimes four, coats, surmounted by an old blue cloak, the whole bound round his body by a common leathern girdle. His boots were covered with patches, as they well might be after a wear of forty years; and his carriage, being painted black, and studded with brass plates, on which were incised the various armorial bearings of the Willis family, was frequently mistaken for a hearse. Antiquarian pilgrimages in this guise could scarcely fail to give rise to many amusing mistakes. Mr Willis, one day, when passing an old building that had been converted into a farmhouse, stopped his carriage, and cried to a female he saw engaged in domestic occupations: 'Woman, have ye any arms in this house?'—meaning coats of arms painted or carved on the walls or windows. But, the period being the eventful year of 1745, when the English peasantry were terrified by the most absurd rumours, the woman, thinking that arms of a different description were required, barricaded her door, and replied to the question with a volley of vulgar abuse from an upper window. On another occasion, Mr Willis, observing a building that exhibited appearances of better days, asked the good woman: 'Has this ever been a religious house?' 'I don't know what you mean by a religious house,' was the reply of the enraged matron, 'but I know it is as decent and honest a house as any that a dirty old rascal like you could have.'

While incessantly engaged in repairing churches, Mr Willis as earnestly insisted upon clergymen fulfilling their particular duties. This spirit led to many disputes and references to courts of law, where antiquarian lore invariably gained the day; the defeated parties generally revenging themselves by satirical squibs on the enthusiastic antiquary. From the best of these, embodying the principal peculiarities of a worthy, though eccentric man, we extract the following verses:

> 'Whilome there dwelt near Buckingham,
> That famous county town,
> At a known place, hight Whaddon Chase,
> A squire of odd renown.
>
> A Druid's sacred form he bore,
> His robes a girdle bound:
> Deep versed he was in ancient lore,
> In customs old, profound.
>
> A stick, torn from that hallowed tree
> Where Chaucer used to sit,
> And tell his tales with leering glee,
> Supports his tottering feet.

No prophet he, like Sydrophel,
Could future times explore;
But what had happened, he could tell,
Five hundred years and more.

A walking almanac, he appears,
Stepped from some mouldy wall,
Worn out or use through dust and years
Like scutcheons in his hall.

His boots were made of that cow's hide,
By Guy of Warwick slain;
Time's choicest gifts, aye to abide
Among the chosen train.

His car himself he did provide,
To stand in double stead;
That it should carry him alive,
And bury him when dead.

By rusty coins, old kings he 'd trace,
And know their air and mien;
King Alfred he knew well by face,
Though George he ne'er had seen.

This wight th' outside of churches loved,
Almost unto a sin;
Spires Gothic of more use he proved
Than pulpits are within.

Whene'er the fatal day shall come,
For come, alas! it must,
When this good squire must stay at home,
And turn to ancient dust,

The solemn dirge, ye owls, prepare,
Ye bats more hoarsely shriek,
Croak, all ye ravens, round the bier,
And all ye church-mice squeak!'

ROLLIN AND HIS ANCIENT HISTORY.

Charles Rollin, born in Paris in 1661, the son of a cutler, rose to be, at thirty-three, rector of the university of Paris, a position of the highest dignity, which he adorned by the sweetness of his character, his learning, probity, and moderation. He is now chiefly memorable for a work, entitled *Ancient History*, in which he gave such information regarding the Egyptians, Assyrians, Carthaginians, and other ancient nations, as was obtainable in his day, in a style distinguished by its purity and elegance. The English translation of this work was a stock-book in the English market down to about thirty years ago, when at length it began to be neglected, in consequence of the many discoveries giving a new cast to our knowledge of ancient history. Voltaire praises the work highly, though he alleges that it would have been better if the author had been a philosopher, able to distinguish better the false from the true, the incredible from the probable, and to sacrifice the useless. It is the best compilation, he says, in any language, because compilers are seldom eloquent, and Rollin was.

THE DUKE OF WELLINGTON.

On the 14th of September 1852, died Arthur, Duke of Wellington, the most illustrious Englishman of his time, at the age of eighty-three. He had performed the highest services to his country, and indeed to Europe, and the honours he had consequently received were such as would tire even a Spaniard. While so much honoured, the duke was a man of such simplicity of nature, that he never appeared in the slightest degree uplifted. His leading idea in life was the duty he owed to his country and its government, and with the performance of *that* he always appeared perfectly satisfied. He was the *truest* of men, and even in the dispatches and bulletins which he had occasion to compose amidst the excitements of victory, there is never to be traced a feeling in the slightest degree allied to vapouring or even self-complacency. It was not in respect of stricken fields alone, that he proved himself the superior of Napoleon. He was his superior in every moral attribute.

The duke was the younger son of an Irish peer remarkable only for his musical compositions. To a clever and thoughtful mother, early left a widow, it is owing, that two men so remarkable as Richard, Marquis Wellesley, and Arthur, Duke of Wellington, were included in one family. Arthur entered the army in 1787, as an ensign of foot. He passed through various regiments of foot and horse, and at four-and-twenty had attained the lieutenant-colonelcy of the 33d Regiment of infantry. His first conspicuous appearance in our military history is as the chief of a little British army, which (September 23, 1803) overthrew a large Mahrattas force at Assaye, in the Deccan, by which the British power was established in that part of India. It is not required here that we should recite the series of campaigns in Spain and Portugal, extending between April 1809 and November 1813, by which he expelled the superior armies of Napoleon from the Peninsula, and enabled his troops to bivouac in unopposed triumph on the soil of France. Neither is it necessary here to repeat the particulars of his Belgian campaign of 1815, ending in his triumph over Napoleon in person at Waterloo. All of these transactions are already written deeply in the hearts of his countrymen.

When Arthur Wellesley completed his military career in 1815, with the title of Duke, and a multitude of other marks of the public gratitude, he was only forty-six years of age. Throughout the remainder of his long life, he devoted himself to the service of his country, as a member of the House of Peers and occasionally as a minister. It cannot be said that he shone as a politician, and his sagacity, for once, made a dismal failure in the estimate he formed of the necessity for parliamentary reform in 1830. Yet no one ever for a moment hesitated to admit, that the duke was perfectly honest and unselfish in his political, as he had been in his military career.

The death of this eminently great man was the result of natural decay, taking finally the form of a fit of epilepsy. He was interred with the highest public honours in St Paul's Cathedral.

THE DUKE OF WELLINGTON AT WALMER.

The death of the Duke of Wellington was associated with much of that soldierly simplicity which marked his character generally. From 1829 till 1852, he was accustomed to pass two months of each autumn at Walmer Castle, away from the turmoil of parliamentary and official life in the metropolis. As Lord Warden of the Cinque Ports, Walmer was one of his official residences. Those

ports have long survived the state of affairs which once gave them celebrity as a naval fraternity; but still the title of Lord Warden is kept up, with a few unimportant duties—Dover being the head-quarters, but Walmer the official residence. The castle, built in the time of Henry VIII., is one of three which defend the low coast near Walmer and Deal; it has had alterations made in it from time to time, to adapt it as a domestic residence. Here the Great Duke, as we have said, passed a portion of each year. His apartments were furnished in the simplest possible way; especially his bedroom, which besides an iron military bedstead and a coverlet, contained very few articles. The one window of that room looked out upon the sea; while a door, in an adjoining apartment, gave access to the ramparts of the castle, where the duke was accustomed to walk at an early hour every morning—a few guns around him, but a very lovely prospect in front. His habits were as plain and simple as his rooms. On many of the doors in the passages and apartments was written, in intelligible letters, 'SHUT THIS DOOR,' a command likely to be the more scrupulously obeyed in being issued in this uncompromising way. The Queen, and some of the most illustrious persons in the kingdom, visited the great general here; but whoever it might be, and at whatever time, all felt a desire to fall in with (or, at least, not to interrupt) his daily mode of life. From morning until night, every hour was apportioned with the utmost regularity. That faculty for order and organisation, which had enabled him, in earlier years, to manage large armies, still remained with him till his death, when he was in his eighty-fourth year.

On Monday the 13th of September 1852, the duke rode and walked out as usual, dined as usual, and retired to rest at his usual hour. On Tuesday the 14th, his valet called him at the customary hour of six o'clock. Half an hour afterwards, hearing a kind of moaning, the valet entered the room, and found his master ill. The duke requested that his apothecary, Mr Hulke of Deal, should be sent for. Lord and Lady Charles Wellesley, the son and daughter-in-law of the duke, happened to be stopping at the castle at the time, and they were at once apprised that something was wrong. When the apothecary arrived between eight and nine o'clock, the duke was in an epileptic fit, something similar to one from which he had suffered a few years before. The apothecary went back to Deal to prepare some medicines; but while he was gone, the symptoms became worse, and Dr Macarthur of Walmer attended. As the day advanced, the urgency of the case led to the despatching of telegrams to London, summoning any one of three eminent physicians; two were in Scotland, and the third did not arrive at Walmer till all was over. The veteran suffered much during the day; he spoke frequently, but his words could not be understood. At four o'clock on that same afternoon, he breathed his last. So little did he or any one anticipate that his end was near, that he had appointed to meet the Countess of Westmoreland at Dover on that day, to see her off by a steam-packet to Ostend. Thus the Duke of Wellington died, with nobody near him, among all his crowd of illustrious and distinguished friends, except one son, one daughter-in-law, a physician, an apothecary, and the ordinary domestics of the castle.

When all the glitter of a lying-in-state and a public funeral were occupying men's thoughts, the simplicity of the duke's life at Walmer was well-nigh forgotten; but many facts came to light by degrees, illustrative of this matter. He made his little bedroom serve also for his library and his study. His iron-bedstead was only three feet wide, and had a mattress three inches thick; he had one coverlet, but no blankets, and was accustomed to carry his pillow with him when he travelled. He rose between six and seven, walked on the ramparts, and at nine breakfasted on plain tea and bread and butter. When the Queen and Prince Albert visited the veteran in 1842, the only changes he made in the apartments appropriated to them were—to put a plate-glass window where the Queen could have a better view of the sea, and to get a common carpenter to make a deal stand for a time-piece in the Prince's room. The Queen was so delighted with the simplicity of the whole affair, that she begged permission to stop for a week longer than the time originally intended—a compliment, of course, flattering to the duke, but possibly regarded by him as a departure from order and regularity.

The duke's death suggested to Mr Longfellow a subject for the following stanzas:

THE WARDEN OF THE CINQUE PORTS.

A mist was driving down the British Channel,
The day was just begun,
And through the window-panes, on wall and panel,
Stream'd the red autumn sun.

It glanc'd on flowing flag and rippling pennon,
And the white sails of ships;
And from the frowning rampart the black cannon
Hail'd it with fev'rish lips.

Sandwich and Romney, Hastings, Hythe, and Dover,
Were all alert that day,
To see the French war-steamer speeding over,
When the fog clear'd away.

Sullen and silent, and like couchant lions,
Their cannon through the night,
Holding their breath, had watch'd in grim defiance
The sea-coast opposite.

And now they roar'd at drum-beat from their stations,
On every citadel;
Each answ'ring each with morning salutations
That all was well.

And down the coast, all taking up the burden,
Replied the distant forts;
As if to summon from his sleep the Warden
And Lord of the Cinque Ports.

Him shall no sunshine from the fields of azure,
No drum-beat from the wall,
No morning-gun from the black fort's embrasure,
Awaken with their call.

No more surveying with an eye impartial
The long line of the coast,
Shall the gaunt figure of the old field-marshal
Be seen upon his post.

For in the night, unseen, a single warrior,
In sombre harness mailed,
Dreaded of man, and surnamed the Destroyer,
The rampart-wall had scaled.

He passed into the chamber of the sleeper,
The dark and silent room;
And as he enter'd, darker grew and deeper
The silence of the gloom.

He did not pause to parley or dissemble,
But smote the warder hoar:
Ah, what a blow! that made all England tremble,
And groan from shore to shore.

Meanwhile, without the surly cannon waited,
The sun rose bright o'erhead;
Nothing in nature's aspect intimated
That a great man was dead.

THE DUKE'S COOLNESS.

'Lord Aylmer,' says Mr Larpent in his *Journal*, 'gave me two striking instances of Lord Wellington's coolness: one, when in a fog in the morning, as he was pursuing the French, he found a division of our men, under Sir William Erskine, much exposed in advance, and nearly separated from the rest of the army, and the French in a village within a mile of where he was standing. He could see nothing. But, on some prisoners being brought in, and being asked what French division, and how many men were in the village, they, to the dismay of every one except Wellington, said that the whole French army were there. All he said was, quite coolly: "Oh! they are all there, are they? Well, we must mind a little what we are about, then." Another time, soon after the battle of Fuentes d'Onoro, and when we were waiting in our position near them to risk an attack, to protect the siege of Almeida, one morning suddenly and early, Lord Aylmer came in to him, whilst he was shaving, to tell him "the French were all off, and the last cavalry mounting to be gone;" the consequence of which movement relieved him entirely, gave him Almeida, and preserved Portugal. He only took the razor off for one moment, and said: "Ay, I thought they meant to be off; very well," and then another shave, just as before, and not another word till he was dressed.'

'Of the duke's perfect coolness on the most trying occasions,' so said Mr Rogers, 'Colonel Gurwood gave me this instance. He was once in great danger of being drowned at sea. It was bedtime, when the captain of the vessel came to him, and said: "It will soon be all over with us." "Very well," answered the duke, "then I shall not take off my boots."—*Table-Talk of Samuel Rogers.*

'His coolness in danger,' says the *Edinburgh Review* in an article on Brialmont's *Life of the Duke of Wellington*, 'and his personal escapes, are as striking attributes of the individual man as his tactics are attributes of the general. During the battle of Talavera, Albuquerque sent him, by a staff-officer, a letter, informing him that Cuesta, the commander of the Spanish army in the action, was a traitor, and was actually playing into the enemy's hands. He was intently watching the progress of the action as the dispatch reached him; he took the letter, read it, and turning to the aid-de-camp, coolly said: "Very well, colonel, you may go back to your brigade." On another occasion, just before the siege of Rodrigo, when the proximity of the allies to Marmont's army placed them in considerable danger by reason of the non-arrival of their flank divisions, a Spanish general was astonished to find the English commander lying on the ground in front of his troops, serenely and imperturbably awaiting the issue of the peril. "Well, general," said the Spaniard, "you are here with two weak divisions, and you seem to be quite at your ease; it is enough to put one in a fever." "I have done the best," the duke replied, "that could be done according to my own judgment, and hence it is that I don't disturb myself, either about the enemy in my front, or about what they may say in England." On several instances he very narrowly escaped being taken prisoner. Once at Talavera, in the midst of the action; once, just before the battle of Maya, being surprised by a party of French while looking at his maps; once at Quatre Bras, again during the battle. In the latter action, as he was carried away on the tide of a retreating body of young troops, the French lancers suddenly charged on its flank, and his only chance was in his horse's speed. "He arrived," Mr Gleig writes, "hotly pursued, at the edge of a ditch, within which the 92d Highlanders were lying, and the points of their bayonets bristled over the edge. He called out to them as he approached, "Lie down, men!" and the order was obeyed, whereupon he leaped his horse across the ditch, and immediately pulled up with a smile on his countenance." . . . . The duke's success no doubt was largely owing to his special mastery of details. In camp and on the march, equally methodical, he relied for victory on the preparations he had made. From the smallest incident to the greatest, he made himself acquainted with all that could affect the organisation of his army, and the comfort of his men individually. Even the cooking of mess-dinners was his constant care; in the Crimea, he would almost have supplanted Soyer. Upon the first publication of his *Dispatches*, one of his friends said to him, on reading the records of his Indian campaigns: "It seems to me, duke, that your chief business in India was to procure rice and bullocks." "And so it was," replied Wellington; "for if I had rice and bullocks, I had men, and if I had men, I knew I could beat the enemy." Like Napoleon, though with a vast difference in scale, his army was the work of his own hands. "Its staff," Mr Gleig writes, "its commissariat, its siege apparatus, its bridge equipment, its means of transport, its intelligence department, its knowledge of outpost and other duties, were all of his creation." This mental activity, of course, widened the range of his achievements. Like Cæsar, who is said to have written an essay on Latin rhetoric as he was crossing the Alps, Wellington passed the night previous to one of his battles in devising a scheme for a Portuguese bank.'

SEPTEMBER 15.

St Nicomedes, martyr, about 90. St Nicetas, martyr, 4th century. St John the Dwarf, anchoret of Scete. St Aper or Evre, bishop and confessor, 5th century. St Aicard or Achart, abbot and confessor, about 687.

Born.—Jean Sylvain Bailly, distinguished astronomer, 1736, *Paris;* James Fenimore Cooper, American novelist, 1789, *Burlington, New Jersey;* John, Lord Campbell, chancellor of England, 1779, *Cupar-in-Fife.*

Died.—Philip of Austria, father of Charles V., 1506; Sir Thomas Overbury, poisoned in the Tower, 1613; Lady Arabella Stuart, 1615; Richard Boyle, Earl of Cork, eminent statesman, 1643, *Youghal;* Sidney, Earl of Godolphin, premier to Queen Anne, 1712, *St Albans;* Abbé Terrasson, translator of Diodorus Siculus, 1750; General Lazarus Hoche, French commander, 1797, *Wetzlar;* William Huskisson, distinguished politician and economist, killed at the opening of the Liverpool and Manchester Railway, 1830; I. K. Brunel, eminent civil engineer, 1859, *Westminster.*

ROMANCE OF THE LADY ARABELLA.

Although Lady Arabella Stuart plays no very prominent part amid the public characters of her time, her history presents a series of romantic incidents and disasters, scarcely surpassed even by those of her celebrated relative, Mary Queen of Scots. She was the daughter of Charles Stuart, Earl of Lennox, younger brother of Lord Darnley, and stood thus next in succession to the crown, after her cousin, James VI., through their common ancestor Margaret Tudor, sister of Henry VIII., and grandmother, by her second marriage with the Earl of Angus, to Lord Darnley. Brought up in England, Arabella excited the watchful care and jealousy of Elizabeth, who, on the king of Scotland proposing to marry her to Lord Esmé Stuart, interposed to prevent the match, and afterwards imprisoned her, on hearing of her intention to wed a son of the Earl of Northumberland. Meantime she formed the subject of eager aspirations on the continent, the pope entertaining the idea of uniting her to some Catholic prince, and setting her up as the legitimate heir to the English throne. Among her suitors appear the Duke of Parma, and the Prince of Farnese; but it would seem that the idea which prevailed abroad of her predilections for the old religion was quite unfounded. Shortly after the accession of James I., a clumsy conspiracy, in which Sir Walter Raleigh is said to have been concerned, was formed for raising her to the throne. It proved quite abortive, and does not seem to have been shared in by Arabella herself, who continued to live on amicable terms with the court, and had a yearly pension allowed her by James. At last, about 1609, when she could not have been less than thirty-three years of age, she formed an attachment to William Seymour, son of Lord Beauchamp, and a private marriage took place. On this being discovered, Seymour was committed to the Tower for his presumption in allying himself with a member of the royal family, and his wife was detained a prisoner in the house of Sir Thomas Parry, in Lambeth. The wedded pair, nevertheless, managed to correspond with each other; whereupon, it was resolved to remove Arabella to a distance, and place her under the custody of the bishop of Durham. Her northward journey commenced, but, either feeling or affecting indisposition, she advanced no further than Highgate, where she was allowed to remain under surveillance, in the house of Mr Conyers. A plot to effect her escape was now concocted on the part of herself and Seymour.

The subsequent mishaps of this ill-starred couple read like a tale of romance. One afternoon she contrived to obtain leave from her female guardian at Highgate to pay a visit to her husband, on the plea of seeing him for the last time. She then disguised herself in man's clothes, with a doublet, boots, and rapier, and proceeded with a gentleman named Markham to a little inn, where they obtained horses. On arriving there, she looked so pale and exhausted that the ostler who held her stirrup, declared the gentleman would never hold out to London. The ride, however, revived her, and she reached Blackwall in safety, where she found a boat waiting. Mr Seymour, who was to have joined her here, had not yet arrived, and, in opposition to her earnest entreaties, her attendants insisted on pushing off, saying that he would be sure to follow them. They then crossed over towards Woolwich, pulled down from thence to Gravesend, and afterwards, by the promise of double fare, induced the rowers to take them to Lee, which they reached just as day was breaking. A French vessel was descried lying at anchor for them about a mile beyond, and Arabella, who again wished to abide here her husband's arrival, was forced on board by the importunity of her followers. In the meantime, Seymour, disguised in a wig and black cloak, had walked out of his lodgings at the west door of the Tower, and followed a cart which was returning after having deposited a load of wood. He proceeded by the Tower wharf to the iron gate, and finding a boat there lying for him, dropped down the river to Lee, with an attendant. Here he found the French ship gone; but, imagining that a vessel which he saw under sail was the craft in question, he hired a fisherman for twenty shillings to convey him thither. The disappointment of the luckless husband may be imagined when he discovered that this was not the ship he was in quest of. He then made for another, which proved to be from Newcastle, and an offer of £40 induced the master to convey Seymour to Calais, from which he proceeded safely into Flanders. The vessel conveying Arabella was overtaken off Calais harbour by a pink despatched by the English authorities on hearing of her flight, and she was conveyed back to London, subjected to an examination, and committed to the Tower. She professed great indifference to her fate, and only expressed anxiety for the safety of her husband.

To the end of her days Arabella Stuart remained a prisoner. She died in confinement in 1615, and rumours were circulated of her having fallen a victim to poison; but these would seem to have been wholly unwarranted. Such unmerited misfortunes did her near relationship to the crown entail. Her husband afterwards procured his pardon, distinguished himself by his loyalty to Charles I. during the civil wars, and, surviving the Restoration, was invested by Charles II. with the dukedom of Somerset, the forfeited title of his ancestor, the Protector.

FIRST BALLOON ASCENTS IN BRITAIN: LUNARDI—TYTLER.
